PART V.

THE PANAMA CANAL REPORTS.

COMMISSIONS.

SECTION A.—LIST OF THE ISTHMIAN CANAL COMMISSIONS, COMBINED WITH A BRIEF TABLE OR SUMMARY OF THE MORE IMPORTANT TOPICS OF THEIR REPORTS, ARRANGED CHRONOLOGICALLY.

SUBJECTS.

SECTION B.—ALPHABETICAL ARRANGEMENT OF THE PRINCIPAL TOPICS OF THE REPORTS.

PLATES.

THE PANAMA CANAL.
ORGANIZATION CHARTS, 1907, 1909, 1914.

GUIDE TO THE USE OF PART V.

What is contained in this part.—An index in a brief form to the important engineering matter, etc., connected with the engineering project of constructing a waterway across the Central American Isthmus, from 1492 to 1914.

What engineering reports are indexed.—These are as follows:

1. Isthmian Canal Commission No. 1, 1899–1901, 1 volume and plates.
2. Isthmian Canal Commission No. 2, 1904, 1 volume.
3. Isthmian Canal Commission No. 3, 1905–1906, 2 volumes.
4. Board of Consulting Engineers, 1906, 1 volume and plates.
5. Isthmian Canal Commission No. 4, 1907–1913, 7 volumes and 4 sets of plates.
6. The Panama Canal (Isthmian Canal Commission and), 1914, 1 volume and plates.

The subjects of these reports.—On the pages immediately following this there is a list of the more important subjects of these reports so arranged that a brief inspection or examination of the list of subjects affords a general understanding of what has been involved in the work of constructing an artificial waterway across the Central American Isthmus.

This list of subjects is arranged chronologically. It shows also the personnel of the various commissions, and names important heads of departments. Reference is made to the paging of the reports on each subject in such a way that their length or scope is indicated. The list of subjects is arranged also to show something of the various plans of organization leading up to the completion of The Panama Canal.

Alphabetical arrangement.—With the exception of the matter referred to in the preceding paragraph, all the matter of Part V is arranged in the customary alphabetical form. Illustration: Details concerning appropriations will be found referred to under "Appropriations"; concerning dams, under "Dams"; and concerning terminals, under "Terminals."

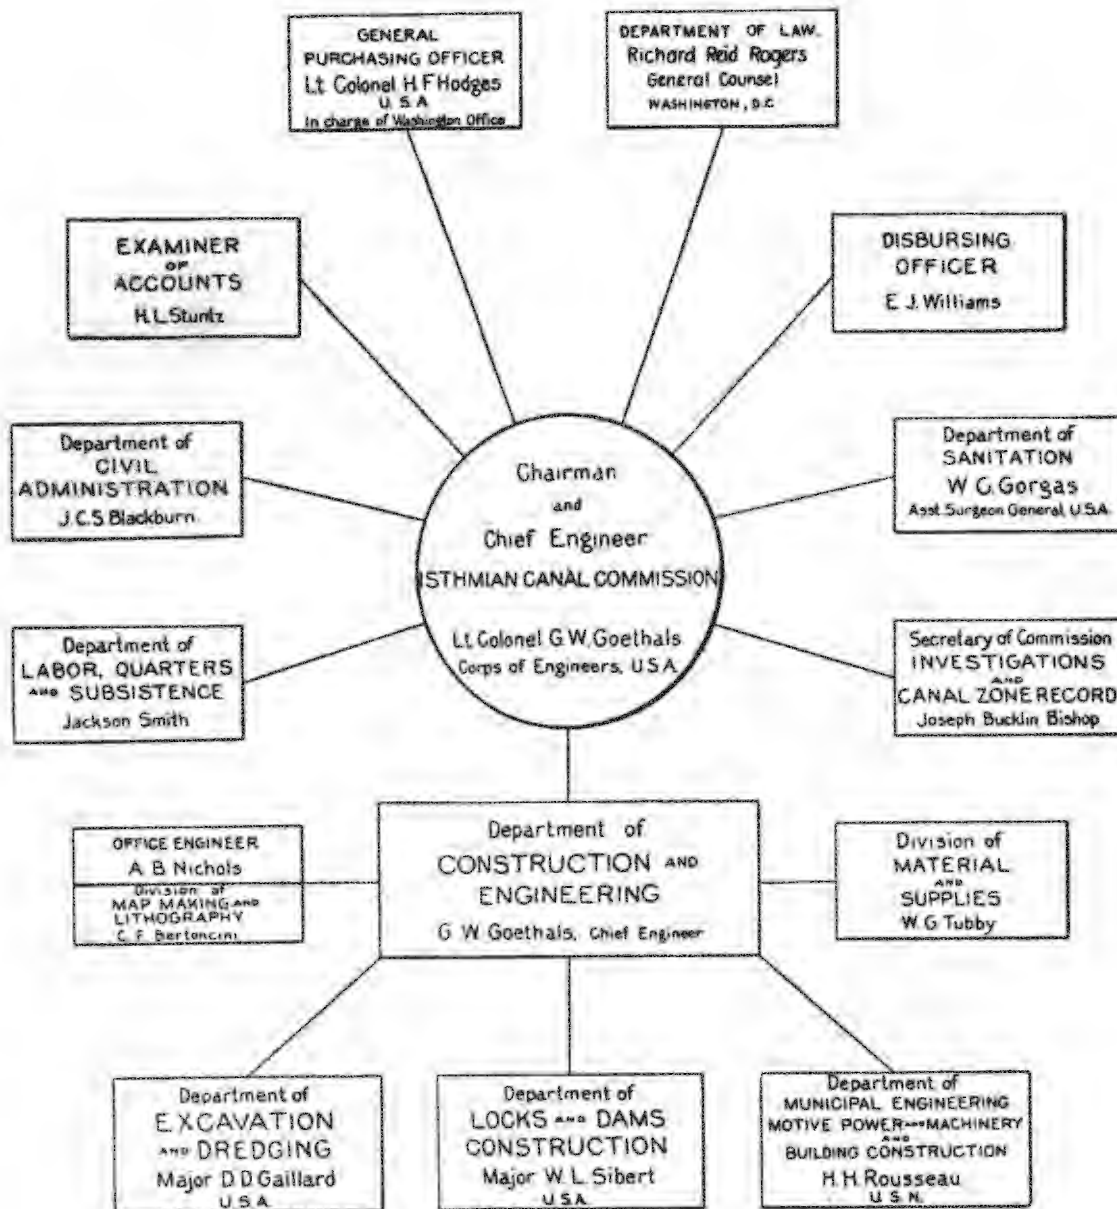

Page references.—These are of the same character as in other parts of this index, with the exception of the addition of the letter P, which refers to the special reports on the Isthmian or Panama Canal project. Illustration: **P-06**, 436, pl. 5, means the report of the Isthmian Canal Commission for 1906, page 436, plate 5.

To distinguish the report of the Board of Consulting Engineers of 1906 from the other reports for that year, a star (*) is added to a reference to that report. Illustration: **P-06***, 377, means the report of the Board of Consulting Engineers, 1906, page 377.

Abstracts.—Brief abstracts have been provided of important reports. Illustration: Under "Projects" are brief but informative details concerning projects for waterways across the Isthmus. Under "Appropriations" is a table of appropriations for the work. Under "Atlantic Division" is a brief outline of the operations on that division.

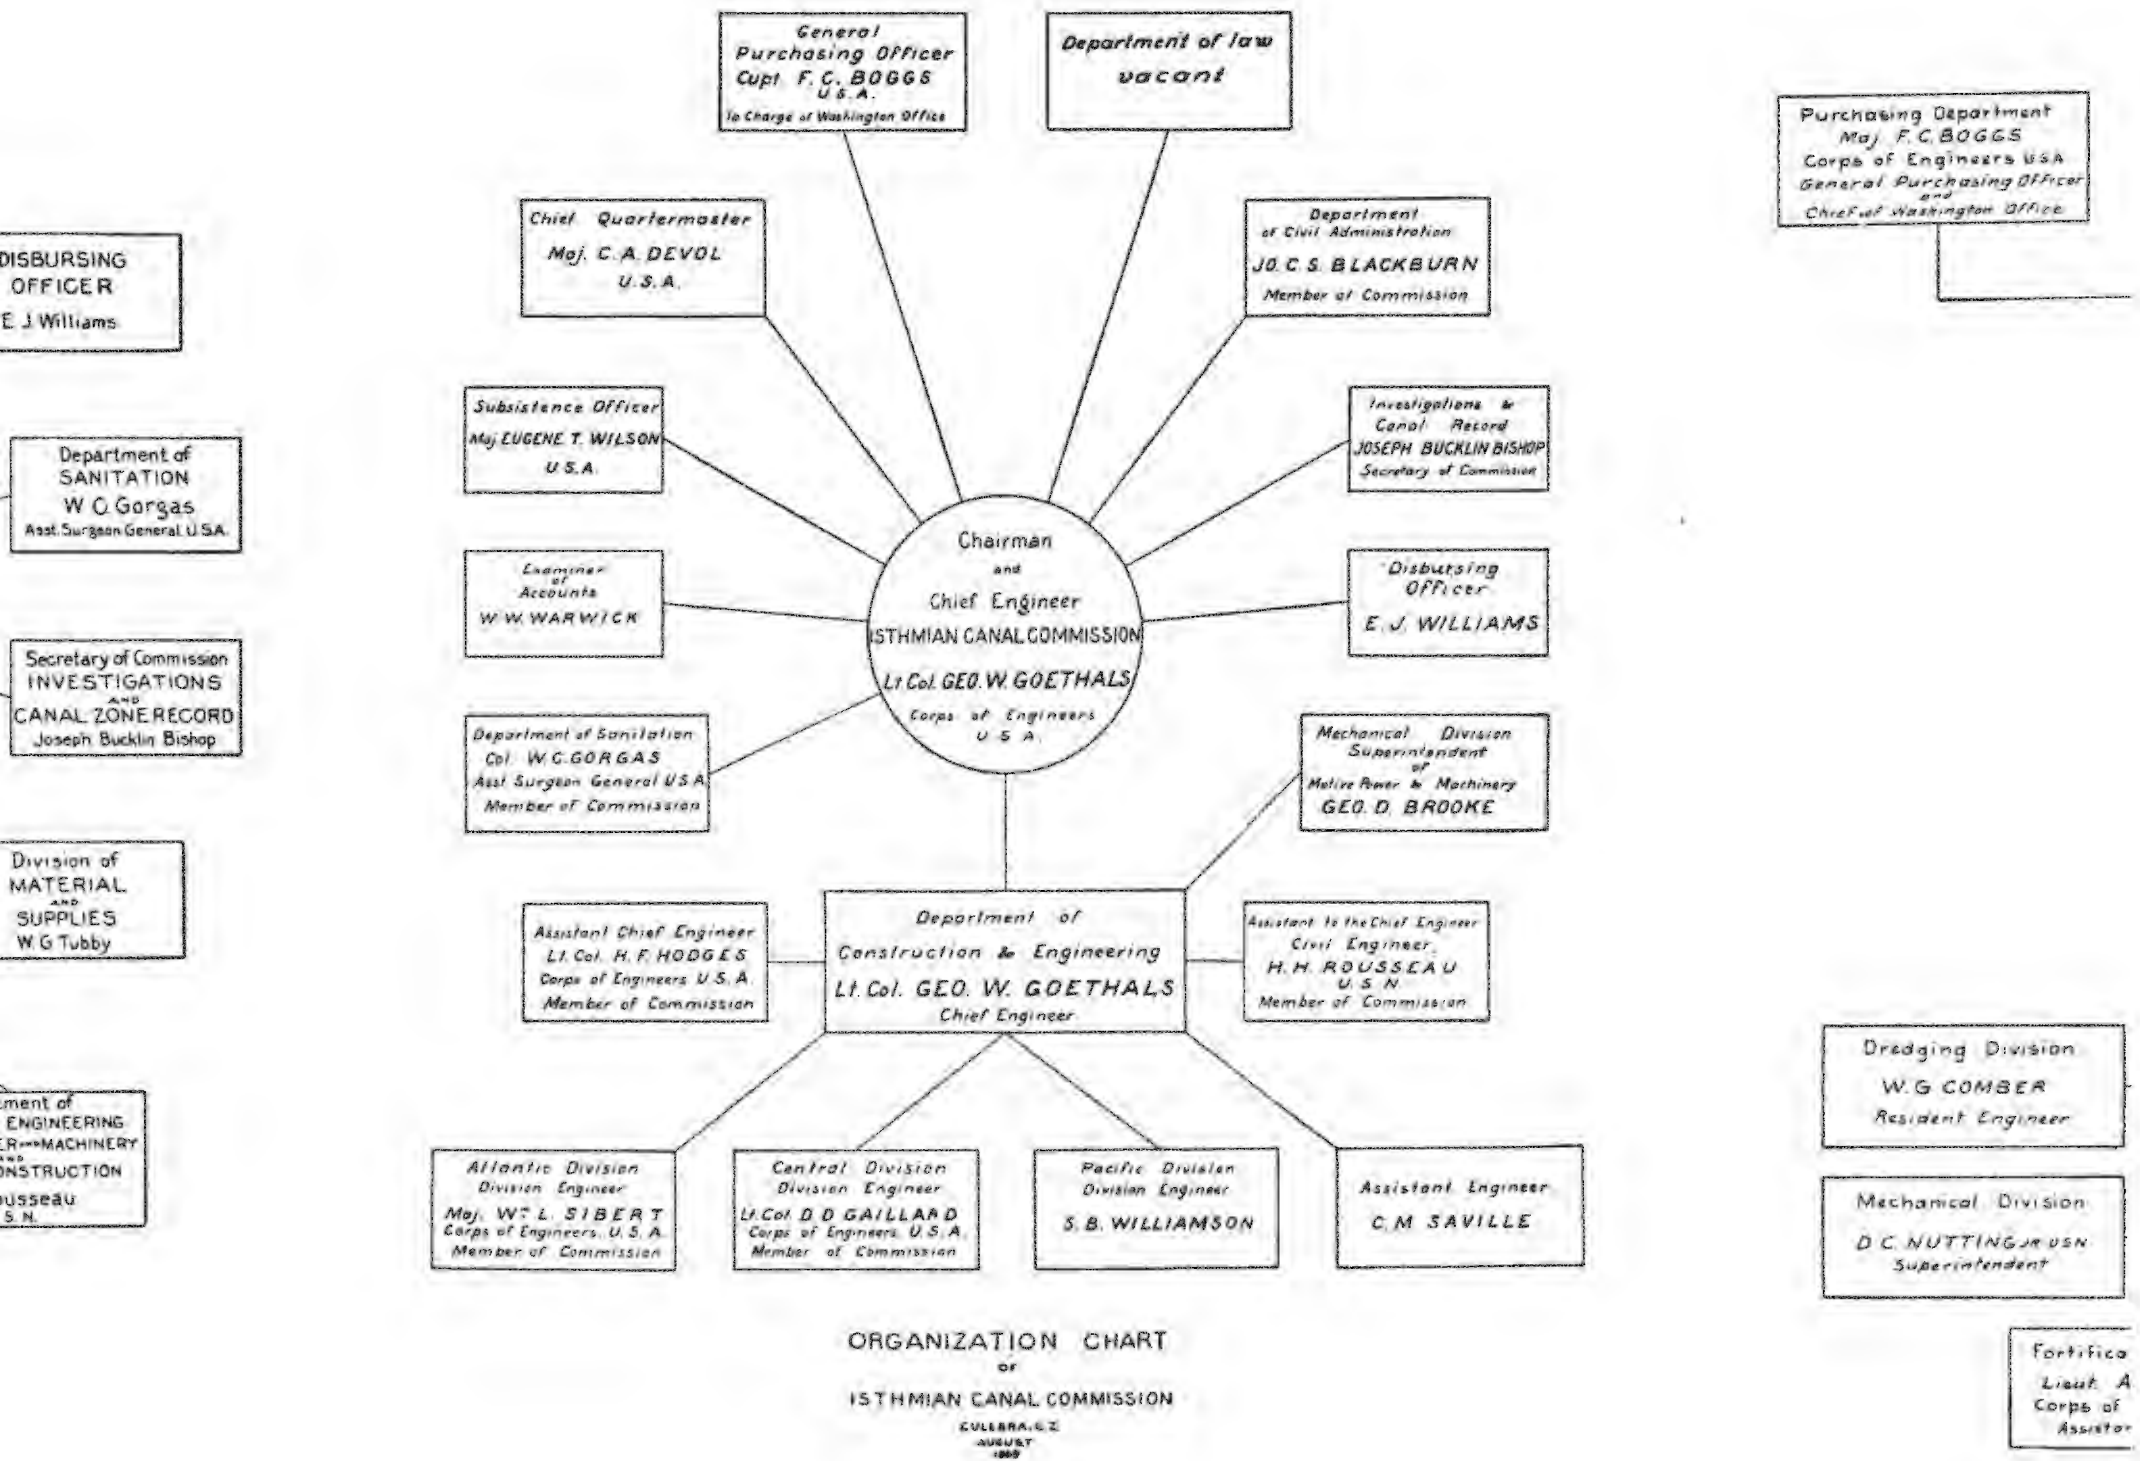

Cross references.—Copious cross references have been provided. Illustration: "Dams" refers to "Locks," "Gates," etc., and to related subjects in the list of important subjects in Section A.

Names of places.—But few names of places have been listed alphabetically, because Part V is intended mainly to index engineering matter. Illustration: Under "Dams" have been collected the more important engineering facts connected with dams, rather than under "Gatun," "Miraflores," "Pedro Miguel," or "Bohio." There are subheads under "Dams" referring to each of these places, however, and each important reference usually names the place connected with the engineering fact indexed. This plan brings related engineering facts under one head usually, rather than under several scattered headings, and makes Part V more compact than would otherwise be the case.

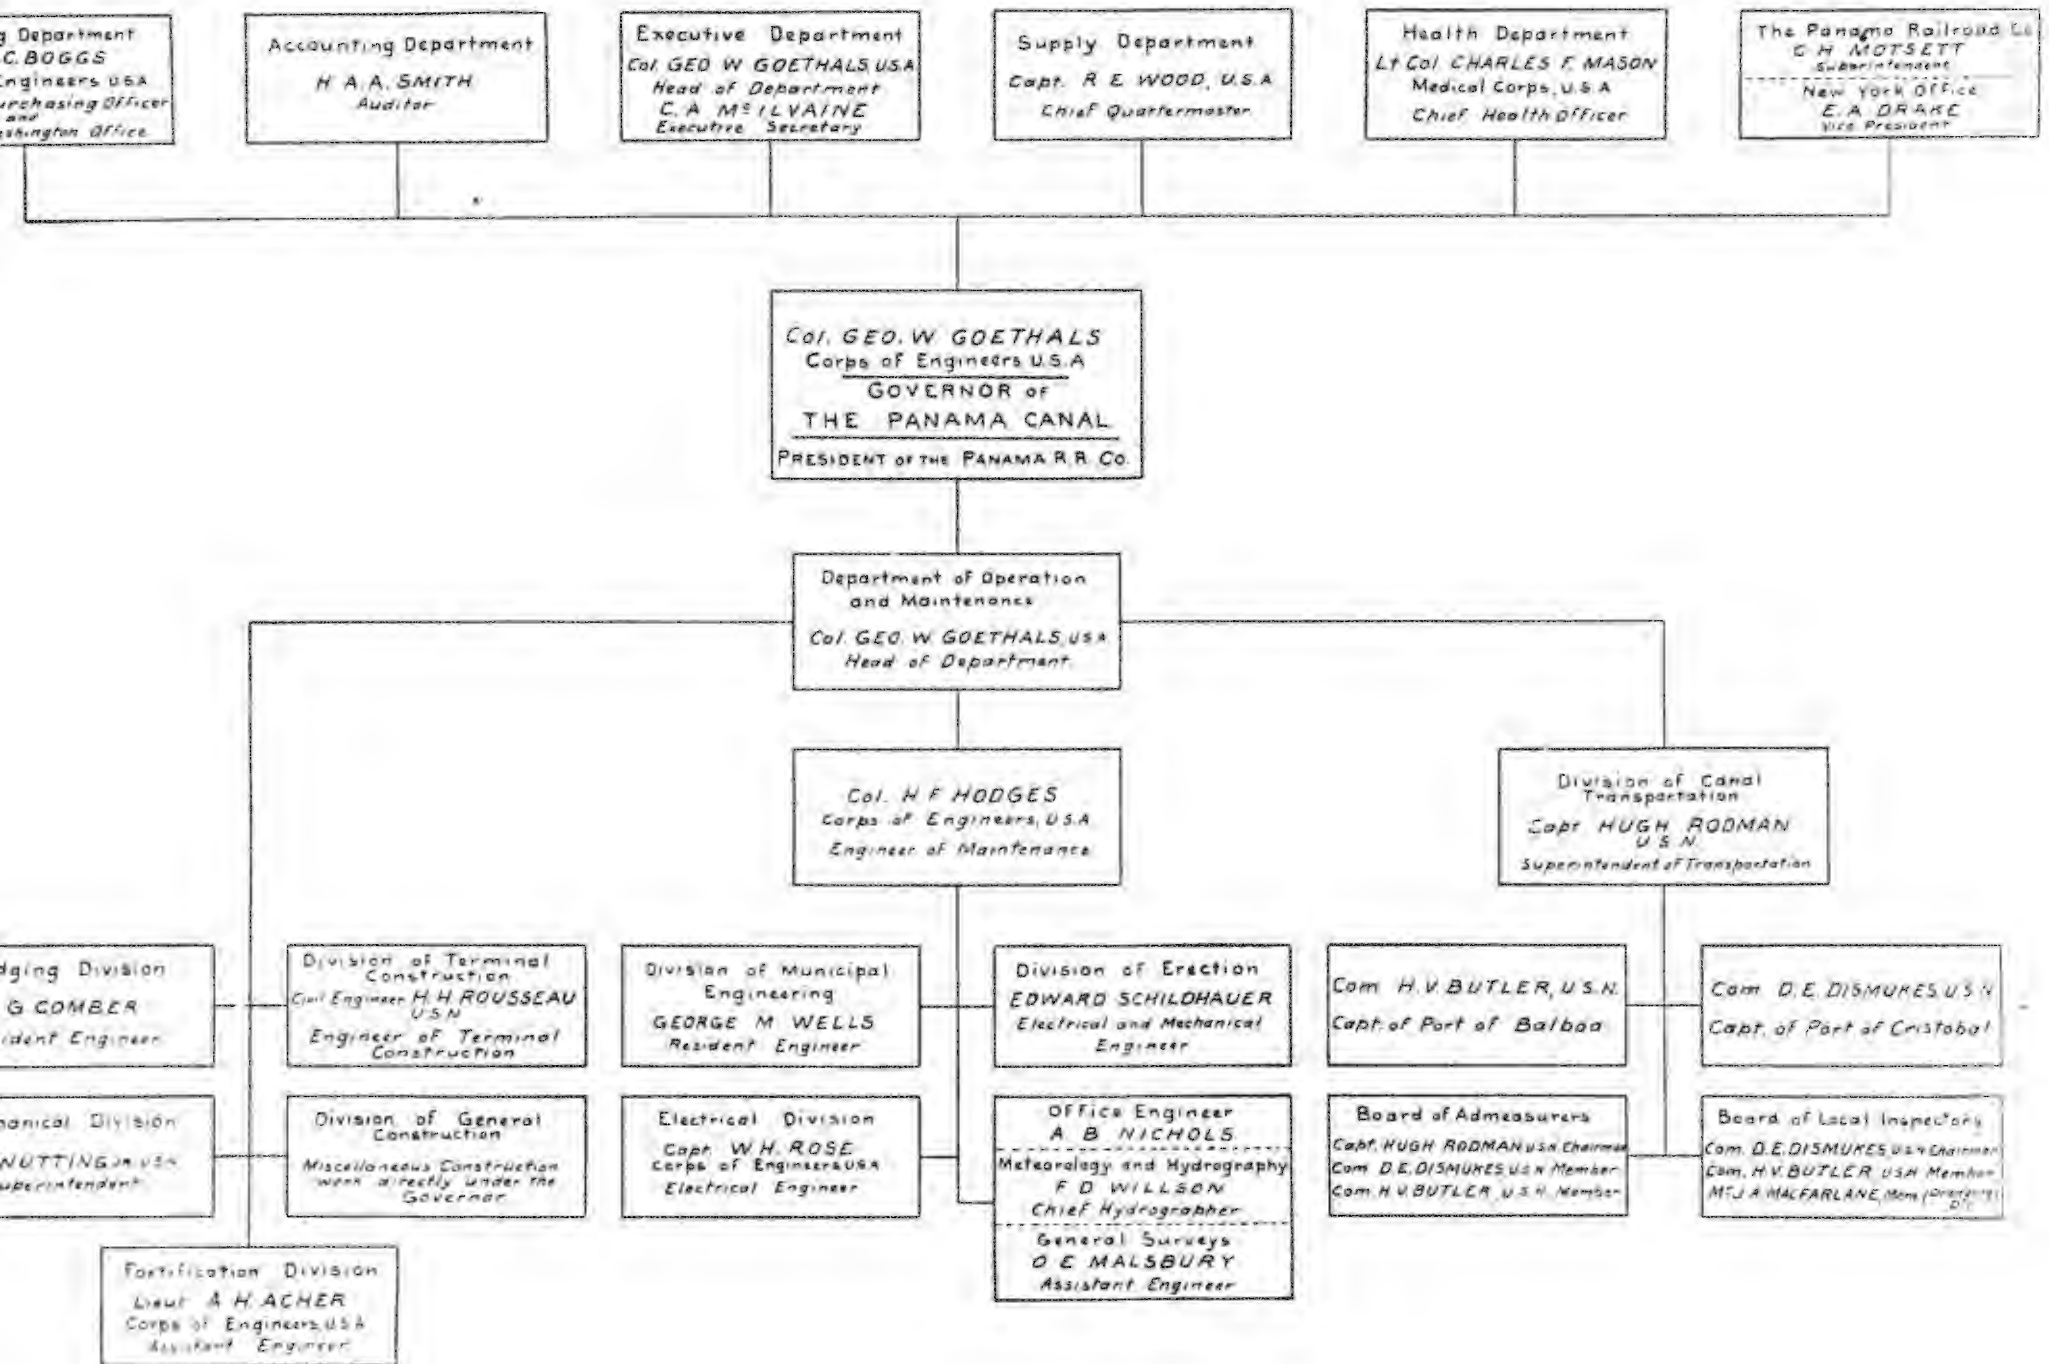

ORGANIZATION CHART
OF
ISTHMIAN CANAL COMMISSION.

CULEBRA, C.Z.

¹ Appointed June 24, 1905, by President Roosevelt. Gen. G. W. Davis, U. S. A.; Alfred Noble, W. B. Parsons, W. H. Burr, Gen. H. L. Abbot, U. S. A.; F. P. Stearns, Joseph Ripley, Isham Randolph, for the U. S. A.; W. H. Hunter, British Government; Eugén Tincanzer, German Government; Adolphe Guerard, French Government; E. Quellenc, consulting engineer, Suez Canal; and J. W. Welcker, the Netherlands. To consider "various plans proposed * * * for canal * * * the deliberations * * * shall continue as long as they may deem necessary * * * before they make their R. to the commission (I. C. C. No. 3)." R. Jan. 10, 1906. Majority R. in favor of sea-level plan. Minority R. for lock canal. Signed by A. Noble, H. L. Abbot, F. P. Stearns, J. Ripley, and I. Randolph. R. of I. C. C. No. 3, dated Feb. 5, 1905. Majority of commission favor lock canal plan. Minority R. (M. T. Endicott) favored sea-level plan. Secretary, Capt. J. C. Oakes, Corps of Engineers, U. S. A.

² From Sept. 1, 1905, Washington, D. C., to 30th meeting, New York, Jan. 31, 1906.

³ Translated by Capt. J. C. Oakes, secretary, Board of Consulting Engineers. (See No. 223, p. 2366 of this Index.)

THE PANAMA CANAL REPORTS.

SECTION B—SUBJECTS.

A.

Abbot, Gen. H. L. (See No. 164, p. 2365 of this Index.)

Absorption.

Rocks and soils, Gatun Dam studies, **P-08**, 177.

Accidents.

Canal transportation, **P-14**, 263.

Accountant. (See Costs.)

Accountant, Cost-keeping.

Reports. (See No. 250, p. 2367.)

Accounts. (See Nos. 42, 237, 269, p. 2362, 2367, 2368 of this Index.)

Each annual report usually contains tables showing appropriations, expenditures, receipts, charges, collections, bills, meal tickets, injuries, revenues, money orders, balances, etc.

Accounting department, **P-14**, 52.

Acts of Congress covering, **P-11**, 558, 559.

Classification; construction and engineering.

P-09, 153.

General accounting, **P-12**, 407.

Isthmian Canal Commission No. 2; audited and closed, **P-05**, 21.

Material and supplies, **P-08**, 226.

Organization of department. (See No. 230, p. 2366.)

Property accountability, **P-09**, 212.

System of accounting, Isthmian Canal Commission, **P-12**, 417.

System, permanent, **P-13**, 418; **P-14**, 324.

Waterworks, **P-14**, 326.

Zone government, **P-08**, 344; **P-09**, 235;

P-10, 342; **P-11**, 390; **P-12**, 413; **P-13**, 414; **P-14**, 328.

Accounts and Disbursements, 1904-1914.

1904. System established after consultation with Secretary of Treasury and other officials. Disbursing officer selected; disbursements to be by customary U. S. methods; disbursing officer to be treasurer of the zone. **P-04**, 53.

1908. Administrative examination of the disbursing officer's accounts before their transmission to the Auditor for the War Department; inspection of the accounts of all officials of the commission, on the Isthmus, charged with the care of funds or property; time inspection by which the time books in the hands of the timekeepers and foremen engaged upon the work of all departments is checked; checking collections made by the disbursing officer from the record of claims

payable to the Isthmian Canal Commission. Examiner of accounts also the auditor for the zone. Created by Executive order Aug. 15, 1907, when the positions of general auditor and local auditor were abolished. **P-08**, 29, 30.

1909. Organization: Rearrangement of duties made Oct. 1, 1908, so that the examiner of accounts performs, in addition to the duties outlined previously, those of the disbursing officer, with the exception of the disbursement of funds, collection of accounts and claims, and issuance of coupon books and meal tickets. Property accounts were transferred to the Q. M. department. Treasurer appointed Oct. 1, 1908, to handle zone funds. Changes resulted in decreased employees and expense.

Examiner of accounts, duties: Division of accounts, in charge of the books of the Isthmian Canal Commission; classification of expenditures and statistical work; handling of bills due the Isthmian Canal Commission; and accounting for coupon books and meal tickets.

Voucher division, which handles the claims and accounts presented for payment.

Inspection division, which has charge of inspecting books and accounts of all employees having to do with the receipt and disbursement of money and the custody and issuance of coupon books and meal tickets, examining and checking time kept by foremen and in shops, and reporting the neglect or misuse of U. S. property.

The pay roll division, which examines and checks all rolls of the Isthmian Canal Commission.

Audit: Advance audit secured prior to payment.

Liability act: Claim officer of the Isthmian Canal Commission has been connected with the examiner of accounts' office, in connection with the employers' liability act May 30, 1908, subsequently modified by act Feb. 24, 1909. Classes under Isthmian Canal Commission given relief by Congress fewer than in any other branch of the service; hardship income cases. Delays caused through long distance, etc. Time would be saved through settlement of claims on Isthmus. **P-09**, 24, 25.

Disbursing officer, duties: In addition to securing, disbursing, and accounting for all funds paid out or collected, is charged with care and issuance of hotel and commissary books and meal tickets by the various departments of the Isthmian Canal Commission. **P-09**, 25, 26.

1910. Bookkeeping improvements made in the classification of expenditures and the compilation of statistics. Distribution of accumulated plant charges made; plant now shown in the expenditure accounts by divisions and by units of the work.

Four inspectors engaged inspecting accounts of bonded employees on Isthmus, and witnessing transfers. Cash accounts inspected and verified at regular intervals. Coupon and meal-ticket accounts inspected about once a month. Twice during the year cash in hands of disbursing officer counted. Money in hands of the treasurer of the Canal Zone verified.

For convenience of time inspection, Isthmus divided into 5 districts, with senior inspectors located at Ancon, Empire, Gorgona, Gatun, and Cristobal. Time inspectors increased from 41 to 46. Gangs on hourly basis inspected 3 or 4 times a week; some every day. Twelve men engaged in inspecting time keeping in all time keeping offices; examination made to see if pay rolls contain only amount of time on rolls; time of sickness, court attendance, etc., verified from certificates attached to rolls.

Claims of employees on account of personal injuries largely increased; paid on injuries, \$96,810.33; on death claims, \$21,053.22. Paid on meritorious sick leave, \$16,010.30. Separate pay roll established for compensation to injured employees.

The classes of persons under the Isthmian Canal Commission given relief by Congress are fewer than in any other branch of the service covered by law; has imposed hardships in some cases. Distance from Washington, etc., has caused much work which would not be required if claims settled on the Isthmus, where facts can be readily determined.

Examiner of accounts also auditor for Canal Zone government. More than \$1,000,000 kept on deposit in a bank in the city of Washington; principally money-order funds held pending settlement. Interest (3½ per cent), \$36,867.94, received on this deposit; credited as revenue of the Canal Zone for public improvements and schools. **P-10**, 39, 40.

1911. The number of bills rendered against employees and other individuals and companies reduced by improved methods of collection. Considerable decrease in monthly average of bills rendered; volume of business materially increased. Accounts of bonded employees charged with collection of revenues audited and balanced each month.

For the past 3 years coupon books and meal tickets issued by disbursing officer on requisition of bonded employees. Saving effected during the year by the adoption of uniform meal tickets of 30 and 40 cent denominations; 520,000 coupon books and 1,423,000 meal tickets issued. Proposition for sale of coupon books for cash under consideration.

Improvement made in handling claims, by consolidation of smaller accounts into one and the rendition of monthly claim; \$10,077,000

audited and paid; at the close of the fiscal year unpaid claims on hand, \$454,000.

Administrative examination of the disbursing officer's account made monthly. Careful permanent record maintained of unpaid salary and wages due employees of the commission record gradually increasing. Unpaid salary and wages June 30, 1911, \$217,081.86.

Supervision and direction of time keeping as questions relating thereto placed under examination of accounts; the effect a more uniform method among all departments and division of handling questions relating to time keeping; greatly improved form in which the pay rolls are submitted for examination.

The inspection of the accounts of all bonded employees continued during the year with force of 3 inspectors, a reduction of 1. Monthly accounts rendered by all financially responsible employees; accounts audited and balanced at close of each monthly period.

Time inspection increased because of field covered; gradually grown larger. Average of men engaged on this work, in addition to 5 senior inspectors located at Ancon, Culebra, Gorgona, Gatun, and Cristobal. On May 1911, senior inspectors reduced to 4; districts rearranged, with headquarters at Ancon, Empire, Gatun, and Cristobal. Average inspections daily, 11,363; in addition, 3,000 special reports.

Cash balance of disbursing officer verified; detailed count made Dec. 31, 1910, and March 31, 1911.

Under the existing agreement with the Republic of Panama whereby U. S. is to construct and maintain waterworks, and be reimbursed at expiration of 50-year period, with interest at 2 per cent per annum, there has been expended on June 30, 1911, \$1,461,303.3 in the city of Panama and \$1,225,922.50 in the city of Colon. Republic of Panama has been credited with \$568,690.45; balance still to be paid, \$2,118,535.36. Of amount credited, \$22,420.63 represents the water rental paid by Isthmian Canal Commission and Panama R. R. Co. in Panama and Colon and \$546,269.82 represents collections for water rentals.

Examiner of accounts also handles claims under employer's liability act; adjusted 1,611 claims developed from 1,573 injuries and 112 deaths. The sundry civil appropriation, Mar. 4, 1911, sec. 5, extended provisions of the injury compensation law to all employees under the Isthmian Canal Commission injured or killed, and provided that claims should be settled by chairman, Isthmian Canal Commission. Result, settlements made in considerably less time.

Accounts of all fiscal officers of zone audited and balanced each month; involved examination of 552 monthly accounts. Funds of the treasurer maintained in 2 banks in Washington and in 1 depository on Isthmus. Average monthly balance at Washington, \$981,620.75; on Isthmus, \$43,239.99, from

which \$27,763.40 interest received. P-11, 45, 46, 47, 48.

1912. The system of classified expenditures for construction of canal extended to include accounts for department of law, terminal facilities at Cristobal and Balboa, lighting and buoying the canal, inspection of lock gates, installation of lock machinery, emergency dams, and fortifications. Since establishment of method of absorbing plant charges, begun July 1, 1909, \$25,226,779.74 charged to construction costs up to June 30, 1912, leaving \$3,590,949.49 still to be absorbed. Classification of accounts recommended by the Commission on Economy and Efficiency for all U. S. departments would necessitate radical departure and confusion; recommended new system be not put in force on the Isthmus until after accounting method has been adopted for operation and maintenance of canal; approved by President.

Accounts of employees making collections audited. Bills against employees and outside parties for charges due the Isthmian Canal Commission increased; monthly average, 490.

Examination of disbursing officer's accounts made monthly. Check made of unpaid salaries and wages representing amounts earned by employees, not collected; balance, accumulating since beginning of work, \$238,634.02, June 30, 1912.

Under revised agreement with Panama for the construction and maintenance of waterworks, sewers, and pavements within Panama and Colon and for reimbursement to U. S., there were expended \$1,432,110.68 in Panama and \$1,297,566.04 in Colon, a total of \$2,729,676.72; during the same period \$757,025.76 reimbursed, of which \$219,163.92 was interest, leaving balance due U. S., \$2,191,814.88. Included in reimbursed amount is \$27,830.51, value of water used by Isthmian Canal Commission in the two cities.

Forty-nine bonded employees engaged in issuing coupon books and meal tickets; 593,900 coupon books and over 1,700,000 meal tickets issued. On June 1, 1912, the method of selling commissary books for cash by the Panama R. R. Co. was installed at several points, in addition to existing practice of issuing books for payment by pay roll deduction; reduced work of issuing clerks, increased volume of business in the commissaries during the early and latter parts of the month on the days when the issue of commissary books was prohibited. Purchase and issue of commissary books to issuing clerks transferred to Panama R. R. Co. on July 1, 1912; \$3,123,220.96 paid Panama R. R. Co. on account of commissary coupon books issued and collected by Isthmian Canal Commission.

Accounts of bonded employees charged with collection of funds inspected. A more complete and detailed checking of accounts of

post offices, hospitals, and Hotel Tivoli instituted, made necessary by increasing business and installation of postal-savings system. Effective Nov. 1, 1909, Illinois Surety Co. executed schedule bond covering employees of the Isthmian Canal Commission and the zone government who were required to give bond under the regulations; bond to run for 3 years. Arrangements made with surety company to continue bond in effect from year to year from July 1, 1912, at the rate heretofore paid—\$3 per thousand.

Claims audited and vouchers prepared 3,440, involving disbursements of \$10,440,047.25; over \$9,000,000 represents payments to Panama R. R. Co. Increase in claims largely due to payments to landowners and others in region to be occupied by Gatun Lake. Unsettled claims at end of year, \$114,176.99, of which \$73,107.05 included several large claims for land purchased but not completed for payment.

To largest division of office is assigned duty of auditing pay rolls of Isthmian Canal Commission and keeping up personnel file of gold employees. One hundred and twenty-one pay rolls each month; over 36,000 payments, involving approximate monthly disbursements of \$1,500,000. To this division is assigned duty of examining recommendations for sick leave; 5,141 cases; in payments, \$55,838.25.

In time-inspection division, districts reduced to 3; senior inspectors located at Ancon, Empire, and Gatun; reduction in inspectors made from 46 to 42.

Verification of cash balance in hands of disbursing officer made on Sept. 1 and Nov. 1, 1911; complete check, including count of all cash, made Dec. 15, 1911.

In accordance with sec. 5 of act of Mar. 4, 1911, 1,849 claims filed during year on account of injuries and 50 deaths—total, 1,899; 1,410 injury claims and 31 death claims allowed. Total amount paid during the year in these claims, \$259,993.14. From Aug. 1, 1908, to June 30, 1912, \$691,753.07 paid to employees for injuries received in course of employment, including sick leaves.

Congress has appropriated \$293,561,468.58 on account of canal work and chargeable against the authorized bond issue. To June 30, 1912, \$5,856,426.77 collected and returned to Treasury as "miscellaneous receipts," and this amount should be deducted from the total appropriations in order to determine the net amount available for actual canal purposes. On the other hand, Isthmian Canal Commission has received benefits from moneys collected which were not expected when the estimates of 1908 were prepared, namely, water rentals paid by Republic of Panama as a repayment of the amount expended in installing waterworks, sewers, and pavements in Panama and Colon, and the net receipts from sale of scrap. To June 30 Isthmian Canal Commission has had the use of \$625,654.54, received from the water rentals;

\$67,492.60, received from the sale of French scrap, and \$98,605.75, received from the sale of American scrap, or a total of \$791,752.89. Total amount available for canal work under its various departments to June 30, 1912, therefore, \$288,496,794.70.

The total zone revenues for year, \$370,272.81; expenditures, \$312,459.75. Increase in expenditures during year principally due to increase in construction and maintenance of roads and trails and payments made steamship companies on account of ocean transportation of mails from 1905 to 1912. Falling off in revenues, due to abandonment of some districts; as other towns are abandoned, revenues will continue to be reduced. Average monthly balance in Washington, \$1,121,707.64; on deposit on Isthmus, \$43,625.73; interest, \$20,784.96. P-12, 54, 55.

1913. Effective May 1, 1913, greater part of detail check made by disbursing officer of every voucher, pay roll and pay receipt discontinued; responsibility formerly carried by the clerks of the disbursing office for such check transferred to clerks in pay roll and voucher division of examiner of accounts' office. Effective Jan. 1, 1913, time-keeping division organized by consolidating the work of preparing time and pay rolls for various departments and divisions, and continued under this department until July 1, 1913, when it was transferred to the fourth division of the chief engineer's office.

The only change made in accounting system during year was extension of the classified expenditure accounts to provide for new operations, including construction of new buildings, electric transmission line, and clearing the lake, and a further separation of accounts for construction and maintenance of water-works and sewers to care for permanent water supply. Material and supply account closed at the end of the year and a new account opened, designed to provide a more exact record of material and supplies on hand and issued. Continuance of the method of absorbing plant and equipment charges resulted in distributing plant charges of \$27,550,635.24 to construction divisions to June 30, 1913, leaving to be absorbed \$1,941,488.61. Cash payments for materials and supplies furnished and services rendered adopted during the year. Collection of money due the Isthmian Canal Commission considerably reduced.

Total amount expended in city of Panama, \$1,626,267.58, and in city of Colon \$1,550,030.46, a total of \$3,176,298.04, including interest; this interest has aggregated \$270,733.72. At close of year \$975,439.71 reimbursed; included in this, \$32,785.01, value of water used by Isthmian Canal Commission in the two cities.

Purchasing and issuing commissary coupon books transferred to Panama R. R. Co.; work of department reduced but little; 60,790 hotel books and 1,363,100 meal tickets issued. In addition, \$3,235,122 worth of commissary books issued and collected on pay rolls.

Administrative examination of disbursing officer's accounts made monthly; periodical examination of fiscal officers' records of financial transactions and auditing of their accounts continued, involving complete check of records and cash and cash values in hands of over 200 officers. There were passed to disbursing officer for payment audited vouchers amounting to \$9,022,000 and pay rolls amounting to \$20,700,000. At close of business June 30 there were unaudited claims of \$57,197, the greater portion in favor of the Panama R. R. Co. Force assigned to inspection of time books reduced. A few cases of padded time books discovered; 5 or 6 negro timekeepers, foremen, and laborers convicted. One thousand eight hundred and nine claims for compensation on account of injuries filed, and 41 claims were filed on account of deaths—a total of 1,850; 1,452 claims for injuries allowed. Of the death claims, 21 were allowed; 4,715 cases sick leave allowed. Total amount expended during the year in settlement of these claims, \$224,071.72; total, Aug. 1, 1909, to June 30, 1913, \$915,824.79.

Congress has appropriated \$349,505,223.14 for canal construction, including appropriations contained in the act of June 23, 1913. Of this amount, \$10,676,950 for fortifications, of which \$4,870,000 were appropriated by act of June 23, 1913, and \$21,411.56 for relief of private persons. The balance, \$333,806,861.58, including \$16,265,393 appropriated by act June 23, 1913, appropriated for construction of canal and is a charge against the total authorized bond issue of \$375,200,900. This leaves \$36,394,038.42 available for appropriation. Actual cash balance on hand June 30, 1913, for the construction of the canal, excluding amount available for fortifications, \$20,673,904.79. Up to June 30, 1913, \$5,856,838.35 collected and returned to Treasury as miscellaneous receipts. This item represents the total amount appropriated by Congress which, after being used for miscellaneous purposes in connection with canal work, was covered back into Treasury and lost to canal appropriations.

The amount of revenues derived from rentals and taxation of zone decreased from \$259,759.68 in 1912 to \$212,266.83 in 1913. Disbursement of Canal Zone revenues increased from \$214,000 in 1912 to \$233,000 in 1913; increase being principally due to sanitary work in native villages and increased expenditure for maintenance of Canal Zone roads and trails. P-13, 58, 59, 60, 61.

1914. Department organized Apr. 1, 1914, in accordance with the provisions of the Executive order putting into effect the new organization, and consists of the auditor, Mr. H. A. A. Smith, who has supervision of the entire department and is in direct charge of the auditing and accounting work; Mr. J. H. McLean is in direct charge of disbursements, and Mr. T. L. Clear of all collections. Attempt made to revise system of accounting that has been in effect during the construc-

tion period so as to make it applicable to the operation of the canal. The assistance of the Treasury Department sought, and 2 committees visited the Isthmus; result, the approval of certain forms for use in connection with the rendition of public accounts. New classification of accounts established beginning with the fiscal year 1915.

Expenditures to June 30, 1914, in city of Panama, were \$1,761,328.49 and in city of Colon \$1,659,640.20; a total of \$3,420,968.69, including accrued interest. For work in Panama, this interest \$186,588.26, and for work in Colon, \$139,665.63. Reimbursed to the U. S., \$1,213,918.37; leaving balance of \$2,207,050.32 still due.

Forty-one thousand two hundred and thirty-three hotel books, valued at \$580,319.40, and 980,283 meal tickets, valued at \$353,253.20, issued. In addition, \$2,888,437.50 collected on the pay rolls for commissary books issued to canal employees.

Examination of accounts of 225 officers and employees having collection, custody, and disbursement of money made.

Total disbursements on Isthmus on account of salaries and wages of employees, etc., \$27,749,135.69. Disbursements in U. S., \$14,614,403.71; total of \$42,363,539.40.

Total collections during year, \$8,106,469.42; of which \$4,718,024.30 repaid to appropriations, \$379,365.02 deposited as miscellaneous receipts, and \$2,963,148.96 collected on account of Panama R. R. commissary. Balance, \$27,931.14, collected for railroad, bonding company, and other contractors.

Inspection of time books and the work of time-keepers in the field continued.

Property accounting transferred to this department on Jan. 1, 1914; for 6 months that it had charge, records maintained of purchases and sales of quartermaster's stores, and material and supplies received of value of \$7,887,431.66, of which \$4,840,245.92 were for stock and \$3,047,185.74 were for material, supplies, and equipment delivered direct to construction divisions. During this period issues from storehouses amounted to \$5,423,585.41; amount received from direct sales to outside interests, \$142,377.56.

Separate business of zone reduced materially during year. Revenue derived from rentals, taxation, etc., decreased from \$212,266.83, 1913, to \$168,076.64, 1914. Audited expenditures, \$261,064.17. In operation of post offices there was decrease in number of orders, 238,316, 1913; 198,009, 1914.

Canal clubhouses received total revenue of \$132,624.05 and expended \$133,086.95. Balance June 30, 1914, clubhouse funds amounted to \$26,513.96; outstanding obligations, \$10,534.53.

Provisions of injury compensation act May 30, 1908, superseded Apr. 1, 1914, by Executive order of Mar. 20, 1914, promulgated in accordance with authority contained in sec. 5 of the Panama Canal act. Since Aug. 1, 1908, the sum paid out in injury claims amounted to \$1,145,085.71. For the first 3 months under

the compensation order of Mar. 20, 1914, \$4,283.83 expended. This does not represent the total that will be allowed on account of injuries received during the period, as no allowances were made on account of long-continuing periods of disability nor on account of death claims.

Congress has appropriated total of \$374,048,194.59 for canal, including appropriation continued in the sundry civil act approved Aug. 1, 1914. Of this amount, \$12,050,825 for fortifications and \$22,508.01 appropriated for relief of private persons, so that there were \$361,974,861.58, including the amount covered by the sundry civil act of Aug. 1, 1914, appropriated for construction of canal and its adjuncts. Except for portion used in maintaining and operating the canal, to which \$161,608.52 were charged, and \$2,000,000 appropriated for colliers, the amount chargeable against the total authorized bond issue of \$375,200,900 is \$359,813,253.06; up to June 30, 1914, \$6,254,203.37 collected and returned to Treasury as miscellaneous receipts, so that the cost of the canal, including appropriation of Aug. 1, 1914, stands at \$353,559,049.69. P-14, 52, 53, 54.

Accounts, Examiner of. (See Accounts.)

Acetylene.

Plan for use in beacons, P-12, pl. 77.

Acknowledgments.

Act relating to acknowledgment of land deeds, P-11, 560.

Acts, P-11, 543; P-12, 593; P-13, 605; P-14, 553. (See Nos. 28, 253, and 276, p. 2362, 2368 of this Index.)

Accounts, P-11, 558, 559.

Appropriations, P-11, 549; P-12, 595; P-13, 607; P-14, 330, 553.

Allens, eliminating act from operation of 8-hour law, P-11, 560, 562.

Bonds, Panama R. R. contract with canal, P-11, 581.

Bonds, Panama R. R.; purchases of, P-11, 563.

Bonds, employees and officers, P-11, 574.

Bonds, issue of, for cost of canal, P-11, 551, 558, 573, 578, 580.

Bonds, acting disbursing officer, P-11, 572.

Claims, McClintic-Marshall Construction Co., P-14, 558.

Contracts, continuous; authorizing, P-11, 574.

Deficiency acts, etc., P-13, 607, 608.

Diplomatic and consular service, P-13, 607.

Earthquake sufferers; authorizing Isthmian Canal Commission to relieve, in Costa Rica, P-11, 575.

Employees, prohibiting increase of, P-11, 580.

Employees, injured; relating to compensation of, P-11, 568, 569, 581.

Estimates, annual; requiring, P-11, 559, 577.

Exposition to celebrate opening of Panama Canal, P-11, 578; P-13, 608.

Fleet, visiting, P-14, 559.

Fortifications, P-11, 550, 580; P-12, 597; P-13, 611; P-14, 65.

Hours of labor, etc., P-12, 595.

Isthmian Canal Commission, creating, P-11, 551.

Isthmian Canal Commission, acts and resolutions of; approved, **P-14**, 599.

Insurance, Panama R. R. prohibited from carrying, **P-11**, 566, 577, 580.

Lands, acknowledgment of deeds, **P-11**, 560.

Lands, survey of zone, **P-11**, 570, 576.

Lands, use, control, and ownership of, in zone, **P-11**, 569.

Lock canal, prescribing, **P-11**, 560.

Marine quarters, **P-13**, 607.

Material available to be used on Alaska railroads, **P-14**, 556.

New Panama Canal Co., purchase of rights, **P-11**, 549.

Officers or men of the Army and Navy retired, compensation, **P-11**, 573.

Opening, maintenance, and operation of the canal, and sanitation and government, **P-12**, 599; **P-14**, 557, 559.

Opium imports, **P-14**, 555.

Panama R. R., subsidy to U. S. abolished, **P-11**, 577.

Panama R. R., remitting payments to U. S. for equipping, **P-11**, 580.

Panama R. R., purchase of, by U. S., **P-11**, 550.

Pay for supplies; deductions from pay, **P-11**, 564.

Persons entering U. S. from zone; status, **P-11**, 558.

Prohibiting longevity and lay-over allowances, **P-11**, 571, 577, 580.

Purchases of material to be from lowest responsible bidder in U. S., **P-11**, 560.

Rights granted to U. S. by Republic of Panama; payment, **P-11**, 555, 573, 575.

Sale of old material, **P-11**, 577, 581.

Seamen, relief of, **P-14**, 558.

Spooner Act. (See Spooner) **P-11**, 549, 550.

Treaties and acts relating to canal, **P-11**, 543.

Zone, providing for government, **P-11**, 558.

Admeasurements, Board of, P-14, 262.

Administration.

Building (office), Panama, **P-05**, 28.

Building, Ancon, **P-07**, 80, pl. 95.

Building, Culebra, **P-07**, 8, pl. 1.

Buildings, permanent; erection, **P-13**, 186, pl. 54; **P-14**, 312.

Estates, **P-06**, 34. (See Estates.)

Expenses, distribution of, **P-10**, 234; **P-11**, 215; **P-12**, 309; **P-13**, 287; **P-14**, 455.

Administration, Civil. (See Civil Administration.)

Aeration.

Mount Hope Basin, **P-14**, pl. 17.

Agglomerate, Volcanic.

Character of, Isthmus, **P-13**, 582, pl. 70.

Agriculture.

Possibilities of the zone, **P-13**, 567.

Air. (See Meteorology.)

Air and Water Service, P-07, 83; **P-10**, 157, 270, 272; **P-11**, 152, 241; **P-12**, 167, 275; **P-13**, 155; **P-14**, 87.

Air Drills. (See Drills.)

At work, **P-07**, 40, pls. 15, 16.

"Ajax." (See Cranes.)

Allens.

Act eliminating from operation of 8-hour law, **P-11**, 560, 562.

Allanca, S. S.

Lockages, **P-14**, 116.

Allowances.

Act prohibiting longevity and lay-over day allowances, **P-11**, 571, 577, 580.

Alternative Line. (See Line, Alternative.)

Gatun-Bohio. (See No. 18, p. 2361 of this Index.)

Amber.

Deposits, zone, **P-13**, 577.

America, Central and South.

"All American" cables, **P-07**, 148.

American Occupation.

Reviving the commerce and industry of the zone and adjacent cities, **P-05**, 53.

Americans. (See Quarters.)

America, South. (See Quarantine.)

Analysis. (See Materials.)

Anchorage. (See Basins; Gates; Locks.)

Ancon.

And vicinity, **P-07**, 30, pl. 8.

Ancon, S. S.

Lockage, **P-14**, 119.

"Ancon," Suction Dredge.

Coaling at dry dock, **P-07**, 48, pl. 35.

Animals. (See Corrals.)

Annual Estimates. (See Estimates, Annual.)

Apparatus, Mechanical. (See Inspections.)

Approaches. (See Locks.)

Appropriations and Expenditures. (See No. 229, p. 2366 of this Index.) **P-04**, 75; **P-06**, 48; **P-09**, 152, 239; **P-10**, 346; **P-11**, 394, 395, 396, 549; **P-12**, 418, 419, 595; **P-13**, 418, 420, 609; **P-14**, 330.

TABLE A.—APPROPRIATIONS BY CONGRESS. (See P-99, 10; P-14, 330.)

| 1899.— | | | | |

Index.)

1909. Gatun Locks, excavation: Steam shovels and a suction dredge at work; 933,546 c. y. in the dry and 479,950 c. y. in the wet removed; trenching for curtain walls in progress at end of year.

Foundations: Tests have proved that the soft sandstone has sufficient resistance to bear safely the greatest loads that will be brought on it by the structures. Curtain walls to prevent any underflow. Holding qualities of sandstone tested by application of power to pull out French rails embedded or anchored into it; result, decided to give thickness of 13' to the concrete floor of the locks between the upper miter sill and the sill for the intermediate gates, and to use old French rails on hand for the anchorages. Rails being placed. Sumps also planned with telltales. In the forebay between the sill for the emergency dam and the first miter sill of the lock a 20' thickness of concrete has been adopted for the floor.

Plant, lock construction: Installed. Sand, stone, cement, to be brought in barges up the French canal to unloading docks on either side of the east division, to which a channel has been dredged. Cement shed with capacity of 100,000 barrels. Electric cranes used. Sand and stone barges tie up at west dock; unloaded with single and duplex cableways on towers; materials transported thus to stock piles with capacity of about 200,000 c. y. stone, and 100,000 c. y. sand.

Concrete mixing and placing: Electric railway from piles to cement shed, thence to mixers; automatic cars; cableways convey to deposit point; forms of steel.

Power, electric: Plant located in a temporary house, to be moved finally to spillway.

Porto Bello quarry: Plant installed for crushing stone. Machine shop equipped. Expected that plant will furnish 2,400 c. y. daily.

Sand supply: Nombre de Dios the source selected. Arrangements made for water supply, and for accommodations of employees. Dredging to secure safe harbor, and channel to sand deposits; sand dredged and sent to Gatun for concrete needed in spillway construction. Clamshell dredge to be used; under construction.

Transportation plant: 3 tugs and 14 barges, each with a capacity of 600 c. y., provided for transporting sand and stone to Gatun. **P-09, 3, 4.**

Gatun Dam, plan: Cross section changed, as noted in 1907 report, to make slopes flatter. Dam to be constructed of 2 rock piles 1,200' apart, and made of spoil from Culebra Cut, lock site, and excavation for the spillway, between which piles selected material to be deposited hydraulically, forming impervious part of the dam.

Operations: Work on south rock pile done until it reached approximate elevation of 58' crossing the Chagres River and the French

canal. Before north pile was started a suction dredge removed deposits accumulated in the Chagres River over the 1,200' length, and also over same distance in the French canal; this done, the north rock pile was started across the channels, and water areas thus inclosed were pumped out, sheet piling up to sea level permitting the accomplishment of this.

Slip, notable: When the water level in the French canal had been reduced to -10', on Nov. 20, 1903, a slip of a portion of the south toe occurred at the intersection of the rock pile and the east bank of the French canal. The depression in the crest was about 20'; length affected, 200'; a track on the north slope at about elevation 30' moved northward about 10'; the track on the south side, however, at about the same elevation was undisturbed. "The slip was of no more significance than those which had occurred on the railroad embankment in the vicinity of Gatun."

Special examination of dam, etc.: Because of a feeling of uneasiness in the U. S. concerning what the aforesaid slip suggested, the President sent the Hon. W. H. Taft (President-elect), with Engineers F. P. Stearns, A. P. Davis, H. A. Allen, J. D. Schuyler, I. Randolph, J. R. Freeman, and Allen Hazen, to report upon the matter. Plan for dam with uniform slopes to top submitted to them, placed at 105' above sea level. Reported there would be no seepage, that materials to be used would make a tight, stable, and permanent dam; that type of dam had unanimous approval; that dam more than a third of a mile in horizontal thickness at its base, and "the design upon which the work is now being prosecuted abundantly fulfills the required degree of stability, and goes far beyond the limits of what would be regarded as sufficient and safe in any less important structure"; could readily understand "how incorrect deductions may have been drawn from these occurrences" (slips of material piled at a steeper slope than would ultimately be the case); considered proper height for the crest, and concluded it could be safely reduced 20'; of opinion that the sheet piling proposed under the base of the dam could be safely omitted; recommended continuation of narrow cut-off trench to be filled with sluiced material, through upper earth stratum; changes thus proposed would facilitate work of construction and reduce cost; "a full study of all the data at hand and of the materials, and of the plans that are proposed with the above modifications leaves no doubt in our minds as to the safe, tight, and durable character of the Gatun Dam."

Dam construction: South rock fill raised to elevation 58; from this elevation material was so dumped on the upstream side as to secure the proper slope. West of the spillway spoil from various sources was dumped east of the west diversion through which the Chagres dis-

charges up to reference 24. Embankment inside north rock toe carried up to plus 35 east of the spillway; at the close of the year three 20' suction dredges depositing material over area between rock piles, which had been cleared of all vegetation and trenched to make proper bond; this fill had reached average elevation of plus 16. Total of 2,501,372 c. y. placed in dam during year. P-09, 6, 7, 8.

Excavation, through Spillway Hill, practically completed.

Gatun Lake, beginning of: Concrete floor below area to be occupied by the dam laid. As soon as side walls and floor are finished, and provisions made for construction of concrete dam, earth dam can be carried across west diversion. This will cause the river to discharge through the spillway channel. Closing the diversion will be the first step toward the formation of the Gatun Lake, the rising level of which will be subject to control by means of culverts with valves placed at a low level in the spillway dam.

Spillway: The concrete channel below the dam is 960' long and 285' wide between the walls. Floor varies in thickness from 1' at the lower extremity to 4' near the dam; side walls will average 27' in height. Sand and stone brought from Nombredé Dios and Porto Bello to temporary dock on the French canal below the dam, where two 2-yard mixers were installed. Concrete taken to site by narrow-gauge road; average length of haul, 4,520'. Floor slopes from elevation 10 to elevation 2.2; laid in monoliths 30' by 20'. Side walls in 35' sections. Regulating works will permit discharge of 140,000 cu. ft. per second, when surface of lake is at plus 87.

During year 359,821 c. y. removed from Spillway Hill, and placed on dam. There were laid, also, 30,464 c. y. concrete.

Mindi Hills section: Excavation started by steam shovels; expected that when shovels reached sea level dredges would have to continue the work because of the French canal being so close to the area, and the Mindi River also. Found that small dike and clay overlay were good protection against seepage. Excavation in dry continued. One shovel at 32' below sea level, or 9' above bottom line. Floods pumped out. Total amount removed during the year, 615,146 c. y., of which 448,287 rock.

Mindi to deep water: Dredging fleet (1 sea-going suction dredge, two 5-yard dippers, and 3 French ladder dredges) removed a total of 6,039,934 c. y. (427,005 c. y. being rock).

Rock blasted: Holes averaging 15' apart churned to 50' below sea level; loaded with dynamite.

At close of year nearly 3 miles of channel (41') completed.

Dredging done also in connection with other work, amounting to 155,073 c. y. and 49,689 c. y. rock.

Limon Bay Breakwaters: Breakwaters parallel to the axis of the channel proposed by Board of Consulting Engineers (1906), for protection

against northers and filling of channel. Plans changed to gain dissipation of entering waves, etc.

Plans and estimates prepared for 2 breakwaters; 1 about 10,000' long from Point Toro in a general northeasterly direction, and the other about 3,500' long running out from Manzanillo Bay, in a northwesterly direction. Exact location of the works to depend on investigations in progress. West one to be built first; easterly one may not have to be built; future to determine.

Marine shops at Cristobal added to and partly enlarged. Great amount of work done. P-09, 8, 9.

Municipal building and sanitary work—Gatun water supply: Existing source the Gatun River; supply never satisfactory; formation of Gatun Lake, etc., makes necessary a new source of supply; to be obtained from storage reservoir created by a dam across the Agua Clara Creek, east of the new village of Gatun.

Reservoir dam: Rock and earth fill, with a concrete wall. Capacity behind it of 612,000,000 gallons. Work on it begun.

Roads: Road from Gatun to Mount Hope continued. Considerable street, road, and sewer work done, particularly in new village of New Gatun.

Buildings: 33 of various kinds built.

Sanitary work: Regrading, cleaning, and widening of ditches. P-09, 9, 10.

1910. William L. Sibert, Corps of Engineers, U. S. Army, as division engineer.

Gatun Locks: Excavating locks continued by steam shovels, and by dredges, resulting in removal in lock chambers of 3,965,699 c. y. in the dry and 435,178 c. y. in the wet. In addition, 646,520 c. y. of material removed in auxiliary work, including dredging in French canal. Excavation in upper locks completed, including trenching for curtain walls and for lateral culverts. With exception of some trenching, excavation for intermediate locks completed. Excavation for lower locks undertaken; 375,000 c. y. remain to be removed. In preparing foundations for concrete, including excavation for trenches for lateral culverts, 33,343 c. y. removed during past 6 months. Anchorages in upper locks for tying concrete to natural rock completed, as well as the filling of curtain wall trenches around upper part of upper locks.

At close of 1909 unloading cableways in partial operation. Entire plant completed in time to permit laying of concrete Aug. 24.

Unsatisfactory operation during early stages of their use resulted in construction of additional unloading plant, consisting of sand bin having capacity of 200 c. y., so arranged as to feed into automatic cars, and 2 rock bins having capacities of 300 and 200 c. y.; derricks were erected for unloading sand and rock from barges. These supplemented by stiff-leg derrick erected at Mindi, with docking facilities, for unloading sand and stone from barges to

cars; when floods in Nov. prevented use of French canal by tugs and barges, arrangements made for unloading barges at Dock 13, using locomotive crane. Mindi plant in service Nov. to June, and plant at Dock 13 from Dec. to Apr. To deliver material unloaded by these plant additions to stock pile, and to unload in stock pile sand from Pacific division, a trestle 179' long constructed over east sand tunnel.

Unloading plant operated 24 hours per day since Apr., when searchlights were installed. Material handled, 2,458 c. y. large rock, 358,665 c. y. crushed stone, and 155,458 c. y. sand; unloading cableways handled 314,854 c. y. crushed stone and 138,813 c. y. sand.

Cement deliveries by Atlas Portland Cement Co. commenced July, 1909, and with cement shed full, the difficulties met with in operation of plant caused supply to accumulate faster than could be used. Rather than stop deliveries, instructions issued to lay as much concrete as possible, and for erection of auxiliary plant. Work was prosecuted daily, including Sundays, until Nov., when Sunday work discontinued. On Sept. 6 a 12-hour day for permanent plant instituted, and continued throughout the year.

Auxiliary plant, two 2-yard mixers similar to those used in the permanent plant, began operations Dec.; continued on basis of 8-hour day.

Permanent plant laid 409,381 c. y., including large rock placed in concrete, and auxiliary plant, 104,422 c. y.; total, 513,803 c. y. Of total amount of concrete to be placed in Gatun Locks, including the approach and wing walls, amount remaining is 1,532,297 c. y.

Average cost of the concrete per yard in place for the year was \$7.355, including plant.

With view to reducing cost of concrete, instructions issued Nov. to embed large stone in concrete to about 20 per cent of mass; up to close of year aggregated a total of 10,756 c. y. Stone selected from material shipped from central division for toes of the dam, and 2,458 c. y. of large stone procured from Porto Bello quarry in May and June. On account of excessive cost of the latter, \$6.284 per c. y. delivered at locks, this source of supply abandoned.

Collapsible steel forms used throughout for main and lateral culverts, and steel tower forms used for side and center walls.

Difficulty experienced in handling water as excavation of lock increased; during heavy rains in Nov. and Dec., 1909, pumps unable to keep down inflow. Two additional 12-inch pumps ordered.

Foundation for 150' of south approach wall put in. To the south of this section the ground is low, requiring a fill; about 90 per cent of this work completed.

Stone and sand: Crushed stone for concrete of locks and spillway obtained from Porto Bello quarry, which was developed during year with single face length of 2,500' and height

of 140'. To overcome delays, and to increase output, a No. 21 crusher ordered in Nov.; under erection; 12-hour working day increased to 16 hours Dec. 27 by operating two 8-hour shifts; continued during remainder of year.

Total amount quarried and crushed, 549,678 c. y. New pressure pump installed and pipe line laid for doing the necessary stripping by hydraulic process. Two boilers, a dynamo, engine, and condenser were also installed. Wireless station erected and clubhouse and commissary building constructed.

Sand obtained from Nombre de Dios and from Pacific division. On Apr. 8 fire destroyed 73 buildings; replaced by new buildings in rear of Nombre de Dios. Dredge "Nombre" sank in Sept. and raised in Nov.; converted into 12-inch pipe-line dredge; began pumping Mar. 1, moving toward deposits in the town. In addition, sand obtained by clamshell dredge temporarily mounted on a barge, by locomotive crane, and by dipper dredge "Chagres" operating until removed to Limon Bay in Dec. Total sand obtained from Nombre de Dios, 187,123 c. y. During year, 101,748 c. y. transported from Balboa docks in Pacific division and delivered in stock pile at Gatun.

For transportation of sand, stone, and cement, 3 tugs, 1 stern-wheel towboat, and 14 barges in use. Four additional barges under contract.

Gatun Dam: Prior to Jan., 1910, operations in construction of dam practically limited to portion between locks and Spillway Hill. Decided in Jan. that larger amount of material for toes should be procured from central division. Additional steel dump cars ordered.

Discharge of Chagres River through west diversion continued until Apr. 25, when work in spillway had been advanced to permit its use for this discharge. Efforts then concentrated toward filling in toes crossing west diversion. Some minor slips; none of importance.

At close of fiscal year, the north and south toes of dam east of Spillway Hill had reached 65' above mean tide, and hydraulic fill between the toes 51'. West of Spillway Hill the north toe carried to plus 30, and south toe to plus 35. Three dredges were pumping hydraulic fill into the west section, 2 from south side and 1 from north, and a fourth dredge was put, June 28, on east portion of the dam. Total amount placed in dam during fiscal year, dry fill 2,577,234 c. y., hydraulic fill 2,933,175 c. y.

Auxiliary work consisted in preparing west valley for reception of hydraulic material by clearing and stripping off top soil containing roots, excavating cut-off trench along axis 10' wide and 5 to 10' deep, and a bonding ditch along foot of western ridge. Surface of low-lying areas plowed. Preparatory work required excavation of about 112,000 c. y. over area of 62 acres. Area of 138.45 acres south

of dam over which dredges will operate in securing interior fill thoroughly cleared and grubbed. Area of 51.36 acres to north of dam cleared for same purpose. 7,486' trestles constructed during year.

Excavation for spillway continued during the year, removing 127,210 c. y. Excavation for foundation of spillway dam completed, except at extreme end; that for curtain, side walls, and floor fully completed. Work on floor and side walls continued; 53,632 c. y. concrete placed, at average cost for last 6 months of the year of \$8.602 per c. y. By Apr. 25 side walls, floor, and curtain walls completed, and foundation of dam sufficiently advanced to warrant turning Chagres River through spillway. Time lost owing to excessive floods, Nov. and Dec. As foundations of dam placed at elevation plus 10, and other channels of the river cut off, lake has been backed up so that its surface stands at from 16 to 20' above sea level.

Material carried to toes on west portion of dam by trestles in prolongation of toes, across channel through the spillway; as trestles are liable to be carried out during flood season, a permanent bridge across spillway constructed, consisting of 6 spans on concrete piers.

Chagres River passing through west diversion had access to the French canal, and silting resulted; necessity for closing passage; failure to do so before high water of Nov., 1909, caused considerable silting of French canal and main channel in Limon Bay, and interfered seriously with movement of sand and stone to Gatun. Dec. flood took out what was accomplished on the dam or levee in interval between floods. Work finally undertaken in Mar.; plan contemplates levee connecting Spillway Hill with Mindi Hills, having elevation of plus 25 at spillway, and sloping to plus 21 in a mile; length to be 1½ miles; 126,000 c. y. of material placed.

Channel between Gatun Locks and the Atlantic Ocean: Excavation in the dry in Mindi section continued until Nov. 20, when work was suspended due to the cut being filled by high water in Chagres River, which had access to French canal. There were excavated in the dry 91,572 c. y. earth, and 233,144 c. y. rock. Deepest part of cut had reached 42' depth below sea level at time work was suspended.

Dredges in operations between Mindi Hills and Caribbean consisted of 20-inch suction sea-going dredge "Caribbean"; 5-yard dipper dredge "Mindi"; three French ladder dredges, and dipper dredge "Chagres." Dredges removed 4,556,375 c. y. of earth and 399,285 c. y. of rock from canal prism, at average cost of 23.60 c. per c. y. There were also handled 3,206 c. y. of earth from approaches to Gatun locks, and 69,844 c. y. of earth and 55,036 c. y. of rock from French canal. Dredges also removed total of 247,537 c. y. of earth and rock from Cristobal ter-

minals, and 501,928 c. y. of earth and rock from approach channel leading from canal to Cristobal Harbor. Total silting between miles 1 and 2, 493,365 c. y., and fill for the year in mile 3 amounted to 461,922 c. y.; total fill during year estimated at 3,500,000 c. y., of which 550,000 c. y. resulted from Chagres River flood in Nov., 1909.

An old French hull, overhauled and fitted with 8 Star well drills, was worked successfully on subaqueous drilling. Dry-dock shops enlarged to provide for installation of additional machines, and the fleet of dredges, barges, and tugs in charge of the Atlantic division was maintained.

Breakwater: The location of west breakwater for protection of Limon Bay and canal channel through these waters definitely fixed Mar. 10, 1910, after examinations by soundings and borings covering extended area. Plan originally contemplated breakwater running out to a 44' depth. Decided to adopt the plan, because sufficient protected area beyond 40' contour would be obtained, and because of economy.

Preliminary work toward laying of tracks, clearing land, construction of quarters, and establishment of permanent water supply undertaken preparatory to construction of trestle for actual work of building the breakwater.

Municipal improvements: Construction of the Agua Clara Reservoir, with exception of filter plant, continued; completed during year at total cost of \$202,147.05, exclusive of the filters. Pumping station on Gatun River in operation until May 28, 1910, when supply was furnished from new system. New village of Gatun supplied with water from new system, and about two-thirds of water service required completed.

Sewer system for New Gatun completed, and progress made toward installation of plumbing.

Mount Hope-Gatun road completed. Road fenced on both sides from Mount Hope to Mindi, 5½ miles. Additional roads constructed about Gatun facilitate access to commissary and corral.

Condition of water in reservoir at Brazos Brook excellent. Owing to slight settlement of dam and dikes, they were raised to elevation 55, 1,715 c. y. of earth being required. Repairs made to concrete apron under 48' waste pipe.

To prevent erosion o. beach at Cristobal by wave action from Limon Bay, 173 concrete blocks made and placed in line along beach. Municipal improvements undertaken in Colon. Sanitary work consisted of constructing new drainage ditch 500' long; on an average 8,200' of ditch regraded, cleaned, and widened each month. P-10, 6-14.

1911. Gatun Locks: During year excavation of lower lock practically completed to include location of caisson sills. 475,875 c. y. removed

by steam shovels. Original estimated amount increased by reason of slides in lower lock, especially on east side, and at north end of east side wall it was necessary to go to 66' below sea level to secure suitable foundation. Excavation to north of caisson sills will be done by dredges; to prevent water from flooding lock while excavation in progress, concrete dam 50' high projected, at estimated cost of \$30,000 for construction and removal. In preparation of foundations for locks there were removed by shovel, crane, and hand 152,582 c. y.

Construction plant modified by changing automatic railroad from third-rail system to trolley system, resulting in more satisfactory service. The sand bin was taken down and rebuilt farther to the north on same level with stone bins previously erected. Derricks which had been used for unloading at Mindi moved about Jan. 1 to vicinity of cement shed. Erection of additional derrick, making 5 derricks, all told, and rock screen completed Feb., and used for supplying screened stone for reinforced concrete work and for making concrete piles. Auxiliary plant continued in use at original location, but part of narrow-gauge equipment, formerly operated in connection therewith, employed in carrying concrete supplied by permanent plant through chutes to places in the floors and walls where concrete was required.

During year the unloading cables were operated for 24 hours per day, except Sundays; handled 500,550 c. y. of crushed stone and 241,858 c. y. sand. Material handled during year by average of 3.93 derricks, operated on an average of 19.12 hours per day, was 294,665 c. y. of crushed stone and 166,606 c. y. of sand; a total of 461,271 c. y. Major portion of material unloaded by derricks was used at auxiliary plant. Derrick and rock screen furnished 2,003 c. y.

During year 945,525 barrels cement received into storehouse; in May, 1911, bags substituted for barrels. During year an average of 6.08 of the eight 2-yard mixers installed in the construction plant furnished 602,851 c. y. of concrete. Two auxiliary plant mixers operated on average of 9 hours a day, except between Sept. 21 and Nov. 5, 1910, when they operated on 12-hour basis, and mixed 226,476 c. y. Four $\frac{1}{2}$ -yard mixers purchased and, together with small amount mixed by hand, produced 10,175 c. y.

Product of construction plant mixers was placed by cableways or transferred by chutes to narrow-gauge equipment, from which the concrete was dumped in place. Cableways operated 12 hours per day, handling 616,661 c. y. concrete and large rock. Narrow-gauge equipment handled 286,265 c. y. concrete and large stone. Total masonry (concrete and large stone) laid by construction plant, auxiliary plant, portable mixers, and hand aggregated 911,137 c. y. Stone laid in concrete selected from material taken to Gatun from

Culebra Cut. On basis of estimated amount of concrete required in Gatun Locks, 2,095,000 c. y. masonry work at close of year 68.34 per cent completed.

Backfilling in rear of side walls of all the locks partly placed during year, that for east side of upper lock being completed sufficiently to form storage yard required by gate contractor. Backfilling to amount of 535,669 c. y. accomplished during year; 2,717 c. y. filling were placed in center wall. Ground adjacent to lower locks lower than walls and slopes toward the north so as to necessitate trestles for carrying cableway tracks; these have been built; will be utilized in making fill in rear of lock walls. To protect lock pit against material sliding into it, toe wall constructed along east side and backfilled.

Arrangements made for construction of concrete piles for foundations for upper or south middle approach wall; to be driven into fill, which was partly completed at beginning of fiscal year, extending out to intersection of center line of locks with old east diversion channel; fill completed. 31,060' of piling constructed of improvised reinforcement and 8,196' driven. Sand obtained from Pacific division. Owing to difficulties experienced with longer piles, substitution of creosoted for concrete piling under consideration.

Stone and sand: Crushed stone for concrete locks and spillway obtained from Porto Bello quarry. The single face which had been developed during previous fiscal year increased, with result that its length was 2,600' and maximum height 170'. Shortly after plant was placed in operation, Mar. 2, 1909, it was manifest that the largest crushers, No. 9, could not economically perform work because of difficulty and expense in reducing stone to proper size. A No. 21 crusher, ordered Nov., 1909, installed and put into operation Sept. 4, 1910. Difficulties experienced with the pan conveyors were remedied after they were remodeled and laid on heavier tracks. Larger crusher receives stone of maximum size handled by steam shovels. Changes resulted in increasing capacity of plant and reducing cost of production. Stone crushed during year, 864,033 c. y. Up to Sept. 17, quarry operated on basis of 2 shifts, or 16 hours per day, on which date 12-hour day adopted and continued until Jan. 16, when working day was reduced to 10 hours, and on Feb. 15 normal working day of 8 hours adopted. Material transported to Gatun in barges, whence transferred to stock piles. Porto Bello quarry also to supply rock needed for outer stone or armor of breakwater at Toro Pt. Necessary plant for this purpose ordered and wharf at Porto Bello under construction.

Sand obtained from Nombre de Dios by means of 2 cranes and 3 dredges, and from Pacific division. At Nombre de Dios the sand procured from channel and from area occupied by buildings destroyed by fire of Apr. 8, 1910. Buildings replaced in rear of town at cost of

\$9,555.05.. Cranes and rolling stock removed in May. Sand obtained, 441,919 c. y., transported in barges to Gatun, whence transferred to stock piles. Pacific division furnished 17,319 c. y. sand.

For transportation of sand, stone, and cement 4 tugs, with occasional service of a fifth, 1 stern-wheel towboat, and 18 barges in use; 4 additional barges received.

Gatun Dam: At beginning of year north and south dry fills of east portion of dam, extending from locks to spillway, had reached 65' above mean tide, and hydraulic or impervious portion between them carried to 51'. At close of year the dry fills raised to 85' and hydraulic fill to plus 73. On July 1, 1910, north and south dry fills of portion on west side of spillway were at 30 and 35', respectively, and intermediate hydraulic material at plus 16; material added during year to make elevations at close of year plus 60, plus 67, and plus 57.3, respectively. In securing this increase in elevation of earth portion of dam cross sections show 2,060,186 c. y. dry material placed in structure; also, that dredges delivered into interior portion of dam 3,758,-870 c. y. In other words, total increase during year was 5,819,056 c. y.

Amounts of material noted as resulting from cross-section measurements of June 30, 1910, and June 30, 1911, differ from aggregate amounts reported monthly as having been placed in the dam, and on which the unit costs are computed, by 1,109,619 c. y. Based on monthly reports of materials placed in the dam, the cost for year averaged \$0.3813 per c. y. for dry fill and \$0.2289 per c. y. for wet fill. The increase between these costs and those that necessarily result from the decrease in quantities shown by the cross sections will be accounted for in determining final cost of the work.

New trestle built across spillway channel at elevation 45 to give easier access to dry fill of west portion of dam, and also to replace old one in bad condition. To handle expeditiously and economically increased supply of material from Culebra Cut permitted by additional cars, an extension of track system made; at close of year there were 21 miles of tracks connected with construction of dam and auxiliary works.

Material for dry fill obtained from Culebra Cut, from lock site, from Mindi, from spillway, and from borrow pit below or north of the dam; based on car measurements, the quantities from each locality amounted to 2,065,272, 320,599, 8,179, and 332,044 c. y., respectively. Service from Culebra interrupted for 1 week during Dec. flood.

Hydraulic fill obtained from above and below dam and placed by 5 suction dredges, 3 of them operating practically throughout the year, 1 operating for 4 months, and the other for over 2 months. From Sept. 16 to Nov. 11 hydraulic filling of east section suspended to enable concentration of available dredges

on west portion of dam, to bring fill up to plus 30 before flood periods, and to permit drying out of east part of dam. From Jan. 1 to Apr. 15 pumping into east portion discontinued to determine to what extent hydraulic fill would dry out and solidify. Tests showed greater solidity on north side of fill and when operations were resumed more of sandy material was pumped along opposite side. While gradual solidification took place during dry season, central portion showed little change; unless this soft material is crowded out during subsequent construction, or hardened by addition of more sandy material, part of fill must be drained off after full height is reached.

In addition to maintenance of tracks, miscellaneous work consisted of installation of pipes, including trestles therefor from dredges to relays, of which 4 were in operation, and from relays to various points along length of dam for delivery of hydraulic fill; laying pipes for draining water and finer material from fills; stripping and spading up subsoil in advance of hydraulic fill; and clearing ahead of dredges.

Based on the estimated amount of material needed in construction of dam, it is 74 per cent completed.

In the construction of spillway, work confined to excavation necessary for east and west approach walls and in forebay. During year concrete work on forebay below reference 45 completed, and approach walls with projections or cores to tie earth portion of dam with spillway completed to elevation 95 for straight horizontal portions and slopes to south. During dry season, after discharge from lake had diminished, construction and sluicing piers begun and carried to 45' above sea level; balanced valve and 3 sluice-gate frames set; cofferdams built on both sides of channel below spillway dam, and foundations prepared and concrete placed to build sufficient of ogee of dam to bring it above high water. Subsequently 2 additional small cofferdams constructed for placing concrete of dam just outside channel flow. After beginning of wet season construction of side sections of dam and of side approach walls continued. Excavated during year, 128,383 c. y., practically completing this part of work. In preparing foundations, 32,245 c. y. material removed. Concrete placed during year, 59,651 c. y. Concrete portion 66 per cent completed. Tracks laid and back fill begun behind side walls of channel below dam. Total back fill at spillway during year aggregated 12,873 c. y.

Levee connecting Spillway Hill with Mindi Hill completed in accordance with approved plan. 51,156 c. y. dry fill placed, and suction dredge placed 20,398 c. y. of hydraulic fill in old Chagres River bed east of levee.

Channel between Gatun Locks and Atlantic Ocean: To north of locks and between them and Mindi Hills 20' suction dredge removed

423,427 c. y. from canal prism, pumping material into swamp areas to east.

Excavation through Mindi Hills flooded, as noted in last annual report; no work done until Oct., 1910, when suction dredge began to cut way from French canal into cut through barrier which had been left to exclude the water so that excavation could be done by steam shovels. Soft material had been deposited by floods; clay moved into cut by slides removed by hydraulic dredge and deposited in swamps to east of canal line; total amount handled, 401,511 c. y. After the removal of dredge in Jan., opening in barrier closed and cut freed from water by pumping. Steam-shovel work resumed Feb. 1 and carried on balance of year; removing 53,199 c. y. earth and 227,106 c. y. rock. Of material excavated, 165,000 c. y. rock used for back fill behind lock walls; balance utilized in filling trestle constructed east of Panama R. R. relocation between Mindi and New Gatun, forming levee behind which it is proposed to pump material excavated between Gatun Locks and Mindi with suction dredges. In construction of levee, 5,650 lineal feet of trestle built and filled. In addition to material obtained from excavation at Mindi, part of material removed from lock pits utilized.

Dredges which operated between Mindi Hills and deep water in Caribbean in excavating canal prism were seagoing dredge "Caribbean," 5-yard dipper dredges "Chagres" and "Mindi," and three French ladder dredges. These removed 4,516,369 c. y. earth and 487,038 c. y. rock, at cost of \$0.2215 per c. y. Silt deposited in channel during year, 2,750,000 c. y.; first 2 miles of channel surveys, June, 1910, and June, 1911, showed silting of 310,901 c. y.; in mile 3 silting was 902,038 c. y.; surveys made immediately after north of Dec. 3 to 5, inclusive, showed fill of about 370,000 c. y. In addition to dredging in prism, 442,350 c. y. earth and 4,853 c. y. rock removed from channel in front of piers 11 to 14, inclusive. Miscellaneous dredging in vicinity of dry-dock slip, Shelter Cove, in French canal, and in front of cement dock at Gatun, aggregated 51,636 c. y. earth and 18,886 c. y. rock.

At dry-dock shops, boiler-shop extension completed, the necessary jib and traveling cranes erected, condenser installed, and oil forge added. These shops maintain fleet of dredges, barges, and tugs in charge of Atlantic division.

Breakwater: Preparations made so that active operations in construction of breakwater leading out from Toro Pt. could be undertaken at beginning of fiscal year. Necessary buildings constructed, machines installed in shop erected for repair work, and construction material collected and stored. Reservoir constructed for water supply, necessitating dams which contain 54,390 c. y. of material; necessary pipe lines laid. Trestle

for breakwater started Aug. 9, 1910. Steam shovel began work in Sept., and a second one in Oct. At end of year 5,365 lineal feet double-track trestle completed, and 359,890 c. y. fill dumped from trestle. In addition, 619,152 c. y. rock dredged from prism dumped in vicinity of breakwater.

Municipal improvements: Rapid gravity mechanical filter plant authorized for Agua Clara Reservoir in Jan. at estimated cost of \$37,447. At close of year 94 per cent of concrete work completed, and filter plant as a whole 80 per cent completed.

Sewers extended 4,425', and usual maintenance work in connection with sewage system carried on.

16' macadam road built from incinerator to New Gatun, 1,400'; 12' road, 650' long, constructed from corral to lumber yard for fire protection, and 101' of road entering carrol rebuilt. 3,100' of curb and gutter constructed along streets in Gatun. In addition, municipal improvements carried on in Colon.

Sanitary work consisted of cleaning and grading 197,834' of ditches and cleaning 29,160' of road ditches. P-11, 6-14.

1912. At close of previous year excavation for construction of so much of Gatun Locks as lie above lower caisson sills completed, with the exception of excavation for lateral culverts in lowest lock. This was completed during year just ended by removal of 8,888 c. y. Material to be excavated too soft to support steam shovels; recourse must be had to dredging. Suction dredge operated in area between Dec., 1908, and June, 1909, and again between Jan. 1, 1911, and Apr. 14, 1911. Nothing further done until Feb. 1, 1912, or until after completion of temporary dam mentioned in last annual report, designed to prevent water from flooding locks during excavation. This dam, completed Jan. 15, 1912, 46' 4" high by 200' long, consists of series of reinforced concrete buttresses supporting timbers. Material used, 1,040 c. y. concrete and 98,736' b. m. lumber. Amount removed by dredges, 883,918 c. y. Estimated that 89,570 c. y. will complete excavation necessary to permit unwatering of area, so that construction of wing walls and north center approach pier can begin. To secure suitable foundation, necessary to excavate in places to 70' below sea level, which required closing opening through which dredges were admitted by an earth dam and lowering the water so that dredges could work to this depth. Material removed by dredges pumped behind levee constructed east of Panama R. R.; large portion escaped, filling Mindi River and French canal where these two cross; none reached new channel. After Mar. 31, 1912, material pumped to west of canal prism.

From July 1, 1911, cableways operated on single shift of 9 hours until June 1, 1912; subsequently occasional 12-hour shifts worked to facilitate delivery of sand from new source

of supply in Chagres River. Cableways unloaded 237,750 c. y. of rock and 109,017 c. y. sand. Five derricks were in use for unloading rock and sand until Nov. 16, 1911, when the 2 sand derricks were put out of commission; remaining 3 ceased operations Apr. 29, 1912. While in service they unloaded 139,143 c. y. rock and 53,768 c. y. sand; total, 192,916 c. y. In addition to unloading, cableways also transferred rock and sand from stock piles to tunnel hoppers.

When deliveries of crushed stone from Porto Bello were stopped, the rock screen, which had been supplied by a derrick unloading directly from barges, was dismantled, placed on a car, and moved to one side of the rock-storage pile where the cableways had access to it, and since May 23, 1912, 1 duplex cableway employed exclusively with rock screen. From July 1, 1911, until Apr. 30, 1912, when delivery of cement in barges was discontinued, cement shed cranes unloaded 448,700 barrels cement. On latter date arrangements made for delivering remainder of cement in cars, to be unloaded by hand. Amount required at end of fiscal year for completing the work, in addition to that in storage, 190,000 barrels.

During year an average of 4.30 of the eight 2-yard mixers installed in construction plant furnished 343,364 c. y. concrete (bucket measurement) and were operated daily, except Sundays, on basis of 12 hours per day, July 1 to Jan. 31, 1912, and 9 hours per day from Feb. 1 to June 30, 1912. Two auxiliary plant mixers operated on average of 9 hours a day until Mar. 11, 1912, when plant was shut down and dismantled; this plant mixed 80,544 c. y. concrete during year. An average of three $\frac{1}{2}$ -yard mixers, together with small portion mixed by hand, produced 15,758 c. y. concrete. Product of construction-plant mixers placed by cableways, or transferred by chutes to narrow-gauge equipment, from which concrete was dumped in place. Cableways operated 12 hours a day to Jan. 31, 1912; subsequently 9-hour day used, handling 309,534 c. y. of concrete and large rock. Narrow-gauge equipment handled, in addition to large stone, 100,990 c. y. concrete from mixers and 24,434 c. y. previously handled by cableways.

Work on upper or south approach pier continued throughout year on fill reported in last annual report. For foundation of the wall 73,695 linear feet of concrete piling manufactured, at cost of \$1,2156 per linear foot, and 75,474' driven. As previously reported, difficulty experienced with longer concrete piles; 51,450' creosoted piles substituted. Reinforced concrete construction used for south approach pier and 31,000 c. y. concrete laid in it during year, completing about 67 per cent. Guide walls at south end of locks completed and 6,000 c. y. placed for this purpose.

Total masonry—concrete and large stone—laid by concrete plant, auxiliary plant, port-

able mixers, and by hand, 451,025 c. y.; of this amount, 59,883 c. y. were reinforced. Of this total, 371,388 c. y. laid during 12-hour day time, so that only 79,637 c. y. laid since Jan. 31, 1912. Large stone laid in concrete, 14,194 c. y. Total concrete laid in locks to close of year, 1,875,965 c. y. On basis of 2,000,000 c. y., masonry work of Gatun Locks 93.80 per cent completed.

Slides at north end of locks continued to give trouble, interfering with extension of cableway tracks.

Back filling in rear of side walls of all locks continued. Back fill in center wall of upper and middle locks completed. Material secured from borrow pits and excavation at Mindi; 922,215 c. y. placed behind side walls, at \$0.4615 per c. y. Back fill placed during year, added to that in last annual report, makes total of 1,462,074 c. y. Total fill in center wall aggregates 97,291 c. y.

Crushed stone for concrete of locks and spillway obtained from Porto Bello quarry until Apr. 30, 1912, when crusher plant shut down. Crushing plant not operated at full capacity; output limited to 3 barges per day subsequent to June 19, 1911. Total produced to shutdown, 440,413 c. y. Material transported to Gatun in barges, thence to stock piles.

Porto Bello quarry supplying rock for outer stone armor of breakwater at Toro Pt. On Aug. 18 production begun. Quarry on site lower than quarry for crushed stone, being developed in 2 benches. 1,100 linear feet of lower bench developed; length of upper one practically 1,700'. Total quarried, 65,133 c. y. Sand was obtained from Nombre de Dios until Nov. 17, 1911, when work closed down. Total secured from July 1, 1911, to this date, 144,123 c. y. Chame sand procured from Pacific division during Jan., Feb., and Mar., when the Pacific division's equipment not sufficient to permit further shipments; 20,315 c. y. placed in stock pile from this source. Decided to use sand secured by dredge from old bed of Chagres River, and since May 15, 40,531 c. y. obtained.

For transportation of sand, stone, and cement an average of 3 tugs, including 1 stern-wheel towboat, 6 lighters, and 16 barges in use. Feb. 2, 1912, 1 tugboat and 3 barges sent around to Pacific side of canal, with intention of increasing equipment at this locality to furnish balance of sand required by Atlantic division. Tug and barges left Cristobal Feb. 11, 1912, and arrived at Balboa June 17, 1912. Sand from old Chagres River bed renders unnecessary further procurement of sand from Pacific division.

At close of previous year dry fills for east portion of Gatun Dam, extending from locks to spillway, had been raised to 85' and hydraulic fill to 73' above mean sea level, while north and south dry fills of portion west of spillway were at 60' and 67' above sea level, respectively, and hydraulic fill between the

dry fills at 57.3' above sea level. At close of fiscal year sufficient material added to raise dam length of 1,000' east of spillway to 103.35'; for balance of portion east of spillway the dry fills had reached general elevation of 96' and hydraulic fill between them general elevation of 85' for portion of dam way, north and south fills had reached general elevation of 98' and hydraulic fill elevation varying from 87' at spillway to 78' at drains located in northwest corner. In securing increases in elevation noted the cross sections taken June, 1912, show that dry fill was increased by 2,544,526 c. y. and hydraulic fill by 2,543,086 c. y. In obtaining this amount of 5,087,612 c. y. of net fill, 9,048,896 c. y. material were handled. For use in dry fill portions of the dam, 1,465,596 c. y. spoil obtained from central division between July 1, 1911, and Feb. 15, 1912. On the latter date old double-track line of Panama R. R. south of Gatun abandoned, necessitating reduction in number of trains per day that could be sent from Culebra Cut. Delivery of spoil from Culebra Cut stopped and borrow pits as source of supply adopted. Two to six steam shovels in these pits and in vicinity of spillway removed 1,467,675 c. y. In addition, 15,962 c. y. obtained from excavation through Mindi Hills, 62,689 c. y. from power-house excavation, and 448 c. y. from lock excavation.

Hydraulic fill was pumped into dam by 5 pipe-line dredges working in borrow pits upward of 1½ miles distant, maximum lift being 100'. One or two relay pumps were installed to assist dredges. A dredge on south side worked between Feb. 1 and July 6 pumping material along south toe of extreme western portion of dam, spreading foundation of structure to overcome slipping taking place in blanket over face of hill on west on which dam rests. It handled 582,410 c. y. A dredge on south side handled 594,495 c. y. in spreading fill made to support south approach pier of locks, which began to settle under weight of pier. Of this total, 36,000 c. y. handled in Sept., 1911; balance between Jan. 1 and May 31, 1912.

The construction of the dam proceeded in accord with recommendations or plans of 1906, 1908, and 1909, except that for construction purposes authority was given to continue the practically 1 on 8 slopes on upward, the change of slopes to be made later. Cheapest filling available that supplied by dredges; evident if this did not dry out properly a condition might arise which would result in producing such a head against dry fill that a blowout might occur. Accordingly, in Nov., 1909, instructions given to increase dry fill on both upstream and downstream sides, encroaching if necessary into hydraulic fill to secure masses such that any hydrostatic pressure produced by hydraulic fill would tend to act downward on exterior masses instead of upward and outward. Drying out tried in dry season of 1910-11 showed unsatisfactory

condition regarding consolidation of at least central portion of hydraulic fill in part of dam east of spillway, but it was believed if construction proceeded along lines of the instructions given the soft material would be squeezed out as height of dam increased.

In order to determine settlement taking place in dam, observations were required on hubs located as described in last annual report and monthly record kept. Observations showed gradual settlement until on Oct. 12, 1911, movement occurred in east half of dam. On north side, for 1,000', top of dry fill settled 4 or 5'. This vertical movement accompanied by horizontal movement, greatest at 75' contour, where it amounted to 14.2', and gradually diminishing down slope to 31' contour, where horizontal displacement about 3.2' in length of about 700'. While the crest of the slope moved downward, lower portions of slope bulged upward to certain extent, measurements showing rise of 1.25' on 60' contour at point 1,150' from center of spillway channel. Movement was within dam, as verified by test pit sunk where bulging greatest, which showed masses of dry fill desired had not been secured. Material was piled to north of 31' contour, giving additional weight to toe, and blanket of spoil to make continuous slope from 31' berm to top of dam placed over north face. No motion after this additional weight had been added other than gradual settlement. In addition to these steps, instructions issued to pump sand into hydraulic fill along 1,000' length where settlement occurred at top, and to bring the dry fill up on regular slopes, gradually crowding hydraulic fill until the distance between dry fills on two sides was 25', after which hydraulic fill to be covered with red clay and tamped wet until height of 103.35' reached, where thickness would be 100'. Proposed to continue observations and ultimately to bring dam to 105' above sea level and, if necessary, subsequently to raise it to height originally advocated.

Movement occurred about same time on south slope, greatest lateral motion being 6.5' on 75' contour. On the 60' berm there was lateral movement of 0.5'. Heavy toe added on 60' level, extending from dam to spillway channel wall and to berm.

In adapting cross section proposed by the board in 1909 to the ground, slopes modified where dam is practically a blanket over spur projecting from hills on west side against which dam abuts; here the plan proposed of making upstream slope 1 on 4 and downstream slope 1 on 5 was approved. As dry fill was added on upstream face of hill a condition developed indicating that material on bottom extending out from foot of hill would not bear the weight; necessary to flatten slope, which was accordingly authorized to be 1 on 7.67. Heavy fill placed on ridge that was pushed up outside of toe of this slope, and, in addition, dredge operating to south of dam extended foundation outside of rock fill by dis-

tributing material over bottom, adding to spread given foundations.

In construction of spillway, work confined during first half of year to east and west flanks, where abutments, ogee, and crest piers were completed to elevation 69, or top of dam. With the beginning of dry season about two-thirds of the central section, held at elevation 10 except for construction piers, inclosed with a cofferdam, and the concrete work carried well above water level. Full closure then made within cofferdam covering balance of central section. Three Stoney gates and one cylindrical valve installed to control flow through four undersluices. Program contemplated completion of central portion to elevation 50 by Apr. 1, so that lake could be allowed to rise to this height at dam. This done for total length, except about 120', which remains at elevation 45, portion to be built up to required height in advance of water reaching 45' level. Though gates controlling undersluices closed on Apr. 30 and lake allowed to rise, they were subsequently raised, as noncompletion of lock gates did not permit proposed lake level. Sluice gates raised and lowered, depending upon circumstances, until Aug. 17, 1912, when condition of lock gates was such they could be closed. On this date lake had reached 32.01'. Trestle built from eastward at elevation 95 and derrick erected near west abutment to enable construction work on east and west flanks to proceed during first half of current year. Total concrete laid, 58,666 c. y.

Plans prepared by first division O. C. E. for hydroelectric power plant, below spillway, having been approved, excavation started in May; total accomplished during the year, 72,119 c. y. During year 10,062 c. y. back fill placed about the spillway.

In channel between Gatun Locks and Atlantic Ocean excavation in dry continued through Mindi Hills and, with exception of dike separating cut from French canal, completed Feb. 24, 1912. Sluicing operations reported last year completed by removal of 1,000 c. y. mud. Two steam shovels removed 56,703 c. y. earth and 368,169 c. y. rock. When dry excavation of channel completed, barrier blown up, for which purpose 81,750 linear feet drilling done and 183,150 pounds dynamite used. Of material removed from Mindi in the dry, about 350,000 c. y. rock used for back filling at Gatun, cost of dumping being charged to locks.

Dredges which operated between Mindi Hills and deep water in the Caribbean in excavating from canal prism were seagoing dredge "Caribbean," 5-yard dipper dredges "Chagres" and "Mindi," and the French ladder dredges "No. 1" and "No. 5." They removed 3,859,445 c. y. earth and 495,595 c. y. rock. Silting during year amounted to 3,036,000 c. y., making net earth excavation in this section 823,445 c. y. Between Mindi and Gatun dredges "No. 4" and "Sand-

piper" removed 515,787 c. y. earth south of old Panama R. R. line. Total dredging in prism aggregated 4,870,827 c. y. In addition, 883,918 c. y. earth and rock removed just south of locks. Miscellaneous dredging outside prism included 3,762 c. y. from dry-dock slip, 72,798 c. y. from east diversion at Gatun, 23,496 c. y. earth and 872 c. y. rock from east diversion at Mount Hope, 4,767 c. y. earth and 2,181 c. y. rock in front of dynamite deck at Mindi, 80,296 c. y. earth from pit for rock dump north of Gatun Locks, 2,785 c. y. earth from front of fortification trestle at Mindi, and 2,450 c. y. earth from slip at cableways. Total output for year from canal prism and lock site, 5,754,745 c. y.; and from accessory works, 444,327 c. y.

At dry-dock shops, oxyacetylene and thermit welding processes put in operation; shops maintained fleet of dredges, barges, and tugs in charge of Atlantic division.

Breakwater extending from Toro Pt. not intended to give protection against the waves produced by the trade winds, which generally are from the northeast. So far as the waves caused by the latter winds are concerned, consensus of opinion among seafaring men that no shelter is necessary; on this account construction of east breakwater has not been undertaken. While present indications point to necessity of construction of east breakwater for maintenance of channel against silting, expenditures in this direction not yet warranted.

During fiscal year 5,514 lineal feet of double-track and 48 lineal feet of single-track trestle completed, making total length of trestle on July 1, 1912, 10,927'. Fill dumped from trestle, 460,040 c. y.; in addition, 6,498 c. y. used for ballast and 4,680 c. y. furnished fortifications, all procured from Toro Pt. quarry, shut down June 22, 1912. Porto Bello rock for exterior of breakwater delivered Aug., 1911. Rock shipped in barges, transferred to Lidgerwood trains by locomotive cranes, and plowed off on the north side of the trestle; 65,133 c. y. unloaded in this way. Of rock removed by dredges from canal prism, 510,730 c. y. dumped in vicinity of trestle.

Filtration plant authorized for Agua Clara Reservoir Jan., 1911, completed Dec. 29, 1911. Due to shortage of water in Colon, Toro Pt., and Porto Bello, water transferred from Gatun water supply in barges, from Jan. 25 to May 23 to Toro Pt., from May 10 to June 24 to Cristobal, and from May 9 to 16 to Porto Bello.

During year usual maintenance done on roads, sewers, and drains. 10,000 sq. y. macadam laid and repaired, 15,000 lineal feet road ditches cleaned, 2,800 lineal feet curb and gutter laid, and 3,000' of sewers installed. In addition, municipal improvements carried on in Colon.

Sanitary work consisted of cleaning and grading 336,000 lineal feet ditches; constructing 8,000 lineal feet of ditches, and lining with

concrete 2,300 linear feet of ditches. **P-12**, 12-24.

1913. The work of excavating channel between Gatun Locks and deep water in Caribbean was in charge of Atlantic division until May 1, 1913, when it was transferred to sixth division of O. C. E. On this same date the dry dock and shops transferred to mechanical division.

At beginning of fiscal year dredges at work excavating area north of caisson sills of locks, within which flare or wing walls and north approach pier to be constructed. Wing walls built on rock and approach pier partly on rock, but for greater part on piling. For the former it was necessary to remove material to 70' below sea level to uncover rock; as dredges could excavate only to 41', level of the pool had to be lowered for them to perform the work. Clay dam built across cut excavated by dredges to reach this area, and water in resulting inclosure lowered by pumping with dredges. Excavation for flare walls carried well to rear and made sufficiently wide for walls and for rock fill to sustain the material back of it from sliding as water lowered. Fill also formed foundation on which to carry cableway tracks. Expected that by extending the rock fill to north cableway tracks could be laid, so that construction plant could build entire length of center approach wall; because of softness of material this plan had to be abandoned.

For approach pier dredges removed material to 55' below sea level and for width of 140' along center of excavated area. On completion of dredging, Nov., 1912, pit was filled with water, clay dam removed, dipper dredge and suction dredge taken out, and suction dredge, pump barge, and 2 coal barges left inside the area. Clay dam rebuilt and water pumped out, exposing foundations. Dredge grounded at 55' below sea level and used to keep water below foundations. Two steam shovels worked over portion of center wall foundations where rock appeared, and excavated such material from approach to west locks as could be handled. Channel excavation and preparation of foundations accomplished by shovel, crane, cableways, and by hand.

Flare walls built solid. North approach wall or pier 58' wide and consists of piers placed 50' centers longitudinally and 40' laterally, in which direction they are connected by arches of 22' span, while longitudinally they are spanned by steel girders incased in concrete. In plan the piers are 10' by 18'. Piers rest upon a slab of concrete, heavily reinforced with old rails near top and bottom, built on piling. First 6 of openings north of locks closed by curtain walls to prevent objectionable cross currents while locks emptying. Plan originally contemplated pier 1,200' long, measured from angle of flare walls. Dec., 1912, division engineer recommended wall be shortened 200'. Slide

occurred at north end of pit when it was dewatered, covering foundation of this portion of wall; removal of this slide, which would have to be done largely by hand, would be tedious and require considerable time; furthermore, this would make north approach wall correspond more nearly to one at south, which is 994.5' long. Local conditions where south wall terminated such as to make cost of building additional length prohibitive; however, as considerable saving in time of completion would result, recommendation was approved and length of north approach pier fixed at 1,000'. Foundation for pier required 5,000 piles, aggregating 200,549 linear feet. For curtain walls 5,657 sheet piling driven. On Jan. 25, 1913, while this work in progress, slide occurred on east side, which covered large part of foundation with 6 to 18' of material, destroying 2 pile drivers and delaying work. Material was partly removed by crane and hand, but largely by sluicing and pumping, dredge handling material from sump.

Concrete in flare walls laid by cableways, which were also used for so much of the center pier as could be reached. Remaining portion of latter laid by cranes and dump cars operated by construction locomotives, concrete being supplied by cableways through hoppers and chutes. Total concrete laid in locks, 164,750 c. y.; 5,530 c. y. concrete used for construction of lampposts and bases, snubbing-button bases, machinery-room covers, control house, paving between upper lock and Panama R. R. station, under emergency dams, and for work of first division, making total handled by Atlantic division 170,280 c. y. Total concrete laid in locks by Atlantic division to close of fiscal year, 2,040,715 c. y.

Last fall estimated concrete of locks would be completed by July 1, 1913. By shortening north approach pier 200', all concrete, except miscellaneous finishing, completed June 14, 1913. Miscellaneous work consists of lamp-post bases, snubbing-button bases, mooring-post bases, stair-wall parapets, paving, and the closing of a few openings left for construction purposes.

In addition to handling sand from barges to stock pile, unloading cableways were used for transferring sand and rock from stock piles to tunnel hoppers and for loading rock for sale to outside parties. Sufficient broken stone in storage; none crushed during year. 171,866 c. y. taken from storage pile for use by the division, 1,568.5 c. y. for issue to other divisions and sale to outside parties. To storage pile on hand at beginning of year 43,851 c. y. sand added, secured from Chagres River by suction dredge. Cement, in bags, amounting to 225,000 barrels, received and handled, partly by barges from ship and crane into cement shed, partly by car transfer, then by hand into shed. 227,000 barrels issued for use.

Back filling of side walls and filling of center wall made of material from borrow pits and from canal prism, aggregating 637,226 c. y., all removed by steam shovels. Of this, 565,756 c. y. placed behind side walls, and 15,872 c. y. in center wall by cableways. Total material used for back fill to June 30, 1913, 2,027,830 c. y. placed behind side walls, and 113,163 c. y. placed in center wall. Teams and scrapers put to work Mar., 1913, and continued to end of year, bringing back fill to final grade and for construction of wagon road along east side of locks. About 1,500 c. y. handled in this way. Decided to pave exposed surface of back fill between locks and Panama R. R. station with concrete slabs 5' by 5' by 6", extending from elevation 78 to top of slope, and laid on from 4 to 6" of broken stone from Ancón quarry. Below concrete paving slope to be covered with riprap down to elevation 74. On June 30, 1913, surfacing of broken stone completed and 125 sq. y. of concrete paving finished.

Lamp-posts and bases for illuminating locks constructed, bases erected, and lamp-standards cast; of the latter, 211 were made.

Control house for Gatun Locks begun Apr., 1913.

At close of previous year Gatun Dam raised to 103.35' for 1,000' east of spillway, and for balance of this portion of dam dry fill had reached 96' and hydraulic fill between them 85'. On portion of dam west of spillway north and south fills had reached 98' and hydraulic fill 87' at spillway and 78' at drains in northwest corner of dam.

At close of current year sufficient material added to raise dam to full height, with 3 to 5' additional along axis for settlement. Dry fill secured from borrow pit, beyond west end of dam, and clay used to top off hydraulic fill from borrow pits north of dam and in vicinity of locks. Two to six steam shovels engaged in procuring this material removed 2,159,159 c. y.; 922,877 c. y. were rock.

Hydraulic fill supplied by 3 pipe-line suction dredges operated in borrow pits $1\frac{1}{2}$ miles distant. Total handled, 493,145 c. y. Hydraulic fill stopped Sept., 1912. No complete survey made during year, but partial cross sections run monthly until Feb., 1913, from which material in place calculated, and for following months, estimates based on borrow-pit measurement. Estimated dry fill deposited aggregated 1,714,367 c. y. Total consolidated fill for year, 1,967,841 c. y. Levels run monthly to determine settlement, observations being taken on hubs placed about 250' apart longitudinally and about 100' apart transversely.

On Aug. 29 bulging and sliding movement began along north slope of dam near west end and continued. There could be no question that the movement was within the dam itself, consequently test pits not resorted to, as in the case of the movement on the east part of the dam a year ago. Line of

wash borings with drive samples made. Borings indicated relative proportions of hydraulic fill and dry fill which would bring about the desired section of hydraulic fill—wedge shape, with the point down—not secured; on the contrary, hydraulic fill in section was opposite of this. Evident provision had not been made against slipping of dam material on itself. As in the case of the movement on north face of east portion of dam, toe was heavily reinforced and slope flattened to an average of about 1 on 7.67.

To prevent injury to dam from wash of south slope, by waves in lake, necessary to pave portion of slope. Decided to use riprap laid on broken stone. Estimated waves 5' in height might exist, so paving was extended over that portion of the slope lying between elevations 74 and 92. Layer of crushed stone laid over dam within these limits to thickness of 4". Over this riprap was placed to protect broken stone from waves. Area of 115,740 sq. y. covered with crushed stone, of which 15,740 c. y. were used, completing this work in Apr. Riprap placed at close of fiscal year aggregated 68,739 c. y., covering area of 102,030 sq. y.

At beginning of year spillway dam had been completed, including abutments; ogee, and crest piers, to elevation 69, while central portion, 370' in length measured along the crest, practically completed to elevation 50. Four sluices had been left—three closed by Stoney gates and one by a cylindrical valve—to permit control of water during construction of dam. During year the flanks carried to completion, while central portion, finished to elevation 50, was left at this height to allow flood waters to escape. Work on closing these openings commenced as soon as level of lake could be dropped below elevation 50 and work pushed. Trestle erected on flanks at elevation 95 and extended entirely around dam when full height of 69' reached. From it the west abutment and part of crest piers built to elevation 115, or full height, and 14 crest gates installed. On completion of west abutment trestle beside each gate dismantled in succession and upstream side of pier, interfered with by trestle, constructed. In Feb. sluice operated by cylindrical valve closed, but it was impracticable to complete remaining crest piers and east abutment until the 3 remaining sluices could be closed. Lake, controlled by sluices, held at about elevation 32 until last week in Aug., when completion of guard gates and caisson sills of locks permitted it to be raised. During Nov. and early part of Dec. water reached maximum elevation of 56.3, notwithstanding flow through opening left in central part of dam and through sluices. After rainy season water lowered to elevation 48 so that work might be resumed on spillway, and sluices finally closed June 27, as plans contemplated raising lake to full height during "present" rainy season, starting with water at Gatun at ele-

vation 50, July 1, 1913. Elevation of lake at Gatun on this date, 49.15. Advantage taken of flow over spillway to dispose of floating islands, snags, and old timbers. Anchorage basin to east of channel and channel itself for 6 miles south of Gatun cleared. Obstructions in channel 14' thick. Such aggregations broken into small sections by floating pile driver.

Concrete laid in spillway for year, 21,719 c. y. Excavation, 175 c. y. Total concrete thus far placed in spillway, 224,132 c. y.

Architectural features added to plans prepared by first division of O. C. E. for hydroelectric power plant below spillway at estimated cost of \$147,950; its construction undertaken by Atlantic division. Excavation completed, and during year 14,948 c. y. material removed—rock and earth; in preparation of foundations, 11,684 c. y. Total excavation to date, including preparation of foundations, 98,751 c. y. Steel work for structure advertised; lowest bid amounted to \$25,456.37. Successful bidder offered to erect steel structure in 45 days at additional cost of \$6,496.74. Atlantic division estimated \$4,643. This work assigned to Atlantic division. Erection of steel work commenced May 16; at close of year about 65 per cent had been erected and 90 per cent of the field rivets driven. Penstocks incased with concrete, except for curved portions near head gates. Forebay walls with trash-rack and stop-plank grooves about 95 per cent completed.

West breakwater, Limon Bay, continued. 599' of trestle, single-track, added, making total length of trestle 11,526'. Total rock received from Porto Bello and placed on breakwater, 183,762 c. y., of which 102,508 c. y. handled from barges to Lidgerwood cars by locomotive cranes and subsequently plowed off. Balance placed by derrick barges. In addition, 220,433 c. y. rock removed from channel by dredges and dumped on breakwater. Small pile wharf built for handling rock by cranes to cars, and 3,000 c. y. sand dredged by derrick barge for barge berth.

Quarry at Porto Bello worked during year for supplying large rock required for breakwater. Because of peculiar formation of hill it was found sufficient large rock could not be secured from the 2 benches to complete breakwater; development temporarily suspended. In Nov., 1912, operations resumed by steam shovel in old crushed-rock quarry, above the 2 benches; after the first of the year 2 more shovels put to work on this higher level. Broad-gauge equipment, substituted for narrow gauge previously in service, placed in operation on Oct. 5, 1912, and output increased from 2 to 3 barges per day. In securing rock of proper size about 60 per cent of output wasted.

Waves from trade winds have been washing shores of Limon Bay in vicinity of canal entrance; survey made Mar., 1913, showed that channel in vicinity of shoreline, dredged to full

depth, had filled as to give available depth of only 27' and that in center of channel. Estimated that silt deposited in channel during previous 12 months was 2,213,032 c. y. On investigation, believed this silting is due to wave action disturbing soft material of bottom of bay. Atlantic Fleet during its visit anchored under lee of west breakwater; at times trade winds made it difficult for small boats to reach ships. General Board of the Navy advocated detached breakwater for protection of anchorage area. Construction of detached breakwater on east side contemplated. Investigations undertaken to find quarry more accessible than Porto Bello. To still further protect channel against material washed from shores of bay experimental stone dikes to be constructed.

As previously reported, water supply for Colon not adequate; plans submitted for modern filtration plant and pumping station. Project approved on July 12, 1912, at cost of \$193,768. It contemplates tunnel through divide separating Gatun Lake from Brazos Brook Reservoir, within which is to be laid a 20" main, with its inlet at an elevation of approximately 5' below extreme low-water level in Gatun Lake. This pipe line, 600' in length, extends to Brazos Brook Reservoir, and by means of control house water in reservoir is maintained at minimum low level of 1' below spillway crest, so that additional amount of water required over that furnished by the watershed will be taken from Gatun Lake. Additional 20" main laid from Brazos Brook Reservoir to Mount Hope. In connection with these there are included aeration basin, sedimentation basin, and filters after passing which water enters clear-water basin having capacity of 650,000 gallons. Basin connected by underground conduit to pump sump beneath floor of pumping station. Pumps will be operated electrically. Work commenced Oct., 1912, and at close of the year all work between Gatun Lake and Brazos Brook Reservoir practically complete. Pumping station completed ready for installation of machinery; filter building completed to and including operating floor; sedimentation basin 75 per cent completed; and foundations and floors of mixing chambers and aeration basin laid. In addition to operation of purification plant at Agua Clara Reservoir, usual maintenance work carried on.

Approximately 70,000 sq. y. macadam laid and repaired, 44,000 linear feet road ditches cleaned and dug, 9,500 linear feet of curb and gutter laid, and 4,600' of sewers installed. In addition, municipal improvements carried on in Colon. Of appropriation of \$800,000 made by act of Mar. 4, 1909, for extending municipal improvements in Colon and Panama, there were expended during year in the former locality \$53,939.15, making total in Colon to end of year \$505,909.54. In addition to completing improvements previously undertaken, money expended in replacing curbs and gut-

ters which had settled, resurfacing, and in extending improvements to include G Street between Second and Ninth Streets, and in extension of E Street to its intersection with the Mount Hope Road.

Sanitary work consisted of cleaning and grading 237,000 linear feet of ditches; constructing 53,000 linear feet of ditches, and lining with concrete 26,000 linear feet of ditches. In addition, 6,800 linear feet of pipe and tile drains were laid and cleaned. **P-13, 13-22.**

1914. Effective Oct. 15, 1913, concrete work remaining to complete the construction of the locks at Gatun transferred from the Atlantic division to first division, which could do it in connection with installation of themachinery, and towing tracks with the same supervisory force; similar unfinished work in connection with the Pacific Locks was also transferred to the first division at the same time. **P-14, 2.**

Remaining work in Atlantic and fifth divisions having reached such a stage as not to justify the administrative charges that the existing organizations called for, these two divisions were abolished Feb. 1. Their property accountability transferred to quartermaster's department and their records turned over to fourth division, O. C. E. **P-14, 2.**

Construction of west breakwater and operation of Porto Bello quarry transferred to second division, O. C. E., while work remaining at Gatun Dam, El Cano saddle, back fill at Miraflores, Miraflores spillway channel, Ancon quarry, and the sluicing at Gold Hill were placed directly under the chief engineer. **P-14, 3.**

Atmosphere. (See Meteorology.)

Attorneys. (See Nos. 252, 273, p. 2368 of this Index.)

Chief attorney. (See Orders, Executive.)

Prosecuting attorney, duties defined by zone laws. Acts as legal adviser to the governor; prosecutes offenses against laws of the zone; investigates and settles claims against the Isthmian Canal Commission. Work expected to assume large proportions as work of construction increases. **P-05, 68.**

Special attorney's office, **P-14, 409, 511.**

Auditing. (See Nos. 75 and 149, pp. 2363, 2364 of this Index.) (See Accounts.)

Canal costs to be audited by Auditor for War Department, **P-11, 558.**

Final audit of all expenditures should rest with Isthmian Canal Commission, **P-50, 121.**

Organization for canal, zone, and Panama R. R., **P-05, 21.**

Auditor. (See Nos. 123 and 269, pp. 2364, 2368 of this Index.)

Audits and Disbursements.

Under laws of zone, auditor and disbursing officer of the Isthmian Canal Commission made, respectively, auditor and treasurer of the zone, **P-05, 72.**

Auditor for the War Department.

Canal costs to be audited by, **P-11, 558.**

Executive order forming Board of Consulting Engineers. Dated June 24, 1905, at the White House. Issued by President Roosevelt. Names members of board. To convene at Washington, Sept. 1, 1905, "for the purpose of considering the various plans proposed to and by the Isthmian Canal Commission for the construction of a canal across the Isthmus of Panama between Cristobal and La Boca." **P-06***, 9.

Members: George W. Davis, major general, U. S. Army, retired, chairman; Alfred Noble, chief engineer, East River division P., N. Y. & L. I. R. R.; Wm. Barclay Parsons, chief engineer, New York Subway; William H. Burr, consulting engineer, Board of Water Supply, New York City; professor of civil engineering, Columbia University, engineering expert, Aqueduct Commissioners, New York City; Henry L. Abbot, brigadier general, U. S. Army, retired; Frederic P. Stearns, chief engineer, Metropolitan Water and Sewerage Board, Boston; Joseph Ripley, general superintendent, St. Marys Falls Canal; Isham Randolph, chief engineer, Sanitary District of Chicago; William Henry Hunter, member Institute of Civil Engineering, chief engineer Manchester Ship Canal, commissioner, upper Mersey navigation, England; Eugen Tinscauer, Königlich Preussischer Regierungs- und Baurat, Mitglied der Regierung zu Königsberg i. Pr., Germany; Adolphe Guérard, Inspecteur-Général des Ponts et Chaussées, France; E. Quellenec, Ingénieur en Chef des Ponts et Chaussées; Ingénieur Conseil de la Cie. du Canal de Suez, France; J. W. Welcker, Hoofdingenieur-Directeur van den Ryks-Waterstaat, The Netherlands. **P-06***, 3.

Mr. Schussler declined appointment, as did Mr. J. B. Berry, chief engineer of the Union Pacific R. R., named in Mr. Schussler's place. Prof. Jacob Krane representative of

Holland, declined, J. W. Welcker being named in his place. At the first meeting, announced that Capt. John C. Oakes, Corps of Engineers, U. S. Army, had been detailed as secretary of the board. **P-06*, 9.**

Instructions: Board of Consulting Engineers was addressed Sept. 11, 1905, by President Roosevelt. "But if to adopt the plan of a sea-level canal means to incur great hazard and to insure indefinite delay, then it is not preferable. * * * Two of the prime considerations to be kept steadily in mind are (1) the utmost practicable speed of construction; (2) practical certainty that the plan proposed will be feasible—that it can be carried out with the minimum risk. * * * The delay in transit of the vessels owing to additional locks would be of small consequence when compared with shortening the time for the construction of the canal or diminishing the risks in the construction." **P-06*, 12.**

Organization of committees: Executive, chairman, Gen. Abbot, and Mr. Hunter. On preparation of plans for sea-level project, chairman, Messrs. Guerard, Hunter, and Burr, to which Messrs. Parsons and Quellenec were added later. On preparation of plans for lock canal, chairman, Messrs. Stearns, Tincauzer, and Ripley, to which Gen. Abbot and Mr. Noble were added later. On unit prices, Messrs. Parsons, Welcker, and Randolph. **P-06*, 11.**

Minutes, first to thirtieth meeting: First one, Washington, D. C., Sept. 1, 1905; thirtieth, New York, N. Y., Jan. 31, 1906. **P-06*, 105-148.**

Summary of proceedings, P-06*, 9.

Report, 1906. Pages 1-426. (See Projects and No. 164, p. 2365 of this Index.)

Letters of transmittal: President Roosevelt, Feb. 19, 1906. Sec. of War Taft, Feb. 19, 1906, to the President. Chairman Shonts (T. P.), Feb. 6, 1906, to Sec. of War. **P-06*, III to IX.**

Physical data concerning canal projects: In letter of Sept. 1, 1905, the chairman of the Isthmian Canal Commission No. 3 laid before the Board of Consulting Engineers physical data concerning the Isthmus of Panama, and solicited opinion of the Board of Consulting Engineers as to the best plan to be followed in the completion of the Panama Canal, **P-06*, 10.**

Plans laid before Board of Consulting Engineers: Plan of Isthmian Canal Commission No. 1; plan proposed to the New Panama Canal Co. by the Comite Technique assembled by that company; 3 projects prepared by Lindon W. Bates, of New York; the more important results of recent surveys, containing the principal information available for a decision respecting a canal at tide level; paper prepared by Mr. P. Bunau-Varilla, explaining method of construction of a lock canal to be later transformed to one at sea level; paper on the Panama

Canal showing some serious objections to the sea-level plan by Maj. C. E. Gillette, Corps of Engineers, U. S. Army, and paper by C. D. Ward, civil engineer, on the Gatun Dam. The Board of Consulting Engineers received no plans originating with Isthmian Canal Commission No. 3. **P-06*, 11.**

Plans considered: List of data, etc., furnished by the Isthmian Canal Commission No. 3, **P-06*, 106.**

Work done and "present" conditions on the Panama route: Review of the history of work done and that going on at Panama, **P-06*, 22.**

Field work: Examinations requested by the Board of Consulting Engineers to gain additional information relating particularly to possible dam and lock sites at Mindi, Gatun, and in the vicinity of La Boca, **P-06*, 25.**

Inspection of the Isthmus: Record of work of inspection in detail performed by the Board of Consulting Engineers at Isthmus of Panama, Oct. 4-11, 1905, **P-06*, 124.**

Vital statistics: Appendix O. Compiled under direction of Col. W. C. Gorgas, chief sanitary officer, **P-06*, 407-409.**

Unit prices: Report of committee on unit prices. Appendix R, **P-06*, 419-420.**

Hearings of J. F. Stevens, chief engineer: Appendix J., Board of Consulting Engineers. Most advantageous type of excavating machine the steam shovel. State of chaos on the Isthmus on assuming charge. Had not had time, at time of examination by Board of Consulting Engineers, to study any of the engineering problems of the canal. Dumps in use small. No detailed plan for dumps had been worked out; Culebra excavation an unknown quantity; ordinarily 1,000 yards a day per shovel output in excavating; Culebra Cut not in good shape for working in; could get 50 shovels or so installed in about 10 months. "I have never believed * * * that under the greatest stress we would require on the Isthmus the presence of over 100 excavating machines. * * * I am talking about the Culebra Cut." Eight-hour law a handicap. "The question of handling the Culebra Cut is very largely one of transportation; and by transportation I do not mean simply hauling it; I mean disposing of it—getting rid of it. It is going to require the most perfect organization that ever was contemplated." "The French company fell down because they could not dispose of their material. * * * They loaded more than they could get rid of. * * * They used a type of car that would not dispose of the material; it had to be cleared by shoveling. * * * This is no reflection on the French, but I can not conceive how they did the work they did with the plant they had." Discussion of the slopes to be adopted for Culebra Cut. Has made no computations of quantities in the Culebra Cut. Labor will work only about 19 days per month. 13,000 men, white and black, on the work. * * * "Force of men (employed) I have who go

around and put the laborers out of their houses unless they work (large number required for this)." Can not determine the size of the force to employ until the U. S. determines what kind of a canal is wanted. Comparative value of American labor and foreign not to latter's credit. Discussion of unit of cost of excavation. Great deal of the cost of work done due to derailments, and sometimes the gangs were not kept full. Would not recommend that the Board of Consulting Engineers take less than 80 cents as an average of cost per yard for the Culebra Cut. Value of French plant—most of it of little use; some of the rails can be used with bridle rods; dredges of doubtful value. "We have never been able to get over 2,700 or 3,000 yards a day of 10 hours per dredge." Thinks suction dredge the best dredge in the world. Would cut channel with dipper dredge, following it with hydraulic machines. Use of materials excavated—some for concrete material, rock for construction, gravel for concrete. Methods of unloading cars quickly; judicious to keep trackage in good shape; would have several tracks to a dump. Thinks he could find a better method than that proposed by Bunau-Varilla for reducing to sea level. Does not know the nature of the strata in the lower part of the Culebra Cut; could not tell what would be necessary for retaining walls. Using excavated material for earth dams a matter of cost; discussion of methods of handling excavated material for dams; special trackage would be necessary; some material might be pumped. Had no opinion as to safety of earth dams of large sizes on the Isthmus; thinks safety of any dam dependent upon the capacity of the spillway; would prefer earth dam with a masonry core to one without this core; dredged material makes very compact work. Had no opinion as to merits of sea-level or lock canal. "I think either one would carry a ship through all right." Cost of double-track railroad probably \$75,000 to \$100,000 per mile in gold. Culebra slides might be conquered by tunneling under the masses to drain it of water. "Anyhow, I think we need not worry about whether the Panama Canal can be built owing to that slide." Some draining done by French. "Give us the type of canal just as soon as you can. * * * I can not, and I do not believe any human being can, do much more than mark time until that is done. I can fix my quarters, and as far as my limited intelligence permits me I can contract for certain rolling stock. I have contracted for two or three million dollars' worth of plant the last month, but beyond that I can not go. Here is this little railroad; we have got to have better terminals at the south end. I want a better yard at La Boca, but you may select an alignment which will interfere with any improvement I might start now." Discussion of the sources from which materials can be had for concrete, breakwaters, etc.; crush-

ing rock for sand; advantageous mixtures for concrete. P-06*, 283-295.

Hearing of F. B. Maltby, division engineer at Colon, has charge of works there and also those of the Pacific terminus of the canal. Appendix J., to Board of Consulting Engineer's report. P-06*, 296-306.

About 600,000 c. y. dredged in harbors in 6 months of 1905. Only 16' available at La Boca Harbor. Constant fill. Dredging in progress to get 22' below spring low tide. References to unusual high tides at terminals. Silting in harbors at rate of about 1' a month; probably due to drift; very little from Rio Grande River. Capacity of French dredges—139,000 c. y. removed in month at La Boca with a double crew. "That represents her maximum capacity." Prefers hydraulic dredges to those of French or ladder type. Discussion of the cost of pumping dredgings ashore; could be put ashore for 6 or 7 cents; do not believe it would exceed 10 cents; use of cutters advantageous; nature of material determining methods and cost. Probable sources of material for breakwater building; location of rock, its nature; identity of soft rock in dry dock at Cristobal and that from borings on site of Gatun Breakwater and pier construction at terminals; foundations. Maintaining channel entrances; necessity of constant dredging. Constant dredging required at the Suez Canal entrances; at North Sea Canal entrances. Annual dredging at La Boca would require probably 1,000,000 c. y. annually. Breakwater at Guinea Pt. would not be worth its cost. Silting of terminal harbors due to sea currents; does not believe important amount comes from Rio Grande. Dredgings, rehandling cost lower than original dredging; to put dredgings into a dam, say 40 or 50' high, would cost not to exceed 20 cents per yard. Would not recommend suction dredges to load scows; would put in 2 dipper dredges for 1 suction dredge. Tides at La Boca and at Cristobal; tabular matter. P-06*, 296-306.

Hearings of H. F. Dose: By Board of Consulting Engineers. Appendix J. Since July 1, 1904, 700,000 c. y. removed at Culebra, or 800,000 c. y. since Americans assumed control. Cost arbitraries. Different outputs in different month large variations; difference due to rainy season and change in rate of pay for labor, and trains off the track and soft character of material. Yardage computed from the cross sections and checked by car report. Figures for computed excavation and total yardage in the Culebra whence obtained; explanation of discrepancies based on different prisms being employed in computing. Unit cost for material taken out; probably would be 70 cents per c. y. in Culebra. Starting of steam shovels: No. 101 (probably the first) started Nov. 11, 1905. Types of shovels: Five-yard dipper good in heavy work; 2-yard dipper efficient in soft material

and on hillside. Loading and dumping costs; what is included under dumping costs and under transportation. In lower excavating, pumps may have to be used, or else some of the smaller streams may have to be let into the cut or diverted. Eight-hour law a source of increase in cost of excavating. Rock at various points on the canal line. **P-06***, 307-314.

Hearing of Charles Bertoncini: By Board of Consulting Engineers. Appendix J. Draftsman in employment of old French company, the new Panama company, and by the U. S. since work was taken over. Profile of the geological section of the canal; section 40 to 50' long; shows character of material as developed by borings before the year 1883 for a sea-level canal. Various maps and plans, sketches, etc. Cross sections made by the last French company when the work stopped; they made a project for the canal with 2, 4, or 6 locks; sections and profile show amount of material to be excavated; calculating methods of quantities. Book of cross sections of the canal line mentioned; set in existence of profiles from kilometer 0 to kilometer 74 (50' for each kilometer). Panama Bay and Harbor map showing currents. Dike at Rio Grande; proposed dam to make a harbor at La Boca; tidal lock. Control of small rivers like Obispo and Lirio; various methods, aqueducts, syphons, etc. Dredging Culebra from pool; same scheme at Cascadas and others. **P-06***, 315-320.

Hearing of W. E. Dauchy, assistant to the chief engineer of the Panama Canal: By Board of Consulting Engineers. Appendix J. When he took charge at Culebra, Nov., 1904, there were 1 modern American steam shovel and 2 or 3 French excavating machines at work, and about 700 laborers. Instructions were to prepare for installation of steam shovels ordered; intention to carry along the preparatory work in the way of track laying, establishment of dumps, and installation of machines, "keeping the work done along the different branches advanced as rapidly as the needs of the installation of the new shovels should require. At that time the tracks consisted only of the old French tracks, and they were in very bad condition, and there was a large amount of work required to put those tracks in workable shape, as well as to lay new tracks for the use of the trains waiting upon the additional shovels to be installed." In following Aug., 11 steam shovels working; French machines had been discarded; on Aug. 10 majority of steam shovels put out of service on account of the pressing necessity of doing preparatory work, and not having sufficient labor to carry on the work of preparation and the work of operating the steam shovels at the same time. Shovels the only modern implements; locomotives antiquated, cars antiquated, track not up to requirements; dumping grounds not established, trains congested; did not ap-

proximate the capacity of the shovels; weather cut but a small figure on the shovels, affected track, etc. Shovels of 2½-yard capacity should handle 2,000 to 2,500 yards a day of 10 hours, 50 per cent of that the net capacity. Considered an efficient condition of trackage, etc., attainable at Culebra. For removing about 100,000,000 c. y. from Culebra, for sea level, thinks 80 to 100 shovels adequate for economical operation; 2½-yard and 5-yard types. To install this equipment would take about 2 years with the same class of labor as used in 1905-6. Expected that on an average 6 per cent of equipment would be laid up for repairs. No great difficulty expected from night work, nor advantage; not hurtful to health. Labor on Isthmus inefficient—4 men to do an American laborer's work; independent, as they realize shortness of labor supply; about 25,000 men needed for a 100-shovel equipment; in addition, force would be required for preparatory work of track laying, etc. Drainage of surface water; no general plan would cover all instances; some small streams would have to be carried in prism, etc. Effect of 8-hour law to increase cost of output about 30 per cent. Has thought of two methods of solving the labor problem—flooding the Isthmus with labor, forcing competition and dependence, and importation of foreign labor, like Chinese and Japanese. Night work would practically double the call for laborers, etc., and a consequent caring for them in quarters. Shovels, efficiency, net about 1,000 under favorable working conditions, or 300,000 c. y. per year per shovel. Dumping arrangements: Panama R. R. as main track, spurs to it from excavating point, and spurs from it to dumping points; dumps long distance from Culebra, some on the Atlantic coast section; Gamboa Dam site not economical site for dumping; French dumps worked on wrong principle; about 200 to 300 miles of track required for 100-shovel plant; 15 to 20' face dumps best; not economical to dump from trestles. Moving plant of the French valueless almost wholly to Americans; ideal method or plant flat cars permitting unloading with scrapers, etc.; in wet weather material has to be shoveled out of existing cars. Character of material: Great bulk of material called rock is soft rock (indurated clay); unit prices for removing earth at a figure equal to that for soft rock; soft rock will permit slopes of 1 on 1; not safe to channel sides practically vertical; in some places they have stood for years, "in other places they would not stand for months." Sides, slopes, etc.: No slides of any extent noticed in the rock section; disintegration of soft rock would be less swift if the slope were very steep; wash from drainage a cause of disintegration; as work progresses proper slope should be found. Thinks Culebra Hill itself, apparently massive rock, would be safely sloped 1 on ½; existing steep slopes at Culebra might not stand with deeper

excavation. Material of the Culebra Hill section: More or less rock; good deal of clay, too; vegetation, except grass, increases tendency of slopes to slide. Would estimate 50 cents c. y. as proper price were contractor to do the work of the Culebra Cut; if 8-hour law were in operation against contractor, price should be increased probably 25 per cent. If Gamboa Dam were to be built, material of Culebra Cut might make it advisable to bring material from Culebra; otherwise, it would be cheaper to find some other dump for Culebra matter; extra cost might be 15 to 20 cents a c. y. Trackage for dumping: Special tracks necessary for dumping at Gamboa; 1 track for high elevations, and 1 for lower ones; a track to the Gamboa site would be notably expensive; Panama R. R. would have to be double-tracked for satisfactory dumping output; small stretch on summit, about 5 or 6 miles, would not need to be double-tracked. Labor required at Culebra: Probably as estimated by chief engineer, i. e., 30,000; hard to figure on number needed; "at present" the most expensive labor in the world, equal to paying \$6 a day in the U. S.; similar labor in Nicaragua cheaper because supply was abundant. Favorably inclined toward U. S. feeding its labor. Wages of employees from U. S. about 40 per cent higher for same work in U. S.; doubtful if this has attracted efficient men; difference probably 50 per cent when transportation, etc., is included. Slides: Seemingly insignificant compared to the whole body to be removed. Effect of water on sides of rock nearly vertical; would probably not affect rock at depths; advisable to have a berm, however; slope of 1 on 1 without berm might result in slides from toe washing out; should not advocate putting vertical face in soft rock at final or bottom elevation of canal channel; perhaps retaining walls would be needed. "My opinion is that most of that material would be of such a character that it would stand on a slope of 1 on 1, but I doubt whether the majority of it would be of such a character as to stand vertically." (Panama Canal Co. (new) built test pits, filled them with water with depths of not less than 30 or 40'; after a number of years they were pumped out; water had had no disintegrating effect on material of sides.) If sides were 8 to 1 and 200' high, slides would bring large mass into prism; disintegration, lesser quantities. Sand for masonry: Panama beach sand most available; Chagres River sand mixed with other materials; some sand near mouth of Farfan River; sand deliverable along canal line for about 75 cents a c. y. Steam-shovel operation, 1904-05: 24,000 men needed for 100 shovels, of which 20,000 common laborers; lowest expense in Mar., 1905; highest in Aug., 1905; explanation of maximum and minimum cost; supply of laborers did not increase in the proportion required for efficiency; expensive

men increased; preparatory work was not finished; rainy season came on; numerous derailments, etc.; dumps were getting higher; French plant not adapted for rapid handling under such conditions; work was practically stopped at Aug., but the expensive organization still remained, increasing unit cost of what work was done; 8-hour law had an effect, also, corresponding to about 25 per cent increase; after the rainy season 12 to 20 derailments a day; derailments due to poor track; wheel gauges of the wheels of the French cars varied in almost every car; shovels working only about 2 or 3 hours a day; trains had to be unloaded by hand. Dumps varying in height from 12 to 20' recommended, with the use of flat cars with Lidgerwood unloaders. One cause of derailment the imported rails being too high in proportion to width of base. Considers it feasible from his experience on the Isthmus to provide such plans and tracks as would practically obviate the difficulties already recorded. Yardage cost increased through work of shaping up the banks, etc.; percentage of cost greater with smaller equipment of shovels. Stone for jetties: Possibility of opening quarry at Bohio. At time of testifying 11 steam shovels set up and 6 others under erection; total on hand or ordered, 60; 120 locomotives ordered. Table showing estimated force needed to prepare for and operate 29 steam shovels, 50 steam shovels, 81 steam shovels, and 100 steam shovels; also existing force, balance needed, and portion of proposed force needed as each additional steam shovel is received between June 1 and Dec. 31, 1905; Dec., 1906 (2 estimates); and Dec., 1907, respectively. P-06*, 321-345.

Estimates: Notes by Mr. John F. Wallace on the report of the chief engineer, Isthmian Canal Commission. Bohio Locks spillway; excavation Bohio to Miraflores; item relating to Chagres and Gatun diversion; estimates referred to by the "notes" probably in an emergency report called for on short notice. P-06*, 370-371.

Hearing of Mr. John F. Wallace, formerly chief engineer, Isthmian Canal Commission. Appendix F. Board of Consulting Engineers. P-06*, 346-393.

On Oct. 27, 1905: Board of Consulting Engineers would like to have the benefit of his experience and his advice as to what he considers to be the maximum quantity that could be removed from the central cut from Obispo to Paraiso in the course of 12 months after the proper appliances are installed; and what length of time "he contemplates" would be required for the installation of a plant. Mr. Wallace sought a week in which to properly present what information he could give. Those under him saw but one detail; not the general plan as formulated by the head himself. P-06*, 346-349.

Statement of Mr. John F. Wallace, formerly chief engineer, Isthmian Canal Commission. Appendix F. Board of Consulting Engineers. **P-06***, 375-393.

Explanation of diagram (p. 367) for showing carrying on of work of excavation by steam shovels and trains; the more terraces, the steam shovels can work. Papers submitted more apply principally to the 5 or 8 miles of central excavation; when Board of Consulting Engineers was there (Culebra) they saw only a mass of tracks, etc.; this the old French installation; when Mr. Wallace took charge he retained this installation and worked it to ascertain its value; 1 excavator of French type did work at less than 5 cents a yard. Method of determining rate of increase in shovel equipment annually; could get as many shovels as wanted, but based his estimates for plan of practical operation on a minimum; installation of 24 shovels a year additional refers principally to Culebra section. Had not formed any estimate of what the additional cost per yard would be for pumping in a sea-level project. Discussion of the difficulties of cofferdamming in deep and narrow cuts which might be made preliminary to digging a sea-level line. Rock-removal methods mentioned Lobnitz system familiar to a member of the board (Mr. Hunter). Agrees with board that it might be more prudent to regard that the whole of the Culebra may be removed in the dry, down to about 10' above sea level; impossible to say what it would cost to pump out lower levels. Committee on unit prices adopted figure of 45 cents per c. y.; considered a matter of some uncertainty; "no man knows how much it will cost." Drainage to prevent slides; discussions; method probably efficacious; slides as a question should become of less importance with each year of work if material be properly handled in dry season. Condition of bottom at 2 terminal harbors not the same; not so much mud at Panama Bay. Coal: Price lowered from \$7.50 to \$5.50; correction of testimony of Mr. Dose, who announced it as \$7.50. Chagres River treatment would be simplified by construction of Gamboa Dam, leaving only regulated flow to care for; the latter being cared for by the pre-built diversion channels; no precise calculations made as to capacity of these diversion channels. Excavated material of Culebra section to go, most of it toward the Pacific end; excavation material between Bohio and Gamboa could be disposed of over the side, at probably 35 cents per c. y. Material from Culebra Cut could be used for partial earth dams, with a core wall; material in Chagres River could be made available for concrete. Favors a composite dam for Gamboa. Concrete making: Might make 8,000 to 10,000 c. y. a day for Gamboa Dam, depending upon the supply of cement, stone, etc.; local rock could be used. Pumps provided for in general

way; records of this evidently not found by Mr. Stevens (his successor); average haul from Culebra, 10 to 12 miles, with 100,000,000 c. y.; explains general method of handling—flat cars, use of unloaders, power bank spreaders, dumps 15' high, long tracks and many of them, troubles have come from dumps which have been too high, economy in having cars waiting to be loaded, and in wide and high terraces. Concrete work of locks: Thinks 10,000 c. y. concrete could be placed per day in lock building; labor on this work might be 25 to 30 per cent less efficient than in U. S. Local labor about one-half or one-fourth as efficient as similar in U. S.; inefficiency due somewhat to inefficient overseers; 1 batch of 25 foremen sent from U. S. to Isthmus to superintend track work had never laid a rail in their lives. Possible to use dredges on the Atlantic side as far as Bohio. Prefers coal at \$4 a ton to fuel oil; advocates an early building of Gamboa Dam to acquire electric power for work on the canal. Minimum of 21 working days on the Isthmus; would expect to work more; would expect to load more than 800 yards a day. Does not think there is any difficulty about providing materials from the Isthmus for the lock at Ancon-Sosa. Dredging constantly would be necessary to keep open deep ship channels at the Panama entrances. Vote of thanks given to Mr. Wallace for his papers and the information orally. **P-06***, 375-393.

Notes on the Panama Canal, by John F. Wallace, formerly chief engineer, Isthmian Canal Commission. Appendix F. Board of Consulting Engineers. **P-06***, 350-371.

The Chagres Valley, Gamboa Dam site, and river control; borings and alignment; technical studies; Culebra excavating work and cost records; sea-level sections of canal; cost of Culebra work from July 1, 1904, to Oct. 1, 1905; mining; excavations; maintenance of tracks; transportation; dumps; general expenses; arbitraries. Various suggested plans: The Bates plan saves only a small amount of work and substitutes a large amount of dam and dike construction, etc.; plan of first Walker commission objectionable; impracticable to provide a sea-level canal in the future, and Bohio Dam would have to be constructed at a point not wholly desirable; the various high level, multilock plans objectionable, as they render sea-level construction impracticable financially; plan of Bunau-Varilla for deepening and enlarging the canal "entitled to consideration and is ingeniously devised." Wallace has been controlled in his studies of the subject by: (1) No high dam should be constructed that could not be founded on bedrock or to which an imperious curtain wall could not be carried; (2) the construction of any high dam should be avoided, the destruction of which would prevent the operation of the canal until the dam had been replaced; and (3) if it became absolutely necessary to construct dams on

alluvial foundations, the plan should be selected necessitating the smallest amount of construction of this character, and subject to the least possible head of water retained thereby. Time required for sanitation, organization, and preparation would remain practically the same with any plan that might be adopted; output would increase steadily each year; experience would give increased efficiency to the force. The plans which have been suggested by reputable engineers are possible of execution in some time and at some cost. Sees no reason why a sea-level canal can not be completed in 10 or 12 years at the utmost; advances reasons to the effect that sea-level plan is better from almost every point of view. **P-06***, 360, 361.

Buildings, Construction of. (See Quartermaster.)

Division charged with the preparation of plans and estimates, and the construction and repair of all buildings on the zone. Task tremendous, in view of rigorous requirements of the sanitary department and the liberal policy of the Isthmian Canal Commission. 1,700 to 2,350 men in this division. Hardly a spot in the zone where it has not done work of importance, in the way of repairs, rebuilding, new houses, etc. **P-05**, 112.

At beginning of fiscal year bureau of architecture and building reorganized. Building material began arriving Sept., 1905; actual working force had increased to 3,150 men in Feb., 1906, when force began to decrease, because of lack of supply of requisite material. Tables showing classes of work done, type of houses, etc. Repair and construction done at long list of camps and points in the zone.

Permanent residence for governor of the zone begun. Despite increase in housing accommodations, quarters for white employees never equal to the demand; provision for hotels, messhouses, post offices, schoolhouses, etc., constantly increasing in necessity; generally all new arrivals have been comfortably cared for; conditions steadily growing better. "It is believed that the provision which has been and is being made for the comfort and health of the employees of the commission has never been approached or attempted under similar circumstances and work." **P-06**, 99.

Canal, Lock. (See Board of Consulting Engineers;
and Canal, Sea-Level.) (See p. 2365.)

Board of Consulting Engineers created by Executive order of June 24, 1905, to consider on proper type of canal, failed to agree. Two reports presented, Jan. 10, 1906. Eight members (5 foreign representatives) favored sea-level canal; 5 members (Americans) favored lock canal at elevation of 85'. Isthmian Canal Commission No. 3, to whom reports were referred, reported to Sec. of War, Feb. 5, 1906, in favor of lock canal, 1 member only dissenting. Civil Engineer Endicott, U. S. Navy, preferred sea-level canal. Isthmian Canal Commission No. 3 report, accompanied by report of Chief Engineer Stevens, in favor of lock-level plan. Sec. of War transmitted these reports to President Roosevelt, concurring in recommendation of lock-level work, Feb. 19, 1906, and on the same date President Roosevelt forwarded the reports to Congress, expressing concurrence in recommendations for a lock-level canal. On June 21, 1906, Senate, 36-31, authorized lock-level canal, as follows: "Be it enacted, * * * That a lock canal be constructed across the Isthmus of Panama connecting the waters of the Atlantic and Pacific Oceans, of the general type proposed by the minority of the Board of Consulting Engineers created by order of the President under date of January twenty-fourth (June twenty-fourth), nineteen hundred and five, in pursuance of an act entitled 'An act to provide for the construction of a canal connecting the waters of the Atlantic and Pacific Oceans,' approved June twenty-eighth, nineteen hundred and two." The House concurred, and on June 29 the act became a law. **P-06**, 13.

"Canal Record."

P-14, 61.

Canal, Sea-level. (See Canal, Lock; Board of Consulting Engineers.)

Estimate by Mr. Wallace. (See Culebra, Status of.) **P-05**, 144.
Discussion of views, **P-05**, 296.
Committee reported Feb. 14, 1905: "With the rate of progress which now appears reasonable to anticipate, this committee believes that a sea-level canal, with a tidal lock 1,000' long and 100' usable width, at Miraflores, can be completed within 10 to 12 years from this time, the bottom width of the canal being 150' and the minimum depth of water 35'." Estimate, not exceeding \$230,500,000. **P-05**, 299.
Moved at commission meeting that sea-level plan be approved. Subject referred to committee on engineering plans. **P-05**, 326.

Canal, Transformation of. (See Board of Consulting Engineers.)

Possible to make transformation from lock to sea-level type. Estimate for reducing a lock canal with a terminal lake on the Atlantic side formed by a dam at Gatun, with 3 locks on the Atlantic side and 3 on the Pacific, and with a summit level 85' above mean tide, to a sea-level canal with the dimensions

of prism adopted for the sea-level plan, \$208,985,000. Transformation impracticable from a financial standpoint of view. Date for needed change remote. Time required can not be expressed definitely. **P-06***, 38, 220.

Canals, Capacity of.

For traffic. (See No. 177, p. 2355 of this Index.) Suez Canal presents the nearest analogy to the case of the Panama Canal. Depth 31' 2" (being increased to 34' 5"). Amsterdam Canal, Holland, has one pair of locks, 31' 2" by 82' by 738'. Manchester Ship Canal, England, controlled by tidal locks 80' by 600'. Depth at low water, 26'. Kaiser Wilhelm Canal, Germany, has tidal locks 32' by 82' by 492'. St. Marys Falls Canal, U. S., lock 25' by 80' by 1,400' building. "A just estimate of the growth of traffic on the Panama Canal can not be formed from the statistics of the growth of trade on any existing waterway. * * * It is therefore essential that the Panama Canal should furnish a double road for traffic throughout, and we consider that the locks should be built in pairs; that twin locks should lie side by side, and that the different lengths of the canal should be of such dimensions as to permit two of the ordinarily large-sized commercial steamers to pass each other at any part of the journey." **P-06***, 39.

Canals, Dimensions of.

After considering dimensions of various world waterways, "it is believed, therefore, that for many years the commerce seeking the Panama Canal will be amply accommodated by a depth of water not exceeding 35'." 150' recommended as minimum bottom width, 35' as minimum depth; but that estimates be prepared for a depth of 40' as well. If lock canal be chosen, locks should be 100' by 1,000', fitted with intermediate gates. **P-05**, 300.

Dimensions of ships, channels, and harbors: Appendix C. Report of Board of Consulting Engineers. M. Adolphe Guerard. (Translated.) In 1900 tendency for larger vessels became pronounced. Enlarging of Suez Canal. Greater depths in large harbors. List of large ships building, and those existing, 1905. Large ships increasing among various classes. "The increase in the consumption of coal is out of all proportion with the increase in speed. * * * The development of works in maritime ports follows instead of precedes the dimensions of the steamers, for these works are very expensive when they attain the proportions necessary for the operation of large vessels." Increase of depth in harbors; depths of anchorages in English ports. "Should it be necessary in order to determine the dimensions of the Panama Canal to take into account the exigencies of navigation, we must not lose sight of the fact that navigation must shape its tools, the steamers, to conform with the sizes of the ports and canals." **P-06***, 165-170.

Diagram of speeds through canal and locks. Summary of dimensions and speed of vessels. Plates XXIX and XXX. **P-06***, 7.

Canals, Isthmian; physical characteristics.

(See Nos. 4, 5, 6, 7, 16, 20, and 21, p. 2361 of this Index.)

BORINGS (see Routes, below): Lake Nicaragua, **P-99**, pl. 63.

CURRENTS, wind areas, etc.: Western Hemisphere, **P-99**, pl. 75.

COASTS: Panoramic views, Atlantic coast, Isthmus of Darien, **P-99**, pl. 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20.

CLIMATES: Damp and enervating. Temperature, 70° to 95°, but humidity excessive. Important factor in employing labor. Not much to choose between Nicaragua and Panama. **P-99**, 114.

DISCHARGE (see Routes, below): San Juan River (canalized), Nicaragua route, **P-99**, 273 (Appendix H). Special study, with map, tables, diagrams, **P-99**, 280. Lake Bohio, Panama route (Appendix E), **P-99**, 247. Study of waste weir dimensions and discharge, **P-99**, 247.

DRAINAGE (see Routes, below): Caledonia Bay to Rio Sabana, **P-99**, pl. 5.

EARTHQUAKES (see Volcanos, below): "No portion of it (Isthmus) exempt from earthquakes. No very important earthquake at Panama or Nicaragua since 1886." **P-99**, 112. Mechanical action of earthquake, **P-99**, 113. "A force which would leave the foundation intact might throw down a high wall." "The works of the canal will nearly all of them be underground." "The locks will all be founded upon rock." Probable that lockgates may be distorted, but such an event to be classed with injuries, such as made by collisions, etc., and to be cared for in a similar way, etc. **P-99**, 114. A fissure probable, draining canal, but such an occurrence in a class with an unwonted conflagration. "If a timorous imagination is to be the guide, no great work can be undertaken anywhere." **P-99**, 114.

ELEVATIONS: Observed from sea, Atlantic coast, Isthmus of Darien, **P-99**, pl. 7, 8.

HEALTH. (See Climate, above.)

HYDROGRAPHY OF NICARAGUA (Appendix I). R. by A. P. Davis, chief hydrographer.

Stream measurements—Pacific slope: Grande River, Tola River, **P-99**, 282. Lake Nicaragua: Viejo River, Neuva River, Quebrada Honda, station at Tipitapa, station at Fort San Carlos, Frio River; dry season inflow, **P-99**, 286-296. PROFILES: Nicaragua, **P-99**, pls. 48, 49, 50, 51-59; upper San Juan River to Indio, **P-99**, pl. 61-62; Panama route, **P-99**, pl. 22, 23.

RAINFALL (see Hydrography, above): Zones of, Panama route, **P-99**, pl. 71. Nicaragua, **P-99**, pl. 72, 73.

ROUTES: Possible routes, **P-99**, 49. American Isthmus 1,400 miles long, embraces that portion of the Republic of Colombia west of the Atrato River, the whole of the 5 Republics which are grouped together as Central America, and so much of Mexico as lies east of Tehuantepec. General direction of the Isthmus is from se. to nw. For the entire 600 miles the width of this Isthmus is comparatively small, varying from a minimum of barely 30 miles to a maximum of 120 miles. It then widens to 300 miles near the boundary between Nicaragua and Honduras, narrows to about 120 miles opposite the Bay of Honduras, widens again into the great peninsula of Yucatan, and finally narrows to 120 miles at Tehuantepec.

A glance at the map appears to indicate that the only possible routes for an interocean canal must be at Tehuantepec, at the Bay of Honduras, or within the eastern 600 miles. While Tehuantepec is admirable for a ship railway, this route, on account of the probability of poor water supply, cost of locks and the number of them, together with the additional cost of the canal proper, must be considered impracticable, in spite of its convenience of approach and accessibility on both sides by the U. S. **P-99**, 49.

The next point is the Bay of Honduras. It is a mountain region. Out of the question. **P-99**, 49.

Within the limits of the 600-mile stretch at the eastern end of the Isthmus several routes have been proposed. At the western limit of this stretch is Lake Nicaragua. With the exception of Nicaragua and Tehuantepec, all the routes proposed for an isthmian canal terminate in the Gulf of Panama or on the South American coast south of that Gulf, the latter using the Atrato for their Atlantic approach. **P-99**, 49, 50.

The Atrato rises near the 5th degree of north latitude, flows northward about 300 miles, at a comparatively short distance from the Pacific and parallel to it. It is a silt-bearing

river having a considerable fall, and not adapted to the passage of ocean craft without large expenditure for improvement and maintenance. **P-99, 50.**

The routes most talked of for years, terminating on the Gulf of Panama, are: The Panama route, the San Blas route, and the Caledonia route. The Panama, the most westerly of the three, in use for years by means of the Panama R. R.

The chief difficulty of the San Blas route lies in the height of the summit, to cross which tunnels 8 to 10 miles long have been proposed. **P-99, 51.**

The Caledonia route is the location whereby the isthmian way was first crossed by white men. Peterson chose this location for his Scotch colony in 1698, 200 years after Balboa crossed. All vestiges of white men's labors here have disappeared. "It would be hard to find any spot in America where there are fewer signs of the work of the white man." Careful examinations and surveys show the improbability of the existence of any practicable canal location between Panama and the mouth of the Atrato, except by the adoption of a tunnel line, the objections to the latter being obvious. There are three probable tunnel routes via the Caledonia route. Cost of tunneling, per mile, about \$22,500,000.

A tunnel via the San Blas route would be at tide level. Engineering cost, including 4.2 miles of tunnel, \$289,770,000. Length of the line would be about 37 miles.

Length of line by Caledonia route, about 30 miles. Tunnels, of three routes, would be at tide-level canals. Engineering cost, \$263,340,000, \$283,440,000, or \$320,040,000.

The only restriction on the length of a ship passing through tunnels would be the curves. The tunnels would be as absolute restrictions on depth and width as the locks of Nicaragua or Panama.

The only advantage such lines of passage would have over a tide-level line at Panama would be in the superiority of their Atlantic harbors, Mandinga Harbor in San Blas Bay, and Caledonia Bay; not enough to overcome the disadvantage of a tunnel. **P-99, 50, 51, 52, 53, 54, 55.**

General map of Central American Isthmus, Tehuantepec to Buenaventura Bay, **P-99, pl. 1.** Map of Panama route, **P-99, pl. 21.**

Details, Panama route, **P-99, 56.**

Panama route: Narrow Isthmus, low summit, width less than 36 miles in a straight line, only 5 miles more than at San Blas, the narrowest place. High portion of the Isthmus limited to a width of about 6 miles near the Pacific side. Chagres River affords access by canoe navigation from the Atlantic to within 16 miles of the Pacific. Steamship lines to California discharge their passengers at the mouth of the Chagres; conveyance, up that river, thence overland to Panama. Panama

R. R. made its Atlantic terminus at Bay of Limon, 7 miles east of the Chagres mouth. The road follows the valley of the Chagres to Obispo, and thence crossed through the lowest gap to Panama. (Location almost identical with that adopted for the canal.) **P-99, 56.**

At Colon, the Atlantic port, tide range about 1'; at Panama, about 20'. Colon Harbor exposed to "northers"; ships sometimes compelled to go to sea. **P-99, 56.**

Map of San Blas route, **P-99, pl. 3, 4.**

Map of route Caledonia Bay to San Miguel Bay, **P-99, pl. 6.**

Details, Nicaragua route, **P-99, 71.**

Nicaragua route: Water communication by means of a large river and lake from the Atlantic to within a short distance of the Pacific accentuates the natural advantages of this route, "and at the same time tends to exaggerate them and to obscure the attendant difficulties," **P-99, 71.**

Lake Nicaragua, about 103 miles long; maximum width, 45 miles; area, about 3,000 square miles. Its longer axis is parallel to the Pacific coast; resembles Lake Erie somewhat in shape, but has only about one-third the latter's area.

First instrumental survey made by Nicaragua Canal Commission, 1893; found that bottom of the lake is above sea level over the greater part of its area. Maximum depth about 200', found just south of the island of Ometepe, which has an elevation of 5,000'. **P-99, 71.**

About 18 miles to the northwest of Lake Nicaragua, on a prolongation of its axis, lies Lake Managua, extending a distance of 37 miles toward the Gulf of Fonseca, a large, natural harbor opening to the Pacific Ocean **P-99, 71.**

Lake Managua is drained through the river Tiptapa, which is frequently without water in the dry seasons. The lake is 65 miles from the Gulf of Fonseca. A shorter route from Lake Managua to the Pacific crosses the plain of Leon to the Bay of Corinto, about 35 miles in an air line. **P-99, 71.**

Surface of Lake Nicaragua a little more than 100' above sea level. Mr. Menocal in his 1885 report says that the lake was as high as 110.63' above mean sea level at the end of the wet season of 1878. It has been as low as 97' or less. Extremes reached at long intervals. In 3 years' consecutive observation, fluctuations only 6.09'. **P-99, 71.**

The drainage basin of the lake is in great part mountainous. Continental Divide, formerly on eastern side, now between the lake and Pacific. Col. Childs, 1850-1852, developed the lowest crossing, crossing the divide at an elevation of only 153' above mean tide and following the valley of a small stream called the Rio Grande to the Pacific at Brito. **P-99, 71, 72.**

Lake Nicaragua discharges through the San Juan River at Fort San Carlos, follows a tortuous course in a southeasterly direction, and

empties through several mouths into the Caribbean Sea near Greytown. Distance from lake outlet to mouth about 80 miles air line, but 120 by windings of river.

The Indio, which empties into the Caribbean some 6 miles northwest of Greytown, runs parallel to the San Juan, the headwaters of some of its tributaries being only about 15 to 20 miles distant from that river.

The San Juan has a number of tributaries, none of great size, save, perhaps, the San Carlos, the Serapiqui, and the Negro. In flood times the discharge of all these streams affects the San Juan. When the San Carlos is in flood the San Juan current may set upstream. **P-99, 72, 73.**

San Juan: Slopes in various reaches; table, **P-99, 73.**

Below the mouth of the Serapiqui the San Juan River enters the coastal plain, a region of swamps, bayous, and lagoons. About 20 miles from the sea it divides into two outlet branches—the lower San Juan, which discharges through Harbor Head Lagoon near Greytown, and the Colorado, which discharges directly into the Caribbean, about 15 miles to the southward, forming the principal outlet. **P-99, 74.**

Trade winds blow almost constantly; not believed that the winds would seriously interfere with canal navigation at any time, **P-99, 74.**

Along the Atlantic coast in the vicinity of Greytown and for some distance inland the rainfall is the greatest known on the Continent. There is no definite dry season. Rain may be expected any day of the year. On the other hand, the entire drainage basin of Lake Nicaragua lies in a region having a well-defined dry season. The average rainfall near Greytown sometimes amounts to nearly 300". In the drainage basin of Lake Nicaragua the average rainfall is about 65". **P-99, 74.**

Geology: Indications of a general subsidence of the Atlantic coast in the region of the Nicaragua route. The former rocky bed of the San Juan appears to have been depressed. At the dam site adopted by Isthmian Canal Commission No. 1 at Conchuda the distance from the low-water surface to the lowest point in the rock cross section is about 80'. From the mouth of the San Carlos down is a deep rocky trough, which is filled with sand. In the coastal plain, consisting mainly of swamps, vegetable matter intermixed with silt is found to a considerable depth, but within 5 or 6 miles of the coast sand is found extending to a great depth under a light covering of mud. **P-99, 74.**

Attractive favorable transisthmian route immediately after the discovery of gold in California. Passengers arriving by sea at the port of Greytown, at that time an excellent harbor, were transported by steamboats to the west shore of the lake; whence the Pacific was reached by a short stage line, which terminated at the port of San Juan del Sur. Successive projects for interoceanic communi-

cation have had to provide for the increasing dimensions of ships; the serious difficulties nearly all found between Machuca Rapids and the Caribbean. **P-99, 75.**

The region of practicable canal routes is limited to the north side of the San Juan River, by the existence of the San Carlos and Serapiqui Rivers on the south side. Financially it would be impracticable to divert these streams, and it would be equally impracticable to take them into the canal. Hence, all the surveys and examinations for a canal route have been confined to the north side of the river. **P-99, 75.**

Topography of the country in the vicinity of the route generally rough. Hills of medium size bunched and steep; swamps between them. Dense tropical vegetation; few places where transit line can be run 50' without cutting out a line of sight; this accounts for paucity of information.

From Greytown to Castillo the boundary line between the Republics of Costa Rica and Nicaragua follows the right bank of the San Juan. Thence to the lake the boundary is a line on the right bank, generally about 2 miles from the river. Both shores from Castillo to the lake are therefore in Nicaraguan territory. In case the level of the water of the river is raised by the construction of a proposed dam at Conchuda, some of the lands in Costa Rican territory would be submerged, although the canal line proposed from Castillo westward to the Pacific would lie wholly in Nicaraguan territory. **P-99, 75.**

Greytown Harbor; old maps; map of 1832; hydrographic charts of Great Britain; trend of coast; outlets of San Juan; sedimentary deposits; effect of wave action on coast; movement of sand spit; erosion or accretion dependent on direction of waves and sand supply; reentrant angle; apparent recession of 8-fathom curve, of 6-fathom curve; how to stop westerly drift of sand; construction of harbor feasible, **P-99, 92, 93, 94.**

Canals, World-famous.

Relative efficiency of, considered in report of Isthmian Canal Commission No. 3 on question of lock or sea-level canal for Panama. Most important ship canal in the world that at Sault Ste. Marie, Mich. Tonnage there per annum 3 times that carried by the Suez Canal, and is greater than the aggregate tonnage of

Suez, Manchester, Kiel, and Amsterdam Canals combined. One of its locks the largest in existence; in successful operation since 1896. Majority of Board of Consulting Engineers have attempted to belittle this experience. Isthmian Canal Commission No. 3 majority did not concur in opinion also that a lock properly constructed and managed "is in any sense a menace to the safety of vessels." "Practical experience has demonstrated the contrary beyond dispute." P-06*, xiv.

Canals of the world: Description of, with plates and cross sections. Appendix D. Report of Board of Consulting Engineers. P-06*, 171-184.

The Manchester Ship Canal. By W. H. Hunter. Depth of water, width at bottom, inclination of side slopes, proportion between sectional areas of canal and vessels navigating canal, curvature.

The Kaiser Wilhelm Canal (Kiel Sea Canal). By E. Tincauzer.

The North Sea Canal. By J. W. Welcker.

The Suez Canal. By E. Quellenec. Depth of water, bottom width, inclination of slopes, cross sections, authorized draft, speed of ships, currents, proportion between sectional areas of canal and areas of midship sections of vessels, curves.

St. Marys Falls Canal. By Joseph Ripley. Curvature, side slopes.

The Corinth Canal. E. Quellenec.

Central Division. (See No. 241, p. 2367 of this Index.) (Takes in the former Culebra and Chagres divisions.)

1909. Duties: Embraces all the excavation between the Gatun Dam and Pedro Miguel, including the diversion channels; construction of the Naos Island breakwater; clearing of timber from the channel and anchorage basin; and such municipal, sanitary, and building work as may be included within the district limits.

In charge: Lt. Col. D. D. Gaillard, Corps of Engineers, U. S. Army, as division engineer. P-09, 10.

Culebra section: Limits, from Chagres River in the vicinity of Gamboa to Pedro Miguel. Plan, originally contemplated channel 300' wide at the bottom, save for the portion between Las Cascadas and Paraiso, where the width was fixed at 200'. Oct. 23, 1908, the President authorized the widening of this portion so that the minimum bottom width throughout should be 300'.

Divisions: Excessive rainfall; adjacent streams rise rapidly. Obispo diversion, caring for drainage on east side, completed June 1, 1909. Carries water into the Chagres about $\frac{1}{2}$ mile east of Gamboa. Required excavation of 1,132,000 c. y. (two-fifths rock), and dike construction totaling about $1\frac{1}{2}$ miles.

Drainage: Water which falls within the prism, etc., cared for by the cut itself, through means of pilot cuts. Bed of canal at crossing of Chagres River at plus 40; excavation at grade. Dike of natural surface left. Pipes laid through dike for drainage; and pumping plant under way.

Excavation: Widening of top areas sufficiently to secure the required bottom width practically completed. Excavated from the prism during the year, 18,442,624 c. y., place measurement (12,291,472 c. y. rock). At the close of the year 43,574,954 c. y. remained to be removed in order to complete the canal.

Dumps: Various dumps in vicinity of cut abandoned, as they became uneconomical; toward close of year practically all material hauled to dumps at Tabernilla, Miraflores,

Balboa (formerly La Boca), and along the line of the relocation of the Panama R. R. between Caimito and Gamboa. Rock from vicinity of Bas Obispo and Empire was still hauled to Gatun for the dam. Completion of the Gamboa bridge gave access to the line of the heavy embankments to be built on the relocation, and 14,731 linear feet of trestle filled.

Filling: 145 acres reclaimed east of the Panama R. R. wharves at Balboa, with dumpings.

Naos Island breakwater: Dumpings used in building. Object of breakwater, to cut off silt-bearing currents approaching or crossing the excavated channel in the Pacific, thereby reducing the cost of maintenance. Extended out approximately 2 miles; upward of 3,000,000 c. y. deposited from trestle; 1 mile to be done.

Slides: Continue as a source of annoyance. Cucaracha slide extended northward until it joins one just south of Gold Hill. Measures 2,700' along the cut, involving area of 27 acres. Total amount removed for the year, 670,017 c. y.; 700,000 c. y. still in motion. Drainage by the French to prevent slide of no benefit. New Culebra slide next largest. 125,000 c. y. in motion. Other slides. During the year 884,530 c. y. removed from all; estimated that 1,000,000 c. y. still in motion.

Explosives: Number of accidents small; casualties large. Experiments to gain best methods. Electric-light current used for exploding, and firing by fuses in parallel. Danger of unexploded charges found by steam shovels practically eliminated.

Lake section: Limits, extends from Gamboa to Gatun. Formerly constituted the Chagres River division. Chagres River course: Crosses the line 23 times, forming peninsulas numbered as Point 1, Point 2, etc., beginning at Gamboa. Dredging across Points 1 and 2; waters of Chagres turned in June 9 at Point 2; total of 1,784,459 c. y. excavated, 1,350,308 removed during fiscal year. Gravel in large quantities brought into new cut by floods; will be removed by dredges or by drains and utilized for making concrete to revet slopes of Culebra section. Changing course of river permits old bed to be used as a dump. Cutting across Point 3 begun June 12, 1909. At Caimito excavation was begun Oct. 1, 1907; during fiscal year 1,375,599 c. y. removed. At San Pablo excavation continued until Jan. 4, 1909. During the year 558,077 c. y. removed; 220,182 c. y. remains to complete the peninsula. Cano River cut: On west side of Chagres River, nearly opposite Tabernilla. Work begun Dec. 15, 1908; 583,867 c. y. removed. Isolated knolls: Above bottom grade of the canal, vicinity of Bohio. 107,740 c. y. removed; 88,000 c. y. remained for removal.

Buena Vista: Work started near, on right bank of Chagres, to secure necessary width and depth of channel.

Anchorage basin: Flat area south of the Gatun Hills. Clearing of it begun, and the channel,

to elevation 15; roots grubbed, and a total of 1,256 trees cleared. In the channel from Gatun to mile 13, trees cut down over an area of 458 acres, removing all standing timber from the channel 1,000' wide. Between miles 26 and 27, in the vicinity of Mamei, 43 acres were also cleared. **P-09, 10, 11, 12, 13, 14.**

Municipal, building, and sanitary work: Water supply; 15,560' pipe laid in extension. Sewer system, 5,894' laid at various settlements; 59 house connections made. Bridges; suspension bridge begun at Empire. Roads; constructed in vicinity of Culebra, Empire, Gorgona, Bas Obispo, San Pablo, and Tabernilla. Buildings; number of various kinds put up; repairs made. Sanitation; 24,370 linear feet open ditches laid; tile drains and filling. Existing drains maintained. **P-09, 14.**

1910. Five construction districts consolidated into four, as follows: Chagres River district, Gatun to Chagres River at Gamboa; Empire district, Gamboa to Empire suspension bridge; Culebra district, Empire suspension bridge to railroad crossing north of Pedro Miguel Locks; and Pedro Miguel district, embracing excavation between railroad crossing and locks, dumps south of Pedro Miguel, and construction of Naos Island breakwater. Division includes Culebra Cut proper, Gamboa to Pedro Miguel.

Chagres district: Work on Point 1 commenced Feb. 24, 1908, continued until June 15, 1909, when, because of high water, work discontinued; resumed Jan. 20, 1910; excavation at this point completed May 28, 1910; 286,560 c. y. taken out. Total removed from Point 1, 1,246,761 c. y. Point 2, between Matachin and Gorgona, completed May 25, 1909. Bottom of the cut was between 2 and 3' above bottom of Chagres River at a point where the latter crosses the cut, and heavy floods of Nov. and Dec. deposited about 109,000 c. y. gravel. Steam shovel and orange-peel crane put at work to collect this gravel for use as ballast and roads; 56,238 c. y. removed and stored. In consequence of this supply, crushing plant at Bas Obispo put out of service. Point 3 lies on east side of Chagres River opposite Gorgona; excavation begun June 12, 1909; continued until close of year; 832,646 c. y. removed. There remained 157,522 c. y. to complete this section, but as every slight rise of Chagres River stops work, it became necessary to remove tracks and shovels. Remaining material loosened by blasting; hoped that floods of Chagres will remove it; such as may remain will be taken out by dredges. Point 4 lies on left bank of Chagres at Gorgona; excavation begun June 2, 1910; 10,646 c. y. removed. Point 5 at Juan Grande; excavation commenced June 2, 1910; 23,824 c. y. removed. Point 6 north of Juan Grande; work commenced May 2, 1910; 46,741 c. y. removed. Handwork at Point Mamei commenced Apr. 15, 1910, and excavation by steam shovel June 15; 8,315 c. y. removed.

At Mamei work commenced Sept. 17, 1909; 372,671 c. y. removed. Excavation at Caimito in progress at close of the last year continued, removing 338,675 c. y.; completed the work in this locality on Apr. 22, 1910. Total excavation at this point, 2,268,572 c. y. During the year 5,899 c. y. removed from San Pablo section, which leaves 258,000 c. y. remaining. Cano River section on west bank of Chagres nearly opposite Tabernilla. Work begun Dec., 1903; completed Sept. 24, 1909; total removed, 707,031 c. y. Work commenced at Tabernilla Nov. 13, 1909, and carried forward to June 17, 1910; 392,490 c. y. removed. Near Buena Vista, on right bank of Chagres, are 2 hills, parts of sides of which had to be removed to give channel necessary width and depth. Work commenced June 29, 1909; completed Nov. 10, 1909, by removal of 153,026 c. y., transported to and dumped in toes of Gatun Dam. At Bohio, steam-shovel work consisted in removing rock hill near north end of village; commenced Sept. 4, 1909; completed Nov. 10, 1909; 33,874 c. y. removed. Isolated elevations projecting but short distance above proposed level of bed of canal removed by employees or by contractors. That done by Isthmian Canal Commission commenced Jan., 1909, completed Nov. Total excavated in vicinity of Bohio, 184,148 c. y. Contract made for removal of 160,947 c. y. from prism between San Pablo and Bohio; all removed excepting 14,223 c. y. Contract entered into for excavation of 202,410 c. y. between Tabernilla and Bohio. Third contract entered into Feb. 10 to excavate 397 c. y. on miles 14 and 15 and miles 19 and 20; finished Mar. 15. Total amount removed from Chagres section from 1907 to close of the last year, 9,497,673 c. y., leaving estimated amount of 3,415,944 c. y. This amount increased over estimate of Sept., 1903, by 251,965 c. y., for excavating to elevation 39 above sea level instead of 40, made necessary by floods, and by allowing 670,000 c. y. for silting. Clearing, grubbing, and burning of trees in channel of Lake Gatun commenced; 950.4 acres cleared.

Culebra Cut: During the year 14,921,750 c. y. excavated, leaving 34,893,531 c. y. The remaining amount includes increase of 6,408,560 c. y. over estimate of Sept., 1903, due to widening canal north of Pedro Miguel Lock to form basin, adding thereby 932,572 c. y., and to allowing 5,475,988 c. y. for slides and breaks, as new ones developed during year. Previous to fiscal year movement of material into prism due almost entirely to slides caused by movement of top layer of clay upon smooth sloping surfaces of rock or other material harder than clay. In addition, several breaks occurred in banks. Of the slides proper, most important at Cucaracha. Total area embraced since commencement of operations, 47.1 acres. Prior to July 1, 1909, 1,125,017 c. y. material removed from this slide, and 639,239 c. y. removed during fiscal

year. Next largest slide is on west bank where New Culebra was located, caused by movement of large French dump into canal. Area involved, 7.3 acres. Prior to July 1, 1909, 118,024 c. y. removed, and 327,540 c. y. removed during year. Third slide covers 4.6 acres, and is on east bank directly opposite Whitehouse yard. Prior to July 1, 1909, 50,800 c. y. removed, and 110,000 c. y. re-removed during present year. Fourth slide covers 1.7 acres on east bank of the Obispo diversion at La Pita Point, where west slope of a hill broke away and commenced to slide toward Obispo diversion; 15,608 c. y. taken away. Three bad breaks occurred during year. On west bank at Culebra break covers 10½ acres, and during year 1,500,388 c. y. removed, making a grand total of 1,650,000 c. y. since break began. Second largest break, directly opposite that just described, covers 11½ acres on east side of canal; during year 314,184 c. y. removed, making total from this locality 420,202 c. y. Third break was at La Pita Point, and permitted waters of the Obispo diversion to flow into canal for three days, drowning out some shovels at north end. Break aggregates 40,000 c. y. Flume constructed to carry flow of diversion past break. Total removed from slides and breaks in central division during year, 2,649,563 c. y., or 15 per cent of amount removed from Culebra Cut.

Floods seriously interfered with progress of work, and one of Dec. 26 overflowed dike separating cut from Chagres, cutting channel 200' long and 21' deep. Steps taken to rebuild it; accomplished, and dike maintained through flood of Dec. 30. Subsequently it was strengthened and carried to elevation of 73 at top of rail. Track on dike connects relocated line at Gamboa with main line of Panama R. R. at Matachin. Pump with capacity of 18,000 gallons a minute ordered to be added to those already in north end of cut to handle water accumulating.

During year 17,749,306 c. y. deposited in various dumps. Most important of these at Tabernilla, relocated Panama R. R. between Gamboa and Caimito, Miraflores, and at Balboa. In addition, over 1,150,000 c. y. removed from Culebra Cut taken to Gatun and deposited in toes of dam. Several dumps opened in Chagres section. Material deposited at Tabernilla and Miraflores outside of relocation of railroad wasted. That dumped on Panama R. R. relocation is used for filling trestles and for raising embankments; 2,351,334 c. y. useful for this purpose. Material deposited at Balboa is useful in that land is reclaimed from ocean, which will be valuable; 108 additional acres reclaimed, making total of 253 acres.

Breakwater started from Balboa toward Naos Island with object of cutting off silt-bearing currents from excavated channel in Pacific, thereby reducing cost of maintenance, and

making navigation easier by protecting vessels from cross currents. During year trestle extended 1,123', giving a total length from shore of 2.4 miles. End of trestle was within 4,900' of Naos Island, and the filling extended to within 400' of end. Trouble experienced in extending outer end of dike, due to sliding of bottom when weight of stone filling was dumped from trestle. Sliding has taken place at every foot of the last 4,000' of dike, and continual settlement of roadbed for 2 or 3 months, after which it gradually diminishes.

Empire shops: On Nov. 5, 1907, a force of mechanics was organized to work in the cut at night in repairing steam shovels. Repairing of steam shovels and manufacture and repair of steam-shovel parts for entire canal transferred to central division, Oct. 1, 1909, when Empire shops were transferred from mechanical division and all other mechanical work formerly handled at Empire shops transferred to Gorgona shops.

Municipal work: Road 8' wide constructed from Empire to Las Cascadas plantation, 2.6 miles, completed Oct. 31. Road between Empire and Paraiso continued, 75 per cent completed June 30. Road between Empire and Gorgona 52 per cent completed. Suspension bridge at Empire completed July 31, 1909. Sanitary work consisted of constructing 17,149 linear feet of ditches, regrading 116,028 linear feet of ditches, cleaning 1,453,741 linear feet of ditches and 56,441 linear feet of concrete drains, laying 7,289 linear feet of tile drains, constructing 56,441 linear feet of concrete gutters, and clearing 123,597 sq. y. **P-10**, 14-20.

1911. Chagres district: The material which remained to be removed July 1, 1911, in Point 1, consisted of gravel and sand washed in by the Chagres River; 20,455 c. y. removed and taken to storage piles. Point 2: Of gravel and sand, 46,102 c. y. removed. Point 3: 91,278 c. y. washed away by freshets. Point 4: 828,462 c. y. removed by steam shovels. Point 5: 438,241 c. y. removed, completing section. Point 6: Section completed Oct., 1910, by which time 112,238 c. y. had been removed by steam shovels. At East Mamei: 598,213 c. y. removed by steam shovels; work at this point completed Mar., 1911. At Mamei: 10,066 c. y. removed by steam shovels, July, 1910, completing work. At Tabernilla: 51,970 c. y. removed in Feb. and Mar., 1911. At Caimito: 731 c. y. removed in Mar., 1911, completing work. Of contracts, that between San Pablo and Bohio completed by removal of 13,832 c. y. making total removed, 170,808 c. y. Contract for removal of 202,140 c. y. from prism between Tabernilla and Bohio still in progress, contractor removing 105,532 c. y. during year. Contract entered into Dec. 6, 1910, for excavating 112,450 c. y. from canal prism between stations 28-1000 and 28-2300. Work begun Dec., 1910; by close of year 68,904 c. y. removed. Total removed from Chagres sec-

tion during the year aggregated 2,301,020 c. y., leaving on July 1, 1911, to complete this portion 533,921 c. y. Excavation in Chagres River section 95.68 per cent completed June 30, 1911. Clearing, grubbing, and burning trees in channel of Gatun Lake by hired labor commenced at beginning of dry season; 182 acres of trees and brush cut in vicinity of Chagrecito and Bohio; completes all clearing of channel throughout central division. In connection with lighting and buoying canal this division cleared 373.5 acres and cut 67,550' of trocha for running profiles.

Culebra Cut: During the year 16,221,672 c. y. excavated; estimate again increased over that reported a year ago by 4,676,278 c. y., to allow for slides developed beyond the limits assumed in the preparation of former estimates. Total removed during the year outside of slope lines and because of slides aggregated 4,879,378 c. y., or 30.07 per cent of total amount of material removed from cut, as against 15 per cent during previous fiscal year. Thus far 10,757,658 c. y. of material due to slides removed. In addition to the slides, breaks have occurred, notably on both sides of the cut at Culebra. Rational method of treatment seemed to be to relieve or reduce the pressure as much as possible, and work along these lines was directed in the latter part of the dry season on the west side of Culebra Cut, and has been so successful that a point has been reached so that the shovels at the bottom are not interfered with, and are enabled to move ahead without bulging due to pressure from this side. Intermediate benches along the slope are cut so as to distribute the top weight and reduce amount of material that may have to be removed. Work was started similarly on east side along same lines. Geological formation of the Isthmus is very irregular and the character of material encountered in the cut is constantly changing, so that it is impossible to determine in advance where slides and breaks are liable to occur, or, when they do occur, the slopes which they will ultimately assume. Estimate of the amount remaining due to slides may not be reached; it may be exceeded. To be noted that 6 of the good-sized slides which have given trouble in the past now quiet, with no indication of further movement, and the work of deepening the cut and widening the lower reaches has progressed satisfactorily with less interruption or interference on account of slides than at any time since trouble with them began. Increases in estimates of material to be removed made necessary by the slides will cause no increase in the total estimated cost for Culebra Cut, due to the reduction in the unit cost of the work; no indication that such increases will delay time of completing the work, because progress greater than expected, and by working on the upper reaches of the slopes the output maintained. The slide of greatest

importance was that at Cucaracha, 47.1 acres. To July 1, 1911, 2,722,164 c. y. removed, and there remain 400,000 c. y. Last shovel cut at foot of Cucaracha slide made in first part of June, 1911, on the permanent berm at 95' level, since which time there has been no sign of any movement, the slide apparently being "dead." Next largest slide was the Culebra slide, first reported as covering 7.3 acres; now covers 46.6 acres; at present most troublesome. On east bank opposite Culebra estimated 2,329,784 c. y. had been removed, and there remain 1,864,350 c. y. On west bank 3,714,662 c. y. have been removed and there remain 3,391,300 c. y. The other slides have diminished in importance.

The summit of drainage in the cut at Empire, and water entering to the south of this point drained into Pacific Ocean by pumping from sump at Pedro Miguel. Eight pumps of various types available on the Isthmus utilized having capacity of 38,250 gallons per minute. Arrangements in progress for draining through center culvert of Pedro Miguel Locks, which will eliminate pumps at this end, and gravity drainage south of summit will result. Dike separating cut on north side from Chagres River remained intact. Additional pump installed and water flowing to north of summit drained to sump at Bas Obispo end of cut, from which it was pumped into Chagres River. There are 8 pumps of various types, having total capacity of approximately 59,290 gallons per minute. As already noted, Obispo River broke into the canal through break at La Pita Point; at that time water checked and handled through a wooden flume, until Jan., when reinforced concrete flume 7' high, 22' wide, and 400' long was commenced and completed in Apr. Flume has maximum discharge capacity of 3,000 cubic feet per second, or 15 per cent more than the greatest recorded flow at this point. Slide on east side of canal opposite White House, in Oct., 1910, broke back to Obispo diversion dike. New channel cut through a saddle so as to carry waters about 1,000' farther from canal at this point, necessitating excavation of 22,416 c. y.

As depth of the cut has increased, egress for dirt trains more and more limited, resulting in decrease in dumps that could be economically utilized. Trains run from south end of cut at Pedro Miguel to dumps at Balboa and Miraflores, and from north end of cut to Gatun Dam, Tabernilla, and over the Gamboa Bridge to dumps on Panama R. R. relocation. Several new dumps of limited capacity opened in Chagres section to take care of local excavation. Tabernilla dumps closed after Dec. 12, 1910, and on them were wasted 1,003,098 c. y. during part of the year; at Miraflores, 3,478,706 c. y. wasted; and 4,646,841 c. y. dumped at Balboa in reclaiming land from ocean and in raising

part of area previously reclaimed. Additional 62 acres reclaimed during year, making total area 315 acres. Material delivered at Gatun for the dam, back fill for the locks, and large stone for the concrete, 2,230,438 c. y., car measurement, and consisted of "run of the cut." Greater part of material hauled out on relocation of Panama R. R. between Caimito and Gamboa wasted; 3,509,221 c. y. disposed of over this section. Average haul to dumps, 12 miles. Two new methods of disposing of material devised; one by washing material to cause it to slide into Chagres River, which washed it away; and the other by so dumping from trestle as to utilize current of river in carrying away material dumped therefrom.

During year breakwater trestle extended 2,008' so that trestle was 2,737' from Naos Island. Filling extended to within 1,500' of end of trestle, or 4,237' from island. Trouble experienced in extending outer end of dike, due to sliding of bottom caused by weight of material dumped from trestle. This sliding encountered at every foot of last 4,000' of dike and resulted in settlement of roadbed, which continued for first two or three months, after which it gradually diminished and finally ceased. The work of material benefit to channel.

At close of year Culebra Cut was 73.25 per cent completed. Empire shops continued under charge of the central division, making shop repairs and manufacturing repair parts for the steam shovels in use on the canal. Shovels repaired during year, 35. Night gang for field repairs maintained. Two oil furnaces installed in blacksmith shop.

Municipal work: Road between Empire and Paraiso, in progress during previous year, completed Oct. 1, 1910, resulting in highway 12' wide and 18,800' long. Road between Empire and Gorgona completed June 28, 1911, giving highway 12' wide and 16,810' long. Reinforced concrete bridge constructed to carry road over Mandingo River near Bas Obispo. It is 12' wide and 196' long, containing 556 c. y. concrete. As result of this work wagon road opened up from Panama City to Gorgona. Apr., 1911, work commenced on Empire-Chorrera road. One mile of subgrading, with necessary culverts, completed. Road from West Culebra to Cowpens, 3,200' started in May, 1911, and by June 30 about 75 per cent completed. In Golden Green, a settlement between Empire and Culebra, 1,600' of street macadamized. Sixty miles of trails cleaned and drained, the labor being done by natives working out poll taxes. Repairs made to existing roads and cinder paths. Water pipe laid, removed, and relaid aggregated 24,684', and sewers laid, removed, and relaid aggregated 8,827'.

Sanitary work consisted of digging 7,177 lineal feet of ditches, regrading 291,474 lineal feet of ditches, cleaning 1,707,517 lineal feet of ditches, laying 1,762 lineal feet of tile drains,

constructing 5,445 lineal feet of concrete gutters, clearing 99,515 lineal feet of concrete drains, and clearing 58,501 sq. y. of brush and grass. P-11, 15-21.

1912. In Point 1,91,300 c. y. were removed, of which 27,632 c. y. were taken from prism. Gravel removed was stored for use as ballast and in concrete work. Total in storage at close of year, 110,000 c. y. At Point 4-B 56,380 c. y. removed; of this, 44,184 c. y. taken out by contract. Contract entered into Dec. 6, 1910, for excavating 112,450 c. y., but little done. Work begun Dec., 1910, and on May 16, 1912, after removing 108,992 c. y., contractor signified his inability to finish. Work was taken over and 12,196 c. y. removed by central division. At San Pablo completion of channel required removal of bed of old line of Panama R. R., which could not be done until line was abandoned. Work commenced Jan., 1912, completed in May by removal of 305,291 c. y., which finished prism. At Tabernilla excavation commenced Mar., 1912, and finished same month by removal of 22,893 c. y. At Buena Vista 100 c. y. removed in Mar., completing this part. At Bohio steam-shovel excavation commenced Feb., 1912, and finished Mar.; 6,997 c. y. removed. At Pena Blanco 48 c. y. removed Mar., 1912. Contract for removal of 202,140 c. y. between Tabernilla and Bohio entered into Mar. 21, 1910. Work commenced Oct., 1910; contract completed Apr., 1912, by removal of 207,132 c. y., of which 101,600 c. y. removed during year. Excavation of Panama R. R. embankment across anchorage basin south of Gatun commenced Mar., 1912, and finished to grade 35' above sea level in following month; required removal of 39,568 c. y. Small force engaged in blasting stumps and trees in Gatun Lake Channel. Prior to Aug. 31, 1911, this division also did clearing work for first division in connection with lighting channel. Total clearing, 652.7 acres, involving running 49,547' of profile and cutting 163,310' of trochas. Subsequent to Aug. 31 this work handled by forces under the first division, O. C. E. Total removed in Chagres section during year, 560,509 c. y., leaving 151,000 c. y. of wet excavation remaining.

During year 16,476,769 c. y. removed from Culebra Cut. Amount remaining again increased over that reported a year ago by 3,595,000 c. y., in order to allow for slides already existing at the beginning of the fiscal year and for excavation along the upper levels of the banks of the canal, where slides had developed or were anticipated, and outside of prism lines. Total removed during year outside of slope lines and because of slides aggregated 5,915,000 c. y., or 35.90 per cent of total amount removed from cut as against 30.07 per cent during previous fiscal year. Total due to slides so far removed aggregates 16,671,000 c. y.

Work in cut retarded on account of slides and breaks in its banks which increased as cut was deepened. At the Cucaracha slide, practically at rest for over a year, the angle of repose is somewhat steeper than 1 on 5, while Culebra slide on west bank, where the material is still moving, present slope is about 1 on 5. In the slide on west bank just north of village of Culebra, moving material is of stratified rock moving in mass on layer of lignite which has an inclination of 1 on 7. This slide developed early in dry season. These very flat slopes of the bank in the deepest portions of the cut explain the large amount of material added by slides and breaks over original estimates. Relatively small slides developed as cut deepened, but the largest one now in motion is that which results from a break in west bank at Culebra, an area of about 63 acres. From this slide 2,710,000 c. y. removed during year, making total thus far taken out of 6,765,000 c. y. Next largest slide lies on east side of the cut, opposite Culebra, an area of 50.7 acres. From this slide 1,960,000 c. y. removed during the past year, making total of 4,290,000 c. y. taken out since 1907.

Work, begun Jan., 1911, of decreasing pressure on banks where breaks might be expected continued throughout year; 3 steam shovels kept continuously at work terracing west bank in vicinity of Culebra, and the same number during greater part of year on similar work on opposite bank.

Increases in estimates of material to be removed, made necessary by slides, will cause no increase in total estimated cost of Culebra Cut. None of the slides which occurred during the year would have interfered with the passage of ships had the canal been in operation.

Aug. 15, 1911, arrangements perfected for draining through the central culvert of the Pedro Miguel Locks. Dike separating cut on north side from Chagres River remained intact, and pumping plant previously described continued in service to handle water which drains to north from summit.

Diversion channel on east side of cut, for carrying Obispo River and tributaries, gave trouble during year. In Mar., 1912, cracks appeared to south of Empire suspension bridge, indicating motion of material lying between diversion and cut. Steps were taken to relocate this part of the diversion farther to the eastward. Excavation in Apr.; in all, 26,168 c. y. removed; new portion 1,970' long and located 510' east of old diversion at its most distant point. Empire-Paraiso wagon road and railroad reconstructed on west bank of new diversion. When water was turned into new channel weight of threatening bank lightened by removing material between old portion of diversion and face of cut. Slide on east side of canal, opposite Whitehouse, threatened to break into Obispo diversion at that point.

Movement of material slow, but it was deemed safer to relocate diversion about 100' eastward of location, and work with this in view undertaken toward close of year.

Trains loaded in cut were hauled out at either end to dumps. Dumps used for wasting material from canal proper after Feb. 15, when service to Gatun was discontinued, were those at Miraflores and Balboa for trains run to south, and relocation dumps for trains run to north over Chagres River bridge. Material from high levels on both sides of canal wasted on local dumps, with exception that a few of Lidgerwood trains serving shovels at Rio Grande and Culebra were run over Panama R. R. to dumps at Miraflores and Balboa. For finishing work at San Pablo, 3 old dumps reopened and 2 new river dumps utilized. Tabernilla dumps reopened and used during Mar., 1912, for wasting material excavated at that point. Between Balboa Y and Ancon and Sosa Hills 72 acres of marshy land that could not be drained filled in, 1,022,591 c. y. from canal being used. Of spoil hauled from central division, 1,585,184 c. y. sent to Gatun for use on dam in back fill of locks; 2,872,950 c. y. wasted at Miraflores; 3,930,543 c. y. used at Balboa, partly in reclaiming swamp, partly in extending breakwater and the rest wasted; 5,268,890 c. y. dumped along relocation between Caimito and Gamboa.

In addition to amount wasted on central division dumps—15,259,391 c. y.—1,883,676 c. y. were furnished other divisions. Material previously wasted at Miraflores, Balboa, and on relocation dumps having settled firmly, found more economical to place new layer or form new dump on top of them than to start new ones.

Prior to June 30, 1911, the Naos Island trestle had been constructed for 2.78 miles. During year this trestle extended 1,360', giving total length of trestle to June 30, 1912, of 16,051', or 3.04 miles. The length of the trestle on June 30, 1912, was 1,320' from Naos Island, and fill extended to within 2,000' of its end, or 3,320' from island. Total vertical settlement at one locality on the dike during the year aggregated 125'. Elevation of top of trestle 14' above mean tide, and average depth of water for last mile of trestle constructed is about 15' at mean tide, giving total height of trestle of about 29' above original bottom. When rock is dumped from trestle it begins to settle as soon as it attains a height of a few feet, displacing adjacent material which, pushing up, forms parallel ridge of mud. By the time rock fill completed, these parallel ridges are about 80' from center of track. To lessen difficulties and to spread foundations as much as possible, suitable material removed by dredges in channel dumped in front of trestle and spread on either side of center line. A board appointed to submit a plan for hastening progress on the construction of this breakwater recommended building double

trestle, dumping on either side, thereby spreading fill and continuing fill to mean tide out to the island, thereby saving the trestle, which is to be made more substantial than formerly. When fill has been extended to island it is to be carried to full height, commencing at the island; should a break occur in the trestle, there would be considerable length of it left to fill over. This was approved, and double trestle built.

Empire machine shops continued making shop repairs and manufacturing repair parts for steam shovels until close of year, when they were transferred to mechanical division. Twenty steam shovels repaired in shops. Night-repair gang continued for field repairs on shovels; average number repaired in the cut each night, 14.

Empire-Chorrera Road, commenced Apr., 1911, continued. On June 30, 1912, macadam had been laid and rolled on 11,230 lineal feet. In addition to this, subgrading, including necessary concrete culverts and drains, completed for 12,450 lineal feet. This is a 16' macadam road and will extend from village of Empire to zone boundary, 6 miles; Panama Government has promised to extend it to Chorrera. Empire-Paraiso Road relocated for 2,480' and reconstructed; made necessary by slide on the east bank. In village of Culebra 1,400' of road reconstructed, on account of slides on west bank. In village of Golden Green 1,650' of road constructed.

In Dec., 1911, realized necessary to install auxiliary pumps in Chagres to assist reservoirs in furnishing a sufficient amount of water for general use in the central division until such time as the rainy season should replenish supply. Purchase made of two 3-stage centrifugal pumps, belt driven, with rated capacity of 2,000,000 gallons under working pressure of 150 pounds; installed under Chagres River bridge; put into service Jan. 24, 1912, acting as feeders for mains on east and west banks of canal. During latter part of Feb., on account of draining off supply in Carabali Reservoir, Chagres River pumping station operated to supply water to Gorgona shops for mechanical purposes. On Mar. 12 a 6-inch line completed connecting Gorgona and Gamboa systems, supplying water to Panama R. R. tank at Matachin, town of Matachin, Jamestown, and engine house at Gorgona shops. On Apr. 13 additional piston pump installed on Sardanilla River, which increased supply for canal purposes at this point to 400,000 gallons per day. On June 8 piston pump, having capacity of 1,500 gallons per minute under a working pressure of 250 pounds, procured from Atlantic division and installed by the date supply in Camacho Reservoir was exhausted. An underwriters' fire pump procured from subsistence department also installed in Chagres River.

Sanitary work consisted of digging 5,763 lineal feet of ditches; regrading 311,061 lineal feet

of ditches; cleaning 1,613,820 lineal feet of ditches; laying 550 lineal feet of tile drains; constructing 11,650 lineal feet of concrete gutters; cleaning 341,214 lineal feet of concrete drains; and clearing 6,536 sq. y. of brush and grass. P-12, 24-30.

1913. Excavation for prism during year confined to Culebra Cut, and 12,582,124 c. y. removed. In addition, 155,376 c. y. excavated in changing portions of Obispo diversion and 35,888 c. y. outside of canal prism for auxiliary work; total handled by central division, 12,773,388 c. y., of which 10,098,099 c. y. rock; 46.67 per cent removed from cut due to slides, against 35.90 per cent during previous year. Amount remaining to be removed again increased at close of year; an increase for central division of 9,280,237 c. y. over estimate in last report. Of this total remaining, 1,324,944 c. y. inside prism lines and 6,860,500 c. y. estimated for slides, which includes benching back of banks to relieve pressure which, crushing underlying strata, may either increase extent of slides or cause new ones. Total material due to slides so far removed, 22,570,200 c. y., or increase of 2,304,200 c. y. over estimate in last report.

Predictions of geologist with reference to Cucaracha slide, that "the end of the activity of this slide is now well in sight," have not been realized. Jan. 20 basalt rocks broke and there slid into cut approximately 2,000,000 c. y. Work continued on slide during year, for purpose of maintaining tracks on 67' level open. Slide at close of fiscal year had area of 50 acres. Total removed since July, 1905, when it began moving, 3,859,500 c. y., leaving approximately 1,500,000 c. y. still to be removed. From West Culebra slide 1,922,700 c. y. removed; making total from Oct., 1907, of 8,687,600 c. y.; leaving approximately 2,390,000 c. y. Slide covers 68 acres. At East Culebra slide 1,676,300 c. y. removed; making total of 5,966,200 c. y. removed since Jan., 1907; estimated 2,000,000 c. y. remain; covers 55 acres and extends from north side of Gold Hill for 5,500'.

Break occurred Aug. 20, 1912, north of one previously reported at La Pita Point, which turned Obispo diversion into canal, flooding it and stopping steam-shovel work to north. Shovels removed, earth dam built across cut south of break to protect cut between it and summit, area then freed from water by pumps, and temporary channel constructed for diversion. After new channel had been excavated for Obispo diversion slide was attacked, and 181,100 c. y. removed.

On east side of cut, north of Gold Hill, there is a French dump included within East Culebra slide. Crack developed Apr. 1, 1913, parallel to cut and 635' distant from its edge. Steps taken with steam shovels to bench this portion of bank and arrangements made for slicing as much as possible into valley to east.

Summit of drainage in cut continued about opposite Culebra until two shovels cutting to grade on bottom produced one cut through at grade June 28, 1913. Water south of summit drained into Pacific through central culvert of Pedro Miguel Locks. Dike separating cut on north side from Chagres River remained intact and pumping plant previously described continued in service to handle water which drains to north from summit, with addition of two French centrifugal pumps, 17" discharge, added after break north of La Pita Point.

With the opening in spillway at plus 50, with upper gates at Pedro Miguel not complete, feared heavy freshet might top dike at Gamboa and do injury to locks. Decided to raise Gamboa Dike to elevation 78.2, carrying this elevation along west dike which separates west diversion channel from cut. Material utilized for this purpose aggregated 37,080 c. y.

As cracks developed in sides of Obispo diversion, giving the appearance of additional slides which, if they occurred, would let water of diversion into cut, decided to relocate diversion farther to east; done opposite Whitehouse, opposite the division office at Empire, and around break north of La Pita Point. This necessitated handling 128,076 c. y.

Lirio drainage channel changed farther to the west, and in making change 27,300 c. y. handled.

All trains loaded in the cut were hauled out at either end to the dumps. On account of the grades that had developed due to deepening cut, it was necessary to use an average of 7 engines per day as pusher engines to get these trains out in carrying the loaded trains up the inclines at either end. With contracted area of operation, steam shovels placed closer together and necessitated an average of 6 locomotives daily to handle the trains to and from the shovels, besides those used in hauling the trains to the dumps.

Due to development of slides and beginning Feb. 20, 1913, split-shift system inaugurated on shovels working in slides and on upper benches, to secure 12 hours' work per day. This increased cost, but it was more than justified, after decision had been reached to admit water into the cut in Oct., in order to remove as much of remaining rock in dry as possible.

Dumps in use during year were those at Miraflores, Balboa, along line of railroad relocation north of Gamboa, swamp lands in the vicinity of Ancon, and a new dump opened along the line of the Panama R. R. south of Pedro Miguel. Necessary to abandon old line of Panama R. R. in the vicinity of Miraflores Locks to permit construction of spillway, and subsequent to Mar. 4 trains had to be operated over the single track through the tunnel. This reduced trains that could be operated to south and caused opening up of Pedro Miguel dump. Material taken from upper benches on east side of cut wasted partly in extending

dump north of Gold Hill started 2 years ago, and remainder dumped at Miraflores, Ancon, and Balboa, operating over Gold Hill cut-off of Panama R. R. That taken from upper benches on west side wasted on old dump at Culebra and on dumps to the south. 284,755 c. y. dumped on east side of cut. At Miraflores 1,288,262 c. y. wasted; 3,985,129 c. y. used reclaiming swamps at Balboa and wasted on Balboa dump; 440,725 c. y. used for filling swamp lands northeast of Ancon Hill; and 4,376,080 c. y. on Panama R. R. relocation dumps between Caimito and Gamboa. During year 90 acres filled in at Balboa, making a total of 474 acres in all reclaimed at this point. Between Balboa Y and Sosa Hill 54 acres marshy land filled during year. In addition, 487,108 c. y. waste furnished other divisions and the Panama R. R.

On June 30, 1913, Naos Island trestle entirely completed and filled, with exception of stretch about 600' long. Total used, 653,242 c. y. Soft material was pushed out and up, forming a ridge of mud, intermixed with stones that had been dumped in and carried up by soft material, parallel to breakwater and 100' from it. Total removed from central division since American occupation up to close of year, 107,139,181 c. y., at average cost of \$0.7105 per c. y. Of this, 93,305,975 c. y. removed from Culebra Cut.

Empire-Chorrera Road completed; convict labor employed on it transferred to other work, and small force of paid labor established for placing screenings and doing other work necessary for completion of road to zone boundary. On Nov. 27, 1912, 16' macadam road from Gamboa to a point on Las Cascadas plantation road, about 3,600' from east end of Empire suspension bridge, undertaken. Road will have a length of over 5 miles. Stockade erected at Gamboa to house prison labor engaged on it. Empire-Paraiso Road relocated and rebuilt for 5,608', due to slides. In village of Culebra 2,370' road reconstructed on account of slides. At Lirio camp 253' of road constructed. For preservation of the roads and comfort of public oiling of highways during dry season authorized; treatment applied to 27,000 linear feet of road in villages of Empire and Culebra. Necessary to resurface 16,323 linear feet of Gorgona-Bas Obispo Road.

For maintenance of water supply to shops and for other construction purposes, additional pumps installed and operated at Lirio, Sardanilla River, Gamboa, and Gorgona shops. Sanitary work consisted in digging 4,986 linear feet of ditches, regrading 602,578 linear feet of ditches, cleaning 1,327,676 linear feet of ditches, laying 6,426 linear feet of tile drains, constructing 3,852 linear feet of concrete gutters, cleaning 847,852 linear feet of concrete ditches, and cleaning 908,331 sq. y. of brush and grass. P-13, 23-28.

1914. With admission of water into Culebra Cut by blowing up of Gamboa Dike on Oct. 10, 1913, central division was abolished. Remaining dry excavation in the territory covered by this division was placed under a resident engineer reporting to the chief engineer; all surveying work and dredging were placed under the sixth division of the chief engineer's office, and the transportation forces, with those of the first, fifth, and fortification divisions, were concentrated under a superintendent of transportation and placed with the second division of the office of the chief engineer; the central division's property accountability was transferred to the quartermaster's department. Annual Rs. usually present; lists of tables relating to stamps, mail, letters and parcels, money orders, customs operations, distillation taxes, saloon licenses, rents, administration of estates, postal savings, police and prisons, arrests, convictions, crimes, prisoners, deaths, accidents, water consumption, schools, teachers, school gardens, revenues, expenditures, balances, courts, supreme court, circuit courts, district courts, legislation, ordinances, steamboat licenses, fires, population, etc.

1909. Organization: Consists of the executive branch, which includes the divisions of posts, customs and revenues, police and prisons, schools, fire protection, public works, and the office of the prosecuting attorney; and of the judicial branch, which includes the supreme, circuit, and district courts of the zone. The head of the department represents the Isthmian Canal Commission in its relations with the Republic of Panama and foreign representatives accredited to Panama.

Legislative acts, etc.: Congressional legislation for the zone includes the provision in the sundry civil act Mar. 4, 1909, in regard to the use of local revenues of the zone, and act Feb. 27, 1909, relative to the use, control, and ownership of lands in the zone. Executive order Nov. 7, 1908, makes changes in the provision respecting appeals from the judgment of the district court. Order of Aug. 14, 1908, amends the Penal Code of the zone by repealing the minimum limit of punishment for grand larceny. Order of Jan. 6, 1909, extends to the zone the provisions of the acts of Congress respecting the use of safety appliances on railroads. Subsequently modified by Executive order June 11, 1909. Isthmian Canal Commission, an. of Sec. of War, under the Executive order of Apr. 15, 1907, adopted amendments to the regulations governing the sale of liquor, the water regulations, and the regulations governing the collection of taxes; and enacted an ordinance requiring the muzzling of dogs.

Beyond-zone relations: Relations with Panama satisfactory, and with other countries. Among matters taken up with Panama were sanitary work in cities of Panama and Colon; removal of sand from Panaman territory; purchase of land at Porto Bello, and stationing there zone police; legislation prohibiting soliciting of labor on the Isthmus of Panama; enforcement of decree prohibiting soliciting of labor.

Posts, customs, and revenues, etc.: Sale of stamps, \$74,241.87, an increase of 2.2 per cent over preceding year. Money orders exceeded those of last year by \$480,064.48 in value; 167,664 registered letters and parcels sent. Postal facilities increased; 193 vessels entered Ancon; tonnage, 485,076; 195 cleared with 485,997 tonnage. At Cristobal 208 vessels with tonnage of 432,250 entered; 207 cleared with tonnage of 429,363. No fees. June 30, 1909, 2,103 leases for lots, land, etc. Rents, \$26,969.88. Act Congress, Feb. 27, 1909, provides for leases of public lands in the zone for a period not to exceed 25 years. Act also provides for survey of land if desired; funds for survey not available, leases made as in former years. Triangulation for a general survey of the Isthmus started. \$93,970.86 collected on account of general taxes and licenses; 50 estates settled.

Police and prisons: Force, June 30, 1909, 245 employees. Arrests of year, 6,275. (See Courts, below.) New stations opened at

several points. Annex to penitentiary completed; 117 convicts confined in penitentiary at close of year; convicts generally employed on road work; 3 men executed.

Schools: Reorganized and systematized; 12 schools for whites, 17 for colored. Enrollment Oct. 1, 1908, 622 whites and 1,073 colored. Two high schools; 1 at Culebra and 1 at Cristobal.

Fire protection: New volunteer companies organized; at close of year there were 19 volunteer companies with membership of 380; drilled twice a month by paid fire department. Alarm system extended; 92 fires—21 in Panama. Total loss from fires, \$2,739.92; value endangered, \$316,593.65.

Public works: On June 30, 1909, 1,292 water and sewer connections in Panama, and 87 applications pending. Rentals over \$60,000. In Colon there were 464 connections, and 27 applications pending. Collections, as rental, over \$60,000. In zone, June 30, 1909, 272 water and sewer connections. New public market built at Cristobal. Public markets at 8 places. Public slaughterhouses at Empire and Gorgona.

Prosecuting attorney: Information filed against 398 persons; 204 convicted.

Courts: Supreme court held 13 sessions. Confirmed decision of circuit court in 3 criminal cases; reversed 1 case; 8 civil cases filed; 5 decided. In the circuit courts, 398 filings in criminal cases; 204 convicted, and 55 acquitted. Cases against 114 were dismissed; 25 cases pending; 163 civil cases disposed of during year, and 122 were pending. In the district courts, 6,025 cases filed; 770 acquitted; 219 discharged; 5 pending. Civil cases filed against 749; 732 disposed of; 17 pending.

Zone funds: At the beginning of the fiscal year \$242,694.73 on hand in the treasury; \$393,734.41 collected. Expenditures, \$412,102.86 for public improvements, schools, maintenance of administrative districts, and contingent expenses in the postal service. P-09, 26, 27, 28, 29.

1910. Important Executive orders promulgated prescribe penalties for murder in first and second degrees; penalizing recruitment of labor in the Canal Zone for service in foreign countries; defining powers and functions of counsel and chief attorney and prosecuting attorney, amending the existing provisions of law respecting the filing of informations and the execution of criminal process; providing for charging an equitable proportion of cost of sanitary improvements to property owners in the district in which sanitary improvements made; board of local inspectors for examination and licensing of masters, mates, engineers, and pilots of steam vessels navigating the waters of the Canal Zone. Executive secretary abolished by Sec. of War, May 24.

Matters taken up with Republic of Panama and adjusted are stationing of zone police at

Nombre de Dios in Republic of Panama; adoption of sanitary regulations; amendment of agreement with Panama for maintenance and operation of Santo Tomas Hospital; maintenance of insane of Republic of Panama in Commission hospitals; verification of survey of Canal Zone boundaries; and enforcement of Executive decree of Panama prohibiting recruitment of labor in cities of Panama and Colon. Relations of Isthmian Canal Commission with Republic of Panama and with foreign representatives continue satisfactory.

Posts, customs, and revenues: The postage sales for the fiscal year amounted to \$83,847.10, an increase of \$9,519.70 over the preceding year. Convention was concluded Aug. 1, 1909, for direct exchange of postal money orders between Martinique, the French West Indies, and the Canal Zone. 237 vessels entered at Ancon, with total tonnage of 400,910, and 238 vessels cleared, with tonnage of 399,690. At Cristobal 235 vessels entered, with tonnage of 636,191, and 232 vessels cleared, with tonnage of 625,958. No duties or customs fees collected; 2,783 leases in force, 1,892 for building lots and 884 for agricultural lands, an increase of 686. Rents collected during year, \$27,282.29, slight increase. Appropriation of \$75,000 made by Congress for a general land survey of Canal Zone. On account of general taxes and licenses, \$107,642.58 collected, an increase of more than \$8,000; 38 estates were settled.

Police and prisons: On June 30, 1910, the police force consisted of 259 employees. Reorganization made Feb. 1, 1910; zone, for police purposes, divided into 4 districts. Arrests, 6,947, an increase of 672. Of those arrested 5,467 were subsequently convicted, 1,211 dismissed, 40 confined in insane asylum at Ancon, 22 turned over to military authorities, 14 fugitives from justice delivered to Panama Government, and 148 persons arrested, at Porto Bello, in the Republic of Panama, turned over to that Government for trial. On charge of murder, 18 arrests were made; 5 were convicted, 8 acquitted, 1 dismissed, 1 confined in the insane asylum, and 3 awaiting trial; 138 convicts confined in penitentiary at Culebra; kept at work on public roads, grading, etc.; 8 pardons granted during year and 2 sentences commuted.

Schools: 12 schools for white children and 15 for colored children maintained, and on Oct. 1, 1909, there was an enrollment of 745 and 1,067, respectively. School gardens maintained in connection with colored schools.

Fire protection: Paid fire company established at Gatun and fire-alarm system installed; 2 new volunteer companies organized at Gatun, and 1 volunteer company discontinued at Ancon. 19 volunteer companies, with membership of 324. 123 fires; 12 were in Panaman territory. Value of Government property involved, as reported by the fire chief, was \$1,174,017.19; total loss, \$2,796.04.

Public works: 201 sewer and water connections made in Panama, total on June 30 being 1,493, with 84 applications pending. Collections from water rents from private consumers for the first three-quarters of the year, \$50,159.15; net amount of bills rendered for quarter ended June 30, 1910, \$16,384. In Colon 84 connections made, total June 30 being 548, with 28 applications pending. Total collections of water rents from private consumers and from the Commission and the Panama R. R. Co. during the first three-quarters of the year, \$56,477.45; net bills rendered for fourth quarter, \$19,507.90. Extension of water, sewer, and paving systems in Panama and Colon authorized by Congress will require amendment of existing agreements with Panama for collections of water rents; new contracts will be submitted. 244 private sewer and water connections made in zone, total now being 516.

Prosecuting attorney: Attorney filed 251 informations against 313 persons; resulted in 205 convictions; also represented the U. S. in 71 criminal cases appealed to the circuit courts.

Courts: Supreme court held 19 sessions. Confirmed decision of circuit court in 2 criminal cases, and reversed decision of that court in 1 criminal case. 3 civil cases pending at beginning of year, 13 filed, and 10 disposed of. In circuit courts 382 criminal cases filed; 249 convictions secured and 39 acquitted; 68 cases dismissed, and 26 cases pending. Of 397 civil cases filed during year, 301 were disposed of and 96 were pending at close of year. In district courts, 6,732 criminal cases filed; 5,215 convictions secured and 812 acquitted; 366 cases appealed, and 9 cases pending. 1,123 civil cases filed, 1,055 disposed of, and 68 pending at close of year. P-10, 41-44.

1911. Only congressional legislation affecting zone during the year, other than change in employer's liability act noted, was act approved June 25, 1910—"To further regulate interstate and foreign commerce by prohibiting transportation therein for immoral purposes of women and girls, and for other purposes."

15 Executive orders having effect of law issued. More important of these to establish rules and regulations to facilitate and protect canal work; prescribing the jurisdiction of Canal Zone courts in civil cases where both defendant and plaintiff are nonresidents of the Canal Zone; respecting the conveyance of real estate by married women; providing a method of executing and recording deeds; respecting the arrest and discharge of deserting seamen; collection of distillation tax in the Canal Zone.

8 ordinances enacted by Isthmian Canal Commission relating principally to licensing automobiles, chauffeurs, and bicycles; rates for coach hire; keeping the watersheds free from contamination.

Of matters taken up with Republic of Panama and satisfactorily adjusted are modification of agreement by which Panama permitted to increase import taxes on certain articles from 10 to 15 per cent; charging of consular fees by consuls of Panama for certification of documents covering shipments consigned to Isthmian Canal Commission and Panama R. R. Co.; withdrawal from entry by Panama of lands situated in Republic which will ultimately be covered by waters of Gatun Lake; conveyance in certain cases of American citizens in city of Panama in need of medical attention to Ancon Hospital for treatment; fire protection in Panama and Colon; construction of roads in zone and continuation thereof in Republic; enforcement of laws prohibiting recruiting of labor on Isthmus; uniform coach rates for zone and Panama and Colon; uniform laws providing for collection of distillation taxes in the Republic and in Canal Zone; public improvements in Panama and Colon; suppression of white-slave traffic through Panaman ports and in Panama and Colon; revision of contracts between Republic and Isthmian Canal Commission for amortization of cost of waterworks, sewer system, and paving in cities of Panama and Colon. Relations of Isthmian Canal Commission with the Republic of Panama and foreign representatives satisfactory.

Steamboat-inspection service: Local inspectors issued 56 licenses to pilots; 7 to masters, 4 of which issued as joint master-pilot licenses; 12 to mates; and 11 to engineers. Rules for navigation of canal and all waters under Isthmian Canal Commission drafted and approved. Duties of board extended to include the general inspection of all floating plant of Isthmian Canal Commission and Panama R. R. Board also to examine and license chauffeurs of automobiles.

Posts, customs, and revenues: Postage sales. \$82,893.72; a decrease of \$953.38. There were in the post offices of zone on June 30, 1911, unpaid money orders aggregating \$332,141.60 drawn to order of remitter and payable at office of issue, indicating extent to which post offices are used as depositories. Convention for direct exchange of money orders between zone and Costa Rica concluded Apr. 1, 1911. Effective Jan. 9, 1911, post office established at Toro Point. Agreement entered into between the postal systems of zone and U. S. for reciprocal payment of indemnity. Postal service also authorized to pay indemnity of 50 francs for loss of registered articles between zone and Postal Union. 264 vessels entered Ancon, with tonnage of 457,746; and 263 vessels cleared, with tonnage of 454,572. At Cristobal 263 vessels entered with tonnage of 722,870, and 264 vessels cleared with tonnage of 727,955. No duties, tolls, or customs fees collected, 2,251 leases in force, of which 984 were building lots and 1,261 for agricultural lands,

a decrease of 530, due largely to cancellation of leases in Miraflores and Gatun Lake areas. Leases for agricultural lands covered 3,534 acres. Rents collected amounted to \$23,469.22 \$123,876 collected on account of general taxes and licenses. Of this, \$2,353.88 for distillation taxes, \$68,400 for licenses for sale of liquor, \$512.59 for license fees from insurance companies doing business in zone, and \$1,057 for 38 licenses for motor vehicles in zone.

Police and prisons: Force consisted on June 30, 1911, of a chief and assistant chief, 5 clerks, 2 inspectors, 4 lieutenants, 8 sergeants, 20 corporals, 117 first-class white police officers, and 116 colored officers. Arrests during year, 5,959, of which 5,500 males and 459 females; 80 per cent convicted. 143 convicts confined in penitentiary at Culebra. Prisoners used in public improvements wherever practicable, especially on road and street maintenance. Deportations of undesirable characters from Canal Zone, 111 persons; 2 pardons granted and 3 sentences commuted.

Fire protection: Organization consists of 1 chief, 1 assistant chief, 1 clerk, 1 messenger, 7 captains, 7 lieutenants, 41 firemen, 1 engineer, 1 electrician, and 1 lineman, constituting the paid fire force. Two volunteer companies disbanded. New volunteer company organized at Toro Point. Fire station opened at Mount Hope. At Gatun, one-story building constructed to provide quarters for paid firemen. New site selected for station at Cristobal. Station at Culebra moved to new site on account of slides. 252 alarms of fire responded to during year, 14 of which false; 1 in Panama and 8 in Colon; 147 in U. S. property and 36 in property of Panama R. R. Co. Value of U. S. and Panama R. R. property involved, \$2,162,938.31. Total loss estimated at \$17,433.42 for U. S. property and \$5,123.07 for property of Panama R. R. Co. Largest fire in Colon on Mar. 23, 1911; loss to the Isthmian Canal Commission, \$14,394.93.

Public works: Organization consists of 1 superintendent, 1 assistant superintendent, 6 clerks, 1 inspector and messenger, 2 inspectors of plumbing, 1 inspector of meters, 1 market inspector, 3 engineers, 6 foremen, 11 masons, 12 pipefitters, 10 laborers, and 1 carpenter. In Panama 1,809 connections made with water mains and sewers and 42 applications pending. Water rents, total for year, \$78,606.45. The Republic required to pay \$4,316.06 in order to liquidate proportionate part cost of water, sewer, and street systems for year. In Colon 559 connections made and 64 applications pending. Collections in Colon, \$76,433.10. Republic required to pay \$2,748.83 to liquidate proportionate part of capital cost of water, sewer, and street systems due for year. On Sept. 30, 1910, new agreements or contracts entered into with Panama providing for quarterly adjustment of all payments due by Republic under plan of amortization of cost of water, sewer, and street systems in

the two cities. Under new agreements total amount due from Republic to U. S. is taken as capital cost at that time. One-fourth of capital cost due at close of each quarter is taken as installment of such capital cost to be paid as of that date, and added thereto is interest on the capital cost for the quarter, together with the quarter's charges for maintenance and operation. Applied to the payment of these items is the total amount collected on account of water rents during the quarter. If a difference remains in favor of the U. S., Republic pays it; but if difference is in favor of the Republic, the amount is credited to capital cost due. In the zone 615 connections made. From 9 public markets in operation revenue of \$4,786.67 derived.

Schools: Organization consists of 1 superintendent, 2 clerks, 1 supervisor of upper grades, 1 supervisor of primary grades, 2 supervisors of children, 1 principal of high school, 5 principals of grammar schools, 61 teachers, and 1 gardener temporarily employed. Oct. 1, 1910, there was an enrollment of 1,837 children; 931 in the white and 906 in colored schools. Highest monthly enrollment was in June, when 1,410 pupils enrolled in white schools and 1,568 in colored schools. Schools at Colon Beach, Las Cascadas, and Corozal consolidated with those at Cristobal, Empire, and Ancon, respectively. Pupils carried to and from schools either over Panama R. R. or by system of brakes or carryalls. Schools in operation throughout the year, 10 for white children and 15 for colored children. Additional white and 2 additional colored schools in operation for part of year. Zone high school transferred from Cristobal to Gatun, and branch high school established at Ancon. June 30, 1911, 11 schools for white children and 16 for colored children.

Courts: Supreme court held 16 sessions. It affirmed decision of circuit court in 3 criminal cases and reversed decision in 2 criminal cases. At beginning of year 6 civil cases pending, 9 filed, and 11 disposed of. In circuit courts 374 criminal cases filed; 234 convictions secured and 78 acquittals; 43 cases dismissed, and 19 cases pending at close of year; 339 civil cases filed during year, 231 disposed of, and 108 pending. In district courts 5,862 criminal cases filed, 4,464 convictions secured, 847 acquittals, 243 cases dismissed, 304 appealed to circuit courts, and 4 cases pending; 948 civil cases filed, 918 disposed of, and 30 pending. P-11, 48-54.

1912. Five ordinances enacted for night-quarantine inspection of vessels at port of Colon; market regulations for zone, and reciprocal license tax upon motor vehicles licensed in zone and in the Republic. Negotiations with Republic included the following: Fees by Panama consuls in San Francisco for certification of manifests covering shipments designed for port of Ancon; laws and regulations by Republic governing navigation of waters under its jurisdiction uniform with

those of zone; occupancy of public lands of Republic by persons forced to vacate lands in Gatun Lake area; exercise of zone jurisdiction over Gatun Lake areas lying within territory of Republic; operation of Chinese-exclusion law in Republic and zone; adjustment of automobile license taxes; interference with U. S. mails in Colon; transfer by Panama R. R. Co. to Republic of certain lots in exchange for land situated opposite Hotel Tivoli; operation of schools for Panaman children by Republic within zone; extradition to U. S. of persons charged with carrying on white-slave traffic; extradition from zone to Panama of persons charged with crime; deportation of gamblers and other undesirable characters living in Panama and Colon; operation of saloons in Colon near zone line; enforcement of laws of Republic prohibiting recruiting of laborers; attempted exercise of police authority on zone territory by police officers of Republic; administration of estates of citizens of Panama who die in zone; marriages in Republic by Protestant ministers; customs inspection of baggage at Panama City R. R. station by Republic; repatriation of alien patients in Ancon Insane Asylum at expense of Republic; construction of buildings, streets, sewers, and other improvements; and maintenance of proper water service in Colon and Panama. Relations of Isthmian Canal Commission with Republic and with foreign representatives satisfactory.

In last report recommendation made for depopulation of zone. June 23, 1908, population was 50,003, but the accuracy of this questioned; thought advisable to take a new census. Census, taken as of Feb. 1, 1912, resulted in the following: Zone population (including the territory of the Canal Zone, the Commission settlements at Porto Bello and Nombre de Dios, Colon Beach and Taboga Sanitarium), 62,810. Employees of the Isthmian Canal Commission, Panama R. R. Co., and various canal contractors numbered, as of Feb. 1, 1912, 42,174. Of the 62,810 persons enumerated in zone, 1,521 Colombians and 7,363 Panamanians; of total 9,157, 4,870 males.

Local inspectors issued 34 licenses to pilots; 9 to masters, 4 of which were issued as joint master-pilot licenses; 10 to mates; and 11 to engineers—a total of 64. 15 certificates of seaworthiness to launches. Licenses issued to 97 chauffeurs. Postage sales for year, \$87,694.41; increase of \$4,800.69 over previous year.

Postal-savings system established Feb. 1, 1912. At close of year on deposit in postal-savings banks, \$356,947. Unpaid money orders aggregated \$332,141.60.

327 vessels entered Ancon, with total tonnage of 619,422; same number of vessels cleared, with tonnage of 622,023. At Cristobal 284 vessels entered, with tonnage of 784,156; and 282 vessels cleared, with tonnage of 775,445.

In force, 858 leases, of which 575 for building lots and 258 for agricultural lands; a decrease of 1,383. Rents collected, \$16,033.54.

\$122,674.54 collected from general taxes and licenses. 60 estates were settled.

7,055 arrests; 6,452 males and 603 females. 79 per cent convicted. 141 convicts confined in penitentiary at Culebra. Stockade erected on Mandingo River for temporary housing of convicts building Empire-Chorrera Road. Slides made necessary demolition of penitentiary buildings at Culebra.

In division of fire protection a discharge of 1 fireman and employment of a motor engineer. Concrete fire station at Cristobal completed. Small station at Balboa removed. Tivoli station altered to accommodate 1 of the 2 new combination automobile fire engines and hose wagons purchased during year. 333 alarms of fire, 18 of which were false; 6 were in Panama and 2 in Colon; 196 were in U. S. property and 21 in property of Panama R. R. Co. Value of U. S. and railroad property involved, \$1,755,685.58. Total loss, \$4,538.58 for U. S. property and \$101 for property of Panama R. R. Co. Largest fire on zone totally destroyed 2 private frame dwellings at Miraflores and caused loss of \$5,000. Year's fires resulted in 12 injuries from burns; 2 deaths occurred, 1 from explosion of gasoline fumes and 1 from explosion of alcohol.

In Panama 1,985 water connections made to date, and 35 applications pending. Water rents from private consumers for the first three-quarters of year in Panama, \$67,491.75; and bills rendered for last quarter aggregated \$25,436.25. For the second and third quarters of fiscal year water collection exceeded requirements by \$4,293.26, which amount was placed in the amortization fund to be applied to reduction of cost of waterworks, sewers, and pavements. In Colon 731 connections made with water mains, and 45 applications pending. Collections in Colon, first three-quarters, \$58,631.20; net bills rendered for fourth quarter, \$20,623.80. Republic paid \$10,943.11 to liquidate proportionate part of cost of water, sewer, and street systems. In zone 691 water connections. From 8 public markets a revenue of \$4,183.95 derived. School year opened Oct. 1, 1911, with enrollment of 2,105 children—1,174 whites and 931 blacks. On June 30, 1912, 26 buildings used—11 for white schools and 15 for colored schools. Medical inspection of pupils, inaugurated during preceding year, continued. Supreme court held 12 sessions. Affirmed decisions of circuit court in 4 criminal cases and reversed ruling of that court in 1 criminal case; 4 civil cases pending in supreme court, 6 were filed, and 8 disposed of. In circuit courts 567 criminal cases instituted; 353 convictions, 126 acquittals, and 84 dismissals, leaving 23 cases pending. 541 civil cases filed during year; 414 disposed of, 127 pending. In the district courts 7,128 criminal cases instituted; 5,183 convictions secured, 1,063 acquittals, 350 dismissals, 528 appeals to circuit courts, leaving 4 cases pending. 1,305 civil actions brought; 1,280 disposed of and 25 pending. P-12, 58-62.

1913. Seven acts of Congress and 4 joint resolutions affecting the Panama Canal and zone enacted, most important being Panama Canal act, approved Aug. 24, 1912, providing for opening, maintenance, protection, and operation of canal and sanitation and government of zone. Four ordinances enacted, most important of which amended certain rules governing navigation of canal and approaches. Resolution adopted that no further licenses be granted for sale of intoxicating liquors in zone.

Negotiations carried on with Republic include following: Arrest by Panaman police of Isthmian Canal Commission employees while engaged in performance of duties in Colon and Panama; reciprocal licensing of carts and wagons used in transportation of merchandise in Republic and zone; municipal and sanitary improvements in Colon and Panama; superior right of U. S. under treaty to use rivers and streams of Republic; deportation to Republic of ex-convicts who have served terms of imprisonment in zone; admission of merchandise shipments consigned to Isthmian Canal Commission, Marine Corps, Tenth Infantry, and wireless stations, without intervention of Panaman customs officials; delay in customs release covering shipments consigned to Isthmian Canal Commission and Panama R. R. employees; collection of customs duties on parcel-post packages coming through post offices of zone; establishment of uniform schedule of rates to be charged for transporting passengers by automobile between points in zone and Colon and Panama; collection of tax by Panama upon steamship tickets covering passage to foreign ports; and tax upon steamship agencies doing business in zone and Republic. Relations with Republic and with foreign representatives satisfactory.

Local inspectors issue 88 licenses to pilots; 41 to masters, 19 of which issued as joint master-pilot licenses; 22 to mates; and 58 to engineers—total of 209 licenses. Certificates issued to 94 vessels, of which 18 were over 100 gross tons burden. 162 licenses as navigators of motor boats granted. Licenses issued to 120 chauffeurs.

Postage sales for fiscal year, \$100,804.38; an increase of \$13,109.97 over previous year. At close of year there was on deposit in postal savings banks \$645,690. There were unpaid money orders aggregating \$156,928.

281 vessels entered Ancon, with tonnage of 553,767; and 283 vessels cleared, with tonnage of 556,306. At Cristobal 280 vessels entered, with tonnage of 849,702; and 283 vessels cleared, with tonnage of 858,703.

319 leases, of which 312 were for building lots, 1 for land, and 6 for buildings. Rents amounted to \$4,792.95. \$53,855.95 collected from general taxes and licenses. 470 estates were settled.

Reorganization of police and prisons on Sept. 1, 1912; strength of force reduced from 274

to 247. 6,827 arrests; 6,079 males and 748 females; 77 per cent convicted. 133 convicts in penitentiary. Stockade on Mandingo River closed during the year and all convicts transferred to new stockade.

In division of fire protection there was actually a reduction of 15 men as compared with the number in service at close of previous year; made necessary by a cut in appropriations. 2 automobile fire engines, made possible discontinuance of 1-man stations at Balboa and Mount Hope, consolidation of 2 Ancon stations, and sale of 6 fire horses. Equipment in buildings at Gorgona removed upon abandonment of that settlement and most of it installed in buildings reconstructed at Corozal and Balboa. 220 alarms of fire; 18 false; 1 was in Panama and 7 in Colon; 104 were in U. S. property and 20 in property of Panama R. R. Co. Value of U. S. and Panama R. R. property involved, \$834,077.44; loss estimated at \$12,173.77 for U. S. property and \$501.75 for property of Panama R. R. Co. Largest and most serious fire in zone at Toro Point, causing loss to Isthmian Canal Commission of \$11,326.98. 5 injuries from burns.

All municipal improvements in Panama undertaken under appropriation of \$80,000 which were completed turned over to this division for maintenance. On June 30, 1913, 2,101 water connections had been made in city of Panama; 22 applications pending. Water rents from private consumers for the first 3 quarters of the year in the city of Panama, \$81,727.75, and bills for last quarter aggregated \$32,583.75. For first 3 quarters of year collections exceeded requirements by \$13,219.69, which was applied to reduction of cost of waterworks, sewers, and pavements. In Colon 866 connections had been made with water mains; 55 applications pending. Collections in Colon for first 3 quarters, \$64,058.15; net bills for fourth quarter, \$24,168.80. For Colon, Republic paid \$9,675.05 to liquidate proportionate share of cost of water, sewer, and street systems for first 3 quarters of year. In zone 695 water connections made. From 8 public markets \$3,805.50 derived in rent.

Division of schools consisted of 1 superintendent, 1 supervisor of upper grades and high schools, 1 supervisor of primary grades, 2 clerks, 2 supervisors of children, 1 principal of high school, 6 principals of grammar schools, and 72 teachers. School year opened Oct. 1, 1912, with 2,199 children—1,157 whites and 1,042 blacks. At close of year 29 school buildings in use; 14 for whites and 15 for blacks. Medical inspection continued and 1,044 pupils treated.

Supreme court held 26 sessions; affirmed decisions of the circuit courts in 2 and reversed decisions in 2 criminal cases. 2 civil cases pending in supreme court, 22 filed, and 18 disposed of. In circuit courts, 533 criminal cases instituted, out of which 369 convictions, 93 acquittals, and 67 dismissals, leaving 4

cases pending. 858 civil actions brought, 750 settled, and 108 pending. **P-13**, 61-65.

Colliers.

Terminal plant, **P-14**, 188.

Colon. (See Nos. 39, 156, pp. 2362, 2364 of this Index.)

Surveys of construction of outer harbor, direct entrance to canal, inner harbor, and completion of Gatun diversion. Bids invited for widening and deepening Colon end of the canal for reception of construction material. Bids too high. **P-05, 12.**

Town on a swamp. Difficult to sanitate. Temporary measures taken until line of canal terminus is fixed. **P-05, 43.**

1910. Colon and Panama: Municipal improvements originally undertaken in cities of Colon and Panama restricted to certain portions of the towns. Extension of Colon eastward of improved section prevented by sanitary regulations; additional area for building purposes considered necessary and advisable. Certain districts in Panama built up without extension of paving and of sewer and water mains, and Isthmian Canal Commission in 1908 submitted to Congress an estimate of \$1,200,000 for extending municipal improvements in the two cities. Act Mar. 4, 1909, making appropriations for canal included an item of \$800,000 for extending improvements, and arrangements made for undertaking work during dry season of 1909-10. Amount thus appropriated will be added to that already expended in two cities and refunded at end of the 50-year period from collection of water rents.

Colon: Work in Colon consists of construction of D Street storm sewer. At close of year work about half finished; 6,473 c. y. excavated, 1,628 c. y. concrete laid, and 1,081 c. y. of back fill made.

Panama: Streets graded and macadamized, and sewers, water mains, and concrete curbs and gutters placed as follows:

| | Paving. | Curbing. | Sewer mains. |
|-------------------------|----------------|-----------------|-----------------|
| | <i>Sq. ft.</i> | <i>Lin. ft.</i> | <i>Lin. ft.</i> |
| Cocoa Grove district... | 70,130 | 3,920 | 1,683 |
| Guachapali district... | 195,354 | 8,171 | 7,535 |
| Avenue B..... | 36,607 | 2,220 | 1,937 |
| Santa Cruz district... | 91,116 | 5,062 | 8,078 |
| District I..... | 24,240 | 1,275 | 1,496 |

| | Sewer laterals. | Water mains. | Water laterals. |
|-------------------------|-----------------|-----------------|-----------------|
| | <i>Lin. ft.</i> | <i>Lin. ft.</i> | <i>Lin. ft.</i> |
| Cocoa Grove district... | 872 | 2,494 | 1,185 |
| Guachapali district... | 1,952 | 8,289 | 4,012 |
| Avenue B..... | 665 | 1,847 | 788 |
| Santa Cruz district... | 1,952 | 7,692 | 4,058 |
| District I..... | 628 | 1,195 | 677 |

P-10, 29-30.

1911. Colon: During year the D Street storm sewer, extending from the sea at Beach Road on the north to Folks River on the south, with outlets at either end and with the summit elevation at Eighth Street, practically completed; 12,881 c. y. excavated; 5,000 c. y.

concrete installed; and 7,235 c. y. back fill placed. Fill started Oct. 31 with 20" suction dredge and continued throughout year; 501,786 c. y. made. Drainage system south of Ninth Street completed. Paving on D Street completed, except half a block. Sections south of Ninth Street covered with rock. Rock to extent of 10,918 c. y. used in street paving. 23,800' curb and gutter placed.

Panama: Of amount appropriated by Congress, \$250,000 allotted for improvements in city of Panama, included within districts of Guachapali, Santa Cruz, Cocoa Grove, Avenue B, and District I. Work consisted of grading and macadamizing streets, laying concrete curbs and gutters, together with sewers and water mains. Work completed. In addition, La Neveria graded and paved, and intercepting sewer laid to prevent flooding of Central Avenue and adjacent property. Survey and plans made for developing district bounded by Zone Line Road, B Street, Fourth of July Avenue, and West Sixteenth Street. **P-11, 27-29.**

1912. Colon: Work continued during fiscal year, suction dredge continuing operations until Aug., 1911, when it had added 129,939 c. y. to that laid during the previous year. Total fill actually placed, 585,527 c. y. Fill was for lots as well as streets, the former paid by property owners. In addition to fill, 9,826 linear feet water mains and 9,603 linear feet sewer lines laid, 3,931 sq. y. macadam added in surfacing D Street, 40,794 sq. y. macadam laid in improved areas, including 1,560 sq. y. of resurfacing on other streets, 21,440 linear feet of curb and gutter built, 1,590 sq. y. concrete alleys, and 1,341 sq. y. sidewalk constructed. 2,015 linear feet curb and gutter replaced.

Panama: Panama unable to pay for some improvements proposed last year, and as improvements were required for sanitary purposes, and as there was an unexpended balance of the amount allotted for work in Panama, authority given to make improvements; work performed comprised grading and macadamizing streets, placing concrete curbs and gutters, and laying water mains and sewers in portions of city. **P-12, 38-39.**

Colon Division. (See No. 134, p. 2364 of this Index.)

Colon division: Covers all works of technical engineering and construction pertaining to the canal from Bohio to the Caribbean Sea. During period of the report, made surveys, borings, did dredging, repair and construction of floating equipment, and a lot of track work; the latter transferred later to the Panama R. R. Supervision of wharf and dock work for a time in this division. An old French ladder dredge kept continuously at work dredging channel at mouth of canal. Contracts made for 2 modern dipper dredges—1 for La Boca and 1 for Colon—

both ports being kept open by 2 old French dredges which had been repaired. Work on this division has been delayed owing to lack of material of all kinds. **P-05, 114.**

Division divided into 2 sections—Cristobal section, from sea to Mindi, and Gatun section, Mindi to Bohio. Miscellaneous surveys, borings, plans for dredges, fitting up of shops, repair of plant, installation of new floating plant units, etc., representative of work of the year. 866,500 c. y. dredged from Colon Harbor. **P-06, 82.**

(See Atlantic division and Central division.)

Commerce.

U. S. occupation of zone beneficial to local interests, **P-05, 53.**

Usefulness of terminal plants to, **P-14, 187.**

Commerce, Special Report on Probable. (See Nos. 9 and 24, p. 2361 of this Index.)

Advantages of canal at Isthmus twofold—Industrial and commercial. Canal would assist wide range of industries in every section of the U. S.; would remove restrictions in obtaining cheaper raw material; and would increase ability of the U. S. to compete with other nations for world trade. Pacific coast industries would benefit also, especially through a probable reduction in freight rates. **P-99, 161.**

Domestic coal traffic would be increased. There would be notable favorable effects upon eastern and southern parts of the U. S. Railroads connecting the Mississippi Valley with Pacific ports would probably feel canal competition most. Sailing craft would continue giving way before steam craft, but they would not be eliminated. Isthmian Canal expected to produce large results in developing industries and commerce of Pacific Ocean countries. New route would give U. S. a decided advantage over other nations in this trade. Canal at Isthmus would probably place U. S. on equality, in distance, with Europe, in trade with the Orient and Australasia. **P-99, 162-163.**

Probable cargo tonnage which would choose canal route at 1899 (were canal existing), over 6,702,541, **P-99, 163.**

Expected that increase of about 25 per cent a decade would raise traffic of 5,000,000 in 1899 to 7,000,000 tons in 1914, and that a growth of about 62 per cent during the succeeding 10 years would make a tonnage of 11,375,000 in 1924, **P-99, 164.**

Traffic through canal would depend in part on tolls. In fixing these, the principal of maximum revenue could not wisely be followed. Revenue subordinate to promotion of industrial and commercial aspect of U. S. progress. Annual traffic of 7,000,000 tons at 1914, at \$1 a ton, equals revenue of \$7,000,000. As cost of operating and maintaining of Panama route

estimated at about \$2,000,000 per annum; of Nicaragua route, about \$3,300,000; revenue annually at \$1 per ton would not permit a return on the capital invested. Annual traffic would increase steadily. Rates on Suez Canal about \$2 a ton; not probable that Suez Canal would find it profitable to reduce its tolls to compete with an Isthmian Canal. It might be expedient to reduce tolls on an Isthmian Canal to cover only the cost of operating and maintenance. **P-99, 164, 165.**

Relative commercial advantages of Nicaragua and Panama routes: Distance for American commerce generally would be less by Nicaragua route. From Europe to western South America, distance less by Panama. From Europe to North Pacific, Nicaragua route shorter, 12 hours required for passage through Panama route; 33 hours through Nicaragua route; which would slightly offset the nearness of the two opposite coasts of U. S. through Nicaragua. Latter route better for sailing ships (not an important factor). **P-99, 165, 166.**

Comparison of benefits to U. S. and Europe: U. S. would derive greater benefits. Benefit to Europe only of a commercial nature; to U. S., commercial, political, and industrial. **P-99, 166.**

REPORT ON THE INDUSTRIAL AND COMMERCIAL VALUE OF AN ISTHMIAN CANAL: Emory R. Johnson, Ph. D. Member of the Isthmian Canal Commission, professor of transportation and commerce, etc. **P-99, 515.**

The information in this report secured mainly during 1900 and 1899. Main purpose of the report to give results of investigation to determine comparative values of the Nicaragua or Panama route. **P-99, 515.**

Scope and methods pursued in the investigation, **P-99, 516.**

Effect of canal on industries and trade of the southern portion of U. S., **P-99, 519.** Cotton industries, **P-99, 519.** Iron and steel trade, **P-99, 521.** Exportation from Southern States of forest products, **P-99, 522.** Fertilizer trade, southern U. S., **P-99, 523.** General commerce of Gulf ports, **P-99, 524.**

Effect of canal on industries and trade of north-eastern parts of U. S.: Characteristics of this region, **P-99, 527.** Textile business, **P-99, 528.** Commerce of the North Atlantic ports, **P-99, 529.**

Effect of canal on Central West: Industrial resources of this region, **P-99, 533.** Existing routes of shipment, **P-99, 534.** Industries of Cleveland, **P-99, 524.** Cincinnati and the Isthmian Canal, **P-99, 535.** Indiana trade, **P-99, 536.** Trade of Illinois and Wisconsin, **P-99, 536.** St. Louis traffic, **P-99, 537.** Effect of canal on transportation facilities of the Central West of the U. S., **P-99, 537.**

Effect of canal on Pacific Coast States: On California, **P-99, 538.** On the lumber and grain traffic of Oregon and Washington,

- P-99**, 540. On the Pacific coast fisheries, **P-99**, 541. On the hops, wool, and mineral business of the Pacific coast, **P-99**, 541. On the trade of Pacific ports of U. S. and Canada, **P-99**, 542, 543.
- Relation of an Isthmian Canal to coal supply for the commerce and countries of the Pacific: Effect of the canal on the coal trade of the U. S., **P-99**, 544. Sources of coal consumed on the Pacific, **P-99**, 544. Puget Sound coal, **P-99**, 546. Fuel supply of California, **P-99**, 546. Prices and costs of coal in different portions of U. S., **P-99**, 549. River transportation of coal from Pennsylvania, West Virginia, and Alabama, **P-99**, 551. Marketing of Appalachian coal west of the Isthmus Canal, **P-99**, 552.
- Effect of Isthmian Canal on iron and steel trade of the U. S.: U. S. as an exporter of iron and steel products, **P-99**, 555. Canal should lower cost of transportation in favor of U. S. in much foreign trade; transportation expense one of the vital factors against existing iron and steel trade of the U. S., **P-99**, 556. Trade of U. S. in steel, etc., with Pacific Ocean countries, **P-99**, 556. A marked increase in U. S. trade in iron and steel looked for through Isthmian Canal, and special benefit to the southern portion of the U. S., **P-99**, 557.
- Effect of an Isthmian Canal on the shipbuilding and maritime interests of the U. S.: Increase of steamships probable, and decrease of sailing ships; larger coasting trade expected; more consequent activity of shipyards, **P-99**, 558. Ownership of ocean vessels by exporters would probably increase, **P-99**, 559. Isthmian Canal expected to exert only one of the influences required to be favorable to the upbuilding of an American merchant marine, **P-99**, 560.
- Effect of an Isthmian Canal on sailing vessels: Tableshewing decline in seagoing sail tonnage of world, **P-99**, 561. Advantage of sailing ships for some classes of freight through Isthmian Canal, **P-99**, 563. Merits of sail ships and steamships compared, **P-99**, 565. Extent to which canal might be used by sail ships, **P-99**, 566. Saving which sail ships could effect through use of canal, **P-99**, 568.
- Effect of canal on U. S. railways: Statistics of transcontinental U. S. traffic not available (railroads ceased recording it), **P-99**, 571. Probable attraction to the canal route of all kinds of freight save perishable freight and quick-dispatch stuff, unless rates were met. Ordinary freight service of railroads "will be only a few days shorter than the service by the faster steamers using the water route," between the two seaboard, **P-99**, 572. Competition expected to be keen, **P-99**, 572. Diverging views as to the effect of the canal on the Atlantic roads, **P-99**, 573. Canal can only increase traffic of the southern roads, **P-99**, 574. No notable effect on railways of Central West expected, though the canal expected to prove profitable by some, **P-99**, 575. Effect of isthmian waterway on Pacific railways expected to be drastic by some; rates will have to be reduced, crippling railroads affected; routes of some materials reversed, wheat, for example, going toward Pacific rather than toward the Atlantic; local traffic could not well be affected save favorably, which would prove beneficial largely to the railroads, **P-99**, 575.
- Effect of Isthmian Canal on the trade and industries of western South America, **P-99**, 578. Area and population of North and South America compared, **P-99**, 578. Outline map of South America, **P-99**, 578. Trade zones of South America, **P-99**, 579. Inadequate transportation facilities of western South America, **P-99**, 579. Dependence of western South America upon foreign capital and large organizations of capital, **P-99**, 580. Isthmian Canal would give U. S. shipping a peculiar advantage in South American trading through a heavy traffic both ways, instead of merely one way, a phenomenon rarely met with in international commerce, **P-99**, 581, 582, 583. Geography, resources, and industries of Chile, **P-99**, 583. Interest of U. S. in trade with Chile valuable, **P-99**, 585. Description of tropical section of western South America, **P-99**, 586. Peruvian coast, its industries, and effect of canal, **P-99**, 586. Andean system comparable with Rocky Mountain system of U. S.; its immense wealth and its greater development would be affected most favorably through isthmian traffic; valuable mines awaiting development; railroads needed, **P-99**, 587. Industries of Pacific slope of Ecuador and Colombia, **P-99**, 591. The Cauca Valley, in the Colombian Andes, **P-99**, 591. U. S. trade with western South America would grow steadily through isthmian communications, and ultimately to important dimensions, **P-99**, 592. Effect of isthmian communications on Atlantic South America not of large character, **P-99**, 593.
- Japan and the Isthmian Canal, **P-99**, 594. Standing of Japan as a manufacturing and commercial country, **P-99**, 595. Analysis of Japanese trade with reference to its effect on an Isthmian Canal on American Continent, **P-99**, 596. An isthmian route to Japan would benefit U. S., taking advantage from European countries, **P-99**, 596.
- China and an Isthmian Canal: Geographical divisions of China, **P-99**, 597. Resources and trade of north China, etc., **P-99**, 598. Resources and trade of central China, etc., **P-99**, 599. Of southern China, **P-99**, 600. The foreign trade of China, **P-99**, 601. Trade of U. S. with China, and specific effects of an Isthmian Canal, **P-99**, 601. \$19,000,000 in year ending June 30, 1903—100 per cent growth in decade. Growth of U. S. trade with China remarkably rapid. As to possibility of China serving its own needs industrially very soon, not depending on U. S. traffic, but little fear, as general experience

indicates that U. S. trade is greatest with those countries which have developed most industrially. **P-99, 602.**

Effect of an Isthmian Canal on the industries and trade of Australasia: Australian industries require a large foreign trade, and U. S. exports to there of increasing importance. U. S. distances to Australia through and not through the isthmian route. **P-99, 603.** General geography of Australia, pastoral and agricultural character, **P-99, 604.** Mineral resources rank high; product about one-tenth of the world, **P-99, 605.** Isthmian Canal should remove large handicaps existing to commerce of U. S. with Australia, **P-99, 606.** New Zealand also agricultural; imports machinery and other manufactures; Isthmian Canal would bring U. S. into favorable competitive zone, **P-99, 607.**

Isthmian Canal, and the Philippines and Hawaii: Geography and industries of the Philippines, **P-99, 608.** Growing importance of traffic between U. S. and Philippines, **P-99, 609.** Canal, while not greatly decreasing distance, would give an additional route, probably more economical, thereby gaining somewhat on the favorable facilities possessed by Europe, **P-99, 611.** Location of the Philippines with reference to trade routes from the U. S., **P-99, 611.** Soil and climate of the Hawaiian Islands, and resources, **P-99, 612.** Agriculture prevailing. Large and rapidly increasing foreign trade, **P-99, 613.** Islands considered as a part of the Pacific coast with regard to the isthmian waterway, **P-99, 614.**

An Isthmian Canal, and Central America and western Mexico, P-99, 615. Population and general geography of Central America, **P-99, 615.** Industries, **P-99, 615.** Isthmian Canal would increase share of trade controlled by U. S., **P-99, 616.** Western Mexico, description, **P-99, 617.** Agricultural in resources; rich mines; manufactured imports needed; eastern section of U. S. will be between 1,000 and 2,000 miles nearer western Mexico by canal than to San Francisco and Seattle. Isthmian Canal may mean elimination of other than U. S. commerce with these regions. **P-99, 620.**

Distances by an Isthmian Canal and other routes, P-99, 621. Table of distances via Nicaragua and Magellan routes between eastern ports of U. S., and ports of the west coast of North, Central, and South America, **P-99, 621.** Table of distances from Europe to Pacific ports via Nicaragua Canal and Straits of Magellan, **P-99, 622.** Table of distances in nautical miles from Atlantic American ports to Yokohama, Shanghai, and Hongkong via Nicaragua and Suez routes, **P-99, 623.** Table of distances, in nautical miles, from American Atlantic ports to Manila via Nicaragua and Suez routes, **P-99, 623.** Table of distances, in nautical miles, between the eastern seaboard of the U. S. and Australia via the Nicara-

gua and Suez routes, **P-99, 624.** Table of distances from Liverpool to the East by the Suez and Nicaragua routes, **P-99, 625.** Table showing comparisons of distances, in nautical miles, from New York and Liverpool to Australasian and Asiatic ports via the Nicaragua and Suez routes, **P-99, 625.** Table showing comparison of distances, in nautical miles, from American and European Atlantic ports via the Nicaragua and Panama Canal routes, **P-99, 626.** Table comparing distances, in nautical miles, from American and European ports to Pacific ports via the Nicaragua and Panama Canals, **P-99, 626.** The following table makes a brief comparison:

| | Nicaragua. | Panama. |
|-----------------------------|------------|---------|
| From New York to— | | |
| San Francisco..... | 4,921 | 5,299 |
| Yokohama..... | 9,457 | 9,835 |
| Hongkong..... | 11,366 | 11,744 |
| Sydney via Tahiti..... | 9,676 | 9,852 |
| Wellington via Tahiti..... | 8,716 | 8,892 |
| Iquique..... | 4,393 | 4,021 |
| From New Orleans to— | | |
| San Francisco..... | 4,118 | 4,698 |
| Yokohama..... | 8,654 | 9,234 |
| Hongkong..... | 10,563 | 11,143 |
| Sydney via Tahiti..... | 8,873 | 9,251 |
| Wellington via Tahiti..... | 7,913 | 8,291 |
| Iquique..... | 3,590 | 3,420 |
| From Liverpool to— | | |
| San Francisco..... | 7,651 | 8,038 |
| Yokohama..... | 12,187 | 12,574 |
| Hongkong..... | 14,096 | 14,483 |
| Sydney via Tahiti..... | 12,406 | 12,591 |
| Wellington via Tahiti..... | 11,446 | 11,631 |
| Iquique..... | 7,123 | 6,670 |

P-99, 627.

Tonnage at 1898-1899 which might use an Isthmian Canal, P-99, 628. Difficulty of obtaining full or complete statistical data concerning traffic tonnage at ports, etc., **P-99, 628.** Method pursued in constructing data groups or tables, **P-99, 629.** Discussion of the average values of the cargo ton, **P-99, 637.** Tonnage of the commerce between Europe and the west coast of South and Central America and British Columbia and Hawaii, **P-99, 638.** Diagram of tonnage, 1888 and 1895-1899, sailing vessels, and steamships, **P-99, 640.**

Tonnage of vessels which would have used an Isthmian Canal, 1899, P-99, 641. Method of determining, **P-99, 641.** Diagram, 1888 and 1895-1899, steamships and sailing vessels combined, **P-99, 642.** Importance of Chilean commerce, **P-99, 643.** Vessel tonnage of European trade with western Central America and Mexico, **P-99, 644.** Trade of the west coast of the U. S., British Columbia, and Hawaii with Europe, **P-99, 645.** U. S. Atlantic coast tonnage with Pacific countries, **P-99, 645.** Vessel tonnage engaged in existing traffic across Isthmus of Panama, **P-99, 648.** Coasting trade of the U. S. available for the canal, **P-99, 649.** Table showing

summary of entrances and clearances, commerce of Europe with Pacific America, and commerce of eastern seaboard of the U. S. with Pacific countries, **P-99, 649.**

Traffic investigations made by the New Panama Canal Co., and comparison of the results of three different investigations relating to traffic probabilities by way of an Isthmian Canal, **P-99, 650.**

The New Panama Canal Co. divided that part of the world's commerce capable of being affected by an Isthmian Canal into the four groups adopted, 1890, by the Commission d'Etudes appointed by the receiver of the Compagnie Universelle du Canal Interocéanique: (1) Between Europe and the Pacific coast of the American Continent; (2) between Europe and the Far East; (3) between the Atlantic and Pacific coasts of America; and (4) between the Atlantic coast of America and the eastern countries of group 2, **P-99, 650.**

Concerning use of American canal by commerce of Europe with Orient, shipping may go by Suez and return via Panama, etc., **P-99, 652.** Evidence of increasing number of round-the-world voyages, **P-99, 653.** Tonnage of available canal traffic, **P-99, 654.** Growth of traffic, 1888-1898, **P-99, 654.** Rapidity and extent of substitution of steamships for sailing vessels, **P-99, 655.**

The three different investigations to measure the probable value of an Isthmian Canal confirmatory of each, although made without reference to each other. Two were made by Isthmian Canal Commission, and one under direction of New Panama Canal Co. **P-99, 657.**

Probable growth of canal traffic, 1899-1914, and 1914-1924, **P-99, 658.** Rate of increase shown by tables of the Panama Canal Co., **P-99, 658.** Increase in trade between Europe and western coast of America, **P-99, 659.** Growth in trans-Pacific trade of the west coast of the U. S., **P-99, 659.** Probable available canal traffic, 1914, **P-99, 660.** Estimate of growth of traffic during the first decade of the use of the canal, **P-99, 661.** Table showing graphically the growth in the tonnage using the Suez Canal, 1870-1899, **P-99, 662.** Estimate of growth for 1924, **P-99, 662.**

Tolls, **P-99, 664.** Tolls charged on Suez Canal, **P-99, 664.** Table showing number and size of vessels, with receipts from tolls, Suez Canal, **P-99, 665.** Table showing increase in number and size of vessels, and receipts, Suez Canal, quinquennial periods, 1875-1899, **P-99, 665.** Effect of tolls on volume of traffic of Suez Canal, **P-99, 667.** Tolls of an Isthmian Canal, and Chilean traffic, **P-99, 667.** Isthmian tolls, and Australian trade, **P-99, 669.** Tolls of Isthmian Canal, and Philippine trade, **P-99, 670.** "In the foregoing discussion a toll of \$1 a ton (net) has been made the basis of reasoning because that represents a maximum beyond which the charge ought not to go. A tariff much higher than

that would in all probability so restrict the tonnage passing the canal as to reduce the revenue derived from the tolls. Such a restriction would unfortunately limit the industrial and commercial value of the canal. The lower the tolls, the greater the traffic of the canal and the larger the industrial and commercial benefits. It is believed that a toll of \$1 a vessel ton net register would yield an income sufficient to pay the expenses of operation and maintenance and a moderate return on the capital invested. Should the U. S. prefer to levy tolls sufficient only to cover the cost of operation and maintenance, a tariff of one-third of a dollar a ton would probably suffice." **P-99, 671.**

Plates relative to commercial data: World routes for steam and sail, **P-99, pl. 74, 75.** Resources and industries of Chile, **P-99, pl. 76.** Resources and industries, northwest South America, **P-99, pl. 78.** Resources and industries, Japan, **P-99, pl. 79.** Resources and industries, China, **P-99, pl. 80.** Resources and industries, East Australia, **P-99, pl. 81.** Resources and industries, New Zealand, Philippine Islands, Central America, Mexico, **P-99, pl. 82-85.** Map of Transportation Divides, **P-99, pl. 86.**

Commissary. (See No. 94, p. 2363 of this Index.) Interior, **P-11, 384, pl. 74.**

Local source of supplies of no value. 17,000 men to feed. Local commissary stores opened. Panama R. R. steamers equipped with refrigerating plants, etc. Refrigerator cars purchased. Line of refrigeration established from the markets of the U. S. to the commissary stations of the Isthmus. Management of local hotels assumed by Isthmian Canal Commission. Laborers fed for 30 cents per day; gold employees for 90 cents per day. **P-05, 8.**

Cost of living not as great as supposed. Adequate food for West Indian laborers a problem; their efficiency affected by lack of proper nourishment. Commissary established. Refrigerator service line from U. S. established. Hotels and boarding camps maintained and operated by the Isthmian Canal Commission No. 3. **P-05, 46.**

Commissaries opened for silver employees (tropical denizens); objection of local merchants; full publicity given to reasons by Isthmian Canal Commission; opinion of zonal inhabitants favorable to action of the Isthmian Canal Commission; coupons issued to employees; acceptable by merchants; probable restriction of commissary to actual necessities of the silver employees, **P-05, 48.**

Commissary stations, hotels, and eating houses under auspices of the Isthmian Canal Commission effective in producing more satisfaction among employees, **P-05, 123.**

Fourteen hotels and mess houses for white employees. Profit of \$5,000 for period ending June 30, 1906, as opposed to a former deficit. **P-06, 3.**

1909. First division, O. C. E.: Under Lt. Col. H. F. Hodges, assistant chief engineer. Has charge of design of the locks and dams and their appurtenances. Considers and reports upon all questions of a civil engineering character "that may arise in the progress of the work."

Locks: Designs for upper locks at Gatun and the locks at Pedro Miguel finished. Locks in pairs; separated by a wall 60' thick, are 110' wide, with 1,000' usable length.

Locks, filling and emptying: Longitudinal culverts in the side walls used, operated by Stoney valves; from these valves the water

passes through laterals under the floors and perpendicular to the axes of the locks, from which openings upward admit water to or draw it from the lock chambers. A longitudinal culvert is placed in the center wall also, connected with the lock chambers by laterals; but in this case, while the water in the main culvert is governed by Stoney gates, flow through the laterals is controlled by cylindrical balanced valves capable of withstanding pressure from either direction. The arrangement permits the passage of water from one lock to the other of any pair.

Gates: Double-leaf, double-sheathed, straight, mitring gates were adopted. Two barriers must separate high levels from the level next below in locks. Horizontal rolling gate abandoned in favor of another set of mitring gates with a chain barrier controlled by capstans in the wall. As over 95 per cent of the vessels of the world are less than 600' long, intermediate gates introduced as a feature, dividing the lock chambers into two parts suited to vessels of 550' and 350' length, respectively; also protected by a chain barrier.

Guide piers: Both up and down stream.

Towing: Electric towing machines being designed.

Emergency dams: Swing bridge from which girders and wickets are to be lowered, to be provided. **P-09**, 2, 3.

1910. Description of locks, as well as drawings of designs for upper locks at Gatun and for locks at Pedro Miguel published in report for 1909. During year drawings prepared as were needed by working forces engaged in construction of locks. General features of intermediate and lower locks at Gatun and Miraflores adopted.

South approach wall at Pedro Miguel designed of massive concrete, and larger part of it is constructed. Northeast wing wall to be of massive concrete, and reinforced concrete walls designed for northwest, southeast, and southwest wing walls in same locality. Designs for approach wall at Pedro Miguel and Gatun and Miraflores tentatively prepared.

Description and drawings of valves for controlling flow of water into and from locks given in last report. Contract entered into Mar. 2, 1910, for all the frames for gate valves to control main culverts for upper Gatun and Pedro Miguel Locks; delivery begun. Contract entered into July 10, 1909, for frames and moving parts for two sets of Stoney valves. 40 cylindrical valves contracted for July 10, 1909; 90 per cent delivered. Substitution of cast iron for steel. Bids asked for remainder of ironwork for valves for main and lateral culverts.

General and detailed drawings of lock gates for all gates required to fully equip the locks completed. Bid of McClintic-Marshall Construction Co., Pittsburgh, Pa., accepted. Prices 3.785 cents per pound for structural steel erected, 2.62 cents per pound for structural steel not erected, and \$5,374,474.82 for entire work. McClintic-Marshall Construc-

tion Co. bind themselves to complete work by June 1, 1913.

Design of machinery for Stoney gate valves main culverts completed. Valves will be operated electrically. In order to try out machinery as designed, before purchasing large number required, specifications prepared and bids invited for two machines each class.

Study given to question of machinery for operating gate leaves. As result, recess in wall modified to permit freer exit of water around miter post when gate is near position rest, and type of machine adopted in which the force applied increases and the rate of motion decreases near the beginning and end of the movement. Crank-shaft motion chosen. It has been thought desirable provide on gate leaves a positive lock. The vice adopted will be tried carefully before being applied.

Design for spillway dam at Gatun completed. The trace of the dam is a semicircular arch which secures not only necessary development of crest, but also partial neutralization of energy of converging stream that will flow over it. To help destroy energy flow, two rows of baffle piers placed on axis of circles concentric with dam. Crest of dam divided into 14 bays 45' wide, by 13 piers and 2 abutments, closed by Stoney gates. Ample provision made to take care of flood even should there be any negligence or delay in the operation.

As spillway channel must be used for discharge of the Chagres during building of main dam construction of spillway dam will be one of last parts of work completed. Piers about 20' apart therefore built from the foundation projecting above low water; stop planks can be placed between them, thus forming a cofferdam, under the protection of which concrete can be placed. Design also contemplates construction of 4 low-level culverts regulated by Stoney valves and 1 by cylindrical valve. By their aid lake level can be regulated during construction of remainder of dam, concrete being kept ahead of slowly rising lake surface. Culverts will subsequently be filled with concrete.

General plan of machinery used in raising and lowering Stoney gates on crest of spillway prepared.

Design prepared for electric locomotive to take vessels through locks and have full control of them from approach until locked through. Work on movable or emergency dams continued; various details settled, and drawings being prepared to invite bids for delivery of material and erection in place.

Investigation of expenditure of water from Gatun Lake as affected by design for locks carried on. Results indicate that in ordinary years there will be a considerable surplus of water, and that water supply of worst-known dry season for last 19 years, 1903, would be sufficient to maintain through canal an average daily number of passages three or four.

times as great as average number passing Suez Canal.

Water supply is ample for canal as planned, and separation of locks into single lifts would have carried with it a great increase in expense to bring about an unnecessary saving in water supply. Analysis of effect of use of different lock chambers upon water supply, levels, and lifts. **P-10, 2-5.**

1911. Scope of division increased to add design and construction of aids to navigation, inspection of manufacture and erection under contract or otherwise of lock gates, operating machinery, gates and valves, emergency dams, and of placing of such concrete in locks as must be omitted until machinery is installed.

General plans of all locks practically completed. Designs for approach walls at all locks, with exception of south middle approach wall for Miraflores, prepared.

Contracts for valves, frames, and bulkheads practically completed. New contracts entered into, or advertisements issued, for remaining frames, valves, snubbing hooks, spillway gates, spillway bridges, and all fixed steel for completed locks. 954 tons of castings for structural material made at Isthmian Canal Commission shops at Gorgona.

With view of ascertaining friction coefficient and leakage under working conditions, tests of rising stem or Stoney valves undertaken at Gatun. Tests for determining coefficient and leakage under working conditions being made. One of the cylindrical valves tested for leakage at Pedro Miguel under head of 65.

Material under contract for fixed parts pertaining to miter lock gates delivered. Work in progress under contract June 21, 1910, for construction of gate leaves proper; shops had completed on June 30, 1911, ready for shipment, practically all material for 8 leaves 54' 8" in height, comprising upper guard gates in Gatun and Pedro Miguel Locks; 8 leaves 77' high for the upper and middle gates in the upper lock at Gatun nearly completed, while 8 more leaves 77' high for safety and lower gates in same lock about half done. Shipments, about 7,000 tons. Output of shops has reached about 900 tons per week, or nearly 1½ leaves.

Under the contract, erection of gates to begin on Jan. 1, 1911, at Gatun, and on Mar. 1, 1911, at Pedro Miguel. Contractor's erection plant practically ready on dates mentioned, but actual erection not begun until later, due to delays. By end of year skeletons of 4 leaves at Gatun were in position for a height of 4 panels and those on east chamber completely riveted.

Fender chains to be placed about 500' above and 230' below the upper and lower guard gates, respectively, in the locks at Gatun, Pedro Miguel, and Miraflores, and also at points 80' and 100', respectively, above the hollow quoins of the middle and safety gates

in the Pedro Miguel Lock, and in the upper chambers at Gatun and Miraflores. Study of the device had made sufficient progress to determine type of first sample machine to be bought. Trial with sample chain will determine character of the remainder to be installed.

To permit examining, cleaning, painting, and repairing lower guard gates, and access in the dry to sills of the emergency dams, proposed to provide floating caisson gates; design of the molded ship type prepared. Alternative design of type now used for dry docks in U. S. under consideration. Caissons will be equipped with electric motor-driven pumps for use in pumping out caissons and for unwatering locks.

Bids for operating machinery for valves not satisfactory and rejected. New bids issued; contract made for purchase of two machines of each type for trial. Motors and limit switches for two machines purchased. Bids invited for purchase of machines for operating and locking the gates.

Plans for emergency or movable dams completed in Dec., 1910, and work of constructing and erecting them in place advertised on Jan. 14, 1911. Contract awarded to U. S. Steel Products Co. for sum of \$2,238,988.40, lowest bidder. Time pledged for completing erection of the dams as follows: At Gatun, Aug. 15, 1912; at Pedro Miguel, Jan. 15, 1913; and at Miraflores, June 15, 1913. Machinery for raising and lowering wicket girders of emergency dams and gates which close openings between these girders designed and included in the above-mentioned contract.

Study given to electrical system for operation of canal. Contemplates hydroelectric station on Gatun Dam with reserve generating station at Miraflores operated by steam. Two stations to be connected by transmission line. Specifications for equipment of hydroelectric plant ready for issue.

Detailed drawings for Gatun Spillway and general plan of Miraflores Spillway completed, as well as drawings for steel footbridge to span gate openings at spillways, and for caissons which replace defective gates and permit repairs.

Scheme for lighting canal prepared and adopted. Contemplates range lights for establishing direction on longer tangents, and side lights about a mile apart to mark side of channel. Light and fog signal located on west breakwater in Limon Bay, and gas and nun buoys will be placed to mark channel to Mount Hope Dry Dock. Three types of lighted beacons will be used, of reinforced concrete. Project contemplates 34 tower beacons, 67 beacons, 57 gas buoys, 76 spar buoys, and 7 nun buoys. Reference targets for marking ranges where lights not used and for fixing location of gas buoys will be erected. Sailing lines marked by

range lights, except at entrances to canal, will be so placed that all ships will follow course 125° to their starboard of axis of canal; two passing ships, on their ranges, will have center line 250' apart. For locating and referencing gas buoys, and providing unrestricted view of range and reference targets, 1,000 acres of land must be cleared. Work begun Apr. 20; at close of year 375.5 acres cleared, 148,000' of trochas cut, and 16,000 lineal feet profile taken.

In the report of the Isthmian Canal Commission for 1899-1901, Mr. S. H. Woodard discussed the effect upon the lock gates of the difference in densities between the water on the two sides of the gates of the lowest locks. In the course of the design of the lower portion of the lock flights at Gatun and Miraflores it appeared that the pressures might prevent the opening of the gates, or even under possible conditions bring such pressure on the downstream side as would expose the operating apparatus to reverse stresses, etc. Questions considered by board; board reported it possible to find for a given condition of density, depth of water, and location of culvert, an elevation for outlets of culverts at which there will be no resultant unbalanced pressure on the gate leaves due to difference in density of water on the two sides after flow through the culvert has ceased. Applying analysis to known conditions at lower gates at Gatun and Miraflores, board determined positions for the outlets of culverts and recommended they be placed at these elevations in horizontal plane of roof of culvert, thus directing flow upward. It also recommended placing of valves in lower guard gates to provide against pressures due to tidal action. As a result, a design for outlet of culverts in lower locks adopted. **P-11, 2-5.**

1912. General plans for lower portion of lower locks at Gatun and Miraflores completed and approved, as well as plans for south middle approach wall at Miraflores and for uncompleted portion of south middle approach wall at Pedro Miguel, which was changed from solid type already built to reinforced cellular type for remainder. In addition, all drawings required for decking over various machinery chambers in the lock walls, snubbing posts, and spring buffers prepared, so that all detailed plans for locks completed and approved.

Chambers prepared for rising stem gate valves by lining up fixed irons, and 12 completed at Gatun and 2 at Pedro Miguel during the year; at Gatun 12 valves placed in position. In addition, 6 bulkhead gates placed in side-wall intakes and 6 in center-wall intakes at Gatun. Three rising stem gate valves and 1 cylindrical valve placed in Gatun Spillway. Cylindrical valves placed in all the locks during construction and all of them in position. To determine probable leakage around rising stem valves, also force required to start valve

and maintain motion, test made on set of two valves installed in upper valve chamber of west side culvert at Gatun. Entrance to culvert closed by water-tight bulkhead, and culvert between bulkhead and valves, with well above valves to top of wall, filled with water. By this arrangement there was greater head against valves than will obtain when lock is pumped dry for examination, and considerably greater than the usual operating head. It had been assumed at 81,750 pounds in design of machinery which was intended to exert a lifting force of 60,000 pounds, including all friction and weight of valve and accessories. Probable that both friction and leakage will be reduced in subsequent valves, as certain improvements in detail and workmanship are found in those of later construction.

Cylindrical valve in locks at Gatun tested for leakage from exterior by constructing bulkhead across entrance to valve chamber, which was then filled with water. When head reached 60' leakage found to vary from a quantity too small to measure to about 0.25 of a cubic foot per second. Average was about what was to be expected from the tests made at Pedro Miguel and described in last report. Examination indicated that leather seal or gasket sufficiently rigid to hold up movable portion of valve and prevent seating properly. Segments which clamped leather seal removed and edge beveled slightly to allow easier bending of gasket. After this was done leakage found by measurement to be about 0.015 of a cubic foot per second, or about one-tenth of that previously measured. Segments for all valves being beveled in manner indicated.

Two rising-stem valve machines furnished under contract tested and found to be satisfactory; contract entered into Dec. 5, 1911, for furnishing all parts for 114 rising-stem gate-valve machines without motors. After successful test of first two cylindrical valve machines, contract awarded, Oct. 25, 1911, for 118 additional cylindrical valve machines without motors and 12 auxiliary culvert valve machines without motors. Up to June 30, 1912, 21 rising-stem valve machines (except valve stems and thrust screws), 34 cylindrical valve machines, and 3 auxiliary culvert valve machines received. Delays in shipment occurred, caused by strike of stevedores at Baltimore.

Owing to the peculiar climatic conditions on the Isthmus, involving tropical heat and extreme humidity, and deteriorating effect of these conditions on insulation of electrical machinery, was necessary to investigate different kinds of insulation. 16 sample motors purchased, 2 from each company offering bids for motors required. 8 of these were sent to the machine contractors for operating tests on valve machines, and the other 8 shipped direct to the Isthmus, where they were subjected to extreme conditions specified in specifications accompanying the invitation

for bids, to test insulation. They were first placed in storehouse at Gatun and exposed to ordinary conditions of climate for about 2 months, during which time condition of insulation was determined periodically by inspection and tests. They were subjected to steam test, in which the extremes of temperature and humidity mentioned might be reproduced. In order that conditions of all motors might be identical, motors were placed in small building erected for the purpose and tests performed on all motors simultaneously, so that motors were subjected to same humidity and temperature. Tests consisted of filling building with steam, maintaining temperature of 50° C. for period of 10 days, making potential tests and measurements of insulation throughout this period. In addition to steam test, motors which survived were immersed by filling case with water at 30° C. and maintaining this condition for 5 hours, during which time observations of insulation resistance made continuously. 8 motors which were first shipped to the machine contractors were, after reaching Isthmus, subjected to the immersion test, but not steam test. Tests were conducted without the presence of any representative of manufacturers.

Relative standing of various types of insulation definite and choice of most suitable insulation clear; however, in view of the number of motors tested, it was desirable to obtain a numerical basis of comparison. A schedule of the various stages of the tests was therefore prepared and a number of points assigned for the survival of each of these stages. Contract awarded on basis of tests as above outlined.

Series of tests also made on sample limit switches purchased under similar conditions as motors and award made. Satisfactory progress made in manufacture of these switches, and at end of year 50 reported shipped.

Lock gates being constructed and erected under contract dated June 21, 1910. During year shop drawings for different heights of gates completed and approved. Total steel plates and shapes accepted at mills, about 52,322 tons, which practically comprised all rolled material required, excepting that for spare parts. Three-quarters of castings made, machined, and accepted. Specified chemical and physical tests carried out and contract requirements as to quality of material fully met. Only change in material made in bushings for the pintles at the bottom of certain leaves that will always be in sea water. Certain leaves operated in brackish water are to be protected from erosion by use of zinc rings placed close to bronze bushings.

Total shipment of structural material to end of year 1912, about 39,000 tons, or 76 per cent of amount required. Of the total, about 32,000 tons shipped during year, so that on June 30, 1912, 13,000 tons remained to be forwarded—

about half the material for the gates in intermediate locks at Gatun, the upper locks at Miraflores, and all material for gates in lower lock at Miraflores.

On June 30, 1912, erecting gates on Isthmus in progress on 23 gates. They comprised all gates in upper lock and intermediate gates in lower lock at Gatun and all gates at Pedro Miguel, excepting lower guard gate in west chamber. No material placed at Miraflores. Total steel in place in several gates at end of fiscal year, 19,631 tons, or about 34 per cent. With exception of 412 tons previously reported, all this material erected during year. Total number of field rivets driven to June 30, 1912, 963,500 out of 5,750,000, or only 17 per cent of total.

Completion of several gates fallen considerably behind dates specified in contract. Close and continuous inspection maintained; believed that completed gates will meet fully the standard laid down in specifications. Tests for water-tightness in first gate at Gatun indicate excellent workmanship.

First two miter gate-moving machines and first miter forcing machine completed and satisfactorily tested. Miter gate-moving machines installed in respective places, and one tested in regular service of swinging gate in dry. Operation successfully performed in 1 minute and 48 seconds, or 12 seconds less than estimated time. Contract for remaining 90 miter gate-moving machines made Feb. 11, 1912. Award for motors for these machines made.

Contracts entered into for delivery of one fender, except the chain, which was built at U. S. Navy Yard, Boston. To determine best form of emergency resistance valve, elaborate series of tests made in power plant of Prudential Insurance Co., Newark, N. J. Three types of valves tested; two satisfactory. Chain the only part of apparatus shipped.

Material for structural steel covers by which the electric locomotive track is supported over lock-gate recesses in masonry provided for, and erection of steel let by contract July 7, 1911. Erection of all covers in Gatun and Pedro Miguel Locks practically completed.

Bids for electric-towing locomotives invited. Contract entered into for delivery of one locomotive complete. Under contracts for materials in connection with locomotive tract, 95 per cent of structural parts completed. Delivery of steel rack sections 44 per cent completed. There was delivered on the Isthmus 60 per cent of malleable-iron supporting brackets for conductor-slot covers, but these rejected on account of general irregularities. Contract for malleable-iron cover plates and washers completed. Bids for crossovers and turnouts rejected. On readvertisement, contract entered into.

Specifications issued Sept. 9, 1911, covering main generating equipment for hydroelectric station, containing three 2,000-kilowatt units, to be located adjacent to spillway in Gatun

Dam. Equipment to consist of three 2,250-kilowatt water turbines, 3 head gates, 3 penstocks, 3 governors, 3 draft tubes, three 2,000-kilowatt generators, 3 direct-connected 50-kilowatt exciters, two 100-kilowatt motor-driven exciter sets, one 30-ton electric crane, and 1 lubricating system. Contract entered into Dec. 2 for hydraulic equipment. Contract entered into on same date for electrical equipment. One generator completed and ready for test. Only material delivered on Isthmus, 60 per cent of penstocks.

Sufficient water from storage in Lake Gatun to warrant installation of 6,000 kilowatts in generating capacity, including reserve. Maximum water diverted for hydroelectric development approximately 7 per cent of minimum water supply and is excess not required for lockages, evaporation, and leakage.

Spillway-gate machine designed to raise and lower, in 10 minutes, Stoney crest gate for controlling water levels of Gatun and Miraflores Lakes. Consists essentially of two counterweights, connected to gate by a screw and chain; screws driven simultaneously; counterweights practically balance weight of gate. Contract awarded for 22 spillway-gate machines.

Jan. 31 specifications issued for apparatus for remote control and indication of the lock machinery and spillway gates. Bids opened Mar. 15 and contracts awarded.

For supplying electric current to operate lock machinery, 16 transformer rooms provided in locks at Gatun, 8 at Pedro Miguel, and 12 at Miraflores. Power taken at 2,200 volts from hydroelectric station and transformed to 220 volts. Each room is to contain two 190-kilowatt power transformers. All equipment in duplicate. Transformer room will also contain 25-kilowatt lighting transformer, bank of 9 or 10 oil switches, 7-panel, low-tension switchboard, and miscellaneous cable and terminal equipment. Every effort made to render operations simple and fool-proof.

General features of lock illumination fixed. Exterior lighting concrete lamp standards will be erected on coping of locks throughout length of each wall—211 lamp standards at Gatun, 131 at Pedro Miguel, and 169 at Miraflores. Standard supports reflector 30' above the coping. For interior lighting of operating tunnels and machinery rooms, deck lights arranged. For use at night, artificial illumination provided by ordinary 16-candlepower carbon filament lamps mounted in specially designed reflectors set in concrete. 7,000 lamps will be installed in all locks.

Erecting lock machinery begun at Gatun Sept., 1911, and at Pedro Miguel Jan., 1912. Schedule of erection not adhered to in all cases, but installation and erection progressing as fast as deliveries. 9,414' towing track, including conductor-slot channels, assembled, lined up, and tested, and 2,348.9 c. y. con-

crete laid in connection with towing track and miter gate recess covers.

Of emergency dams, 2,786 tons material shipped from U. S. Shipments to Isthmus delayed; only 1,700 tons received. False work and erection cranes for east dam at Gatun completed.

Contracts made for emergency dams and gate and girder hoisting machines; also for electrical equipment for operating machines. Satisfactory progress made; first machine of each type tested and other machines advanced. Tests of worm gearing carried out.

Work on drawings for floating caisson gates continued. Plans for various decks drawn out and detailed study made of pumps and piping.

Contracts aggregating \$3,683,306.29 entered into during year for various irons in connection with locks, electric locomotives, tracks, machines, pumps, electrical equipment; for all necessary appliances for completely equipping the locks for satisfactory operation, except machinery for guard valves, and material for transmission line which will connect hydroelectric station at Gatun with locks of Pacific division.

Prolongations of range light tangents so covered by brush and timber that trochas had to be cut; 809.85 acres cleared.

Field forces organized and work begun on range towers at Pacific entrance Sept. 1, 1911. The towers, of concrete, being constructed by means of steel forms. Eleven of the towers completed—Nos. 5 and 6, Atlantic section; Nos. 2, 9, 11, 13, and 14, Pacific section; Nos. 1, 21, 24, and 25, Gatun Lake section. In their construction 805.88 c. y. concrete used. 60 gas buoys located, referenced, and checked, and 3 beacons in Gatun Lake section located. For floating buoys and for 23 towers and beacons in inaccessible places, compressed acetylene adopted. White lights will be used; all range lights, beacons, and buoys will have individual characteristics formed by flashes and combinations of flashes of light and dark intervals. Candlepower of lights will vary from 2,500 to 15,000. Most powerful ones will be those marking sea channels at Atlantic and Pacific entrances, visible from 12.5 to 18 nautical miles. Beacons and buoy lights will have 950-candlepower. P-12, 2-12.

1913. Designing work for locks, including drawings needed by working force in the field, as well as for spillways, approach piers, and wing walls, completed. After performing some work for second division on coaling plants and canal terminals, force in charge of designs disbanded June 1, 1913.

Complete installation for a set of rising stem valves requires setting valves, placing stems, roller trains, crossheads, motors, and control panels. Fixed ironwork for guiding valves and forming water seals required correction before installation begun. For valves at

Gatun and all but 2 at Pedro Miguel corrections made by chipping and grinding with pneumatic hand tools; for 2 at Pedro Miguel and all valves at Miraflores done by specially designed milling machine. 94 per cent of fixed irons corrected at close of year. During year 102 rising stem valve chambers prepared, including 50 at Gatun, 28 at Pedro Miguel and 24 at Miraflores, and 104 valves, including trains and sealing devices, placed in position in locks. Of this latter number, 48 at Gatun, 28 at Pedro Miguel, and 28 at Miraflores.

Tests made on 39 rising stem gate-valve machines at Gatun, 20 at Pedro Miguel, and 8 at Miraflores.

Six side-wall intake screens placed at Gatun, and bulkheads to center-wall intakes removed and placed in outlet. At Gatun 4 lower side-wall bulkhead gates also placed.

Guard valves provided as duplicates to upper rising stem valves in emergency, or for use in closing intakes in side-wall culverts for unwatering culverts to permit access to other valves for painting and repairs. Design of machinery for these valves completed Aug., 1912. Design determined by cramped position in which machines had to be placed; because of infrequency of operation, as well as slow speed, simpler and cheaper than for rising stem valve. On Nov. 14, 1912, contract awarded for 18 complete machines, excepting motors, limit switch, counterweight bases, and counterweights; 50 per cent of machines delivered before close of year.

Last of cylindrical valve machines under contract delivered Jan. 15, 1913. Mechanical installation of 120 cylindrical valves completed June 1, 1913, and electrical work of installing control panels and cables with necessary conduits for these machines 41.6 per cent complete for all locks. As result of tests, decided to regrid all valves. Operating machinery is same for both cylindrical valve and auxiliary culvert valve machines, except 60" and 36" strokes are required for 60" and 36" auxiliary culvert valves, respectively, instead of 32" stroke of cylindrical valve. Test made to determine time required to open various types of valves; cylindrical valves required 10 seconds, 60" auxiliary culvert valve 16 seconds, and 36" auxiliary valve 10 seconds.

Tests of discharge made on cylindrical valve and 3 rising stem gate valves in spillway.

During year 14 gates and 1 caisson for spillway at Gatun and 8 gates and 1 caisson for spillway at Miraflores erected. Gates at Gatun installed in position on dam. Miraflores spillway under construction. Draft tubes for hydroelectric station on east side of spillway dam at Gatun completed.

All spillway gate machines and pumps for unwatering counterweight pits delivered and test made of first machine. Device for shifting gate upstream a slight distance after it is clear of the water and mechanism for raising roller train out of water operated properly.

Mechanical work started on 12 of 14 machines at Gatun and 71 per cent of mechanical work on all machines completed.

Construction and erection of lock gates continued under contract with McClintic-Marshall Construction Co. dated June 21, 1910. Shop drawings completed, as was manufacture of all material for gates, aggregating 57,500 tons; final shipment made in Apr. In addition, 2,100 tons structural work for spare parts built and delivered on Isthmus. Spare parts comprise sufficient material for partly or completely rebuilding any 2-gate leaves on canal. Erecting lock gates proper began at Gatun May 17, 1911, at Pedro Miguel Aug. 7, 1911, and first work at Miraflores done Sept. 10, 1912. At beginning of year work in progress on half the total number in all locks; none had been completed. Total steel assembled only 19,361 tons, or about 34 per cent of total. Field rivets numbered 963,000, or about 18 per cent of a total of over 5,700,000. Work allowed to drag; completing it within reasonable time hopeless. Contractors decided upon change in local management and, Sept. 1, installed additional machinery, increased force, and arranged for efficient supervision. Improvements in organization became manifest; high degree of efficiency reached, with large increase in work. Some idea of improvement may be judged from fact that during Mar. 660,000 rivets driven, while the highest number driven in any one month prior to Sept. 1, 1912, was 213,000. On June 30, 1913, over 97 per cent of material assembled in gates. All leaves in west chamber at Gatun and in east chamber at Pedro Miguel stepped on pintles, and all leaves in west chamber at Miraflores excepting 2 leaves of operating gate in lower chamber. All guard gates complete except at lower end Miraflores Locks; and guard gates at both ends Gatun Locks permanently closed at end of year. Those at upper end put in service July 20, 1912, and lower guard gates closed June 11, 1913.

Supplemental contract entered into with contractors Jan. 14, 1913, by which certain restrictions governing payments modified, as original provisions proved unnecessarily severe and more speedy completion would be assured by relaxing. Modification provides for successive partial payments on each gate when assembling, riveting, finishing, and painting completed and accepted. Further supplemental agreement, signed May 20, 1913, gave extension of time. Delays occurred for which contractors could not be held responsible, due to shipwrecks and strikes, as well as delays caused by Isthmian Canal Commission. Rate under which liquidated damages to be computed increased, while new and later dates fixed for completion of several gates. June 1, 1913, fixed for upper guard gates at Pedro Miguel, and June 15 for guard gates at lower approaches to Gatun and Pedro Miguel and upper approach to Miraflores Locks. Lower-guard gates at Miraflores to

be finished Sept. 1, 1913, and all other gates necessary to permit lockage through one side of each flight, ocean to ocean, must be completed not later than Oct. 1, 1913, while date of final completion for all remaining gates fixed at Jan. 1, 1914, for Gatun and Pedro Miguel, and Mar. 1, 1914, for Miraflores. From progress made dates will be anticipated. Total weight of all gates on canal, excluding pumps, floats and float switches, motors and conduits, and other electrical apparatus, castings for attaching operating struts, and miter forcing machines, 57,552 tons. Castings and structural parts to be embedded in masonry in part furnished under contract for lock gates and erected by Isthmian Canal Commission in connection with concrete construction.

Entire shipment of miter gate-moving machines completed during May, 1913, but work handicapped by nonreceipt of parts necessary to embed in concrete and about which erection of whole machine hinges. At end of year 86 per cent of all machines installed. Electrical work in connection with these machines 24.2 per cent completed at close of year.

Miter gate-moving machines installed complete on upper guard gates at Gatun, and test made of machinery July 31, 1912. Gate-moving machines adjusted. Limit switches adjusted so that the gate traveled from its full miter position to opposite position in recess, at which point machine again on dead center. Operation of one leaf 1 minute and 51 seconds and for other 1 minute and 50½ seconds. Operation completed second time. Mitering of leaves perfect. Gates also had installed miter-forcing machine, tested out on same date. One leaf left in closed position and other opened 2'.

Miter-forcing machine brought gate to within ¾" of perfect miter. Another trial, with opening of 3½", brought gate to ⅝" from miter. Several changes made, and new proposals invited. Under new contract all machines delivered. Installation delayed on account of noncompletion of work on structural gate parts.

Under contract entered into Nov. 4, 1911, all material for trial tender delivered. Erection begun about Jan. 1 and completed Mar. 1, 1913. During Mar. and Apr. tests made. Results seemed to warrant belief that vessel, unless of great size or moving at excessive speed, can be checked or stopped without breaking the chain. Great tidal range below Miraflores Locks made modified design necessary. Same system of cylinders used and machinery practically same, but chain is stretched across the lock at either of two levels, according to stage of tide. Chain is endless.

Plans and specifications for floating caissons completed and invitation for proposals issued May 23, 1913. Caissons will be used for closing upper and lower entrances to lock chambers when unwatering them, and will contain

pumping plant for pumping out locks. Pumping system will include 4 centrifugal pumps of volute type with 20" discharge, besides small auxiliary pump. Flooding of caissons done by gravity and 2 of the 4 large pumps arranged for pumping them. All remaining parts of towing track material delivered. Total delivered, 53,950 linear feet, and at close of year 36,908 linear feet installed complete with concrete, and 11,168 linear feet distributed and bolted up ready to be aligned and concreted. Installation of most of return track performed by Atlantic and Pacific divisions.

Bids invited for towing locomotives on design prepared by electrical subdivision, and contract entered into for locomotive. Locomotive delivered Jan. 25, 1913, and ready for operation Feb. 7, after which it was tested. Test developed defects. As a result, order placed for required number of locomotives on design submitted by General Electric Co., abandoning design of Isthmian Canal Commission.

Tests made in Limon Bay on ships of Panama R. R. fleet, at various speeds of acceleration, to serve as check on basis used for design of locomotives. Ships ranged from 3,500 tons to 10,400 tons displacement. Tug used which could exert maximum pull at standstill of 15,000 pounds. Readings taken of dynamometer pull, tug speed, angle of tow line with center line of tug, angle of tow line with ship, and ship's bearings, at intervals of 30 seconds throughout the run.

Insulated cable on order to date for all classes of work on locks and hydroelectric station, including underground lines from hydroelectric station to locks, aggregates 2,372,110', of which 1,394,600' lead-sheathed cable and remainder rubber-covered double-braided wire and cable. 93 per cent of total required delivered. 462,729' of lead-sheathed cable pulled into ducts, and large part of remaining ducts rodded, cleaned, and wired with fish wires for pulling in remainder. Cable pulled in ducts by special winch made on Isthmus.

Control scheme for various locks completed; contemplates control of every piece of machinery in lock walls from central station. In house is located control switchboard connected with every local control panel and indicating mechanism. Switchboard so arranged that indicator and control switch of each gate or valve machine is placed in same relative position to other indicators and control switches as that occupied by actual machines, so that by means of red and green lights and small models of gates and valves operated by synchronous transmitting mechanisms operator in the control tower on locks is able to tell at a glance condition in any part of locks from switchboard indications. Expected first board will be shipped by Aug. 1. Hollow concrete pole with concrete bracket arms and reflectors designed by architect for supporting lamps for exterior illumination of locks and grounds. Poles arranged in 4 rows

along length of locks, spaced 100' apart, with lamps 30' above coping level. Lighting units used, 110-volt, 500-watt Mazda lamps.

Generating equipment for hydroelectric plant delivered, including main generators and turbines, exciter sets, traveling crane, penstocks, head gates, and operating machinery. Steel-work for hydroelectric station purchased, and delivery completed. Erection of penstocks complete and turbines set. Balance of installation dependent upon completion of building for housing electrical equipment.

Decided to install for transmission line overhead system of 44,000 volts, from Balboa to Cristobal, connecting Gatun hydroelectric power station with present Miraflores steam power station. Four substations provided—at Cristobal, Gatun, Miraflores, and Balboa. Complete line consists of duplicate 3-phase lines.

Remaining shop drawings for emergency dams completed and approved. Tests made upon gates prior to shipment. Structural material for turning and wedging machinery for emergency dams shipped to Isthmus. Assembling of east dam at Gatun begun July 1, 1912, and completed Mar. 1, 1913. Erection of west dam begun Nov. 9, 1912, and practically completed in 5½ months, or Mar. 1, 1913. Material for west dam at Pedro Miguel received in time to begin erection Feb. 1, 1913; all material assembled. Work begun Apr. 1, 1913, on east dam, and by June 30 over 50 per cent of material assembled in structure and 30 per cent of riveting completed. Delivery of material for east and west dams at Miraflores began May 1, 1913, and to end of fiscal year about 840 tons received. Erection of east dam begun June 1, 1913, and of west dam June 13, 1913. On May 20 contractor began final tests of dam on east side at Gatun, total time for closing, first test, being 1 hour 1 minute and 30 seconds. Second part of test started, consisting of operating turning and wedging machinery for 20 days, at intervals depending upon heating of motors. Tests were made principally for limbering up turning and wedging machinery. After completing second part of tests, 3 additional complete operations made; the last completely closed passage in 42 minutes and 17 seconds—19 minutes and 13 seconds less than time of first test.

12 range towers completed, of reinforced concrete, with heights from base to focal plane varying from 28' 10" to 87' 10". 3 skeleton tower beacons, marking edges of channel, Balboa to Miraflores, completed. 18 concrete-steel reference and range targets completed in Gatun Lake section. There will be approximately 32 of this type, by means of which gas buoys may be located from previously determined angles. At Bohio, Pena Blanca, Caimito, Mamei, Juan Grande, and Bas Obispo these reference targets also form unlighted ranges which mark axis of short tangents at those places. Reinforced concrete caisson for west breakwater light and fog signal, begun in June of last year, completed to height of 25'

and was sunk at inner end of Limon Bay in 20' of water, where it will remain until its riprap foundation at outer end of breakwater has reached settlement. Plans for west breakwater light and fog signal revised under supervision of architect and revised structure superseded one shown in last report. 51 concrete buoy sinkers 48 by 48 by 26" and forty-five 24 by 24 by 18" constructed at Balboa plant of lighthouse subdivision. Reinforced concrete wharf 70' long and 30' wide, adjoining small boat landing at Gatun, built for lighting establishment of canal by Panama R. R., to be used for storing, painting, and repairing gas and spar buoys belonging to Gatun Lake section. Experiments made with tungsten lamps having spirally wound filament concentrating the light source to spheres of ¼" for 100-watt and ⅝" for 150-watt lamps, as that type of lamp will be used throughout for all electrically lighted range towers and beacons. Experiments made for special flashing devices and lamp shifters for electrically lighted towers and beacons.

250 acres of prism from San Pablo to Pena Blanca cleared of trees and brush, and approximately 180 acres of land were cleared of trees in the vicinity of Mamei for the dredging division. P-13, 2-13.

(See p. 2368 of this Index.)

Construction, Plan of. (See p. 2365.)

Outline of, as proposed by John F. Wallace, before Board of Consulting Engineers, 1906.

Unit costs and time. P-06*, 364-371.

Terminal channels should be dredged to permit receiving material; Colon Harbor should be protected from northers; embankments to be thrown up on each side of the canal with dipper or clamshell dredge as far inland as possible, to keep flood waters out of canal section, to retain material excavated from the canal by hydraulic dredges, and to provide roadbed for the Panama R. R.; this location of the railroad would do away with the construction and maintenance of bridges; operation of canal will increase traffic of railroad; should be operated with electric power got from Gamboa Dam; track necessary perhaps on west side in central division; dredgeable section through the lowland between La Boca and Miraflores to be constructed in like manner; two end sections of the canal to be completed as soon as possible, "in order that dredges might work as far inland as practicable to assist in the attack on the principal excavation through the divide. This work can be performed by dipper dredges of from 5 to 10 c. y. capacity, loading the material on seagoing barges, and dumping it in deep water beyond the harbor limits."

Various unit prices estimated for soft dredging, rock work, etc.

"The limit of time that it will require to complete the canal or put it in operation will depend upon the removal of the 8 miles of central excavation, containing approximately

100,000,000 c. y., for canal section 200' in bottom width, 50' berms, and slopes of 1 on 1."

"The time required to do this work is dependent upon the excavating units which can be installed and the capacity per unit, which in turn is dependent upon the promptness with which empty cars are furnished to the steam shovels and loaded cars removed. The efficiency of the entire operation rests upon the plan of tracks, the quality and amount of motive power; the number, capacity, and character of the cars; the provision of adequate and proper dumps, and dumping facilities."

10 steam shovels operating Jan., 1906; 37, Jan., 1907; 58, 1908; 82, 1909, would bring output up to 16,400,000 c. y. annually. Same rate during 1910, 1911, 1912, and 1913, excavation would amount to 111,400,000 c. y. at the end of 8 years from Jan., 1906. "In the meantime the excavation of other portions of the central excavation outside of the 8 miles could be carried on partly by steam shovels, etc." Canal could be opened for navigation within 8 years and completed in 10—at most, in 12 years.

Sketch showing typical cross section of canal, on the terrace plan.

Dumps: Existing dumps and tracks practically those of the French company; "lack of track material, labor, and other appliances prevented any material changes being made." Wallace finally had 4 distinct main track railway systems leading from the excavation to distant spoil banks, 2 at each end of the central excavation and 1 on each side of the canal axis; these track systems to consist of 2 or more main running tracks as requirements might determine, using the Panama R. R. as a base; part of this plan consisted of a main double-track railroad leading from the Culebra excavation to the Gamboa Dam site, over which excavated material could be delivered at the site of the dam for construction purposes; main track systems to be ballasted with stone and maintained in first-class condition for rapidity of movement; ample side track facilities to be provided; trackage provided and arranged so that it should not be necessary for a steam shovel to wait for a car; lock tracks to be at the dumps; high and low dumps to receive study; location of dumps such that after the first mile an extra haul of 10 miles should cost but 2 cents per c. y. for transportation alone.

In the preparatory work the first step to remove the slippery clay formation overlying the Culebra excavation, during the dry season; slides afterward can be controlled, "in the opinion of the writer"; central drainage excavations at both ends of the cut; extraordinary efforts to be made to sink the central excavation to the greatest possible depth.

60 cents per c. y. estimated for removing central 5 or 8 miles of excavation; increase of 10 per cent over previous estimate of 50 cents due to 8-hour law, "and by the conclusion

which he has also reached, that to obtain efficient and economical results it will probably be necessary to contract this work, on account of the delays and difficulties which surround the prosecution of the work the details of which are carried on under direct Government control." P-06*, 364-370.

Construction, Status of. (See p. 2364 of this Index.)

Inspection of condition of work after resignation of Chief Engineer Wallace, made by Isthmian Canal Commission No. 3, P-05, 5.

Outline of conditions when Chief Engineer Stevens took charge, covering operations from Feb. 1 to June 30, 1905, P-05, 124.

June, 1904, to Mar., 1905, the work in connection with the investigations and surveys relating to the construction of the canal carried on as outlined by the commission in 1904. The assistant engineers appointed prior to July, 1904, reported direct to the chief engineer, but after the investigations intrusted to them neared completion and the work expanded, divisions were organized and different residencies placed under the charge of the division engineer. June 30, 1905, the engineering department comprised 5 divisions and 8 so-called bureaus. P-05, 124.

Report of Gen. Hains and Maj. Harrod, members of Isthmian Canal Commission No. 3, dated July 17, 1905, as to what had been accomplished under Chief Engineer Wallace. Records of latter's office examined, works along the line examined, and engineers in direct charge of work consulted. List of reports found on file. Outline of what had been done on Culebra division, Colon construction division, by bureaus of water works, sewers, and roads, of architecture and building, and of machinery and equipment. Report accompanied by letter, dated July 14, 1905, of W. E. Dauchy, acting chief engineer, showing the amount of work accomplished under Mr. Wallace, and the improving progress made toward organization, with an outline of the vast number of unwonted difficulties which had to be overcome. P-05, 133.

After observation of status of canal work under Mr. Wallace, apparent that good work had been done in preparation. Better, however, if attempt to "dig dirt" at Culebra had not been made. P-05, 145.

Progress made, extent of, at Feb. 14, 1905. Water supply for towns; administration of department of material and supplies satisfactory; entire work of the department of sanitation has been prosecuted in an efficient manner and with gratifying results; needful to make arrangements for increasing forces, and for resulting housing accommodations. P-05, 302.

Preparatory stage virtually past, at date of annual report, for year ending Dec. 6, 1906. Ready to enter upon actual work of canal construction. Thoroughness of preparatory

work testified to by Senate Committee on Inter-oceanic Canals, in its majority report, May 17, 1906, after an investigation covering a period of 6 months, embracing every detail of the work and every act of the canal officials. From this report, "The work authorized by the Spooner Act has been initiated and extensive preparations for a rapid prosecution of it have been made. The Canal Zone has been placed in a satisfactory sanitary condition, adequate shelter for the workmen has been provided, hospitals of very large capacity have been made ready, as is evidenced by the opinions of experts who have testified before the committee, and we are fortunately now in possession of a vast array of facts and figures affecting the prosecution of the undertaking that have not until now been available. This is due to the fact that the preparatory work has for two years been prosecuted with patient, intelligent judgment and earnest effort by those intrusted with the direction and supervision of the work." **P-06, 1, 2.**

Consuls. (See Countries, foreign; see No. 93, p. 2363 of this Index.)

Department of State issued circular note saying that consular officers commissioned to the President of Panama and recognized by him might exercise their function within and with reference to the Canal Zone without recognition from the U. S., **P-05, 48.**

Contracts, Construction of Canal by. (See No. 163, p. 2364 of this Index.)

Bids for canal construction asked from large contractors, Oct. 9, 1906, the accepted groups to be paid upon the estimated reasonable cost of the actual construction as fixed by an engineering committee, etc. Bids to be opened Jan. 12, 1907. **P-06, 15.**

Letter of chairman of Isthmian Canal Commission No. 3 to Sec. of War setting forth reasons why construction of canal by contract seems advisable. **P-06, 128-131.**

U. S. will get benefit of the combined efforts of the best and most experienced contractors in the world; will secure cooperation of "those powerful interests" in keeping full the ranks of employees; the U. S. will know exactly what the work costs in every part; plan offers incentive for speedy and economical construction by the penalizing system; * * * "friction will be avoided"; "probable saving to the U. S." **P-06, 130.**

Invitation for proposals to complete the construction of the ship canal upon the Isthmus of Panama between the Caribbean Sea and the Pacific Ocean, Oct. 9, 1906. For 85' lock-level ship canal, having a minimum depth of 41' and a minimum width at bottom of 200', between deep water in the two oceans. Basis of proposal: Qualifications of bidders; bonds; general directions for bidders; information furnished by commission; rejection of bids. Proposal form: Bond form; form of contract. Articles: Work to be done by contractor; extra work; plant and facilities furnished by the commission; functions reserved by the commission; to be supplied by the contractor; obligations to be assumed by contractor; payments; final compensation; method of estimating cost and time of construction of canal; default by the contractor; termination of contract when contractor is not in fault; decision of the chief engineer; definitions; bond for fulfillment of contract. **P-06, 132-150.**

Contract versus hired labor construction direct by U. S.: Sealed proposals invited Oct. 9, 1906, for building canal by contractors. Bids opened Jan. 12, 1907. None satisfactory. Contract work in U. S. generally cheaper; where he does not have to use special plant; illustrated by various instances where U. S. did its own work cheaper than through contractors. To be remembered that U. S. does not seek to make a profit when it undertakes a construction. Doubtful if any U. S. contractor could bring to the Isthmus any better labor organization than could the U. S. itself. No contractor can even attempt to recruit labor from the West Indies; no objection from any Government to their laborers working under the U. S. direct. Experience of the U. S. as a contractor equal to that of any contractor. In case of labor troubles, U. S. can handle the problem better apparently. More likelihood of continuity of construction by U. S. direct con-

struction. Reference made to the fact that in a majority of contracts on public works the time limit has to be extended. "There is no question that there are a number of people who will always believe and contend that any piece work done by the U. S. could have been done as well and more cheaply if undertaken by contract, but an examination of the records will generally disprove such a contention. On the other hand, there is an equally large class who will contend to the contrary and claim, after the completion of the work, that the reverse is true." Questionable if a contractor could get more work out of the laborers of the Isthmus than could the U. S. At Culebra all the plant secured, organization has been built up, labor obtainable; some of the organization composed of former contractors or overseers for contractors. No advantage in letting that section out to contractors. Dredge plant being steadily augmented for prism work. No advantage in seeking contractors' equipment, etc. Dam work intimately connected with rock work at Culebra and dredging elsewhere; no gain discernible in letting such work to contractors. In lock construction, the acquaintance with competent men for this work is more extended on the part of the U. S.; no question but that the U. S. should furnish all the cement; no contractor possesses the necessary plant for handling the enormous quantities of concrete required for these structures. The gates and operating machinery can, it is believed, best be constructed by contract at the proper time. Sanitation could probably be managed better with the whole work under direct construction by the employees of the U. S. "The relative advantages of the contract system, etc., * * * very different to-day from what they were two years ago. * * * 80 per cent of the entire plant needed for the construction of the canal purchased and contracted for. Machine shops have been erected and equipped for making all needed repairs to the machinery now on hand. * * * The U. S. better equipped to carry on the work as advantageously and economically as any contractor. * * * Thousands of employees have been secured, and an effective working organization has been perfected, and the recruiting system put in operation is capable of furnishing more labor than can be advantageously used. The employees are well sheltered and, in general, well fed; the salaries paid are satisfactory and the work is progressing smoothly. A change from these favorable conditions in the method of prosecuting the work would disorganize all existing conditions and would undoubtedly increase the estimated cost and time of completing the canal. The conclusion that the work can be done better, cheaper, and more quickly by the U. S. has been reached only after free and full discussion by the various members of the commission and the higher officials connected with the construction work, and after careful consideration of all sides of the proposition." **P-07, 16-24.**

Cost Keeping. (See 250, p. 2367 of this Index.)

System: Begun July 1, 1907. Monthly statements prepared showing the cost of each principal piece of work. Cost based on engineers' monthly reports, and general expense reports, the first covering engineering proper, and the second covering general expenditures, such as Isthmian Canal Commission direct expense, Disbursing Officer, Examiner of Accounts, etc. Civil administration charges are omitted, "because they are not useful in a comparative statement of the work proper, although necessary to the construction of the canal as a whole, and because they were not incorporated in the estimates of the minority members of the consulting board, whose plans are being executed."

Plant cost: Not included at 1908, because all plant necessary for the completion of the work not on hand.

Building construction: Cost included, except those items chargeable as aforesaid to civil administration.

Balance of cost with funds: "The monthly cost of each piece of work * * * balances with the amount charged to the same work on the books of the disbursing officer." **P-08, 21, 22.**

1909. Purpose to enable a comparison of cost of work between any two periods. Improvement already evident. New system of accounts effective July 1, 1909, expected to give better results. **P-09, 19, 20.**

1910. Effective July 1, 1909, the subaccounts of the Department of Construction and Engineering were contained in (A) construction work, and (B) plant and plant arbitraries established as basis for construction work. By taking up monthly proper proportion of charges for plant and equipment expenditures, plant charges will have been completely absorbed by work on its completion.

Division cost of an item of construction work made up of cost of all labor and material directly applied to work, plant, arbitrary and proper portion of general administration expenses, including expenses of O. C. E. and other general engineering expenses. To division cost must be added proportion of general expenses of the Isthmian Canal Commission, including expenses of Quartermaster's and Subsistence departments, Examiner of Accounts and Disbursing Office, proper share of expenses in U. S., and all other miscellaneous charges, in order to arrive at total cost. **P-10, 34.**

1911. Methods revised from time to time, and that adopted Jan. 1, 1910, continued without change. Cost-keeping accountant, Mr. Ad. Faure, reports directly to Chief Engineer, and his duties consist in supervising and verifying statements of costs furnished by division engineers, establishing accounts for new work, and preparing statistical reports.

In examination of construction expenditures, Central division seems to bear more than its proper proportion of general expenses, due to fact that prior to 1907 but little work done except in this division, so that nearly all overhead charges properly chargeable to it.

Unit costs during year lower. Central division produced lowest cost for excavation, and, as between the terminal divisions, that done in Pedro Miguel Locks lower by 11 cents than in Gatun Locks, but higher by 19 cents than that done in Gatun Spillway. Excavation for Miraflores Locks highest. In preparation of foundations Atlantic division did work for less than Pacific division. High cost at Pedro Miguel partly due to layout of work and partly to changes in designs increasing amount to be done at a time when excavation could not be economically handled.

In dredging, Atlantic division secured lower costs with seagoing suction and dipper dredges, and Pacific division with ladder dredges. In latter division underestimate of quantities resulted in total plant charge being absorbed with accounts for Apr. Masonry laid during year, 1,741,908 c. y. in locks and spillways. In Pedro Miguel Locks the average division cost was \$4.7040 per c. y., and in Miraflores Locks \$4.6826; in Gatun Spillway, \$6.7044; and in Gatun Locks, \$6.5919. Difference between costs in Atlantic and Pacific divisions mainly in cost of cement, sand, and stone. Bulk of cement used in Atlantic division received in barrels at cost of \$1.19 at tidewater in U. S., while Pacific division

received its cement in bags at cost of \$1.60 per barrel, less credits for bags. As 90 per cent of bags were returned, cement in bags cost \$1.01 per barrel at tidewater in U. S. Construction plant in Pacific division also handled large percentage of cement directly from cars to mixer, while nearly all cement of Atlantic division handled through storehouse. Year's operations show difference in favor of Pedro Miguel Locks of \$1.7340 in cost of cement, stone, and sand, and large rock; costs at this locality also lower for forms, placing, pumping, power, repairs, plant arbitrary, and in division expenses, while difference exists in favor of Gatun Locks in mixing and reinforcement. Construction plant at Pedro Miguel in operation from July 15 to Feb. 1, and comparison of costs for 6 months' period, Aug. to Jan., with costs at Gatun Locks for year shows less cost for all items than in Atlantic division except for reinforcement. Noted that mixing by construction plant at Pedro Miguel was \$0.1334 and at Gatun \$0.1749 per c. y. of concrete. Work at Miraflores done with auxiliary plant to advance work at this locality, and not comparable with construction plant. Auxiliary plant at Gatun mixed concrete cheaper than auxiliary plant at Pedro Miguel, due to local conditions, which require constant train service for supplying material at latter place. By use of large rock in Atlantic division, of which 73,609 c. y. were placed, a net saving per c. y. of material laid during year of \$0.2888 secured.

In production of stone, cost in storage bins at Gatun \$2.3403, in storage piles for locks on Pacific side \$0.8443 per c. y. Crushed stone from Porto Bello is transported to Gatun in barges and unloaded by cableways and derricks, while crushed rock from Ancon is transported from quarry by rail to storage and dumped from trestles. There is, therefore, an extra expense attached to Porto Bello, represented by difference between cost of towing and unloading and that of transporting by rail, of \$0.7184 per c. y. If this be deducted from actual cost in storage, it leaves a cost of \$1.6219 per c. y. for Porto Bello stone as against \$0.8443 for Ancon stone for similar items in cost of stone produced at the two places. This is in a measure explained by harder quality of rock, by method of quarrying, and layout of plant at Porto Bello. Noted that cost of production on 8-hour day basis as compared with 12-hour day basis is less for former, both at Porto Bello and at Ancon.

Sand produced at Nombre de Dios at cost of \$0.8795 per c. y. before transportation, or \$1.8565 in storage at Gatun. Pacific division secured sand at Chame at cost of \$0.1788 per c. y.; cost in storage, \$0.8284 per c. y. In both divisions sand was transported by water to point of unloading; 40 miles on Atlantic side and 20 miles on Pacific side. Atlantic division used cableways and cranes

to unload, while Pacific division used electric cranes. Omitting cost of transportation from sand bank to docks, cost to Atlantic division was \$1.3142 and to Pacific division \$0.6015. Less cost secured in Atlantic division when 18" pipe-line dredge was placed in operation at Nombre de Dios.

In connection with division costs, noted that amounts paid for salaries of clerks and supervisory forces, amounted to 26.05 per cent for Atlantic division, 17.8 per cent for Central division, and 22.95 per cent for Pacific division.

Effective July 1, 1910, reports of performance of various parts of plant kept and reported, to secure some data relative to operation of plants. P-11, 38-41.

1912. In addition to those reported a year ago, cost accounts prepared and kept for aids to navigation, terminal facilities at Balboa, fortifications, and installation of lock-operating machinery. Supervision of cost data for construction of the docks at Cristobal and New Washington Hotel at Colon added to duties of office; cost of pieces of work in charge of Panama R. R. not included in this report.

In distribution of general expenses Central division continues to carry larger proportion. Excavation in prism by steam shovels cheapest in Central division, averaging \$0.5101; in Atlantic division lower cost is shown than during previous year—\$0.5952 against \$0.6010—while in Pacific division it is higher—\$0.7527 against \$0.6960—and also greater than in Atlantic division. In preparation of foundations, costs higher in Atlantic division than year ago and lower in Pacific division, while those of Atlantic division higher than in Pacific division.

In dredging, costs higher than for previous year, and for work in channels Pacific division shows lower than Atlantic division; Pacific division dredging does not include any arbitrary for plant, total cost of which was absorbed prior to fiscal year, but on this side increase in depth attended with additional expense because of great tidal variations.

Total of 1,443,570 c. y. masonry laid in locks and spillways during year, as against 1,741,908 c. y. during previous year. Unit costs for masonry were: Gatun Locks, \$7.7552; Gatun Spillway, \$7.0988; Pedro Miguel Locks, \$6.4640; Miraflores Locks, \$4.7675. With decrease in quantity laid of 512,315 c. y. in Gatun Locks, cost of plain concrete last year shows increase of \$0.5398 as compared with previous year. At Pedro Miguel, with decrease in amount laid of 363,609 c. y., there was increase in cost of \$1.0143, due to forms, placing, mixing, and plant arbitrary, the construction plant having been removed to Miraflores, with exception of two berm cranes, operated until Dec. 12, 1911, and Feb. 7, 1912, respectively. With in-

crease of 456,163 c. y., cost of plain concrete at Miraflores shows decrease of \$0.0952. Labor costs for year per c. y. of plain concrete at various locks and spillways show lowest at Miraflores, \$0.5394; next, Gatun Locks, \$1.3840; Pedro Miguel Locks, \$1.4733; and Gatun Spillway, \$1.5425.

Difference between costs in Atlantic and Pacific divisions mainly in cost of cement, sand, and stone. While cement for Atlantic division now handled in bags, it must pass through cement shed, while bulk of cement in Pacific division passes directly from cars to work. In production of stone cost in storage bins at Gatun \$2.4952, while in storage pile for locks on Pacific side it was \$0.7996 per c. y., a difference of \$1.6956. If there be deducted from this difference extra expense attached to Porto Bello stone represented by difference between costs of towing and unloading and that of transportation by rail, \$0.7365 per c. y., and difference in plant arbitraries, \$0.4336, net difference in labor cost in favor of Ancon quarry is \$0.5255 per c. y. Sand from Nombre de Dios in stock piles in Atlantic division averaged \$2.2414 as against sand in stock piles of Pacific division at \$0.7025, or excess of \$1.5389 per c. y. in cost of Nombre de Dios sand over that from Chame. Chame sand delivered in stock pile at Gatun cost \$1.7079, including \$0.7890 for unabsorbed plant charge at Nombre de Dios. Sand secured from Chagres River, May 15 to June 30, cost \$1.2850 delivered in stock pile, including \$0.7671 for plant.

Cost of concrete piling at Gatun \$0.0679 less during year than in 1911, while cost in place \$0.7088 less. Total amount driven, 83,670 lineal feet, at cost of \$1.5719 per lineal foot; in addition, 51,450 lineal feet wooden piles driven, at cost of \$0.6516 per lineal foot. On this basis had wooden piling only been used for south approach pier saving of \$77,001.50 would have resulted. In Pacific division 6,530 lineal feet of wooden piling driven for foundations of northeast wing wall, at cost of \$2.3200 per lineal foot.

In connection with division costs, to be noted that amounts paid for salaries of clerks and supervisory forces in the three construction divisions less in Central and Pacific divisions during 1912 than during fiscal year 1911, while in Atlantic division percentage higher. Percentages as follows: Atlantic division, 26.09; Central division, 17.39; Pacific division, 18.94. P-12, 48-50.

1913. In addition to those reported a year ago, cost accounts initiated for erection of permanent buildings, construction of electric transmission line across Isthmus, and preparation of permanent town sites. Cost accounts of first division, which include erection of lock gates, emergency dams, lock-operating machinery, and aids to navigation, revised so as to furnish better information.

Supervision of cost data for construction of concrete dock at Gatun and of bridge across French canal at Mount Hope to connect with site of Cristobal coaling plant added to duties of the office. These projects, as well as construction of dock at Cristobal and of New Washington Hotel at Colon, in charge of Panama R. R. Co., and their costs not included in this report. Oct. 1 preparation of detailed costs for aids to navigation transferred to this office; on Jan. 1 that for reorganized divisions of former Pacific division and for first division of O. C. E.; and on Apr. 1 that for Atlantic division. Although details of costs have greatly increased in past year, expense of securing data decreased from about \$3,600 per month to \$3,000 per month.

In distribution of general expenses, Central division continues to carry larger proportion. Excavation by steam shovels in Central division shows increased cost over last year of \$0.0410, principal item of increase being in cost of repairs to equipment—\$0.0297.

In Atlantic division costs for dredging in prism lower this year than last, due to larger ratio of material excavated by pipe-line suction dredges. In Pacific division cost higher than last year, due to larger ratio of rock excavation and increased depth, which is attended with additional expense because of great tidal variations.

Hydraulic excavation in channel below Miraflores Locks concluded Nov., 1912, and plant reerected at point north of Gold Hill to sluice top banks to relieve pressure. Operations began June 16, and to close of year 57,274 c. y. material had been removed, at division cost of \$0.1235 per c. y., including arbitrary of \$0.1000 per c. y. for plant. Work being performed by fifth division, O. C. E.

Total of 771,907 c. y. of masonry-laid in locks and spillways, as against 1,443,570 c. y. during previous year. This is inclusive of masonry laid by first division in connection with installation of operating machinery. Costs per c. y. for masonry were: Gatun Locks, \$7.2794; Gatun Spillway, \$8.1227; Gatun power house, \$8.5739; Pedro Miguel Dam, \$5.0240; Pedro Miguel Locks, \$7.5976; Miraflores West Dam, \$4.3330; Miraflores Spillway, \$5.8497; Miraflores Locks, \$5.6445. Plain concrete shows increased cost over last year in all projects, except Gatun Locks, due to reduced quantities of concrete laid and to use of larger ratio of auxiliary mixers. At Gatun Locks plain concrete shows decrease of \$0.5934, principally in cost of sand and stone, in expense for steel forms, and in arbitrary for plant, decrease in cost of sand and stone being due to readjustment of stock prices (revised cross-section measurement of the stock piles having shown more stone in storage than was carried on books), and securing sand from borrow pit at Gatun instead of from Nombre de Dios. At Miraflores Locks plain concrete shows increase of

\$0.4406 per c. y., principally in cement, mixing, wood forms, and placing. Fluctuations in cost of reinforced concrete due to different classes of reinforced concrete laid during the two years.

Dam at Gatun increased by 1,714,367 c. y. of dry fill at division cost of \$0.3755 per c. y., and 169,114 c. y. of hydraulic fill at division cost of \$0.2654 per c. y. At close of year there were in place at Gatun Dam 11,578,268 c. y. of dry fill at cost of \$0.4063 per c. y., and 10,124,082 c. y. of hydraulic fill at cost of \$0.2933 per c. y.

During 1913 no filling for Colon Breakwater secured from Toro Point; 183,762 c. y. large rock secured from Porto Bello quarry placed in breakwater at average division cost of \$4.8250 per c. y. Last year 65,133 c. y. rock placed in breakwater at division cost of \$4.3064 per c. y.

Ancon quarry alone operated during fiscal year and produced 688,301 c. y. crushed stone at average cost of \$0.7795 delivered in storage. To close of year quarry had produced 2,558,578 c. y. crushed rock at average cost of \$0.8572 per c. y. delivered in storage. Porto Bello quarry began operations Mar., 1909, and closed down Apr., 1912; produced 1,921,929 c. y. crushed rock at average cost of \$2.4337 per c. y. delivered in storage. There was secured from Chame sand pit 445,658 c. y. of sand at average cost of \$0.7111 per c. y. delivered in storage. To end of year there was secured from this source 1,741,196 c. y. of sand at average cost of \$0.7666 per c. y. From pit at Nombre de Dios on Atlantic side, opened Mar., 1909, and closed Nov., 1911, there was secured 785,893 c. y. of sand at average division cost of \$1.9176 per c. y. delivered in storage. During year there were secured from borrow pit near Gatun Dam 43,851 c. y. of sand at average cost of \$0.5188 per c. y.

To close of year following amounts had been expended: On spillway gates and caissons, at Gatun, \$73,732.22; at Miraflores, \$40,625.69. On spillway gate machines and their erection, at Gatun, \$91,122.95; at Miraflores, \$64,299.22. On lock gates and their erection, at Gatun, \$2,225,084.30; at Pedro Miguel, \$1,373,537.13; at Miraflores, \$1,233,845.37. On fender chains, at Gatun, \$3,836.95; at Pedro Miguel, \$21.37. On emergency dams, at Gatun, \$316,184.77; at Pedro Miguel, \$512,480.47; at Miraflores, \$38,803.75. On lock-operating machinery, including towing-track system, concrete used in the installation of machines, etc., at Gatun, \$2,592,232.64; at Pedro Miguel, \$1,361,873.92; at Miraflores, \$1,561,817.40. For towing-track system following number of linear feet of return track laid by construction divisions at various locks: Gatun, 10,527, average division cost \$1.3261; Pedro Miguel, 4,333, average division cost \$1.1065; Miraflores, 5,925, average division cost \$2.5637; and by first division at Gatun, 1,449, average division cost \$1.9273; at Pedro Miguel, 2,043, average division cost \$2.3678; at Miraflores, 1,082, average division

cost \$0.6085 per linear foot. Linear feet of track, with rack installed by first division, and average cost per linear foot were: At Gatun, 21,000, average division cost \$2.3128; at Pedro Miguel, 12,199, average division cost \$2.0180; at Miraflores, 14,137, average division cost \$1.2291.

In connection with erection of operating machinery, installation of towing tracks, and decking, first division had laid to June 30, 1913, 36,710 c. y. of concrete, as follows: At Gatun Locks, 16,706 c. y., average division cost \$13.4124 per c. y.; at Pedro Miguel Locks, 10,190 c. y., average division cost \$12.1460 per c. y.; at Miraflores Locks, 9,814 c. y., average division cost \$11.3013 per c. y.

Total expenditures for aids to navigation to close of year, \$377,041.63.

For Cristobal terminals \$14,488.14 expended, and for terminal facilities at Balboa, \$1,943,971.09. There had been excavated in preparation of site 412,707 c. y. at average cost of \$0.5620 per c. y. In filling, 505,419 c. y. used at average cost of \$0.3992 per c. y. Dredged in preparation of inner harbor at latter point 1,771,814 c. y. at average cost of \$0.1547 per c. y. For main dry dock excavated 145,478 c. y., and for coaling station 58,221 c. y., at average cost of \$0.8461 per c. y. In preparing foundations for shops 29,684 c. y. had been removed at average cost of \$1.5607 per c. y.; 7,787 c. y. concrete placed at average cost of \$9.2091 per c. y., 135,442 linear feet of wood piles and 3,060 linear feet of concrete piles driven, at average cost of \$0.4820 and \$3.2358 per linear foot, respectively. In constructing docks 12,435 linear feet of concrete caissons placed at average cost, including excavation, of \$18.4708 per linear foot.

Expended in preparation of permanent town sites \$52,458.77 and in construction of permanent buildings \$55,918.76. In preparation of foundations for administration building 38,073 c. y. excavated, at average cost of \$0.5654 per c. y., and 770 c. y. of concrete laid in foundation sat average cost of \$12.8646 per c. y.

Amount paid for salaries of clerks and supervisory forces during year 19.75 per cent of total amount disbursed for salaries. Last year it was 20.55 per cent, indicating saving in clerical and supervisory forces of \$185,000. **P-13**, 49-53.

Cost keeping formerly done by various divisions of work gradually consolidated under chief accountant, so that at close of year he had charge of all work of this character, with exception of that of Central and Mechanical divisions. **P-13**, 2.

1914. Oct. 1, 1913, time keeping and cost keeping for the Central division and cost keeping for Quartermaster's department transferred to O. C. E. and consolidated with forces already organized under this office to take care of time keeping and cost keeping of other branches of the work. **P-14**, 2.

In addition to those reported last year, cost accounts initiated for Cristobal coaling plant, gravel-reclaiming plant at Balboa, and construction of permanent concrete buildings. In addition to duties enumerated in last annual report, cost accounting for work under jurisdiction of former Central division and that for Quartermaster's department transferred to this office Oct. 1, 1913, and on June 1, 1914, that of Electrical division. Cost-keeping accountant has been engaged preparing permanent accounting systems for operation and maintenance of canal since Apr. 1, and to close of year most of this work completed with exception of minor detailed accounts, which will be initiated as the necessity develops. At close of last year pay roll of office about \$3,000 per month, and there were transferred with accounts of former Central division and of Quartermaster's department employees whose salaries aggregated \$975 per month; pay roll at close of year about \$3,600 per month. This, notwithstanding increase in accounting work for terminals, town site, permanent buildings, and Electrical division, which exceeded by far decrease on account of completion of some of canal units.

General expenses prorated to construction work this year amount to 11.12 per cent of division cost and for period to date to 8.73 per cent. Comparative costs not given this year for all units of construction, as conditions due to completion of work make such comparisons valueless. At Ancon rock quarry there was decrease of 185,503 c. y. in quantity of crushed stone produced and increase of \$0.1179 per c. y., principally in operation of and repairs to crushers.

Sand dredged from Chame Point decreased 246,339 c. y. and cost increased \$0.1154 per c. y., principally in expense of dredging and towing to Balboa.

Cost of large rock in place in Colon breakwater increased \$0.4480 per c. y. as compared with last year, due to increase in charge for plant arbitrary, made necessary by decreased quantity of rock placed in breakwater as compared with estimate.

There was increase of \$0.3154 per c. y. in cost of rock placed in Naos Island breakwater, due to charging this account with expense of quarrying and transporting rock from Sosa Hill and of transporting rock secured from excavation in area of dry dock at Balboa.

To end of year total of \$440,483.46 expended—for terminal facilities at Cristobal, \$390,789.31 for coaling plant and \$49,694.15 for fuel-oil storage plant. For terminal facilities, Balboa, total of \$6,665,446.24 expended—\$1,108,773.31 for surveys and in preparation of site, \$592,971.66 in dredging inner harbor, \$504,320.59 in construction of main dry dock, \$78,312.02 in construction of small dry dock, known as Dry Dock No. 2, \$237,269.17 in construction of coaling plant, \$386,004.07 in excavating entrance basin, \$126.85 in construction of sea wall, \$2,444,462.23 in construction of perma-

ment shops, storehouses, and roundhouse; \$1,212,917.01 in construction of docks, and \$50,289.33 in construction of fuel-oil plant and in dredging berth for oil ships.

In preparation of permanent town sites-\$132,-539.23 expended for La Boca, \$409,116.35 for Balboa, and \$112,349.25 for Pedro Miguel; total of \$654,004.83.

In construction of permanent concrete buildings, \$716,936.09 expended for administration building at Balboa, \$425,210.17 for 28 four-family apartment houses, and \$20,737.76 for 9 two-family apartment houses.

Administrative and general expenses increased \$292,404.07. Of this amount about \$120,000 is apparent only and is due to consolidating time and cost-keeping forces in executive office, expense having previously been borne by construction divisions. Remainder is due principally to heavy charges for repatriation of employees leaving service or discharged for reduction of force, and to expense of moving storehouses at Gorgona and Empire. P-14, 50-52.

Cost of Canal. (See No. 248, p. 2367 of this Index.)

Revised estimate of the cost of the proposed canal submitted at a hearing before the Committee on Appropriations of the House of Representatives in Feb., 1909. 50 per cent more work necessary in order to complete the canal than was contemplated by the original estimate. Unit prices, due to labor conditions, cost of materials, and gratuities given employees, have been increased 20 per cent. New estimate shows total cost of engineering and construction as summing up \$297,766,000, to which, if the purchase price and the estimated cost of sanitation and civil government be added, there results the sum of \$375,201,000 as the total cost of the canal. Isthmian Canal Commission No. 1 estimated \$144,233,358, 1899-1901, including sanitation and police. Minority report of the Board of Consulting Engineers, 1906, fixed the cost for engineering and construction, exclusive of the purchase price, the cost of sanitation and civil government and the interest, at \$139,-705,200. P-09, 31.

Costs. (See Nos. 243, 248, 250, 272, p. 2367, 2368 of this Index.)

Tables are in each annual report showing costs of excavation, foundations, spillway, locks, prism, dredging, masonry, fill, levee, breakwater, concrete work, piling, stone, sand, lighting, buoying, quarries, cableways, derricks, mixers, plant, cranes, unloading, etc.

Auditing to be by Auditor for War Department, P-11, 558.

Administration and general expenses, P-14, 455.

Costs, statement of, 1904-1910, P-10, 244.

Constructions, P-14, 443.

Dredging, P-14, 448.

Divisions of the work, various, P-14, 450-455.

Excavation, hydraulic, P-14, 449.

Dry filling, P-14, 447.

Hostling, P-14, 260.

Headings for monthly reports, P-10, 237.

Masonry, P-14, 446.

Progress and costs, comparisons of U. S. and

Culebra work, P-08, 42.

To be reported annually to the President, P-11, 559.

Report form, P-10, 237.

Statements of, for various parts of the canal work, P-09, 170.

Stone production, P-14, 449.

Sand production, P-14, 450.

Total division costs, P-13, 275, 282.

Units of work, P-11, 290; P-12, 294; P-13, 275, 276, 282; P-14, 444.

Year ending June 30, 1905, P-05, 131.

Cottages.

Labor, P-05, 46.

Councils, Executive. (See Clubhouses.)

Counsel. (See Order, Executive; see No. 252, p. 2368 of this Index.)

Counters, Refreshments. (See Clubhouses.)

Countries, Foreign. (See Consuls.)

Extradition, other than Panama, P-07, 152.

Coupons.

Meal tickets and. (See Subsistence.)

Courts. P-07, 160; P-08, 264; P-09, 268; P-10, 373; P-11, 431; P-12, 472; P-13, 475; P-14, 57, 417. (See No. 117 on p. 2363 of this Index.)

(See Civil administration)

Courthouse, Empire, P-08, 280, pl. 191.

Jurisdiction over nonresidents, P-11, 433.

Panama R. R. cases, P-13, 520, 523.

Procedures, P-05, 96.

Supreme court cases, P-13, 517.

View of first U. S. court held on zone, Ancon, P-05, 68.

Courts (1905).

Judicial authority in zone vested in 5 municipal courts, 3 circuit courts, and a supreme court. Difficulty of obtaining judges speaking English and Spanish. 2,373 cases tried in year ending Oct. 31, 1905, and 358 civil cases tried. Contemplated in organizing the circuit courts they could be utilized as land courts. Property titles on Isthmus uncertain. Court system may make titles more certain. P-05, 67.

Court procedure: Provisional rules and regulations; supreme court; circuit court; municipal courts; appeals; new trial; civil actions; commencement of action; summons; answer, demurrer; further pleading; upon agreement of facts; taking of testimony; witnesses; depositions; appeals; special proceedings; briefs and arguments; judgment; execution; attorneys at law; dockets of supreme and circuit courts; estates of deceased persons; history of a civil cause; criminal cause; fee bill; meeting of circuit courts. P-05, 96.

Covers.

Cast-iron covers, P-12, 92.

Electric lines, P-11, 82.

Recasses, locks, P-12, 82; P-13, 110, pl. 4.

Craftsmen.

Reductions in force, **P-11**, 226.

Cranes. (See Costs.)

Arrangement of, Pedro Miguel Lock, **P-10**,

Culebra Cut. (See Excavation; Slides; see No. 223, p. 2366 of this Index.)

1,000,000 c. y. removed. 2,600 men. **P-05**, 12.

No systematic work can be done here until sea-level or lock plan has been chosen. Each plan requires different method of attacking the cut. **P-05**, 15.

Status, Aug., 1905. Estimated by Mr. Wallace that cost of excavation would be 50 cents c. y. This estimate probably instrumental somewhat in requiring a consideration of the advantages or practicability of a sea-level canal by Isthmian Canal Commission No. 2. Estimate not conclusive, as later excavating would undoubtedly be comparatively expensive. **P-05**, 144.

Excavation: Graphical illustration of practicable yearly excavation which would complete the Culebra Cut in less than 10 years, **P-06***, 7.

Memorandum by Mr. John F. Wallace, to accompany diagrams illustrating tentative method of Culebra excavation, **P-06***, 372-674.

Diagram 1 is an average maximum cross section, and shows in numbers and colors the different phases of steam shovel progress. Diagram 2 shows the A and B sections at kilometer 54.74 on the line of the maximum cross section above elevation 185 with the different phases in colors and numbers. Diagram 3 is a progress diagram showing the relative positions, horizontally, of the different steam shovels which may be installed at elevation 185 and below. It also shows the time of entering and the completion of each phase of the work. Diagrams 4 to 7, inclusive, are diagrams showing a suggested arrangement of tracks and shovels covering the first 5 phases of the work below elevation 185. **P-06***, 372, 373.

Culebra Cut, Views of. (Arranged in order of time.)

Looking north between Contractors Hill and Gold Hill, **P-11**, 156, pl. 31.

South end, looking south from bridge 57½, and showing the partly completed anchorage basin north of Pedro Miguel Lock. Train shown on completed bottom of canal, elevation plus 40. **P-12**, 170, pl. 28.

Looking north from bridge 57½, near Paraiso. Train shown on completed bottom of canal, plus 40. **P-12**, 170, pl. 29.

Looking north from a point south of Contractors Hill, showing quiescent state of Cucaracha slide on right bank. Bottom of lowest steam-shovel cut about 16' above the final bottom of the canal, or elevation plus 56. **P-12**, 170, pl. 30.

Looking south from Empire suspension bridge. Well drills shown in middle of canal about 27' above the bottom, or at elevation plus 67. **P-12**, 170, pl. 32.

Looking north from Empire suspension bridge. Nearest shovel shown, in the lowest cut, is working about 12' above the bottom, or at elevation plus 52. **P-12**, 170, pl. 33.

Looking south from Cunette. Two shovels shown are working at bottom of canal, elevation plus 40. **P-12**, 170, pl. 34.

Looking north from Cunette. Two shovels shown are working at bottom, elevation plus 40. Water in center drainage channel is about 6' below bottom, elevation plus 34. **P-12**, 170, pl. 35.

Looking north from Las Cascadas. Trains standing in the bottom of the cut, elevation plus 40. **P-12**, 170, pl. 36.

Looking south from bend in east bank near Gamboa. Train and shovel shown are on bottom of the cut. Water in drainage channel is about 10' below bottom of the canal, or at elevation plus 30. **P-12**, 170, pl. 37.

Break in east bank of canal. Amount of material involved, 320,000 c. y. Train shown about 35' above bottom of the canal, or at elevation plus 75. **P-12**, 170, pl. 41.

Bas Obispo. Looking south from east bank, June, 1913. **P-13**, 160, pl. 34.

Completion of bottom pioneer cut, steam shovels Nos. 230 and 222 meeting at grade,

looking north from west bank. May 20, 1913. **P-13**, 160, pl. 35.

Looking north from one-quarter mile south of suspension bridge at Empire. Cut completed at bridge. All tracks on completed bottom of canal. June 16, 1913. **P-13**, 160, pl. 36.

Empire. Looking north from suspension bridge, showing cut completed, except toe of slide on right. Drainage ditch is below bottom of canal. June 16, 1913. **P-13**, 160, pl. 37.

Empire. Looking south from suspension bridge, showing terracing on upper levels of east bank to prevent slides. Lower shovels are working on bottom of canal. June 16, 1913. **P-13**, 160, pl. 38.

Culebra. Deepest excavated portion of Panama Canal, showing Gold Hill on the right and Contractors Hill on the left. June, 1913. **P-13**, 160, pl. 39.

Las Cascadas. Looking north from east bank. June, 1913. **P-13**, 160, pl. 40.

Empire. Break in east bank at La Pita (station 1651), taking in Obispo diversion channel, looking north. Aug. 21, 1912. **P-13**, 160, pl. 41.

Culebra. Break in east bank between stations 1746-1758. Steam shovel No. 201 in midst of upheaved material and displaced tracks, looking south. Feb. 6, 1913. **P-13**, 160, pl. 42.

Culebra. Break in east bank between stations 1746-1758. Top view of rear portion of slide, looking north. Feb. 6, 1913. **P-13**, 160, pl. 43.

Culebra. Bottom of canal, steam shovel No. 260 overturned by slide from east slope. June 12, 1913. **P-13**, 160, pl. 44.

Culebra. Looking north from west bank, south of Contractors Hill, showing shovel No. 256 caught in Cucaracha slide. Feb. 7, 1913. **P-13**, 160, pl. 45.

Bottom of cut, **P-14**, pl. 41, 43.

Culebra Division, P-07, 44; P-08, 40. (See No. 139, p. 2364 of this Index.)
Status, P-05, 133, 134.

1904. At the time of the first visit of the Isthmian Canal Commission No. 2 the only work in progress was some excavation here. Outfit consisted of a few French excavators (steam) and dump trains, and a force of about 700 men engaged in blasting, loading cars, removing the excavated material from the track and down the slopes of the fill; neither equipment nor organization adequate; deemed advisable, however, to keep the force (already acclimated). **P-04, 39.**

1905. Division extends from Bas Obispo to Miraflores. Since American control, work of experimental character. Equipment poor. Apparently no definite system followed.

Excavation closed down. Reconstruction of equipment begun. Preparatory work in progress. Actual working year probably only 8 or 9 months, because of rainy season. Future plans dependent on whether sea-level or lock canal is to be adopted. Problem at Culebra one of transportation, including disposal, pure and simple. Surveys made of vicinity. Much miscellaneous work, for other departments, as the furnishing of maps, plats, etc. Location of proper dump grounds under way. New offices for engineering department planned to be located at Culebra and Empire instead of Panama. **P-05, 117.**

1906. No special attempt made to get out yardage, but rather to take out barriers left by the French. Equipment trackage completed, and necessary yards and dumping grounds arranged for. 1,500,000 c. y. excavated at 79.5 cents per c. y. Increase in cost over previous year due to harder material, more rainfall, and 8-hour day. At the beginning of the year 10 shovels ready for work; at the close, 39 shovels, 300 western dump cars, 560 40' flat cars, these being received late in the year. Mining department working at high efficiency. **P-06, 86.**

(See p. 2366 of this Index and Central Division.)

D.

Dam, Gatun, or Gamboa. (See Dams below.)

Surveys, etc., for a possible dam site across the Chagres at Gatun show that such a structure is not feasible, **P-05**, 300.

Paper by C. D. Ward, member American Society of Civil Engineers. Reprinted from Transactions of A. S. C. E., Vol. LIII, 1904, p. 36. After mentioning a list of authorities and their pertinent writings on the subject, from 1875 to 1902, Ward says: "Neither of these authorities mentions or gives any consideration to the project of a dam at Gatun, nor even condemns it; nor is the writer aware that any soundings or other examinations, looking to a dam at that point, have ever been made." Drawing. Detailed advantages of a dam at Gatun. Estimate of project, with one lock at Gatun and one at La Boca, each of 45' lift, \$155,111,936. (Estimate made by Isthmian Canal Commission with summit level at 90', \$144,233,358.) "If it should appear that such examinations have not been made, it is hoped that this paper will induce those in authority to make such examinations before deciding upon the final plans for the Panama Canal." **P-06***, 279-282.

Upon considering the various factors of seepage, foundations, etc., Board of Consulting Engineers recommended at Gamboa either an earth dam with a heavy masonry core carried down to bedrock, or an all-masonry structure founded at the same depth and upon the same material, **P-06***, 45.

Act relating to acknowledgment of land deeds, **P-11**, 433, 560.

Defense. (See Fortifications; see Nos. 10, 175, p. 2361, 2365 of this Index.)

Military value of the canal to the U. S., **P-99**, 167.

In time of peace the canal would facilitate movement of troops, supplies, etc. In time of war an Isthmian Canal would permit rapid movement from one ocean to another. Canal, however, only one link in a chain of communications. Hence, the power holding any one of the links can prevent the enemy from using the communication, but can itself use it only when it holds them all. Several existing powers which might be able to dispute complete U. S. control of the whole chain. Canal useless to an enemy unless in latter's possession. Fortification of the canal in the nature of insurance. **P-99**, 167.

Making canal neutral suggested as a means of guarding it against international attack. Canal managed by American citizens a source of strength if neutral; a source of weakness if not neutral. **P-99**, 168.

"The general question of defense of the isthmian transit will be in no way affected by the type of the canal." Dimensions of existing and probable future warships. "Military exigency requires, and it therefore results, that the dimensions of the canal and its appurtenances must be adequate for the largest vessels upon the oceans." Vulnerability of the canal. " * * * Well-nigh impossible to provide effectually and always against such peril." "Sovereign rulers, bridges, railway trains, buildings, and ships, all under very strict watch, have been destroyed by lawless individuals." Suggested methods for injuring works, etc. "The board believes that this jeopardy will exist at all times during the stress of war." " * * * Risks would be very much greater for a canal in which lift locks are an essential feature." **P-06**, 37.

Deficiency.

Act, deficiency, **P-13**, 607, 608.

Departments. (See p. 2368 of this Index.)

Disbursing Officer. (See Disbursements; see No. 236, p. 2367 of this Index.)

Bond, **P-11**, 572.

Disbursing Officer; Operations.

1908. Duties: Had charge of time inspection, preparation of pay rolls, vouchers, issuances of commissary and hotel books, and disbursements of moneys on the Isthmus.

Organization: By Executive order Aug. 15, 1907, time inspection assigned to examiner of accounts; keeping property records and general books of the Isthmian Canal Commission transferred to the disbursing office.

Methods: Monthly payments instead of semi-monthly; preparation and checking of pay rolls in division offices instead of in disbursing office; elimination of duplicate property records in the division of material and supplies.

Disbursements: Pay rolls, \$18,062,000. Average payment per month to employees on gold roll, \$125.80. Silver roll, \$40 gold, or so. **P-08**, 28; **P-09**, 25.

1910. The work of this department embraces securing, disbursing, and accounting for all funds paid out or collected, and issuance of hotel and commissary books and meal tickets, **P-10**, 40.

1911. Pay-car schedule, which formerly provided 4 days to effect payment of forces on Isthmus, reduced to 3 in Apr. Total paid out on pay rolls aggregated \$19,415,987.02, in addition to which \$10,017,600.13 paid in settlement of public bills and reimbursement vouchers. Value of hotel books, commissary books, and meal tickets issued, \$4,150,943.50, **P-11**, 48.

1912. Total paid on pay rolls, \$19,407,398.90; in addition, \$10,465,634.09 paid in settlement of public bills and reimbursement vouchers. Hotel books, commissary books, and meal tickets issued \$4,591,510.50, **P-12**, 58.

1913. Total paid on pay rolls, \$20,524,705.75; in addition, \$9,035,630.18 paid in settlement of public bills and reimbursement vouchers. Hotel books, commissary books, and meal tickets issued, \$1,305,405, **P-12**, 61. (See p. 2368.)

Dredging Division. (See No. 264, p. 2368 of this Index.)

1913. When it was finally decided to turn water into Culebra Cut, Oct., 1913, and to complete remaining excavation by dredges, all dredging on Isthmus combined under one head. May 1, 1913, dredging work under Atlantic division transferred to sixth division, O. C. E., consolidating it with dredging organization of Pacific side. Same date drydock shops at Cristobal transferred to mechanical division. **P-13, 2.**

1914. Dredging division subdivided into two districts, the first extending from deep water in Pacific to Gamboa, and the second from Gamboa to deep water in Caribbean.

In first district, Pedro Miguel Locks to sea, 5,364,816 c. y. removed, of which 3,329,072 c. y. taken from within prism. Of amount from prism, 1,186,432 c. y. rock. Of rock excavated, 146,477 c. y. drilled and blasted by drill barge "Teredo" and 60,832 c. y. broken by rock breaker "Vulcan." Operations began in Culebra Cut Oct. 23, 1913, and continued throughout the year; 3,432,363 c. y. removed, of which 919,655 c. y. earth and balance rock. Of this amount, 865,015 c. y. earth and 1,557,360 c. y. rock removed from Cucaracha slide. Pipe-line dredges pumped over west bank into Rio Grande Valley 684,514 c. y. earth and 77,880 c. y. rock. Cucaracha slide very active since dredging operations, daily movement averaging 24'. June 30, 1914, area of slide 60.4 acres, 44.6 acres active and 15.8 acres without motion. Dredging done during 4 months of year in Miraflores Lake, removing 159,817 c. y. earth from prism.

In second district 6,544,192 c. y. removed—3,692,576 c. y. from within prism, 574,630 c. y. from old French dump in Limon Bay; 158,994 c. y. from prism were rock. Of total taken out, there were removed between Oct., 1913, and Feb., 1914, 507,195 c. y. earth and 5,035 c. y. rock from canal prism north of Gamboa, formerly known as Point No. 1.

In connection with Atlantic terminals, dredges removed 18,286 c. y. earth and 16,015 c. y. rock from site of bridge crossing French canal south of drydock, 117,289 c. y. earth from approach channel, 275,993 c. y. earth and 46,360 c. y. rock from new Piers Nos. 7, 8, and 9, and 181,709 c. y. earth and 213,325 c. y. rock from coaling station. 17,000 c. y. placed in fill for substation and 304,411 c. y. placed in fills for bridge foundations, coal basins, and yards at coaling station.

At Pacific terminals dredges removed 1,919,003 c. y. earth and 7,964 c. y. rock, of which 1,831,711 c. y. earth handled by pipe-line dredges and placed in fills for reclaiming swamp land.

Considerable amount of miscellaneous dredging done, making total removed by dredging fleet, including sand and gravel reclaimed, 15,341,371 c. y. The fleet consisted of seagoing suction dredges "Caribbean" and "Culebra," seagoing ladder dredge "Corozal," French ladder dredges "Badger," "No. 1," "No. 5," "Gopher," "Marmot," and "Mole" (the last abandoned as worn out on Sept. 20, 1913), 5-yard dipper dredges "Cardenas," "Chagres," and "Mindi," 15-yard dipper dredges "Gamboa" and "Paraiso," and pipe-line suction dredges "No. 4," "No. 82," "No. 83," "No. 85," "No. 86," and "Sandpiper." In connection with these there were employed 12 tugs, 19 launches, 9 clappers, and 24 dump scows.

As noted in last report, contract made with Bucyrus Co. for two 15-yard dipper dredges.

First ready for towing to Isthmus Dec. 1, 1913, and second Jan. 1, 1914. First accepted at Port Richmond, N. Y.; Feb. 16, reached Isthmus Mar. 16, and placed in operation Apr. 4, 1914. Second accepted at Port Richmond Apr. 13, reached Isthmus May 22, and went into commission at Cucaracha slide June 7, 1914. Buckets not sufficiently strong, and additional delay caused. Failure to meet dates of delivery resulted in handicapping work at Cucaracha slide and delayed securing channel sufficiently deep and wide to permit canal to be utilized for passage of commerce before close of year.

\$2,000 authorized for temporary dikes on west side of channel where it is cut through at head of Limon Bay, to determine effect upon erosion occurring, due to waves created by trade winds. Results so satisfactory that it was decided to make dikes permanent. P-14, 31-33.

Electrical Division.

1914. Operation of various power plants consolidated Apr. 1 to comprise electrical division, under Capt. W. H. Rose, U. S. Army. Includes operation and maintenance of steam-driven electric power plants at Gatun, Miraflores, Empire, and Balboa, and all substations, transmission, and distribution lines connected with power plants; operation and maintenance of air-compressor plants at Empire and Balboa; construction, operation, and maintenance of building and street lighting systems in zone; operation and maintenance of electric cargo-handling cranes on Panama R. R. pier at Balboa; installation of electrical equipment of new Balboa shops of mechanical division; and construction of permanent underground conduit systems for permanent towns of zone.

One of three 1,500-kilowatt vertical turbogenerator sets and two 410 high-pressure water-tube boilers removed from Gatun station for installation at Miraflores power plant. New unit in place June 1, 1914; gives Miraflores plant capacity of about 6,000 kilowatts, same as hydroelectric station. Total power in kilowatt hours generated during year: 6,824,556 kilowatt hours at Gatun, at \$0.0175 per kilowatt hour; 16,352,732 kw. h., Miraflores, at \$0.0135 kw. h.; 2,327,877 kw. h., Empire, at \$0.0240 kw. h.; 138,143 kw. h., Balboa, at \$0.1503 kw. h.

Air-compressor plants operated during year at Empire and Balboa, and Rio Grande plant operated until Nov. 1, 1913; furnished compressed air for excavation work at Culebra, Rio Grande, and Gold Hill; for mechanical division shops at Empire, Balboa, and Paraiso; for division of erection at Pedro Miguel Locks, Ancon quarry, and for work in vicinity of Sosa Hill and new dry dock at Balboa.

Removal and reerection of wooden buildings from various points along line to Ancon-Balboa district necessitated removal of wires and fixtures, and later rewiring, of 178 buildings. Feb., 1914, two temporary substations completed, one at Miraflores and

one at Balboa, each of 1,500-kilowatt capacity, for 11,000-volt transmission between these points. May, 1914, another 11,000-volt transmission line completed between Miraflores power plant and Cucaracha, supplying power to relay pumps and Gold Hill hydraulic plant. Additions and alterations necessitated change in pole lines for construction, amounting to 15 miles. 25 miles pole line to supply power to range lights and beacons of lighthouse subdivision constructed, lighthouse subdivision erecting poles and electrical division installing wires and transformers and making connections to lights and beacons. Duplicate 2,200-volt armored cables, supplying power to Agua Clara pumping station, installed between that station and Gatun substation. In all, 12,900' conduit, having 83,000' of duct incased in concrete, and 40 concrete manholes completed during year between Pedro Miguel telephone exchange, Tivoli Hotel, new administration building at Balboa, and latter with Balboa substation. Large amount of conduit work done in connection with electrical work in permanent buildings and Balboa shops. Eight 4-ton alternating current cargo-handling cranes, five 4-ton direct-current cranes, and one 20-ton direct-current French crane, all on Panama R. R. pier at Balboa, operated and maintained. These cranes handled practically all commercial freight crossing Isthmus in either direction. Vessels loaded and unloaded, 413. **P-14**, 22, 23.

- Employment.**
 General conditions of, in which salary is fixed in U. S. currency, **P-05**, 157.
 2,175 buildings inherited from French in bad condition. 2,400 men engaged in destroying buildings, repairing others, and erecting new ones. Hotels under construction. **P-05**, 7.
 Nov., 1904, 3,500 employees on the Isthmus.
 In Nov., 1905, 17,000. White Americans, 1,500.
 Panama R. R. employed about 2,500, not included above. **P-05**, 9.
 Nov. 15, 1904, the President put all employments, except laboring, under civil service

rules and regulations. Difficulty of obtaining skilled employees due to prosperity in the U. S. and sensational stories about health on the Isthmus. **P-05, 10, 11.**

Number of employees approximately 17,000. Efforts to provide social environment, clubs, lodges, churches, etc. 8-hour day adopted May 10, 1905, for laborers and mechanics. Pay of 10-hour men increased. Only minor complaints at times from employees. **P-05, 56.** Inexpensive method of administering estates of employees provided. 23 estates cared for. **P-05, 66.**

Credit given American employees who stayed on the Isthmus in the face of the yellow-fever panic, **P-05, 73.**

Discouragement among employees, due probably to executive changes on the Isthmus, **P-05, 103.**

Efficiency of staff might have been better if more discretion had been exercised in selections and appointments, **P-05, 109.**

Some difficulty in getting men from the U. S. Wild newspaper reports somewhat responsible. **P-05, 120.**

Policy of the Isthmian Canal Commission has produced a personnel entirely capable of good results, **P-05, 120.**

Force inadequate. 5,000 additional men needed, Aug., 1905, at Culebra alone. No adequate facilities for housing men. **P-05, 145.**

Sufficient buildings to house all its bachelor employees. 335 separate houses and 13 larger buildings constructed for married quarters, providing accommodations for 375 families. Approximately 1,200 American women and children on the Isthmus. **P-06, 3.**

4,569 persons tendered employment in the U. S. for Isthmus work; 3,962 accepted; 3,243 transported to their work. 834 members of families of employees and 929 persons returning from leave of absence have been transported at reduced rate. Capacity of Panama R. R. boats exhausted at times; other lines had to be used. Employees secured through the Civil Service Commission, employment agents, or personal application. On Jan. 12, 1906, the President put all employments on the Isthmus outside civil service examination, except clerks, bookkeepers, stenographers, typewriters, surgeons, physicians, internes, trained nurses, draftsmen. **P-06, 6, 7.**

Circular outlining organization by division and bureaus, **P-05, 146.**

Organization of department, **P-05, 154.**

Staff; list, **P-04, 37.**

Begun with four parties, each in charge of a resident engineer; preliminary work begun early part of 1904 immediately after return of Isthmian Canal Commission No. 2 from Isthmus. The first party sailed from New York about the middle of May, 1904. The chief engineer, John F. Wallace, entered upon his duties June 1, 1904. Early work surveys, etc.; study of water-supply question, control of the Chagres, terminals, etc. Operations at Culebra were continued with force of about 700 men. Plant taken over was cared for and examined. When the chief engineer arrived, force was entirely reorganized, plant was overhauled, accounting system established. **P-04, 48.**

Engineering, Municipal, P-14, 23. (See Nos. 127, 221, 261, pp. 2364, 2366, 2368, of this Index.) **P-04, 43.**

Excavation and Dredging, Department of. (See No. 219, p. 2366 of this Index.)

1905. Stopped by Isthmian Canal Commission No. 3 until preparatory work of sanitation, quarter providing, terminal construction, etc., had been adequately arranged, **P-05**, 6.
 Estimate of rate of. "Demonstrated that each steam shovel may be counted upon to yield an average record of at least 1,000 c. y. per working day. The chief engineer estimates that with 100 steam shovels installed, with a complete system of tracks serving them, a yearly record of 30,000,000 c. y. of excavation may be reached without requiring a greater

output per shovel or greater speed in working than has already been attained. This rate of working could probably be reached within two years from the present time." **P-05**, 299.

1906. Engineering work hitherto considered preparatory. Delay in deciding upon type of canal made it impracticable to locate permanent and well-arranged dumping grounds. Levels at Culebra Cut put in proper condition for installation of a maximum number of steam shovels, etc. 1,500,000 c. y. excavated during the year, as against 742,000 c. y. previously. Notwithstanding rainy season (Apr.-Dec.), 244,844 c. y. taken from Culebra, the largest amount taken out up to that time during any one month since the canal came under American control. "At the close of the fiscal year, which was practically the date of the decision, as to the type of canal, the conditions in Culebra Cut regarding the installation of shovels and consequent large increase in the output, were generally satisfactory. At the beginning of the fiscal year there were 10 shovels erected and ready for work. There was available in Sept., 1906, a total force of 46 steam shovels, of which 27 were at work in the canal prism, 2 outside the prism, 4 on the Panama R. R., and the rest set up and ready for work in various places." **P-06**, 7.

1907. Department embraced the Culebra division (from Chagres River to Pedro Miguel); Chagres division (between deep water in Lake Gatun and the Chagres River); the Colon dredging division (Gatun to deep water in the Atlantic); and the La Boca dredging division (taking in all the excavation between the La Boca Locks and deep water of Pacific), **P-07**, 2.

Culebra division: "That the preparation (mentioned in the annual report of Isthmian Canal Commission No. 3, 1906) was efficiently done and the organization effective is best attested by the results accomplished and the relatively small falling off of the output during the wet months; thus the amount of material removed from the Culebra Cut was 4,047,071 c. y., place measurement, from Jan. 1 to June 30, out of a total of 5,570,432 c. y. for the fiscal year."

Division, 10 miles long, subdivided into 5 construction districts, each under a superintendent of construction. Better results.

July to Sept., inclusive, output over 2,300,000 c. y. 77 working days. An average of about 40 shovels at work.

During rainy season dumps a source of delay; soft, impeding trains.

Surveys looking to preventing water from adjacent watersheds entering canal. Plans under way for carrying Obispo waters, etc., into Chagres River. **P-07**, 2, 3.

Chagres division: Preparatory work; surveys and borings; Chagres crosses this division 22 times; desirable that rockwork be done in

advance of excavation (in dry); steam shovels diverted from Culebra division to this division after close of fiscal year, **P-07, 3.**

Colon dredging division: Consists of Mindi and Colon districts; 700,000 c. y. to be shoveled in former; necessary preparations under way. Dredging in progress, mostly in vicinity of dry-dock slip, and along the route of the old French canal as far as Gatun, the latter for transportation of materials to site of lock construction.

Dredging fleet: Old French ladder dredge, 5-yard dipper dredge, one 16" suction dredge. Under contract: Dipper dredge, and seagoing suction dredge, 6 steel hopper barges.

Dredges during year served by tug and 4 old French self-propelling clapets.

1,112,321 c. y., place measurement, dredged (43,602 c. y. rock), 17,000 c. y. being from canal prism.

Machine shop at Cristobal equipped with many pieces of new machinery.

Steps taken to enlarge dry dock, to take vessel 15' by 50' by 298'. **P-07, 3, 4.**

La Boca dredging division: Surveys continued to determine line of canal; test borings.

Dredging fleet: One old French ladder dredge and one 5-yard dipper. Second French ladder dredge, after repairs, put in operation about end of year.

Under contract: Seagoing suction dredge; to come by way of Cape Horn to Panama; 3 steel hopper barges.

Dredging plant served by 7 French self-propelling dump barges.

1,235,897 c. y. dredged, 64,352 c. y. of which taken from canal prism.

Machine shop at La Boca fairly well equipped for marine work; repairing and building of clapets, launches, etc. **P-07, 4, 5.**

1908. Embraces Culebra division, Chagres division, Colon dredging division, and La Boca dredging division, **P-08, 2.**

Equipment: Fourteen 70-ton steam shovels, sixteen 95-ton steam shovels, 292 Lidgerwood cars, and 668 12-yard dump cars added. With 200 more dump cars, equipment should be complete for this class. **P-08, 2.**

Culebra division: Division extends from Chagres River in the vicinity of Gamboa to include the Pedro Miguel Lock, a distance of 9.2 miles, **P-08, 3.**

12,065,138 c. y., place measurement, 11,685,253 c. y. being from canal prism. Steam shovels assigned, 59. **P-08, 3.**

Dumps, Culebra division: Greater part of material hauled over main line of Panama R. R. to Gorgona and Tabernilla on the north, and to two new dumps on the south, at Miraflores and La Boca. Average haul, 10 miles. Rock from the "cut" at Obispo taken to Gatun; since Mar. 20, 1908, 1,300 c. y. deposited daily on the south toe of the dam. **P-08, 3.**

Diversions, Camacho: French diversion channel on west side of canal utilized; new channel revetted with stone cut through White House yard, the French tunnel through the hill at Obispo cleared out, and a dam constructed across Obispo River. Waters carried from Culebra to the Chagres River, near Matachin. **P-08, 3.**

Diversion, Obispo: Survey for diverting Obispo River and other streams on the east side of the canal completed, a new channel located, and construction pushed. Channel finished from Gold Hill to a point opposite Las Cascadas. Waters to be carried into the Chagres River about 1 mile above the crossing of the river by the canal. 313,511 c. y. excavated. **P-08, 3.**

Slides, Cucaracha: Movement begun Oct. 4, 1907; 14' in 24 hours, decreasing later to about 4' a day. 113,000 c. y. stopped transportation through to the south. Work of excavating through carried on day and night; in a month trains going through. Area of slide, 34,455 sq. y.; 600,000 c. y. in motion. **P-08, 3, 4.**

Slides, Paraiso: Developed Apr., 1908. On east bank. Estimated area, 16,700 sq. y.; amount in motion, about 140,000 c. y. 90,000 c. y. removed. **P-08, 4.**

Slides, New Culebra: West bank. Area, 6,110 sq. y.; about 50,000 c. y. in motion. **P-08, 4.**

Slides, Las Cascadas: East bank. Area, 5,433 sq. y. In motion, 100,000 c. y. **P-08, 4.**

Slides: Uplift of bottom of cut, Culebra, corresponding with sinking; similar action just south of Gold Hill. Removing material on upper levels stopped sinking. **P-08, 4.**

Chagres division: Surveys of last year completed; center line of canal permanently marked. Saving of 1,264,700 c. y. made by slight change in alignment (264,300 c. y. being rock). Surveys show total of 12,256,300 c. y. to be removed, 8,313,500 c. y. being earth **P-08, 5.**

Excavation begun on four different sections—San Pablo, Caimito, Matachin, and Santa Cruz. Total excavated, 1,774,124 c. y. **P-08, 5.**

Overflow protection: Levees built at Santa Cruz and Matachin, and pumps and sumps installed, **P-08, 5.**

Equipment: Steam shovels, 15. Balance of equipment mostly French—47 out of a total of 50 engines French, and 410 of the 645 dump cars. **P-08, 5.**

Colon dredging division: Division extends from foot of Gatun Lock to deep water in the Caribbean Sea; embraced Mindi and Colon districts, and Cristobal marine shops.

Survey: Of Mindi district completed.

Clearing: Between Mindi and Limon Bay finished Aug.

Excavation: Begun with steam shovels July; 2 removed 536,959 c. y.

Levee: Built along low part of prism to protect cut from waters of French canal.

Dredging: Done by 2 French ladder dredges, 2 dipper dredges, a 16" suction dredge, and by seagoing suction dredge "Ancon." Total, 5,087,623 c. y. removed, about 5,000,000 being from prism.

Machine shops: Additional machinery installed. Dredges received from U. S. and reerected.

Dry dock: Enlargement completed; capable of taking ship 15 by 50 by 293'. **P-08**, 5, 6.

La Boca dredging division: Limits extended by change in location of locks and dams on Pacific side, about 3 miles. Area to be dredged to extend from the Miraflores Locks to deep water in the Pacific (about 8 miles), with a width of 500'.

Excavation: Quantity to be removed, about 30,000,000 c. y., about 1,500,000 c. y. being rock.

Borings: Being made to determine amount and character of rock.

Rock removal: Experimental plant arranged for.

Channel alignment: Slight change made, with abandonment of the lock site at La Boca, so as to utilize the existing wharves of the Panama R. R. Co., as well as the dredging already done.

Plant: Suction dredge "Culebra," and 4 French ladder dredges; a dipper dredge part time.

Excavation: Over 5,270,000 c. y. removed (9,350 c. y. being from accessory works). **P-08**, 6.

Dump: Spoil from removal of Cardenas Hill dumped along the east bank of the Rio Grande, forming a dike for confining suction dredgings; over 55,000 c. y. utilized from canal prism.

Shops: Repairs, U. S. dredge reerected; shops in new location not subject to floods; fitted up for permanency. **P-08**, 6, 7.

Chagres division: Covers distance of about 23 miles. Extends from Gatun to a point where the canal crosses the Chagres River at Gamboa. River crosses canal 23 times in these limits; prism, hence, subject to overflows, producing delays. **P-08**, 5.

Excavation, Operation. (See No. 264, p. 2368 of this Index.)

1914. Excavation for prism in dry, uncompleted at close of previous year, embraced Culebra Cut from Gamboa to Pedro Miguel Locks, channel Pedro Miguel to Miraflores Locks, and channel below Miraflores Locks to dike which excluded waters of Pacific. As noted in previous report, decision reached to admit water to cut by blowing up dike at Gamboa Oct. 10, 1913, and complete excavation by dredges. Excavation in cut carried on during July with average of 40.74 steam shovels; Aug., with average of 34.65 steam shovels; and Sept., with average of 14.62 steam shovels. These shovels worked not only in cut proper, but on upper reaches in vicinity of Culebra and on east side opposite Lirio. After water had been admitted to cut, 5 to 2 shovels worked on both east and west bank in vicinity of Culebra to lighten load. Work on east bank continued until Apr. 1, 1914, and on west bank intermittently until June 15, 1914. Last movement of considerable amount occurred on west side of Culebra just as steam shovels were withdrawn. Removed during year total of 3,122,702 c. y., 2,205,847 c. y. classified as rock. Work continued on Cucaracha slide, Culebra slides, Hagan's slide, Lirio slide, and powder-house slide until steam-shovel operations suspended; removed from these slides 2,635,902 c. y.; in other words, 84 per cent of material removed from cut due to slides. Total material removed in dry from Culebra Cut, from beginning of American operations to June 15, 1914, 110,261,883 c. y.; of this amount, 25,206,100 c. y. removed because of slides. This was increase of 4,940,100 c. y. over estimate in report for 1912. Steam-shovel operations in cut proper permanently suspended Sept. 10, 1913; estimated 600,000 c. y. remained to be removed by dredges from cut section within original limits of canal, exclusive of slides and inclines at north and south ends of cut. Practically all of this material lay between Cucaracha slide and point about midway between Culebra and Empire.

To prevent possible damage to canal due to velocity of current caused by difference in head between Gatun Lake level and bottom of cut, water admitted through 24" pipe extending into lake under Gamboa Dike, these pipes remaining from old pumping plant located in vicinity to take care of drainage water north of divide. This done 9 a. m., Oct. 1. Work on drilling dike at Gamboa preparatory to demolition begun latter part of Aug.; holes loaded and fired Oct. 10, 2 p. m. Blast fired by President Woodrow Wilson, at

Washington. The President depressed lever, current relayed from point to point along the route to local circuit, closing it and tripping a weight attached to handle of switch. Weight threw switch, setting off blast. Result of explosion was clear opening 125' wide through which water from Gatun Lake flowed in sufficient volume to complete filling cut from dike to Cucaracha slide in about 2 hours' time. Prior to dynamiting dike water in cut about 6' below level of lake.

Oct. 10 after blowing up Gamboa Dike, effort made to dynamite passage through Cucaracha slide to flood cut between dike and Pedro Miguel Locks. Though steam shovels had been at work on slide with view to securing passage, on cessation of this work movement continued and completely blocked channel. Attempt to open passage by dynamite not successful; it was not until Oct. 12 that a stream of water was gotten through and area to south of slide began to fill. Dredges reached Cucaracha slide from north end Oct. 20 and from south end Oct. 24. Gamboa Dike attacked by dredges immediately after explosion. Channel finally dredged through Cucaracha slide to permit passage of dredging fleet, Dec. 13. With exception of small pocket slide in vicinity of Cascadas, admission of water to cut had no bad effects; no perceptible tendency for water to produce slides.

In central division 44.5 miles track removed July 1 to Oct. 10, 33.7 miles laid, and 294.81 miles shifted.

Sluicing to north of Gold Hill and to rear of Cucaracha slide continued, removing 1,384,455 c. y. rock and earth.

Material removed in dry from cut wasted bulk going to Balboa waste dumps, where 1,017,596 c. y. deposited, and on dumps along relocation of Panama R. R., where 920,748 c. y. placed.

South of Pedro Miguel Locks 306,700 c. y. excavated by fifth division. Of this, 20,510 c. y. from channel south of Pedro Miguel Locks and 286,190 c. y. from prism south of Miraflores Locks. Material was used as back fill to lock sand for sloping Miraflores Dam.

Total excavated in dry, Pedro Miguel to sea, since beginning of work, aggregated 4,819,969 c. y.

Berm and chamber cranes on west side of locks taken down and stored; 4 berm cranes, which formed part of concrete-handling plant during construction of Pacific Locks, used in connection with coal-handling plant at Balboa.

Steam-shovel work south of Pedro Miguel Locks stopped Aug. and south of Miraflores Locks Sept.; steps taken to remove tracks that remained within limits of canal channel. Last remaining barrier at Pacific end of canal dynamited 9.30 o'clock Aug. 31, 1913. This dike, composed of trestle fill of rock and earth, prevented water from sea level from entering steam-shovel cut, 46' below mean tide by 500' by 5,000', extending to Mira-

flores Locks. Rio Grande diversion turned into this pit Aug. 23, but depth of water had only reached about 15' Aug. 31. 37,000 pounds dynamite used, charge being placed in 541 holes at average depth of 30'. At time of explosion water in channel south of barrier nearly at low tide. Dynamite tore gap in dike about 100' wide, but as bottom of gap was still at some height above existing tide level no water passed through until high tide, at 1.35 p. m. At 3 o'clock, 1 hour and 25 minutes after water first began to flow over, level in inside channel that of outside channel, while gap had been widened to 400' or more. As noted in previous reports, two low places in the perimeter of Gatun Lake were to be raised to avoid possibility of waters of lake escaping—one was in vicinity of Gatun, and embankment built across it. Fill about 350' long and containing 4,117 c. y. made, which raised surface to elevation 105, with crown width of 15'. Nov. 28, 1913, contract made for earth dike at Cano Saddle No. 4, along ridge 12 miles southwest of Gatun, to raise rim of Gatun Lake at that point to 105' above sea level. Material involved 71,500 c. y.; completed May, 1914. Saddle between head-waters of Siri River and Lagarto River, which flows into Caribbean Sea. Surface of earth at lowest point, 87.4' above sea level. Fill approximately 900' long between 105' contours on knolls at ends of saddle. It is 15' at top, with slope of 1 on 3 both sides.

Executive Department. (See Civil Administration; see No. 103 and No. 271, pp. 2363, 2368 of this Index.)

1914. Department outgrowth of department of civil administration. Prior to reorganization, Apr. 1, department of civil administration under supervision of Mr. R. L. Metcalfe-appointed member of Isthmian Canal Commission Aug. 9, 1913, succeeding Commissioner M. H. Thatcher. He arrived on Isthmus Aug. 7, 1913. Since reorganization Mr. Metcalfe has been member of committee for formal and official opening of the Panama

Canal, created by Executive order May 20, 1914. Department embraces general office business of governor, work under supervision of executive secretary as already outlined, courts, and offices of special attorney, district attorney, and Canal Record. In charge of Mr. C. A. McIlvaine, acting under the governor.

Customs service: 280 vessels entered Balboa, total tonnage, 569,681; and 277 vessels cleared; total tonnage, 558,334. At Cristobal 295 vessels entered; tonnage, 832,579; and 296 vessels cleared; tonnage, 838,708. Usual customs services rendered seamen and vessels, and interests of Panama guarded by customs inspectors on wharves.

Estates: Estates of 452 deceased and insane employees of the Panama Canal and Panama R. R. Co. administered.

Posts: 13 post offices in operation, 6 of the 17 offices in existence at close of fiscal year 1913 discontinued, while 2 new offices established. The sale of postage stamps and postal cards, including the revenue derived from the sale of stamp books, amounted to \$90,590.63, as compared with \$100,485.54 for previous fiscal year, and \$463.67 were collected for second-class mail matter, as compared with \$318.84 for the preceding year. Money orders amounting to \$4,029,364.83 issued. As compared with preceding year, decrease of \$854,259.30 in amount; and decrease of \$3,938.71 in fees collected. 5,113 postal savings accounts opened, 2,180 of which active at close, with deposits aggregating \$498,481. Total deposits for year, \$1,708,530, as compared with \$1,601,616 for previous year. In addition there were on deposit at close of year \$70,750.41 in form of money orders issued and drawn on zone post offices payable to remitter.

Schools: Opened Oct. 1, 1913, with enrollment of 2,167 children—1,109 in white schools and 1,058 in colored schools—as compared with 2,199 during Oct., 1912. Total during year, 1,270 in white schools and 1,492 in colored schools. In addition to white schools at Gorgona and Toro Point and colored schools at Gorgona and Matachin, closed in 1913, the white school at Bas Obispo and colored schools at Miraflores, Pedro Miguel, and Cruces not reopened, and schools permanently closed at Mandingo Dec. 19, 1913, Marajal colored school Feb. 6, 1914, branch high school at Empire on Feb. 20, 1914, white school at Porto Bello Apr. 24, 1914, and colored school at Cucaracha May 29, 1914, \$1,089 collected as tuition from nonresidents of zone, as compared with \$744 during 1913. Medical inspection of white schools continued, fire drills inaugurated, and hand chemical extinguishers installed. Public-school athletic league formed in white schools, and annual meet of league held June 12, 1914, in canal clubhouses at Balboa, Corozal, Empire, Gatun, and Cristobal; 193 participants.

Police and fire division: Police, prisons, and fire protection consolidated Apr. 15, 1914,

under designation "police and fire division." Positions of assistant chief of police, fire chief, and assistant fire chief abolished and position of fire inspector created. Station at Gorgona and substation at Matachin closed July 17, 1913. On Aug. 31, 1913, call station at Matachin abolished, and Dec. 15, 1913, station at Bas Obispo abolished. July 18, 1913, call station at Cucaracha abolished. On Sept. 14, 1913, station at Miraflores abolished; also station at Las Cascadas on Dec. 15, 1913. Mount Hope station abolished Apr. 15, 1914; station at Paraiso on same date, and station at Porto Bello May 13, 1914. Arrests totaled 4,911—4,455 males and 456 females—as compared with 6,827 arrests for previous year. 5,021 charges—4,713 misdemeanors and 308 felonies. Of total arrested, 3,927 convicted. 75 convicts confined in penitentiary June 30, 1914, as compared with 133, 1913. Operation and supervision of markets and slaughterhouses of zone turned over to police division July 16, 1913. At Empire 1,533 animals killed. Rentals derived from stalls and tables in public markets, \$2,599.75. Five markets in operation June 30, 1914, three having been discontinued during year.

Sept., 1913, fire station, together with equipment, at Gorgona removed to Corozal, and one-man volunteer fire station at this point discontinued. Las Cascadas station closed Apr. 30, 1914, and apparatus and equipment desired by military authorities at that point transferred to them. Equipment withdrawn from Bas Obispo and Porto Bello stations Aug. 20, 1913, and May 6, 1914, respectively. Fire pump and turret nozzle removed from tug "Bolivar" during preceding year, installed on claret "No. 7," Aug., 1913, to provide water-front and harbor fire protection at Balboa. Fire protection provided new piers, Nos. 8 and 9, Cristobal. 215 alarms responded to, 8 false; of 207 actual fires, 98 occurred in property of Panama Canal, 14 in Panama R. R. property, 27 in private property, and 68 in grass, rubbish, dumps, etc., on zone. Of fires in private property, 11 occurred in Colon, 1 in Panama, 1 at old Porto Bello, in Republic, and 14 in zone. Largest fire in zone Jan. 3, 1914, in pile of creosoted and untreated piling stored about three-quarters mile south of shops at Balboa, where it was impossible to drive apparatus. Automobile fire engine loaded on flat car and hauled to scene. Total loss to Panama Canal, \$14,551.71.

Courts: Supreme court held 24 sessions, disposed 29 cases—3 criminal, 25 civil, and 1 habeas corpus—and ceased to exist June 30, 1914.

Circuit Court of Third Judicial Circuit, Cristobal, last criminal session Mar. 26, 1914. At Ancon last regular session of Circuit Court of First Judicial Circuit held Mar. 30, 1914; and at Empire last regular session of Circuit Court of Second Judicial Circuit held Mar. 31, 1914. While further business relating to these

courts formally ordered over to new district court Apr. 1, they continued to act on civil cases until May 1, pending confirmation of appointment of new district judge. In circuit courts, July 1, 1913, to May 1, 1914, 395 criminal cases filed and 4 cases pending July 1, 1913, making total of 399. Of this total, 370 cases disposed of, leaving 29 pending May 1, 1914. 158 civil cases filed during period and 51 civil cases pending July 1, 1913. Of this number, 179 disposed of, leaving 30 civil cases pending. 435 probate cases filed, which, with 57 probate cases pending July 1, 1913, made total of 492 probate cases before court. Circuit courts held 225 sessions. District courts discontinued Apr. 1, 1914. July 1, 1913, to Apr. 1, 1914, 4,183 cases settled, 3,656 of which criminal. Pending July 1, 1913, 35 civil and 3 criminal cases, and pending Apr. 1, 1914, when courts closed, 1 civil case.

On Apr. 1, 1914, courts of zone ceased to exist, pursuant to provisions of Executive order Mar. 12, 1914, with exception of supreme court, which went out of existence June 30, 1914. The judiciary created by act of Congress consists of district court and two magistrates' courts. District court consists of two divisions, known as Balboa division and Cristobal division. Former includes all that part of zone within lines of 10-mile zone and extends from south bank of Chagres River and shore line of Gatun Lake, 87' above mean sea level, to Pacific Ocean. Latter includes all territory within lines of 10-mile zone extending from Balboa division to Atlantic Ocean and area of Gatun Lake beyond lines of 10-mile zone up to contour line of 100' above mean sea level and islands and peninsulas in and bordering on Gatun Lake taken by U. S. for Panama Canal. A magistrate's court for both Cristobal and Balboa, jurisdiction of each covering that division, into which zone is divided as described for district court, in which town is located.

District court has original jurisdiction of all felony cases, all causes in equity and admiralty, all cases at law involving principal sums exceeding \$300, and all appeals from judgments rendered in magistrates' courts. Jurisdiction in admiralty of district court is same as that exercised by U. S. district courts and procedure and practice are same. Circuit Court of Appeals of Fifth Circuit of U. S. has jurisdiction to review, revise, modify reverse, or affirm the final judgments and decrees of district court of zone in certain cases, and final appeal may be had to Supreme Court of U. S. in same manner as appeals from district courts of U. S.

Magistrates' courts have exclusive original jurisdiction throughout subdivision in which situated of all civil cases in which principal sum claimed does not exceed \$300, and all criminal cases wherein punishment that may be imposed does not exceed fine of \$100 or imprisonment not exceeding 30 days, or

both; all violations of police regulations and ordinances and all actions involving possession or title to personal property or forcible entry and detainer of real estate. Magistrates also hold preliminary investigations in charges of felony, and commit or bail in bailable cases to the district court.

In district court under new judicial system during May and June, 1914, 206 cases settled—9 civil, 120 probate, and 77 criminal. In magistrates' courts 1,203 cases settled, leaving 18 cases pending.

Negotiations carried on with Republic included following: Enforcement of quarantine; regulations; establishment of rates for transportation of passengers by automobile between points in zone and Panama and Colon; enforcement of sanitary rules and regulations; use of revenue stamps on bills submitted by Isthmian Canal Commission and Panama R. R. against Republic; new contract for street cleaning and garbage removal in Panama; charge for interments in zone of remains of persons who resided in Republic; water supply for village of Taboga; certification by Panaman consuls of manifests of ships clearing for ports of zone; jurisdiction of U. S. over islands and peninsulas in Republic formed by waters of Gatun Lake; sale in Republic of dynamite stolen from Panama Canal; collection of burial fees for interments in zone cemeteries of indigents from Republic; assessment of commercial tax by Republic on steamers of Panama R. R. Steamship Co.; improvements in Chorrillo district of city of Panama; misuse of transportation issued to employees of Republic; modification of existing arrangement for purchase of postage stamps used in zone; sale of old administration building in city of Panama; water supply for section of Panama known as "El Hatillo"; cooperation of Republic health officers with those of zone in effort to prevent introduction of plague into Panama from infected ports on west coast of South America; enforcement of exclusion law in zone; use in zone post offices of U. S. postage-due stamps; modification of existing agreement respecting release of mail parcels received by gold employees through zone post offices; arrest in Panama of Panama Canal employees while engaged in discharge of duties; care of patients by health department for Republic in consideration of withdrawal of request of Panaman Government for establishment of independent hospital in Colon; removal of garbage and street cleaning in city of Panama; construction in Republic of military trails at expense of U. S.; segregation of stables in city of Panama within certain areas; desirability of having Panaman Government cancel licenses for five saloons near zone boundary line; granting of commissary privileges to certain persons not connected with Panama Canal or Panama R. R.; deportation of American in city of Panama charged with fraudulently representing himself as attorney

licensed to practice in zone courts; deportation of criminal characters from zone; violation of quarantine regulations; securing of statistics concerning health conditions in interior towns of Republic; promulgation by Panama of resolution with reference to manifests of vessels arriving at ports of zone with cargo for consignees in Republic; substitution of properly surcharged stamps of Republic for surcharged U. S. postage-due stamps used in zone post offices; installation and cost of municipal improvements in area in Colon set aside for erection of manufacturing plants; protection of revenues of Panama in connection with parcel-post entries into zone; and admission to Ancon Hospital, as pay patients, of Americans residing in Republic who, on account of character of their employment, not entitled to hospital privileges. Relations with Republic and with foreign representatives satisfactory.

Time keeping: Time-keeping work centralized; time keeping of all departments and divisions, with exception of Panama R. R., done by time-keeping bureau.

Clubs and playgrounds: Division of club houses continued to exist to Mar. 31, 1914, when, in reorganization, it became bureau of clubs and playgrounds. Activities conducted under supervision of secretaries furnished by Y. M. C. A. Gorgona clubhouse closed Aug. 1, 1913; removed to Pedro Miguel; reerected and opened Jan. 27, 1914. Porto Bello clubhouse closed May 1, 1914; being reerected with improvements as clubhouse for colored men at La Boca. Decided to inaugurate system of playgrounds in permanent towns of zone; equipment and supervision under jurisdiction of this bureau.

Canal Record: Canal Record continued under direction of secretary of the commission, Mr. Joseph Bucklin Bishop, until Apr. 1, 1914, when he was designated special secretary and continued in charge until July 1, when he resigned. Record transferred to charge of executive secretary.

Law: Law department continued in charge of Judge Frank Feuille until Apr. 1, when reorganization became effective. Since Apr. 1 Judge Feuille continued as special attorney for purpose of codifying laws of zone and to defend interests of U. S. before joint land commission in acquisition of lands in private ownership taken over in accordance with Executive order of Dec. 5, 1912.

Number of Executive orders of legislative character issued, the more important of which were orders prohibiting flights over the Isthmus by machines; providing punishment to deported persons returning to zone; fixing legal rates of interest; prohibiting gifts or gratuities to agents, employees, or servants; providing punishment for persons engaged in practice of hunting deer or other animals at night by use of lanterns or torches; to establish permanent organization for zone:

and order conferring power upon governor of zone to remit fines and forfeitures, to grant pardons, reprieves, and commutations of sentences, and to establish system of paroling prisoners.

Joint land commission, appointed under Panama Canal treaty between U. S. and Panama, in session from July 1 until middle of Sept., when one American commissioner resigned, his resignation being followed by that of the other American commissioner. Commission heard and disposed of 1,253 claims; 602 were dismissed, awards made in 629, disagreed in 22. During same period law department settled 752 claims, aggregating the sum of \$48,659. From discontinuance of joint land commission until end of year law department adjusted 1,528 claims; so that total claims settled without intervention of joint land commission during year was 1,903, aggregating \$147,452.50. On May 25, 1914, joint land commission reorganized with Messrs. Federico Boyd and Samuel Lewis, who served on previous commission, and Messrs. Levi Monroe Kagy and David Marks, the two American members. Work of commission interrupted by death of Commissioner Marks, at Ancon Hospital, July 17, 1914.

Leases for lots in Culebra and Empire districts, including villages of Empire, New Empire, Camacho, Golden Green, New Culebra, Cow Pen, and West Culebra, canceled on behalf of Panama R. R., June 30, 1914. At the same time leases for Panama R. R. lots in New Gatun canceled, but cancellation did not become effective until after close of year. **P-14, 54-62.**

- 1913.** Pacific division abolished Dec. 12, 1912,
and fifth and sixth divisions of O. C. E.
organized.
Fifth division has charge of construction of
locks, dams, spillway, excavation in dry in
prism between and below locks, operation
of Ancon quarry, municipal engineering work

within area covered by works of division, and such sanitary engineering work as prescribed by sanitary department within area. Work in charge of H. O. Cole as resident engineer. Excavation of Pedro Miguel Locks completed by removal of 3,044 c. y. from locks. Bulk of excavation consisted of removal of French dump east of lock site; material utilized for back fill. In addition to excavation for completing locks, 2,190 c. y. removed for construction of northeast core wall built to prevent passage of water back of east wall. Excavation done by hand, and extended under tracks of old Panama R. R. in use by central division. To prevent flooding locks, cofferdam left to south until completion of concrete work of locks, and subsequent increase in length of south approach pier to 1,200' prevented its completion until after cofferdam could be removed. In preparing foundations for guide pier and for wing walls 15,366 c. y. removed, of which 10,701 c. y. rock. Total excavation for locks, approach piers, and guide walls, including preparation of foundations, 1,319,742 c. y. Total concrete placed during year, 58,367 c. y., mixed entirely by auxiliary mixers consisting of two 2-cubic yard mixers at north end of locks on west side and of average of 3.05 $\frac{1}{2}$ -cubic yard mixers, moved about as necessity required. Concrete handled either by derricks and locomotive cranes or dumped direct into place through chutes. Of this, 39,465 c. y. were plain concrete and 18,902 c. y. reinforced concrete. Total concrete placed prior to July 1, 1913, in Pedro Miguel Locks, 906,293 c. y.

Back filling of lock, wing walls, and center wall completed, and riprap finish at ends of south wing walls partially placed. Amount used in back fill, 367,150 c. y., of which 193,212 c. y. were in center wall, balance behind side walls. Total back fill placed to June 30, 1913, 806,538 c. y. back of lock walls and 215,149 c. y. in center wall. West dam at Pedro Miguel, consisting of rock-filled sides and puddled-clay core, completed and top finished at elevation 107 with clay. North face riprapped with hard stone at 85' level. 114,117 c. y. fill added, making total in dam 696,558 c. y.

Miraflores Locks carried to completion. Foundation work for lower west wall seriously interfered with and retarded by slides and by water-bearing strata of banks. In some places necessary to build retaining walls to prevent mud from flowing onto foundation areas; and slides carried away berm-crane tracks, necessitating use of auxiliary concrete mixers for laying wall bases sufficiently high to secure bearing for berm-crane tracks. Similar difficulty experienced with south guide walls, especially on east side of locks, which could be built only in small sections. Concrete would be pushed as far as possible, then stopped until another portion of slide could be removed; in this way slide gradu-

ally encroached upon until guide or flare wall completed. North flare walls founded on piles; on west side of locks piles driven in marsh and weight supported entirely by friction on piles. While back filling, this portion of wall constituting return bulged slightly; further movement checked by depositing material along face of return, adding counterweight.

Center approach piers constructed to full length of 1,200' each from angle of flare walls. North wall of cellular reinforced concrete construction and founded on concrete caissons sunk to rock. Caissons consist of reinforced concrete shells $7\frac{1}{2}$ ' in diameter and 1' thick, built up in sections 6' long and sunk progressively, bottom shell fitted with steel shoe for cutting edge. Caissons sunk to bedrock at average depth of 29.43' and filled with concrete, forming solid columns to rock. They were spaced 15' centers longitudinally and 27' centers transversely. Wall then supported on heavily reinforced concrete girders spanning caissons in both directions. South approach wall of massive concrete and founded on natural rock.

Construction plant, consisting of 4 berm and 4 chamber cranes, supplied concrete. Total concrete laid in Miraflores Locks during year, 450,792 c. y., of which 402,607 c. y. plain concrete and 48,185 c. y. reinforced concrete. Of total, 308,914 c. y. laid by 4 berm cranes. Chamber cranes handled 218,135 c. y. concrete and 92,359 c. y. fill for center wall. Concrete furnished in part by mixers on berm cranes and by 2-yard mixers on east wall, operated July 1, 1912, to Oct. 26, 1912, producing 97,603 c. y. In addition to regular plant, average of 3.12 $\frac{1}{2}$ -yard portable mixers used. Total concrete laid in Miraflores Locks to close of year, 1,476,895 c. y. Concrete in locks proper completed May 17, except reinforced concrete floor and stairway in middle wall at junction of upper and lower locks, completed June 10. There remain to be completed lamp-post bases, snubbing-button bases, parapets around stairways, and nosing at end of south center approach pier, added during year to completed plans. Total concrete laid in Pacific Locks, July 1, 1913, 2,382,983 c. y.

Back filling lock walls continued with material from locks and prism excavation and aggregated 1,128,769 c. y., of which 149,301 c. y. were in center wall. Total back fill placed behind walls to June 30, 1913, 2,006,054 c. y., and in center wall 157,213 c. y. Sept. and Oct., 1912, 9,896 c. y. excavated for spillway dam by hydraulic method. Owing to limited space and excessive rainfall this method abandoned; no work done until beginning of dry season; excavation resumed by steam shovels and by hand. Situation complicated by fact that central division tracks for hauling spoil from cut to south passed through spillway site, and it was desired to give central division as much advantage during dry

season as possible. Assumed that spillway must be completed by Sept. 1, 1913. To meet this required removal of central division tracks from site by Mar. 1, 1913; not accomplished until Mar. 4, and when excavation of entire site could proceed, found that more material had to be removed than was estimated, and greater amount of concrete needed. Difficulty experienced due to fact that Rio Grande passed through site of dam and had to be diverted twice. After concrete for west end of dam brought up to elevation of bottom of river, dike constructed confining water to space sufficient to enable it to discharge through opening left in concrete of dam, and another dike built on south side to confine water after passage through opening. After these were finished further trouble from this source avoided. To credit of those engaged in construction, structure completed, notwithstanding difficulties and delays, Sept. 1, 1913, including placing of gates and erection of steelwork for walk way on top. Opening for passage of Rio Grande left until gates at Pedro Miguel completed. In addition to material removed by hydraulic method, 124,775 c. y. excavated by steam shovels, hand, derricks, and cranes, completing excavation for spillway dam.

Total concrete laid in spillway, 64,142 c. y., of which 63,707 c. y. plain concrete and 435 c. y. reinforced concrete. In laying this concrete narrow-gauge tracks laid from berm cranes located on east side of locks to south toe of dam, ending in various spurs leading to derricks which handled concrete mixed by berm cranes and delivered on transfer cars in 2-yard buckets. Berm cranes mixed for use at spillway 27,619 c. y. In addition, average of 1.43 1-yard mixers and 1 $\frac{3}{4}$ -yard mixer supplied 38,551 c. y. West dam at Miraflores completed, with exception of junction of dam with back fill along west lock wall. Hydraulic fill in west dam completed during previous year and total dry fill added was 418,375 c. y. As this dry fill was advanced over hydraulic fill, softer material crowded to center and increased in height and, as it was not sufficiently hard to bear tracks, outlet was cut on west side of dam through which much of soft material crowded out, assisted by water jet. What remained pushed over on west slope of dam by raising and crowding east dry fill.

Excavation in dry between Pedro Miguel and Miraflores Locks and south of locks continued, spoil being used for back filling lock walls, for dams, and filling swamp areas on east and west sides of canal. Total removed, 379,626 c. y. To divide more equally excavation between steam shovels and dredges, to keep latter at work, new dike built across canal 3,300' north of old one. After closing down hydraulic excavating plant which had excavated area between these dikes to rock at elevation approximately minus 20, area drilled to minus 45 and blasted preparatory

to being excavated by dredges after area rewatered. Steam shovels, prior to turning in of water, took out 59,000 c. y. rock. Lower dike drilled to grade and blown up May 18, advancing water to new dike. Total removed below Miraflores Locks by steam shovels, 2,949,943 c. y.

Total dry excavation in prism, 3,120,851 c. y. Ancon quarry operated for about 3 years without general overhauling until May 16, 1913, when it was shut down for 10 days for putting in various repair parts. Small No. 5 gyratory crusher, taken from old Rio Grande quarry, installed on floor of south end of rock bins for crushing larger rock to supply increased demand for smaller-sized stone. Total produced, 688,301 c. y., of which 424,460 c. y. placed in storage, 21,301 c. y. supplied to municipal division, and 161,311 c. y. supplied to other divisions and departments.

Hydraulic excavating plant continued at work until Dec. 1, 1912, when it was taken out of service. Material removed used for reclaiming tidal swamp lands east of and adjacent to prism. Total removed, 451,631 c. y., making total removed by this method 1,549,904 c. y.

Plant still in serviceable condition, and suggestion made that at least part be utilized in sluicing soft material found, on north side of Gold Hill and on top of east bank of Culebra Cut. Bank had been to a certain extent stepped back by steam shovels in process of lightening loads on upper part of bank, but this work stopped Aug., 1912, on score that Lidgerwood cars could not be spared for this service and that material could not be handled economically with steel side-dump cars during wet season. Rain had cracked bank badly and part had sloughed off into cut. To the north and east of Gold Hill lies valley of the Obispo, and material excavated by steam shovels on this upper bench deposited on dump extending almost across valley of river. By continuing dump entirely across valley and placing culvert pipes through dam that would result, water could be allowed to flow through former channel and Obispo diversion to Chagres River. By tilting these pipes upward on south side of dam they would form spillway to any pool that dam might make; calculations indicated sufficient pool could be created to furnish water for pumps to sluice back into depression to east some clay that would otherwise fall into cut. After renewed activity of Cucaracha slide, decided to make use of sluicing plant for this purpose. Location for pumps and pipe line such that rear of Cucaracha Hill could be taken off and washed back into valley to east by relay pumps and whatever material remained on cut side of Cucaracha Hill could be washed down to dredges, thereby finishing Cucaracha slide for good and all. Work placed in charge of resident engineer of fifth division. Work on

installation of hydraulic pumping mains and flumes started Feb. 1, 1913. Two boilers and two Worthington pumps erected, with necessary flumes. Dam has created lake of 180 acres, with drainage area of 4 sq. m. Elevation at bottom of suction at pumping plant, 214' above sea level, and elevation of pipes forming spillway 223. Material washed back into depression which forms lake, and discharges at such a distance from pumping plant that water used in sluicing returned to lake and used over again, requiring only small inflow to keep lake at constant elevation. Sluicing begun June 17, 1913, and 57,274 c. y. removed by this method. Booster pumps ordered; when received, operations for attacking rear of Cucaracha Hill will be begun.

To meet increased demand for water at Ancon and Panama, two pressure filters removed from Miraflores power house and installed in Ancon filtration plant. On account of future inundation, 16" Rio Grande water main taken up between Pedro Miguel and Miraflores power house, and work of relaying it along Panama R. R. line partially completed at close of year. Construction work on locks made it necessary to relay portions of 10" main between Coccol pumps and junction with 16" main at Miraflores power house.

Grading completed on new road, Diablo to Ancon, and macadam partly placed and rolled at close of year. Work on road included construction of 20' span concrete bridge over Corundu River.

Work started on permanent town site at Balboa in Mar. and included installation of 750 linear feet of reinforced concrete storm sewer and 1,222 linear feet of reinforced concrete drains, filling hydraulically of a portion of town site with material pumped from inner harbor excavation, laying out permanent laborers' barracks, and location of permanent administration building. In connection with latter, 36,500 c. y. material excavated preparatory to installation of foundations, concrete piers for columns placed, and erection of steel frame for superstructure begun.

Sanitary work consisted of cleaning 593,127 linear feet of earth drains, excavating 5,079 c. y. of new earth drains, sweeping 1,023,382 linear feet of cement drains, filling 2,862 c. y. of holes and swamps, laying 2,520 linear feet of tile drains, constructing 10,566 linear feet of cement drains, and clearing 131 acres of vegetation. P-13, 28-35, 161.

Fires, Destruction by.

Destruction of property by fire, and liability of the Isthmian Canal Commission. 30 houses were destroyed in Panama, Jan. 12, 1906, the fire said to have been caused by fumigating methods. Owners presented claims. Comptroller of the Treasury suggested that the value of the property destroyed might be assessed by a joint commission for the condemnation of property required for canal purposes, as provided by treaty, and that the legality of the awards thus established could then be decided and tested. **P-06**, 21.

Plans made for paid fire departments at Cristobal and Ancon. Volunteer departments established at various points. Extinguisher apparatus provided generally. Special means held in readiness at places of risk. All the fires discovered in their beginnings. Damages kept under. **P-06**, 37.

1912. When it was determined to fortify the canal, recommended that construction be done by Isthmian Canal Commission, utilizing forces and such plant as could be spared from other work under its charge. Proposed at same time, in order that completed work might embody latest improvements in battery construction, that plans be prepared by the Chief of Engineers, U. S. Army, subject to approval of Panama Fortification Board, and batteries and accessories built in accordance. Recommendation received approval at Washington. **P-12**, 1.

Act Mar. 4, 1911, appropriated \$2,000,000 for gun and mortar batteries for defense of canal against naval attack. Work commenced Aug. 7, 1911, under provisional organization which continued until Jan. 1, 1912, when work was consolidated and placed in charge of Lt. George R. Goethals, U. S. Army, reporting to chief engineer. 408,392 c. y. excavation done, 5,159 c. y. concrete laid, and channel excavated to one of islands by dredging 32,150 c. y. **P-12**, 1, 47.

1913. By act Aug. 24, 1912, \$1,000,000 appropriated for gun and mortar batteries, making total appropriated \$3,000,000, sufficient for completion of this portion of work. In addition, \$200,000 appropriated for land defenses. Work continued on gun and mortar batteries. Detailed surveys for location of land defenses well advanced to completion and arrangements made to begin

work July 1, 1913, on construction of redoubts in accordance with plans prepared by board appointed by Sec. of War. 416,542.5 c. y. excavation done, 131,952.8 c. y. concrete laid, 93,808 linear feet piling driven, and 100,957 c. y. filling done by one dredge. Work in charge of Lieut. George R. Goethals, U. S. Army, assisted by Lt. A. H. Acher, U. S. Army, and R. M. Elder and H. P. Warren as superintendents of construction, **P-13**, 49.

1914. Work continued during year on gun and mortar batteries; by close of year concrete work practically completed, as well as greater portion of back fill. July 1, 1913, construction of redoubts in accordance with plans prepared by a board appointed for purpose and approved by Sec. of War undertaken; completed, as well as clearing necessary in connection with them. **P-14**, 65, 66.

Old bridge of, connected with trestle, Gamboa, **P-08**, 216, pl. 178.

Work of French companies: Their work not to be spoken of lightly. Those directing it men of international skill, and their associates some of the best engineering talent of Europe. Its large scale operations were embraced within about 72 months. They excavated about 1,000,000 yards a month. Haste was imperative with them, due to the limited concession, enormous interest charges, etc. The residue of their plant testifies to the feverish energy with which it was used. Cost was a secondary object. Since their time there have been huge strides in modern methods. The terror of yellow fever has also been conquered. **P-06***, xii.

Geology, Isthmian.

Geology of Isthmus of Panama: Paper printed
as Appendix B of report of Board of Con-
sulting Engineers, on Geological Study of
the Isthmus of Panama. By Marcel Ber-
trand, member of the Institute of France;
professor of geology at the National High
School of Mines at Paris. By Mr. Philippe
Zürcher, chief engineer in the Corps of
Bridges and Routes of Communications of
France. Translation by Capt. John C.
Oakes, Corps of Engineers, U. S. Army.
P-06*, 149-163.

Geological section of the Isthmus: Preliminary
work; general structure; the Gamboa rock;
Atlantic slope; southwest slope; Culebra
Cut; Pacific slope; central part; plateau of
Alhajuela; later eruptions; dividing ridge;
superficial red clays; alterations of the strata
in depth; alluvial soils and Quaternary
phenomena; résumé; cross section.

Description and microscopic diagnosis of the
rocks: Gamboa breccia.

System of the bituminous schists (clays and
tuffs of Culebra): Cut at Culebra; section of
the Pacific slope; Trachytic tuffs. **P-06***,
149-163.

Health. (See Nos. 7, 59, 66, 104, 270, pp. 2361, 2362, 2363, 2368 of this Index.)

Bills of, quarantine regulations, **P-13**, 626.

Statistics, general, **P-08**, 283.

Yellow fever completely extirpated. Better health generally. In 1884 the French lost 161 men out of 19,234; in 1905, Americans lost 55 men out of 19,685. Sanitation no longer a problem. **P-05**, 6, 7.

2,500 men in health department. Organized into hospital service, health office of Panama, health office of Colon and Cristobal, sanitary service of zone, quarantine service, and Ancon laboratory. Problem of sanitation no longer a formidable obstacle to the completion of the canal. Credit given Col. Gorgas and staff. **P-05**, 59.

Laboratory established to test foods, water, drugs, etc. Investigation as to susceptibility of natives and nonnatives to malaria. Water of zone not inferior to drinking water of U. S. Entirely new fumigating material discovered. Evidence of liquor adulteration provided. Agricultural investigations with a view to improving breed of dairy cattle on the Isthmus. **P-06**, 30.

Average daily sick rate among employees, Jan. 1, 1906, to June 30, 1903 per 1,000. **P-06**, 31.

"The health conditions have been so very materially improved during the year that the feeling of fear and panic which prevailed at its beginning has been entirely done away with, and the fact has been proved beyond a doubt, that with rigid quarantine and with a never-ceasing vigilance in carrying forward sanitary measures, that the health of the average white person depends almost entirely upon the care he takes of himself." **P-06**, 117.

- Hydraulics, Isthmian.**
 Panama Canal: Paper by Henry L. Abbot, as Appendix E, Report of Board of Consulting Engineers.
 Some of the hydraulic problems of a sea-level Panama Canal: Topography of the canal route; discharge of the tributaries below Gamboa; volume of freshets and great floods; conclusions that for a sea-level canal there must be a tidal lock at Miraflores, a dam at Gamboa, spillways, and over 40 miles of artificial and very costly diversion channels for tributaries entering below Gamboa, etc. **P-06**, 185-191.
 Water supply of the canal for three variants, assuming a lake at Gatun raised to elevations 85', 60', and 30', the latter combined with a lake at Bohio raised to elevation 60': Flow of the rivers; requirements for lockage; other losses of water; volume of water reserves; storage of the reserves. **P-06**, 192-197.

Immigration Restrictions.

Isthmian Canal Commission No. 3 authorized
excluding undesirable immigrants; this re-
striction inapplicable to Panama, so that
undesirables simply landed in Panaman
territory and finally landed in the zone a
burden therein. Panama, on suitable rep-
resentations, issued a decree, Mar. 17, 1906,
banning undesirables from entrance into her
territory. **P-06, 20.**

Isthmian Canal Commissions. (See p. 2359 of this Index.) (See Nos. 1-256, pp. 2361-2368 of this Index.)

Isthmian Canal Commission No. 1: Letter from John Hay, Sec. of State, June 10, 1899, announcing to Rear Admiral John G. Walker (retired) the latter's appointment as a member of the Isthmian Canal Commission or investigators referred to by act Mar. 3, 1899, authorizing the President to make full and complete investigation of the Isthmus of Panama, particularly those routes known as the Nicaragua and Panama routes, with a view to ascertaining the best route for an interoceanic canal and the cost of the same and placing it under the control, management, and ownership of the U. S., embracing the cost of all rights, etc., acquired by all former enterprises; and authorizing the President to employ any engineers or others to carry out the details. The act also sets

aside \$1,000,000 for expenses, and requires the President to report to Congress the results of such investigations, together with his recommendations. Copy of act referred to. **P-99**, 10, 11.

Organization of commission by committees (the President being ex officio a member of each committee): Investigation of Nicaragua route, Mr. Noble, Mr. Burr, Col. Hains; investigation of Panama route, Mr. Burr, Mr. Morison, Lt. Col. Ernst; investigation of other possible routes, Mr. Morison, Mr. Noble, Col. Hains; investigation of industrial, commercial, and military value of an interoceanic canal, Mr. Johnson, Mr. Haupt, and Mr. Pasco; investigation of rights, privileges, and franchises, Mr. Pasco, Lt. Col. Ernst, and Mr. Johnson, **P-99**, 12.

Assistants: On July 6, 1899, Lt. Commander S. A. Staunton, U. S. Navy, chosen secretary, **P-99**, 13.

Chief hydrographer, A. P. Davis. Appendices D and I. **P-99**, 219, 281.

Lock studies, S. H. Woodward. Appendix A. **P-99**, 179.

Special surveys, A. B. Nichols. Appendix J. **P-99**, 349.

Special commercial report, Prof. E. R. Johnson (member of commission). Appendix NN. **P-99**, 515-573.

1899-1901. Operations: Organization; law authorizing commission; instructions to commission; committees named; subjects of investigation (see Engineers); appointment of chief engineers, one for Nicaragua and one for the Panama route, third engineer appointed to direct field work at Darien, **P-99**, 13.

Employment of assistants and laborers: 20 working parties organized in Nicaragua, 5 in Panama, 6 in Darien; total field force, about 850. Chief engineers directed to make examination of geography, topography, hydrology, and other physical features of the different countries, and to make a special study of the routes in Panama and in Nicaragua. Commission visited Paris, 1899.

New Panama Canal Co. permitted inspection of all its records, etc. Commission visited various canal works in Europe. Visit made to Central and South America in 1900. **P-99**, 14.

Darien visited by Mr. Morison. U. S. S. "Scorpion" used by commission. Officials of the various countries consulted and conferred with. **P-99**, 15.

Upon return to the U. S., commission considered dimensions and unit prices. Conclusions reached used in making subsequent plans, computations, and estimates. Other questions considered, such as treaty relations, grants and concessions already made-value of the canal, operation and main, tenance, etc. Second visit made to Nicaragua by Mr. Noble, 1901. Parties disbanded, as they finished their work, the engineers being brought to the U. S. for the necessary office work. Field work completed June,

1901. Special report on the industrial and commercial aspect of the canal lines obtained. **P-99, 16.**

Many maps prepared. Short history of canal projects referred to. **P-99, 17.**

Report submitted, 1901, favoring the Nicaragua route, **P-99, 13.**

Supplementary report of Isthmian Canal Commission, 1899. S. Doc. 123, 57th Cong., 1st sess. The President (Theodore Roosevelt) transmits to Congress a proposal, laid before him by the Isthmian Canal Commission through Sec. of State (John Hay), of the New Panama Canal Co. to sell and dispose of all its rights, property, and unfinished work to the U. S. for \$40,000,000. **P-99, 675.** Correspondence of New Panama Canal Co. with Isthmian Canal Commission, **P-99, 676.** Outline of rights, etc., offered by the New Panama Canal Co., **P-99, 676.**

Repetition of respective virtues of the Nicaragua and Panama routes. The offer of the New Panama Canal Co. makes the cost of the two routes—for Nicaragua, \$189,864,062; Panama, \$184,222,358. **P-99, 679.**

Acceptance of terms of New Panama Canal Co. should, in the opinion of the commission, be conditional upon the satisfactory adjustment of concessions desirable from the Republic of Colombia. "The grant must be not for a term of years, but in perpetuity, and a strip of territory from ocean to ocean of sufficient width must be placed under the control of the U. S. In this strip the U. S. must have the right to enforce police regulations, preserve order, protect property rights, and exercise such other powers as are appropriate and necessary. The business relations between the railroad and canal companies and the Colombian Government must also be settled, and the consideration to be paid by the U. S. for the privileges and rights to be exercised in the future must be agreed upon free from all embarrassment with reference to past transactions." **P-99, 680.**

"* * * It must be assumed by the commission that Colombia will exercise the same fairness and liberality if the Panama route is determined upon that have been expected of Nicaragua and Costa Rica should the Nicaragua route be preferred." **P-99, 680.**

"* * * The commission is of the opinion that 'the most practicable and feasible route' for an Isthmian Canal, to be 'under the control, management, and ownership of the United States,' is that known as the Panama route." **P-99, 681.**

1904. Congress authorized the President to purchase at not exceeding \$40,000,000 the rights of the New Panama Canal Co.; to acquire from Colombia perpetual control of zone not less than 6 miles wide, and over operation of railroad; additional territory and rights if needful; building of a canal, etc., through a commission; failing satisfactory conclu-

sions concerning the Panama route, negotiations to be conducted for canal by Nicaragua route; the States through which canal shall run to have use of canal and harbors, etc., on special terms to be agreed upon; authorizing commission; appropriating funds; and authorizing Sec. of Treas. to issue bonds to amount of \$150,000,000 for this special work. **P-04, 23.**

Treaty with Panama signed 1903. \$10,000,000 paid Panama. **P-04, 36.**

Operations continued with French company's employees. Organization of survey parties. **P-04, 40.**

Isthmian Canal Commission No. 2. Committees: Engineering plans, Mr. Harrod, Mr. Burr, Mr. Grunsky, and Mr. Parsons, **P-04, 37.**

Executive, Mr. Parsons, Mr. Grunsky, Admiral Walker, **P-04, 37.**

Isthmian Canal Commission likened to a board of directors of a railway. Frequent meetings held. **P-04, 36, 37.**

Temporary head of engineering staff after transfer, Maj. Wm. M. Black, Corps of Engineers, U. S. Army, **P-04, 36.**

Sanitary department, Dr. W. C. Gorgas, colonel, U. S. Army, the chief officer, **P-04, 37.**

Disbursing, Geo. C. Schafer, paymaster, U. S. Navy, **P-04, 38.**

Sec. of War Taft suggests more elastic organization, permitting designating members of the commission to charge of special duties, **P-04, 13.**

First visit of Isthmian Canal Commission No. 2 to Isthmus: Arrived Apr. 1, 1904. Cordial reception from Republic officials, etc. Study made of plans and methods of old company; points of work visited; evident that new and extended surveys and examinations necessary because of increase in modern requirements; advisability of sea-level or lock-level canal to be determined; surveys planned. **P-04, 38.**

"The organization of the department of engineering and construction has been made with two distinct purposes in view. The first of these purposes covered the entire field work, including surveys and investigations necessary for the solution of all problems preliminary to the development of plans for the entire project of a ship canal between the two oceans and the design and construction of waterworks and sewer systems for the cities of Panama and Colon. The second purpose was the formation of the preliminary organization in such a manner as to merge efficiently into the permanent organization ultimately required for

the actual construction of all classes of work embraced in the entire engineering construction within the limits of the Canal Zone." Preliminary work of surveys nearly completed, "so that the studies for the features of the general project can soon be undertaken." The purpose of the Isthmian Canal Commission No. 2 to install and operate considerable number of large steam shovels already purchased in the U. S. Some of the old French plant has been found usable temporarily. Feasibility of excavating the Culebra Cut by the hydraulic method considered. **P-04**, 43.

Law establishing government for the Canal Zone, act Apr. 28, 1904, **P-04**, 31.

Letter of instructions from President Roosevelt to Isthmian Canal Commission No. 2, through Sec. of War Taft, placing Isthmian Canal Commission No. 2 in charge of the government of the zone, giving it the power to legislate, and appointing Maj. Gen. Geo. W. Davis (member) governor of the zone, **P-04**, 31.

Instrument conveying canal properties to the U. S., Apr. 23, 1904, **P-04**, 35.

Letter of President Roosevelt, Oct. 18, 1904, instructing Sec. of War Taft to proceed to Panama to reassure Panama authorities it "is not the purpose of the U. S. to take advantage of the rights conferred upon it by the treaty to interfere with the welfare and prosperity of the State of Panama or of the cities of Colon and Panama," **P-04**, 5.

Executive order, in name of President Roosevelt, Dec. 3, 1904, limiting importations,

tariff duties, port control, postal matters, currency, voting of Panama residents in zone, roads, hospital treatment, by Sec. of War Taft. "The truth is that while we have all the attributes of sovereignty necessary in the construction, maintenance, and protection of the canal, the very form in which these attributes are conferred in the treaty seems to preserve the titular sovereignty over the Canal Zone in the Republic of Panama, and as we have conceded to us complete judicial and police power and control over the zone and the two ports at the end of the canal, I see no reason for creating a resentment on the part of the people of the Isthmus by quarreling over that which is dear to them but which to us is of no real moment whatever." Supplementary order, Dec. 6, 1904, clarifying doubts relating to imports. Section XIII of the treaty construed (Jan. 7, 1905) to give free entry of things needed by those engaged on the canal work, etc., but not of things customarily found on sale in the zone and required by those who come from tropical countries, but if the local merchants charge undue prices for these the canal employees may avail themselves of imports for those coming from nontropical limits. **P-04**, 5, 17.

Unskilled, tropical laborers unsatisfactory, **P-06, 5.**

Labor and Quarters. (See Labor above.)

Has charge of the hiring of all grades of employees and of assigning them to the various departments, of providing and assigning quarters, record of employees; handles directly all hotels and mess houses; has general charge of all buildings on the zone belonging to the Isthmian Canal Commission. **P-05, 105.**

Supply of efficient unskilled labor a problem.

Tropic laborers 25 per cent to 33 per cent efficient only compared with U. S. labor. Eight-hour law applied to this class not deemed advisable, as it would add many millions to cost of canal; not expected by laborers until they arrive and learn of it. Isthmian Canal Commission No. 3 recommends that labor on the Isthmus be excluded from the application of the 8-hour law, contract-law law, Chinese-exclusion act, or any other law for the protection of U. S. labor at home. **P-05, 9, 10.**

Tropical labor inefficient and hence expensive.

Regular pay, good food, and better overseers already producing more efficiency. **P-05, 120.**

Branch has charge of hiring of all grades of employees, assigning them to the various departments, assigning them quarters, etc. Directly handles all hotels and mess houses, and has general charge of all buildings on the zone belonging to the Isthmian Canal Commission. Table showing the force in the three departments of construction and engineering, government and sanitation,

and material and supplies, ranging from 9,786 to 16,997. Sources of supply: Barbados, 8,043; Martinique, 1,756; Jamaica, 4,981; coast towns and small islands, 10,254. Spanish laborers very satisfactory, being paid 40 cents silver per hour, as compared with 20 cents to other kinds of labor. Skilled labor obtained through recruiting agencies in the U. S.; improvement in grade being noted; increased wage rate necessary; authorized Dec., 1905, but even then scale not higher than in U. S., making it difficult to obtain class of men needed. Clerical force, obtained through civil service, not altogether satisfactory. Ordinary labor far from efficiency. "The majority work just long enough to get money to supply their actual bodily necessities, with the result that, while we are quartering and caring for twenty-odd thousand of these people, our daily effective force is many thousands less." Preliminary steps taken toward securing large numbers of Spanish laborers direct from the northwestern Provinces of Spain, and also for securing trial shipment of Cantonese Chinese. Upon fixment of lock-level plan, 5,000 to 6,000 additional employees could have been used; delay from their not being available. Eating houses established at various points. Isthmian Canal Commission took charge of hotels, etc., opened for white employees until better arrangements could be made. Year's work of labor and quarters branch satisfactory. Believed that physical stamina of employees can be kept up to a standard equal to that of the U. S. **P-06, 114.**

Bids asked by Isthmian Canal Commission for Chinese labor—2,500 for not less than 2 years, with privilege of increasing number to 15,000. Four bids; the two accepting the terms the lowest. Laborers, 9 to 11 cents an hour. **P-06, 14.**

Impossible to get satisfactory work from tropical negroes. Will not take nourishing food. Spanish labor efficient. White men can stand isthmian climate better than "blacks, who are supposed to be immune from practically everything, but who, as a matter of fact, are subject to almost everything." **P-06, 5, 6.**

Transportation of, amount spent, **P-08, 249.**

Labor, Quarters, and Subsistence. (See Labor above.)

1907. This department charged with securing all skilled and unskilled labor and its assignment; is the custodian of all living quarters; supplies furniture, delivers distilled water and food supplies; polices grounds around camps and quarters; has charge of the lighting of camps and roads; operates the hotels, messes, and kitchens for the accommodations of the employees; keeps service history of each individual employee; records leaves, etc.; authorizes transportation, etc., **P-07, 24.**

Labor supply: Skilled labor recruited in U. S., through agents. Clerks, stenographers, draftsmen, doctors, and nurses secured through civil-service registers. Skilled force, June 30, 1906, approximately 2,500; June 30, 1907, actually 4,404. To increase the force 1,904 men, 3,038 men brought from the U. S. during the year. Unskilled force brought from West Indies and Europe; gained through agents. June 30, 1906, 500 Europeans and 13,625 West Indians. June 30, 1907, 4,317 Europeans and 14,606 West Indians. An average of about 1,500 men per month recruited to keep up the force. June 30, 1907, the increase in the employees was 10,000 over previous year. "Labor problem is still an unsolved one," but efficiency increasing. Always large periodical changes in tropical labor. **P-07, 25, 26.**

Quarters: June 30, 1906, 1,129 houses available for quartering employees of all classes. June 30, 1907, 2,208 were available. Quarters better and more comfortable than ever. Congestion in quarters of laborers has entirely disappeared. **P-07, 26.**

Subsistence: 15 hotels operated for Americans; meals, 30 cents. Hotel Tivoli, Ancon, with superior accommodations; charging more. 18 mess halls for Europeans; day's board, about 40 cents. 23 kitchens for West Indian laborers; day's board, about 30 cents. West Indian laborer employed upon a basis of subsistence as a part of his compensation, because of his careless habits and the probability that he would impair his efficiency by lack of proper nourishment. Nearly a million meals a month served to all classes. Subsistence operations self-sustaining; no profit taken, however. **P-07, 26, 27.**

Commissary: Commissary department of railroad furnishes supplies to hotels, messes, kitchens, etc. Various branch stores. In operation, cold storage and ice plants, laundry, bakery, etc., all at Cristobal. **P-07, 33, 34.**

1908. Organization: Resignation of Jackson Smith. Maj. Carrol A. Devol, quartermaster, U. S. Army, assigned. Duties of the department to be divided. Maj. Devol to have charge of labor and quarters, and division of material and supplies, as a "quartermaster's department." The subsistence features to be consolidated with the commissaries of the Panama R. R., and to be in charge of Maj. Eugene T. Wilson, Artillery Corps, U. S. Army, as a "subsistence department."

Labor: 1,828 men employed in the U. S., as against 3,038 the year before, while the number employed on the Isthmus increased from 2,780 to 3,382. 500 more Europeans and 1,000 more West Indians on the work than at the close of the previous year. 4,150 West Indians and 3,650 Europeans imported. Excess of immigration over emigration, 18,000. "The labor problem may be considered solved."

Quarters: 700 American families brought; quarters accommodating 250 families recommended for construction. No such congestion for married quarters as existed a year ago. Laborers' quarters ample; increasing tendency to go into the bush or tenements in the towns; doubtful if move is beneficial.

Subsistence: 20 hotels operated for Americans, 25 mess halls for Europeans, and 31 kitchens for West Indian laborers. Inspection instituted looking toward cleanliness of messes and better food supplies. **P-08, 23, 24.**

Commissary—Organization: Operated by the subsistence officer of the Isthmian Canal Commission under the direction of the president of the Panama R. R.

Stores: 13 branch stores, along line; 5 new.

Work: Supplies ice, meats, bread, pies, cakes, ice cream, and groceries of all kinds, as well as laundry service, to the hotels, messes, and kitchens, and to employees of the Isthmian Canal Commission.

Sales: \$3,736,607.11.

Equipment: Coffee-roasting, ice-cream, and pie and baking plants added to the main commissary Cristobal.

Employees: Average, 742. Cost, \$430,343.75. **P-08, 30.**

Leasing of lands for agricultural uses being encouraged; 121 leases made of this kind. Ever-present market for fresh vegetables, etc. **P-06, 33.**

Difficult to foresee uses to which land in zone may be put. Within limits of zone 436 sq. m., of which about 73 sq. m. in private ownership and 363 sq. m. owned by U. S.; of latter, 96 sq. m. occupied by canal.

Large part of U. S. land required for military and naval purposes; not unlikely that additional lands will be required by other departments of U. S. Position of Republic and its two cities with respect to zone makes it necessary in interest of harmony that Spanish laws now in force shall obtain. Rules and regulations for government of zone, made effective subsequent to 58th Congress, should be approved and changes should be authorized to meet new conditions as they arise.

Under existing law, lands may be leased for not exceeding 25 years, with understanding that cost of improvements shall be reimbursed to lessee in case lands needed for other purposes. Generally the rule that land taken for U. S. purposes never sufficient and must always be extended, and from experience gained in prices agreed upon for lands taken for canal purposes, improvements always expensive. For most part, configuration of ground not suitable for extensive farming; material obstacles tend to hinder agricultural development; perpetual title can not be assured; and Spanish system of taxation must be continued to avoid friction on account of unfair competition with Panamans. Inducements offered not likely to attract Americans. Other occupants are desirable. Town sites already established populated by laborers, a class which should be repatriated after work can no longer be given, and growth of such towns should be discouraged. Greater the

amount of land leased and number of town sites established and occupied, greater will be cost of sanitation and civil government. For several years to come believed that best policy will be to keep all U. S. lands for U. S. purposes. Military force located on Isthmus will be charged with its own sanitation. Reservation of all lands for U. S. use would result, therefore, in minimum costs for these two items.

Zone occupies unique position among outlying possessions of U. S., and on this account requires special treatment. Construction of canal is original purpose, and to this purpose everything within zone subordinate. After completion everything must be subordinated to operation of canal. Assuming that canal built for benefit of commerce of world, nevertheless is military asset to U. S. and condition may arise in which military necessities of U. S. will be paramount. During certain periods operation of canal for commercial purposes, entirely separate and distinct from military; there are times when military necessities predominate. **P-11, 62.**

Law, Department (Operation.)

1911. By Executive order of the President, Apr. 16, 1910, position of counsel and chief attorney created with specific duties, and filled by appointment of Judge Frank Feuille.

Under the order he is legal adviser to Isthmian Canal Commission, chairman, and head of department of civil administration; in addition, he has direction and control of all litigation, as well as supervision and direction of all prosecutions for offenses against law. Executive order, Jan. 8, 1908, created a department of law, charged with general supervision of legal matters pertaining to Isthmian Canal Commission, including acquisition of right of way and adjustment of land damages. Under this order, land questions handled through prosecuting attorney on Isthmus by general counsel in Washington. After resignation of general counsel, Apr. 30, 1909, only such land matters considered by prosecuting attorney as

needed immediate attention. Land titles on Isthmus are in unsettled state, and with completion of canal construction in sight it became necessary to adopt some measures looking to adjustment of land situation as soon as possible. Decided, therefore, that all questions affecting lands on Isthmus should be handled by counsel and chief attorney, and with this in view department of law placed under direction of counsel and chief attorney.

Questions affecting lands belonging to Panama R. R. handled by land office of that organization, and those affecting lands owned by Isthmian Canal Commission handled by legal department; and though counsel and chief attorney is also attorney for Panama R. R., deemed advisable to consolidate all land matters on Isthmus. Effected May 1, 1911, under Executive order of Jan. 19, 1911, by creation of land office, to which were transferred all papers, maps, records, and other documents relating to lands owned or controlled by U. S. in zone and lands auxiliary to canal.

Act Feb. 27, 1909, relating to use, control, and ownership of lands in zone, authorizes President to lease land. No leases made under this act, but practice of issuing leases by authority of Sec. of War adopted and continued. By Executive order Oct. 7, 1910, such leases to be executed by officer in charge of land office, with approval of head of department of civil administration.

Aug. 6, 1908, to June 30, 1910, 11 joint commission awards paid by U. S. for lands taken over for canal purposes, amounting to \$142,515, and joint commission having failed to agree in 3 claims, they were settled in accordance with findings of umpire for \$61,000. During same period 16 tracts of land acquired by U. S. for canal purposes under private agreements with owners for \$47,215.74, and 50 claims for damages to crops and improvements settled for \$5,037.95. In addition, 68 claims, amounting to \$8,796.55, paid between Apr. 8, 1910, and June 30 following on account of fire at Nombre de Dios.

During year island of Margarita in Manzanillo Bay near Colon and one or two other small holdings acquired by payment of \$4,250. In addition, 112 claims for damages arising in connection with excavation work, surveys, road building, and other canal activities settled for sum of \$4,532.37. Ten additional claims for fire at Nombre de Dios settled for \$436.20. 208 claims in area of Lake Gatun, including valleys of Chagres, Gatun, and Trinidad Rivers, adjusted and paid for \$46,704.50. \$33,964.85 paid to Caribbean Cocomat Co. by Panama R. R. for damages from cancellation of lease held at Toro Point. Total paid on claims during year, \$90,442.92.

Executive order outlining duties of counsel and chief attorney gives to latter equal authority with judges of courts of zone to issue subpoenas for witnesses in criminal cases and to examine witnesses under oath

in investigation of offenses against laws of zone. Information in civil case may also be filed by prosecuting attorney, assistant prosecuting attorney, or other counsel specially designated by head of department of civil administration, as well as by counsel and chief attorney. Order contained substantial modification of existing-law, providing more expeditious method of prosecuting criminal cases.

Conflicts between agents of Isthmian Canal Commission engaged in canal construction and shipping interests began to arise relative to rights of parties to use of waters. Resulted in enactment of legislation to prevent interference with canal construction, authorizing Isthmian Canal Commission to establish rules and regulations respecting use or passage through canal channel and all other navigable waters, and fully protect such navigable channels from injury or obstruction.

During existence of municipal governments in zone taxes assessed, levied, and collected by municipal authorities for benefit of local treasuries. Municipal governments abolished by Executive order Apr. 15, 1907, and functions of municipal officers vested in district tax collectors, under supervision of collector of revenues. Confusion resulted as to right of forfeiture of property to zone government in default of bidders at tax sales. To remedy existing conditions, Executive order Oct. 4, 1910, abolished office of district tax collector, and powers and duties of this office vested in collector of revenues, to be exercised by him through deputies. Order also provided that property sold for taxes should be forfeited to zone in default of bidders at tax sales.

Counsel and chief attorney calls attention to necessity of compiling, revising, and adding to existing legislation so as to establish simple, complete, correlated, and efficient system for civil government of zone. Administrative laws also in need of revision, so that duties of various departments may be clearly defined and coordinated. Law of civil procedure, criminal code, and law of criminal procedure also need revision. Held in abeyance until policy of U. S. with reference to zone determined. P-11, 54-56.

1912. Congressional legislation affecting canal not enacted until after close of fiscal year. Aug. 24 Panama Canal act made effective and sundry civil act approved on same date, making appropriations for current fiscal year, contains legislative provisions affecting canal. In addition, 16 Executive orders having effect of law issued to provide for cases and conditions which had arisen and which necessitated enactment of provisions to cover them.

Attention already called to necessity of a revision of Canal Zone laws, in order that legislation might be brought under one complete correlated system. Head of department of law advocates remedying condition

by embracing in one code all Colombian and Panaman laws deemed expedient to keep and repealing the others. Revision of administrative laws also necessary.

Assistant prosecuting attorney handled criminal matters in the zone during the past year; 615 cases disposed of in three circuits; 398 resulted in convictions, 139 in acquittals, 66 in dismissals, and in 12 defendants were fugitives and not arrested. Makes considerable increase in number of criminal cases, due in part to large number of prosecutions for gambling and for violations of navigation laws; increase in idle population probably responsible. Four criminal cases passed upon by supreme court of zone; two resulted in affirmance, in one trial court's finding reversed, and fourth was habeas corpus proceeding brought originally in supreme court.

Cases arise occasionally in which unlawful intrusions made upon public lands; no authority for anyone in zone to submit title of U. S. to judicial ascertainment. If land be needed for canal purposes, intruders ordered to leave; on failure to do so are ejected by police. When lands intruded upon not needed for construction purposes, appeal taken to courts to evict occupants. On this theory several suits instituted on behalf of Isthmian Canal Commission and 225 acres of land between cemetery at Mount Hope and quartermaster's corral at Cristobal recovered for U. S. and Panama R. R. Several disputed land claims pending which might be adjusted amicably if commission were authorized by Congress to agree upon boundary lines with claimants.

Several small tracts acquired from private persons by deed, and claims will not be submitted to joint commission for adjustment. Amount aggregated 979 hectares and consideration \$9,318. In addition, 31 quitclaim deeds taken by Panama R. R. from squatters at Toro Point; consideration, \$5,578.

295 revocable licenses issued for 315 lots in town sites, calling for annual rental of \$2,529.09. \$1,536 obtained from monthly licenses covering 27 rooms in houses belonging to Isthmian Canal Commission at Gorgona, and \$900 additional for rental of 1 house at same place. P-12, 62-64.

1913. In anticipation of inundation of Gatun Lake area, number of towns along line of old Panama R. R. between Gorgona and Gatun cleared of population; as result, administrative district of Gorgona abolished and its territory added to district of Empire for judicial, administrative, and political purposes, by Executive order Sept. 2, 1912. Order also abolished office of senior district judge and reduced number of district judges to 3.

Panama Canal act Aug. 24, 1912, authorized President to declare all land and land under water within zone necessary for construction, maintenance, operation, sanitation, and protection of Panama Canal. Executive order

issued Dec. 5, 1912, directed all land and land under water within limits of zone be taken possession of and to extinguish, by agreement when practicable, all claims and titles of adverse claimants to occupancy. Negotiations pending between U. S. and Panama for exchange of lands known as Las Sabanas, lying contiguous to Panama, in zone, for certain harbor areas in Colon; Executive order Feb. 18, 1913, issued, modifying provisions of order of Dec. 5, 1912, exempting privately owned lands in territory under negotiation from being acquired by U. S. Mar. 19, 1913, order issued protecting from wanton killing or injury birds of zone. Order Mar. 20, 1913, amending order Feb. 5, 1912, collector of revenues authorized to administer upon estates which consisted of personal property only, regardless of value of estates, maximum value previously fixed being \$1,000. Under existing law, estates of deceased or insane employees of Isthmian Canal Commission, zone government, and Panama R. R. administered by collector of revenues free of cost. Actions of collector subject to supervision and approval of Circuit Court of First Judicial Circuit of zone.

Complaints that agents of foreign corporations whose financial condition doubtful doing business in zone. Order issued Mar. 20, 1913, requiring foreign corporations or joint-stock companies to file articles of incorporation with collector of revenues for zone, together with information to enable collector of revenues to base conclusion as to solvency of concern. In addition, foreign corporations required to file authorization with collector of revenues to represent them in all suits and legal proceedings in zone, and to pay annual tax of \$50. Order has had effect in keeping out undesirable concerns.

Apr. 15, 1913, maritime quarantine regulations for zone and harbors of Panama and Colon in Republic established by order, to take effect upon the date on which Panama Canal is officially and formally opened by President of U. S. Regulations promulgated in advance that shipping interests and public may have information in regard to quarantine requirements of canal and zone.

Prosecution of criminal cases conducted by assistant prosecuting attorney; 621 cases disposed of in 3 circuits; 449 convicted, 111 acquitted, charges against 54 dismissed, and in 7 cases defendants fugitives. One disbarment proceeding brought in supreme court against attorney of zone, and defendant disbarred.

\$27,806.50 paid by Isthmian Canal Commission in settlement of claims presented by squatters and occupants of lands. Several tracts acquired from private persons. Quitclaim deeds obtained for U. S. for holdings at Santa Isabel, El Encanto, Victoriano, and Paja. Mar. 31, 1913, all unexpired Isthmian Canal Commission leases for building lots and agri-

cultural property terminated; on that date there were 174 leases, covering 99 hectares of agricultural land and 108 building lots, which would have remained in force until June 30, 1913, had it not been for cancellation.

312 revocable licenses, covering 347 building lots, in force June 30, 1913, calling for annual rental of \$2,816.96. P-13, 65-67.

Legal Department.

Department created by act 8, Isthmian Canal Commission. Charged with all litigation before courts of special tribunals of the zone, and advises the governor and the commission respecting questions of law arising in the administration. Presents the interests of the U. S. in the courts of Panama. Charged with the duty of negotiating for the purchase of real estate; only 3 cases of latter kind had to be settled on an expropriation basis. Many cases of damages caused by municipal engineers and the department of health settled; one unsatisfied

claim led to examination of all titles on the Isthmus, with the result that it developed all the land belongs either to the U. S. or to Panama R. R. Aug. 16, 1904, penal code enacted and put in force; natives adapted themselves instantly. Zone considered practically free of crime. Gambling suppressed. Immediate trials, avoiding expense and delay. **P-06, 41.**

Sites of, compression tests, **P-07**, 125.

Locks and Dams, Operation. (See Locks and Lock Gates, below.)

1906. After determination of canal-level policy, Isthmian Canal Commission No. 3 fixed definitely location on the Atlantic side of 3 sets of locks and a great dam at Gatun, and on the Pacific side of 1 set of locks at Pedro Miguel and 2 sets at La Boca and 2 dams in the vicinity of La Boca, a large one between Sosa Hill and Corozal and a smaller one between Sosa Hill and San Juan Hill, **P-06**, 14.

1907. Department of construction embraces Gatun Locks and Dam, locks and dam at Pedro Miguel, and locks and dam at La Boca; meteorology and river hydraulics. Project embraces 3 flights at Gatun, 2 at La Boca, and 1 lift at Pedro Miguel. Locks in pairs. Usable lengths, 1,000'; widths, 100'. Previous borings have been criticised; 5 test pits each 6' by 8' sunk to depths of the lock walls at Gatun, 2 at Pedro Miguel, and 1 at the spillway in Gatun Dam. Satisfactory rock at La Boca. Board of Consulting Engineers (Alfred Noble, F. P. Stearns, and John R. Freeman) examined borings, and reported, May 2, 1907: "We found that all of the locks of the dimensions now proposed will rest upon rock of such a character that should furnish a safe and stable foundation." Subsequent borings made to plat contours of the rock surface, with a view to economical adjustment of locks to sites. Studies begun of locks, gates, and sluices. Method of filling and emptying the locks, and the number and type of gates, decided. Gates in duplicate; miter type, but rolling gate of Ohio River type to be substituted for duplicate set at lower end of each summit lock. Auxiliary pair of gates at the lower end of each flight to be used as cofferdams in emergency. Tentatively determined to adopt swing bridge dam for emergency. Designs of locks and gates under way. **P-07**, 5.

Gatun Locks and Dams: Excavation of lock site begun Sept., 1906; 4 shovels working Mar., 1907; total of 484,362 c. y., p. m., earth and rock removed. 573 acres of site of dam cleared of timber; pile trestle built for rock depositing. Contracts made for two 20" pipe-line suction dredges. Cross section of dam slightly changed. Excavation of spill-

way begun Apr., 1907; 1 steam shovel at work; 3,832 c. y., p. m., removed and dumped in near vicinity. Topographical survey made of basin of lake to 100' contour; area of lake found to be 164.23 sq. m. No stone for concrete in immediate vicinity; quarry opened at Porto Bello; contracts made for rock-crushing plant, and for barges for conveying product to Gatun. **P-07, 6.**

Pedro Miguel Locks and Dam: Test pits made; 162,094 c. y., p. m., removed from lock site, considered as part of work on Culebra Cut. **P-07, 6.**

La Boca Locks and Dams: Preparatory work arrangements made for diversion channel; Borings along the lines of the two dams, La Boca-San Juan and Sosa-Corozal. **P-07, 6.**

Meteorology: Three stations operating, at Naos Island, Ancon, and Bas Obispo. Fourth begun at Cristobal. **P-07, 7.**

River hydraulics: Object of this division the collection of data necessary to predict freshets in time to take measures for preservation of property. Also for determining amount of water to be relied on for supplying lakes to exist upon completion of canal. Rain gauge and fluviograph observations at Alhajuela, Gamboa, and Bohio. Gaugings at Trinidad and Gatuncillo started. Arrangements made for discharge measurements of several channels at Gatun. **P-07, 7.**

1908. Limits: Embraces Gatun Locks and Gatun Dam divisions, the Pacific division of locks and dams, and the division of meteorology and river hydraulics.

Locks: Locks in pairs. Dimensions increased to make locks 110' wide, usable length 1,000', in response to ideas of General Board of the Navy; modification approved by the President Jan. 15, 1908. Designs for locks in preparation.

Dams: Steps taken to build Sosa-Corozal Dam; trestles failed; examination of foundation area revealed unctuous blue clay instead of the stiff clay reported by the Board of Consulting Engineers, 1906. Careful examination of canal route made from Pedro Miguel to Pacific by wash and diamond drill borings and test pits to ascertain if a more suitable place for the locks and dams, originally proposed for La Boca and Pedro Miguel, could be found. One lock at Pedro Miguel and two at Miraflores recommended (dams of lower height, less length, resting on rock could be more easily constructed, and works would be under better geographical protection in war); change approved by the President Dec. 19, 1907. **P-08, 8, 9.**

Gatun Locks; borings: Disclosed presence of ground water, under pressure; small. "There is no question that the various materials will bear the greatest loads that will be transmitted to them by the lock walls, if provision is made to prevent the underground flow of water through the softer materials on which part of the walls will

rest." Curtain walls to be built to prevent access of the ground water to the foundations. (See special report of C. M. Saville, assistant engineer, on Gatun Dam investigations, **P-08, 127-196.**)

Lock excavation: Nine shovels on work. Nearly 1,800,000 c. y. removed (190,013 c. y. being placed on the south toe of the dam).

Drainage: By gravity; pumping plant being installed.

Stone for concrete: To be procured from Porto Bello, and preparatory work being done there.

Sand for concrete: As the result of searches, etc., deposits in vicinity of Nombre de Dios selected. **P-08, 9, 10.**

Gatun Dam; foundation investigations: Test pits dug and borings made. Examination of spillway reveals rock of sufficient strength to bear safely any of the loads to be placed upon it; what underground flow there is to be cut off by means of curtain walls. Studies show top layer of dam site to be fine sand with a large proportion of clay intermixed, for about 80'; next comes, for about 100', a thick marine deposit of blue clay (impervious material); under this and directly overlying the rock is a deposit, up to 20' thick, of small boulders and gravel consolidated. What seepage occurs is in top stratum; proposed to cut it off by sheet piling projecting up into the core of the dam and down into the impervious layer. "The material encountered is of such character as to be amply strong for supporting the proposed structure." Materials for dam construction can be procured readily from vicinity, and sufficiently. **P-08, 11.**

Experimental dams: Two built with dimensions on a scale of 1" to 1'. Tests for seepage, etc., showed not only the suitability of the available material, but also that a stable and water-tight dam could be built by hydraulic methods. (See report of Assistant Engineer C. M. Saville. Appendix E. **P-08, 127-196.**)

Operations: 918,920 c. y. removed from spillway (this channel 300' wide with a flare to 500' on the upstream side, and it was decided to maintain the elevation of its bottom at the south end at 10' above sea level, so as to preserve as thick a layer as possible of argillaceous sandstone over the conglomerate). The fill at the south toe was extended across the French canal; in this toe 36,669 c. y. of Bas Obispo rock were placed, and 329,257 c. y. from the spillway and the lock site. Trestle built along a portion of the north toe of the dam; 2 lines of sheet piling driven across Chagres River to form cofferdams prior to pumping area dry. Old village of Gatun moved. **P-08, 11, 12.**

Pedro Miguel Lock and Dam; operations: Culebra division excavated the lock site down to reference 40, removing 1,071,696 c. y. (included in total yardage of Culebra division). Locks and dams division began work June, 1908, installing 1 shovel, and

constructing trackage. 7,493 c. y. moved from lock site.

Lock and dam plans: Lock to be connected to the rock portion of an adjacent hill by prolonging the east wing wall. West dam will be of earth, and will be 1,400' long; top elevation to be 107, and width 40' with side slopes of 4 on 1. Width will be increased, as it will form a convenient dump for the Culebra division. Maximum pressure will be due to a head of 40'. **P-08, 12.**

Miraflores Locks and Dams; lock foundations: Tests show foundations of ample strength; hard limestone at upper part of site, sandstone at lower end; no variation in formation like those at Gatun.

Lock construction: Site cleared; 2 steam shovels installed Jan., 1908; additions thereafter. Total of 8 shovels assigned to division. 341,786 c. y. removed, nearly 300,000 c. y. being from prism of the locks. Excavated material deposited on either side to be used as foundations for the erecting plant. Pit drained.

Dam foundations: Good.

Dams: Concrete dam from locks to Miraflores Hill, to be 750' long. West dam to be of earth, 2,300' long.

Diversions: Cocoli River diversion under way; channel being cut through the hills 1½ miles west of the lock site, a dam required to force stream through this diversion; 73,592 c. y. being removed.

Concrete material: Sosa Hill quarry selected. Sand located at Chame (about 20 miles west of La Boca), in large quantities. **P-08, 12, 13.**

River hydraulics: Work of previous year continued. Flood-warning station established at Vigia.

Meteorology: 3 first-class and 3 second-class meteorological and 13 rainfall stations established. Fog observations begun. Tidal measurement work transferred to this division. Seismograph station under way. **P-08, 13.**

1909-1913. (See Atlantic and Pacific divisions, and Fifth division.)

1914. Gatun Locks: As noted in last report, concrete of locks assigned to Atlantic division finished June 14, 1913, with exception of lamp-post bases, bases for snubbing buttons and mooring posts, stairway parapets, and closing of openings left for construction purposes. During year 525 c. y. concrete laid in locks structure; in construction of control house, 94 c. y., and 9,785 c. y. in connection with installation of machinery. Mixers ceased Aug. 16, 1913. Cableways handled 4,111 c. y. concrete and were utilized for transfer of material across locks after removal of bridges used by contractors in erection of gates. Amount of concrete laid in Gatun Locks, exclusive of construction of control house, from beginning of work to close of fiscal year, 2,067,731 c. y. at an aver-

age cost of \$7.2122 per c. y. No rock or sand handled by unloading cableways during year, but they were used for transferring material from stock piles to tunnel hoppers and for unloading coal for use on west side of locks. Back filling of side walls continued until Dec. 19, 1913. Amount placed during year, 91,576 c. y. Total material used for back fill to June 30, 1914, 2,119,406 c. y. placed behind side walls, and total of 113,163 c. y. placed in center wall. Tegms and scrapers, locomotive cranes, and hand labor used to bring back fill to final grade. Concrete paving of slope between locks and Panama R. R. completed. Lamp-posts, snubbing buttons, and mooring posts completed. Construction of control house, begun Apr., 1913, continued by forces of Atlantic division until Oct. 15, 1913, when it was taken over by first division with other unfinished work in Atlantic division. Completed by close of fiscal year, with exception of door and window frames.

Gatun Spillway: Completing fill of openings of valves in body of dam, raising piers to full height, setting valves, and completing bridge. Structure finally finished Oct., 1913. 7,047 c. y. concrete laid, inaking total concrete placed in structure 231,179 c. y., at an average cost of \$7.5273 per c. y. Steps on either side and back fill in connection with them completed by May, 1914.

Gatun Dam: Placing material on portions east and west of spillway to bring dam to full height, bringing slopes generally to final grade, completing fill around and over core wall connecting dam with locks, paving upstream slope, and laying such permanent tracks as advisable to maintain order to make quick repairs in case of necessity. Two steam shovels at work until Mar., 1914, borrowing material from north of dam, and in grading and completion of fill; 314,160 c. y. handled. Paving upstream slope, as outlined in last report, completed Aug., 1913, and 9,860 c. y. large riprap rock from Sosa Hill and from excavation for dry dock at Balboa used. Total large and crushed rock used for paving, 94,330 c. y. Permanent tracks 5,780' in length laid. Observations for settlement continued. Seepage from dam negligible. At close of rainy season two small streams found issuing from north toe in west portion of dam, but with advance of dry season these ceased. No seepage of any kind apparent in east portion of dam.

Pedro Miguel Locks: Masonry construction carried on at these locks consisted of lamp-post bases, bases for snubbing buttons and posts, stairway wells, and the control house. Concrete laid in lock structure, 1,087 c. y.; in construction of control house, 592 c. y.; and 10,961 c. y. in connection with installation of machinery. As machinery and wiring not all installed, additional concrete required. Total concrete laid at Pedro Miguel Locks, from beginning of work to close of

year, 928,326 c. y., and the cost was \$5.6575 per c. y. Work on control house begun May, 1913; completed by close of year, with exception of doors, windows, and plumbing. Back filling of side walls completed Mar., 1914, and filling of center wall Feb., 1914. During year 27,750 c. y. placed behind side walls and 5,619 c. y. in center wall. Total material used for back fill to June 30, 1914, 834,288 c. y. placed behind side walls, at a cost of \$0.4131 per c. y., and 220,768 c. y. placed in center wall, at cost of \$0.4777 per c. y.

Miraflores Locks: At close of previous year concrete of locks proper completed, except lamp-post bases, bases for snubbing buttons and mooring posts, parapets around the stairways, and nosing at end of south-approach pier. During year 2,844 c. y. concrete laid in locks structure; in construction of control house, 949 c. y.; and 18,241 c. y. in connection with installation of machinery. Additional concrete remained to be placed, as installation of machinery and wiring not completed. Building lamp-post bases on southeast wing wall interrupted by necessity of transferring sand operations to Miraflores. Concrete laid in Miraflores Locks from beginning of work to close of year was 1,507,794 c. y. at cost of \$5.1695 per c. y. Total concrete laid in Pacific Locks at close of year, 2,436,120 c. y., at cost of \$5.3555 per c. y. Back filling lock walls at Miraflores continued. Back filling of side walls completed May, 1914, and filling of center wall Mar., 1914. During year 360,198 c. y. placed behind side walls and 92,244 c. y. in center wall. Total back fill to June 30, 1914, 2,366,252 c. y. placed behind side walls, at cost of \$0.3855 per c. y., and 249,457 c. y. placed in center wall at cost of \$0.5846 per c. y.

Miraflores Dam and Spillway: During year total concrete laid in spillway 10,112 c. y., of which 9,570 c. y. were plain concrete and 542 c. y. reinforced concrete. Total concrete laid in spillway to June 30, 1914, 74,254 c. y., at cost of \$6.2160 per c. y. Last concrete laid Feb., 1914. Dry filling on west dam completed Feb., 1914. During year 98,424 c. y. placed in this dam. Total dry fill placed in dam since beginning of work, 1,758,423 c. y., at cost of \$0.4582 per c. y. Design, construction, and inspection of lock gates, chain fenders, emergency dams, operating machinery, and electrical installations continued in charge of Col. H. F. Hodges, U. S. Army, as assistant chief engineer until Apr. 1, 1914, and subsequently as engineer of maintenance.

Lock gates: Construction and erection of gates under contract continued and completed in accordance with supplemental agreement of Jan. 14, 1913. At Gatun all gates for west flight completed Sept. 24, 1913; all gates for east flight Dec. 30, 1913. At Pedro Miguel all gates for east lock completed Sept. 30, 1913, and for west lock Dec. 30, 1913. At

Miraflores gates for west flight completed Sept. 30, 1913, and for east flight Jan. 10, 1914. All gates completed within time specified in supplemental contract, time at Miraflores being anticipated by about 2 months. Original contract provided that contractor should paint gates with 2 coats of red lead, at his expense, and with third coat of some other pigment to be furnished by the Isthmian Canal Commission, applied to gates at contractor's cost. Agreement modified and at Gatun arrangement made for additional coat, making 2 of red lead and 2 others, instead of 1. Additional coats consisted, 1 of U. S. Navy anticorrosive and 1 of antifouling paint, and applied to those parts of gates in lower locks constantly under water. On remaining gates at Gatun 2 coats of equal parts of graphite and red lead applied. Intended that no red lead should be used at Pedro Miguel except for upper guard gates, protection to consist of 3 coats of damp-proof paint. At Miraflores gates in lower lock from elevation -6 to bottom to be given 2 coats of red lead, followed by 1 coat of anticorrosive and 1 coat of antifouling paint. All other gates to be given 3 coats of proprietary paint consisting of a hydrocarbon mixture. On account of delay in receipt of damp-proof paints intended for use on Pedro Miguel gates, some of these painted with hydrocarbon paint from Miraflores and, conversely, a few of Miraflores gates painted with damp-proof paint. In all of these cases the third and fourth coats were applied by Isthmian Canal Commission forces. Due to impurities in water of Gatun Lake, none of paints, except bitumastic, which was applied directly to metal on small sections of several of the gates at Gatun, has proved satisfactory, and paint on those parts constantly under water in very poor condition. Action of gates in service entirely satisfactory; leakage at quoin and miter posts small. Cost of gates complete, \$8,471,806.99, of which \$5,632,942.33 paid under contract, and balance of \$388,864.41 for inspection, painting, recess covers, fixed steel, special tracks, and services furnished the contractor.

Gate machines: All parts for mechanical and electrical installation of machines for operating miter gates emplaced. Forty machines required at Gatun completed Feb. 28, 1914, 24 machines at Pedro Miguel on Mar. 28, 1914, and 28 machines at Miraflores on May 28, 1914. Tests conducted to determine conditions under which most satisfactory operation might be obtained, and results show advisability of reducing duty of motor by starting one gate ahead of the other by interval of 20 seconds. Benefit derived, with only 1 gate operating; when gates are near mitering position entire area of chamber is available for storage of water displaced. Cost of miter gate moving machines complete, \$822,410.03, of which \$704,744.78 ex-

pended under the contract, and balance for installation.

Miter gate forcing machines: With the material of miter gate forcing machines on hand, erection progressed with completion of the gates. Twenty machines required at Gatun completed Feb. 14, 1914; 12 at Pedro Miguel completed Mar. 27, 1914; and 14 at Miraflores, Mar. 26, 1914. No special tests conducted. Total cost of machines, \$57,200.16; of which \$40,225.88 expended under contract and balance for installation. Machinery for operating handrails on gates installed complete; 36 machines at Gatun, 20 at Pedro Miguel, and 24 at Miraflores. Operation satisfactory. Total expended, \$29,652.32, of which \$17,078.58 under the contract and balance for installation. Installation of pumps for unwatering gates completed; 40 pumps at Gatun, 24 at Pedro Miguel, and 28 at Miraflores. Total expended, \$28,516.31, of which \$18,979.98 paid out under contract. Installation of electrical appliances for operating various gate machines completed. Total expended, \$207,653.42; of which \$132,326 paid out under contract.

Rising stem valves: Placing of valves, stems, roller trains, and crossheads remaining to be done at close of last year completed, and 116 machines required for operation erected and electrical installation completed. Of the machines placed during year, 5 were at Gatun and 28 at Miraflores; making total of 56 at Gatun, 24 at Pedro Miguel, and 36 at Miraflores. Mechanical and electrical work in connection with installation completed at Gatun Feb. 12, 1914; at Pedro Miguel on Mar. 30, 1914; and at Miraflores on Mar. 30, 1914.

Guard valves: At end of year all guard valves and machines erected in place at all locks except Miraflores. Six at Gatun completed Apr. 25, 1914; 6 at Pedro Miguel June 29, 1914; and those at Miraflores were 62 per cent completed. Tests made of guard valves showed machines would not operate satisfactorily as originally designed; changes necessary. Amount expended on rising stem and guard valves and their machines to close of year, \$1,508,735.59, of which \$1,127,725.38 paid under contract.

Auxiliary culvert valves: Mechanical and electrical work in connection with installation of these completed; 4 machines installed at Gatun and completed on Mar. 10, 1914; 4 at Pedro Miguel completed Mar. 5, 1914; and 4 at Miraflores completed Mar. 31, 1914. Cost in place, \$22,805.80, of which \$16,062.84 paid under contract.

Cylindrical-valve machines: Setting of all cylindrical valves completed during previous year and 41.6 per cent of electrical work finished. Total cost for machines, \$228,222.04, of which \$161,290.79 in payment of contracts for furnishing material. Remaining electrical work completed on 60 at Gatun, Mar. 30, 1914; on 20 at Pedro Miguel, Jan. 27, 1914; and on 40 at Miraflores, Feb. 27, 1914.

Chain-fender machines: After tests completed on 2 sample chain-fender machines, arrangements made to order balance. Of 16 at Gatun, mechanical work on 14 completed, with exception of chains; of 16 at Pedro Miguel, mechanical work on 7 completed, with exception of chains; and at Miraflores, of 16, mechanical work on 1 completed, with exception of chains. Work in progress on all the units, with exception of 4 lower ones at Miraflores. Electrical work progressed with mechanical work. Manufacture of chain for fenders progressed rather slowly, but orders placed for all chains required with one exception, before close of year. Total expended thus far, \$830,726.89; of which \$661,140.30 for payments under contract for delivery of the material, and \$169,586.59 for erection. Cost of inspecting lock-operating machinery to June 30, 1914, \$167,926.06.

Spillway gates: Gates placed by construction divisions in connection with building spillway dams. Mechanical equipment and electrical installation completed on 14 machines at Gatun, Dec. 13, 1913. At Miraflores mechanical work completed on 8 machines on Oct. 13, 1913, and electrical work on June 5, 1914. Gates at Gatun have all been operated satisfactorily under full head, controlled from switchboard in hydroelectric station. Tests of Miraflores gates indicated defects in mechanical work, necessitating overhauling and correction. Changes not completed at close of year. Total expended, \$337,529.11, of which \$236,045.26 under contract.

Towing-track material: All towing-track material purchased under original contract delivered previous to June 30, 1913. Tests with locomotives brought out fact that it was necessary to provide additional rack sections at top and bottom of inclines at locks, and 606 linear feet of additional rack sections made at Balboa shops. At Gatun Locks 1,182 linear feet of rack section laid, 3,438 linear feet concreted in, and total of 4,082 linear feet completed; making total completed to date 22,185 linear feet. At Pedro Miguel Locks 1,518 linear feet of track laid, 3,901 linear feet concreted in; making total of 13,696 linear feet completed to date. At Miraflores Locks 4,007 linear feet laid, 8,160 linear feet concreted in; making 9,104 linear feet completed during year, or total to date of 18,144 linear feet. Of total to be completed, 54,365 linear feet, 99.3 per cent completed at close of year. Conductor-slot material, consisting of steel and copper conductor rails, insulators, brackets, and cover plates, laid, and during year 12,485 linear feet completed, or complete total to date at Gatun Locks of 45,084 linear feet; at Pedro Miguel 21,760 linear feet during year, or total to date of 36,292 linear feet; and at Miraflores 22,232 linear feet during year, or total to date of 28,162 linear feet. For the conductors copper tee rails used for all towing tracks,

inclines, and crossovers, steel conductors being used on return track. Installation of single and double crossovers and turnouts completed during year at all locks. Total cost of all towing-track material installed, \$1,182,044.06, of which \$767,173.93 expended under original contract.

Towing locomotives: As noted in last report, contract entered into with General Electric Co. for furnishing 40 towing locomotives of their design and manufacture, first locomotive to be delivered by Jan. 15, 1914, and 4 locomotives each month thereafter. Twenty-one locomotives delivered and in operation. Total cost under contract, \$527,015; \$301,859.21 expended on contract and \$22,329.40 for erection and alterations. Tests made by actual service not sufficient to warrant announcement they are satisfactory.

Illumination of locks: Exterior lighting of locks described in previous report. Exterior lighting circuits all locks completed except for 5 posts at Miraflores, where erection of posts delayed by sand operations transferred to this point from Balboa to allow for construction of terminal docks. Installed at Gatun 206 standards, 116 single arm and 90 double arm; at Pedro Miguel, 130 standards, 80 single arm and 50 double arm; at Miraflores, 163 standards, 96 single arm and 67 double arm. Suitable sockets, with lights, installed for illuminating operating tunnels and valve wells. Total expended to June 30, 1914, on electrical lighting equipment of locks, \$126,234.52.

Remote control: General Electric Co. awarded contract for furnishing lock-control switchboards for Gatun, Pedro Miguel, and Miraflores Locks. Original specifications of Isthmian Canal Commission departed from as to general construction of board and also with regard to method of accomplishing required interlocking of control switches. Detail design of board left entirely to contractor, work being subject to approval of Isthmian Canal Commission's inspector in U. S. Switchboards located on second floor of control houses and interlocking racks on mezzanine floor. Boards designed to represent locks in miniature, all machines being represented by individual control switches, and wherever important for operator to know exact position of machines being controlled, indicators provided which operate in synchronism with machines in lock wall tunnels. With exception of cylindrical valve, auxiliary culvert valve, and miter forcing machines, operator provided with definite information with regard to exact position of valve or machine being operated by means of synchronous indicators electrically connected with transmitting devices mechanically connected with large machines in lock tunnels. Operation of cylindrical valve, auxiliary culvert valve, and miter forcing devices indicated by use of red and green lamps on control board. Arrange-

ment also made on switchboard by which water levels in lock chambers indicated. Control board completed at Gatun May 9, 1914; at Pedro Miguel June 26, 1914; and at Miraflores June 25, 1914. Switchboards of all locks satisfactorily used for remote control. Total cost of lock-control switchboards, \$108,079.50, of which \$73,693.33 paid under contract.

Hydroelectric plant: Erection of hydroelectric station continued under Atlantic division until Sept. 8, 1913, when work transferred to building division of quartermaster's department. With exception of doors and some carpenter work, building completed at close of year. Installation of equipment continued; turned over to operating force June 18, 1914; plant took over load from Gatun steam plant July 13, 1914. Expended on installation of machinery, \$300,355.60. In connection with power-transmission system, underground duct lines constructed from hydroelectric power house at Gatun to locks and to transformer substation at the point, and from Miraflores transformer substation to Pedro Miguel and Miraflores Locks. As noted in previous report, decided to install for transmission line overhead system of 44,000 volts, extending from Balboa to Cristobal, and connecting existing Miraflores steam-power station with Gatun hydroelectric station, that they may be operated separately or in parallel. Four substations provided, located at Cristobal, Gatun, Miraflores, and Balboa. Excavation for Gatun substation begun Nov. 26, 1913, and steelwork, furnished and erected under contract, completed Feb. 19, 1914. Installation of electrical equipment of building governed by progress made in building construction, and at close of year 37 per cent completed. Total expended on building \$145,717.92 and on installation of machinery \$40,818.11. Cristobal substation installed for purpose of furnishing power required by coal-handling plant, Mount Hope pumping plant, and miscellaneous requirements in vicinity of Cristobal. Excavation for this structure begun Mar. 4, 1914, and erection of steelwork under contract completed May 6, 1914. Amount expended on building \$111,858.01 and on electrical installation \$8,557.96. Miraflores substation being installed for purpose of caring for power requirements of Miraflores and Pedro Miguel Locks, and also for purpose of serving as step-up transformer station for Miraflores steam plant. Foundation work commenced Oct. 29, 1913, and steelwork under contract completed Mar. 9, 1914. Electrical equipment 22 per cent completed. Amount expended thus far, \$155,532.20, of which \$103,509.04 for building construction and \$52,023.16 for electrical installation. Balboa substation, located for purpose of supplying power to Balboa shops, air-compressor plant, dry-dock pumping plant, coal-handling plant, and Ancon pumping

plant, as well as other local purposes. Work begun on this substation Apr. 27, 1914, and steelwork erected under contract completed June 27, 1914. Four per cent of electrical equipment installed. Total expended thus far, \$49,173.84, of which \$45,565.12 for building construction and \$3,608.72 for electrical installation. To supply power to power house of Darien wireless station, being constructed by Isthmian Canal Commission for Navy Department, arrangements made to install small substation of 400-kilowatt capacity, tapping transmission line and stepping voltage down to 440 volts. Change in location of pumping plant from Miraflores to Gamboa necessitated installation of substation at this location. To supply necessary power in connection with pumping plant arrangements made for installation of two 500-kilowatt power transformers and necessary equipment for stepping 44,000-volt transmission line pressure down to 2,200 volts.

High-power transmission line: Under contract of Mar. 31, 1913, 794 double-track span bridges and 20 single-track span bridges to be delivered on Isthmus. All erected with exception of 5 special towers, required at Cristobal and Balboa terminals and 1 bridge at Cristobal. Purchased and received for transmission line, 1,562,208' of 2/0 Brown & Sharpe gauge stranded copper and 512,065' of five-sixteenths inch copper-clad wire. At close of year 1,408,443' of 2/0 conductor cable erected. Total expended on transmission line, \$1,014,333.29, of which \$701,222.62 covered by contracts.

Cables: Total cable on order, received and installed to end of year, 2,659,403', of which 1,531,528' lead sheathed and 1,127,875' rubber covered, double-braid wire and cable. At close of year 1,462,684' lead-covered cable pulled into ducts and 911,816' rubber-covered used for conductor-slot feeds, control connections, etc.

Telephone system: Elaborate system of telephone communication designed for operation of locks and contract awarded for complete equipment. To consist of 3 subdivisions: First, for control of vessels passing through locks; second, upkeep and maintenance work in lock tunnels; and third, local public service.

Emergency dams: Dams at Gatun completed before close of last fiscal year, but final acceptance tests not finished. Two dams at Gatun accepted and dams at Pedro Miguel and Miraflores finished and accepted, the first at Pedro Miguel Sept. 16, 1913, and second Oct. 17, 1913; at Miraflores the first completed and accepted Jan. 14, 1914, and second Feb. 7, 1914. Test made at Gatun May, 1914; dam swung, girders and gates lowered, and pipes driven to close spaces between ends of gates. Upper lock then filled to lake level, upper guard gates and upper operating gates opened, and inter-

mediate and lower gates of lock closed. Upper lock emptied through culverts until water level was below guard-gate sill. This brought full head of 47½' on emergency dam; leakage, 950 cubic feet per second; no dangerous current in lock; would have been easy to close any of lower gates in face of stream. Another purpose of test to determine whether dam could be used in lieu of caisson for unwatering locks to permit access to gates for painting, but leakage too great. Experiments being made to devise means of stopping flow. Total expended for emergency dams, \$2,206,984.67, of which \$1,958,329.90 covered by contract for delivery of material and its erection.

Floating caissons: Description of caissons for closing entrance to locks, including pumping plant for unwatering lock chambers, given in last report. Bids invited May 21, 1913; 2 bidders, the lowest bidder offering to construct 2 caissons and deliver them at Balboa for \$648,300; price for 1, \$330,760. Contract entered into for 1 caisson Aug. 22, 1913.

Pontoon bridge: To maintain communication across canal with west side, finally decided to construct pontoon bridge at Paraiso for Panama R. R. Constructed at expense of Panama R. R. Co., but design and construction undertaken by Isthmian Canal Commission. Approaches and abutments built under direction of A. S. Zinn, resident engineer; pontoon and superstructure by dredging division under W. G. Comber; track work by Panama R. R. Co.; and operating machinery by first division, O. C. E. Bridge revolves about pivot at one point, similar to pontoon bridges successfully operated for many years on upper Mississippi. Pontoon is 378' long over all, 55' wide, and 6' 3" deep at center line. Base of rail 33' above bottom of barge, or 30' above water level. Apron girders 64' long, resting on hinged supports at both ends, and consist of spare lock gate parts. Arrangement is made at each end of girder for automatically providing for variation of 6' in water level. When bridge is turned, girders lifted clear of concrete piers by electrically driven mechanism and temporarily supported by blocking on ends of barge. Bridge revolved by means of 1" anchor chain fastened at each bank, which passes around electrically driven wildcat on deck of pontoon. Mechanism for lifting apron girders, turning bridge, and operating rail lift, rail latches, and main latch at pier, operated from central panel. Total cost, \$218,331.78.

Operation of locks: Lockages during year gave opportunity to try out locks and machinery. First one at Gatun, Sept. 26, 1913, when tug "Gatun" put through, followed on Oct. 14, 1913, when part of dredging equipment locked through Pacific Locks to lake level. From these dates craft belonging to Panama Canal passed back and forth, in addition to

tows instituted for handling freight from Balboa terminals to Colon and Cristobal for Panama R. R. To try out towing locomotives, Panama R. R. steamers "Allianca" and "Ancon" locked through Gatun Locks and returned, and through courtesy of agent of W. R. Grace & Co. the "Santa Clara" locked through Pacific Locks and returned. Operation developed facts in regard to action of flowing water not anticipated. Gates of upper locks of each flight and of Pedro Miguel Locks duplicated. Upper pair called guard gates and lower pair of the upper two the lock gates. At lower end of locks the upper pair called safety gates and lower pair lock gates. Space between guard gates and lock gates regulated by auxiliary culvert, while space between safety gates and lower gates regulated by tee culvert. When water in upper lock is low and valves are open there is sudden drop of water level in forebay. More noticeable at Pedro Miguel, where canal above forebay is narrow, than at Gatun and Miraflores, where forebay opens immediately into lake. Drop faster than can be followed by water in space between guard and upper gates, and result is reverse head on guard gates, causing them to open at miter. Reverse lasts but short time. In first lockages tee culvert regulating space between lower safety gates in free communication with side wall culvert near lower end, but about lower valves. When upper valves were raised water in space between these gates rose faster than in lock; consequently there was reverse pressure on safety gates, causing them to open at miter, pressure being sufficient to compress springs in gate-manuevering struts. Due to possible danger of crippling moving apparatus by such reverse stress, valves in tee culvert partly closed, choking communication between side-wall culvert and space between gates. Experimenting, a degree of closure reached which caused water in space between culverts to lag behind water in lock when filling, and at same time to fall more rapidly when emptying. In this way positive pressure always kept against safety gates. With use of both side and center wall culverts, as rapidity with which water level in lock changes is increased, different adjustment necessary. When valves in side culvert are raised and water enters lock flow of water greater through those openings in laterals nearest middle wall than through those nearer side culvert. As water rises in greatest volume next to middle wall, results a slight slope of surface toward side wall. When both side and middle culverts used no such action noticeable. First gush of water from side culverts appears to come from highest laterals and then successively from the others. Can not be stated that discharge greatest from any one of laterals. In filling or emptying small canal lock water levels approach each other with rapidity

depending upon square root of diminishing head. Toward end of operation change in level becomes slower, and flow of water supposed to cease either just before or at equalization of levels. Frequently the gates are opened with slight head against them to avoid loss of time involved in waiting for head to vanish entirely. In filling or emptying locks of Panama Canal there is noticeable overtravel of water, so that water in chamber which is filled rises slightly higher than level in chamber from which water drawn, and gates separating chambers become subjected to reverse head. At Pedro Miguel noticed that water rises from 0.3 to 0.6 of a foot higher than water in forebay, tending to throw upper gates open. Difference in head of short duration, but very noticeable; taken as indication of instant when apparatus for opening gates should be put in motion. This acts as safety device to motors which operate gates. In report of Isthmian Canal Commission for 1911 is described method used for overcoming differences in pressure on lower gates at lower lock, Miraflores and Gatun, due to difference in density of water above and below gates, in consequence of which culverts were turned up at outer end to reduce pressure to manageable quantity. Possible that overtravel of water from the emptying lock into tailbay may result in continuing flow of fresh water through culvert beyond point at which in theory it should cease; therefore, in obviating danger of resultant pressure. No trouble experienced from resulting pressure against lower gates. Difference in density of water above and below gates is noticeable in another way. When lower gates are opened fresh water rushes out with considerable velocity on surface of salt water below, and there is corresponding rush of salt water along lower strata. This current continues for considerable time and has noticeable effect on vessels leaving lock, sheering them away from middle wall as soon as they pass angle of side wall. Slope given to water in lock by use of side culverts already been noted. Same effect noted during filling of lowest lock with fresh water when lower gates have been left open long enough to insure salt water filling lock. Slope is from middle wall so that ship moves to side wall and towing locomotives unable to hold large vessel central in lower lock during entire process of filling when side culvert only used. As noted in previous reports, in formula for filling and emptying locks coefficient of flow C , used to determine real velocity, assumed at 0.65, this being slightly more favorable than experience at other locks has shown to be readily obtainable, but nature of design and construction warranted assumption. From experiments made at Pedro Miguel when lake level was at reference 84.8 and water in lock at reference 50.9, value of C for side culvert, with both

valves open, determined to be 0.886, much more favorable than anticipated. Similar observations, using only one valve, made both at Pedro Miguel and upper lock at Gatun as check, and value of C found to be 1.177 and 1.272 at two locations, respectively. Value of coefficient for emptying lock at Pedro Miguel somewhat less favorable than for filling coefficient C for side culvert being found to be 0.804 when both valves used. At Gatun and Miraflores, where culvert turned up at discharge, coefficient of flow for emptying lower lock about 8 per cent less than through level discharge at Pedro Miguel. When middle wall culvert used in combination with side culvert time of operation greatly reduced. Pedro Miguel Lock can be filled or emptied in about 8 minutes without causing too great a disturbance in the chamber. Observations not yet made with middle culverts at Gatun and Miraflores. **P-14**, 6-21.

Locks and Lock Gates. (See above.)

1899. Study of locks for Nicaragua and Panama routes. By S. H. Woodward. Appendix A. Report of Isthmian Canal Commission No. 1. **P-99**, 179-196.

General description of the methods of calculation of the stresses and stability of the walls, floors, and various other parts of the locks, and memoranda of the assumptions made, the stresses computed, the dimensions determined, and the estimates of cost of the locks designed for the two routes. Designs and computations made under the direction of the Isthmian Canal Commission No. 1 committee on locks. General drawings show the principal features of the locks; pls. 24, 25, 64, 65, 66. Twin locks were designed in all cases. Estimates made of the cost of building single-lock system, but with provision that second lock could be added later by simply building a floor and one side wall. General dimensions of locks: Clear length, 740'; clear width, 84'; depth, 35'. Total length of lock masonry to depend upon the kind, number, and arrangement of the gates, as well as upon the clear length required. Lateral dimensions of the lock walls dependent upon the height of the walls and upon local conditions.

Lock gates: Exhaustive study of steel lock gates had been made by the U. S. Board of Engineers on Deep Waterways,¹ in their investigation of the various plans for a canal from the Great Lakes to tidewater; estimates made for several hundreds of gates varying in width from 60' to 80', and lifts varying from zero to 50'. Isthmian Canal Commission No. 1 committee on locks decided to make use of these studies as a basis of estimate for isthmian lock gates. Lock masonry designed with a view to the use of the same type of gate as developed by that

board. Type of gate the steel mitring gate, with horizontal framing, straight on the downstream side and curved on the other. Rise of sill one-fifth the width of the lock; when the gate is closed the line which joins the centers of the quoin and miter posts makes an angle with the normal to the side wall, the tangent of which is 0.4. Gates sheathed on the upstream side only; where the gates are extremely heavy; they are made partially buoyant by sheathing the downstream face below the level of the lower pool. Upper and lower gates, and an intermediate gate. Intermediate gate forms a lock chamber 400' clear. Upper and lower guard gates. Formula for the weight of the lock gates. **P-99**, 180.

Special estimates made for gates between the upper and lower locks of the Bohio and Pedro Miguel flights of locks on the Panama route, the head of 84' at Bohio and 62' at Pedro Miguel being considerably greater than those for which the formula was developed.

Side walls: Masonry of all the locks rests upon a rock foundation. Figs. 1 to 12 showing sections of the side walls of all the locks of both the Panama and Nicaragua routes. Computation formulas, etc. **P-99**, 181. Table of forces, etc., **P-99**, 182.

Middle walls: Typical cross section shown by Fig. 14. Computation formulas, etc. **P-99**, 183. Diagrams, etc., **P-99**, 180-181.

Lock floors: Floors inverted arches; rock foundations; floors thicker near the gates. Computation formulas, etc. **P-99**, 188.

Miter sills: Stone arches 3' thick and of varying depth; faced with timber-bearing piece. Drawing shows sills of the lower and intermediate gates to be straight; all others curved.

Approach walls: Quay wall 1,200' long provided, for tie-up of vessels.

Culverts and valves: Contained inside walls, 2 for each lock, 12' 6" high and 6' 6" wide. Each culvert connected with the lock by 18 ports 2' high and 4.5' broad. Lining of cast iron and brick. Second set of culverts at lower end of Miraflores Lock and Lock No. 8 of the Nicaragua route; made necessary by the difference in density between fresh and salt water. Computation formulas, etc., **P-99**, 189. Culvert valves to be of Stoney sluice type; used very successfully on the Manchester and other canals, **P-99**, 190.

Time of filling and emptying locks: Table giving time for filling and emptying locks, ranging from 10 minutes 39 seconds to 16 minutes 19 seconds for the Panama route, and from 10 minutes 42 seconds to 14 minutes 56 seconds for the Nicaragua route, **P-99**, 190.

¹ Report, June, 1900. Members of board: Lt. Col. C. W. Raymond, Corps of Engineers, U. S. Army, chairman; Alfred Noble, and George Y. Wisner.

Use of water for lockage of vessels: Outline of possible conditions; computation formulas, etc., **P-99**, 191.

Leakage of locks: Amount dependent on accuracy of fitting; serious leakage might occur at culverts and gates; leakage around quoin posts can be made small; should be no leaking through gates. Computation formulas, etc. **P-99**, 192, 193.

Water for lockage: At Panama, as follows: Lockage, 411 cubic feet; leakage, 225 cubic feet; power, 200 cubic feet; total, 836 cubic feet per second. Nicaragua route: Lockage, 367 cubic feet; leakage, 215 cubic feet; power, 233 cubic feet; total, 815 cubic feet per second. **P-99**, 193.

Costs: Locks, Nicaragua route. Tables showing cost of double locks, exclusive of excavation, but embracing concrete, cut stone, steel, bronze, timber, brickwork, machinery and plant, and approach walls with their concrete and piles. Estimate for single locks, exclusive of excavation. Double locks. Single locks. **P-99**, 194-196.

1906. Lock dimensions: As a basis for all plans, the Board of Consulting Engineers voted 11 to 2 that locks should have minimum usable dimensions of 40 by 100 by 1,000', **P-06***, 3.

Lockages: Time required to pass a flight of locks at Bohio or at Gatun, on the Panama Canal. By J. W. Welcker. Appendix M. **P-06***, 403-404.

1907-1914. (See Construction and engineering; Projects; Atlantic division; Pacific division; and Locks and dams, above.)

1911. Every known precaution taken to insure safety of locks. Accidents to locks have in nearly every case resulted from misunderstood signals in engine room. To avoid possibility of accident which might render canal useless, authorities should assume charge of all vessels during transit of locks; under such conditions any damage that may

result to vessels should be assumed by the U. S., and legislation looking to this end necessary. **P-11**, 62.

Material and Supplies (operations).

1904. Query by Sec. of War Taft as to policy governing purchases of material, supplies, etc., from foreign or American sources, **P-04**, 12.

Department found necessary at once. Isthmian Canal Commission No. 2, Aug. 31, 1904, while at Isthmus, resolved there should be such a division, charged with the receipt, inspection, custody, care, shipment, transfer, issue, and disposition of all supplies, material, equipage, and floating equipment unissued and not in actual use. Governor of zone and chief engineer to have authority to decide on the suitability of supplies, etc. E. C. Tobey, paymaster, U. S. Navy, appointed chief of the department. Proposed later to extend its scope to include a commissary; in view of need for supplying satisfactory food to American employees. Board of inventory appointed to list, etc., the property taken over at transfer; work in progress. List of some of the matter, valued at 98,379,841.60 francs. Transferred material, etc., in better condition than expected. Considerable purchases made at first in open market, but usual U. S. policy of competition to be followed rapidly. **P-04**, 54.

1905. Some of the delay of work of construction due to slowness of getting material asked for months previous, **P-05**, 139.

Regulations governing purchase, delivery, etc.:

Purchases; delivery; assistant purchasing agent on the Isthmus; assistant purchasing and forwarding agents in the U. S.; custody and issue of material and supplies; requisitions made on material and supplies division; articles manufactured; scrap material; record of material and supplies; property records; storekeepers; inventories by storekeepers; requisitions for material and supplies to be purchased; inspection; board of surveys; sales. **P-05**, 159-170.

1906. Purchasing offices maintained in various places in the U. S.; circulars, also, distributed through Army offices; total of purchases, year ending June 30, 1906, \$3,743,482.05. One general storehouse established near Atlantic terminus, local storehouses supplied therefrom. **P-06**, 11.

1907. Division of material and supplies: Charged with the purchase and proper handling of all material and equipment. Marked diversity of work. All departments rely on this department for their wants. Wants anticipated by frequent purchases in the U. S., based on estimates submitted by divisions, etc. \$9,500,000 spent; 90 per cent of purchases being made in U. S. Entailed handling of 37 full cargoes, and 150 partial cargoes. Some items: 23,000,000' lumber, 254,000 cross-ties, 4,000 piles, 50,000 tons miscellaneous cargo. Most of the material received at Mount Hope storehouse. Large amount of French plant (boilers, pumps, track, cars, locomotives, cranes, etc.) repaired and placed in service. About 11,000 tons old French material scrapped to U. S. dealers. 4,000 tons used as ballast by Panama R. R. vessels going north. Storehouses located at various points. Fire damaged Mount Hope storehouse to extent of \$100,000 Apr. 1, 1907. No delay caused. Building rebuilt in 3 sections. Division charged with care and operation of corrals and equipment used in land transportation on the Isthmus. Corrals located at various points. Over 600 horses and mules, with wagons, etc., in this service. Cost (net) of teams, about \$110 per month, one-fourth cost proposed by U. S. contractor. Printing plant, caring for all work on the Isthmus, operated. Organization modified to secure better efficiency. 1,289 employees; expenditures, \$755,321.89. **P-07**, 13, 14.

1908. Duties: Charged with the purchase and handling on the Isthmus of all material needed. Charged with the care and maintenance of local transportation and the operation of the Isthmian Canal Commission print shop, and of a typewriter repair shop. Purchases: Special classes of material and supplies are purchased on requisitions by the purchasing department of the Isthmian Canal Commission in the U. S. The stock of other material is replenished as the rate

of consumption at the various storehouses along the line dictates. Local purchases on the Isthmus consist of material and supplies which are not carried in stock, and which are urgently needed—supplies for engineering parties, for subsistence department, and for hospitals.

Supply: Stock material for general use is distributed from 9 warehouses at important points.

Receipts and distributions: Received to value of \$11,607,094.63. Disbursed, \$11,685,158.33 of the latter, \$182,894.56 covers old French material utilized. Among the items issued the following are notable: 38 steam shovels, 800 cars, 10 unloaders, 10 spreaders, 6 ballast plows, 9 cranes, 8 dredges, 5 tugboats, 12 steel barges, 2 air-compressor plants, 172 rock drills, 13 rock channellers, 508,000 pounds track bolts, 1,684,000 pounds track spikes, 119,150 pounds angle bars, 470,000 tie plates, 481 15' split switches, 628 frogs, 15 oil fuel tanks, 2 launches, 4 concrete mixers, 1 road roller, 3 motor cars, 1 material-handling plant, 1 15-ton rock crusher, 4 saddle-tank locomotives, 19,254½ tons steel rails, 501,876 ties, 3 electric cranes, 18 hoisting engines, 38,985,521' lumber, 34,657 piles, 501,574 switch and cross-ties, 246,000 brick, 8,852,000 pounds dynamite, and 54,000 pounds blasting powder.

New buildings: Rebuilding of large general storehouse at Mount Hope completed; restocked. New storehouses built at various places. Four storage magazines for dynamite, etc.

Transportation: Handled at 16 corrals, for 632 animals. Isthmian Canal Commission owns 397 vehicles (wagons, carriages, ambulances, scrapers). **P-08**, 23.

Printing shop: Supplies all the stationery and printing; 14 presses in plant. Cost of printing, \$38,513.10. Stationery and engineering supplies cost \$32,758.

Employees: 1,220. Pay roll, \$665,126.07. **P-08**, 22, 23.

Meals. (See Hotels; Labor; Kitchens; Messes; Subsistence.)

Cost of, at hotels, **P-09**, 229.

Mechanical Analysis, Materials.

Gatun Dam studies, **P-08**, 144.

Mechanical Committee.

Shops, **P-11**, 231.

Mechanical Division. (See Nos. 133, 251, 265, pp. 2364, 2368 of this Index.)

1905. Repair of locomotives and rolling equipment, erection of cars, steam shovels and heavy and light repairs to almost every class of machine in the zone. Over 170,000 pounds of castings made. Some shop construction done. Nearly 300 machines installed in shops. Large list of equipment under order. Old, obsolete machinery

cleared away. All new machinery expected to be soon in operative condition. **P-05**, 113.

1906. Operations of this division begun with shop organizations at Cristobal, Bas Matachin, Empire, and Culebra. On June 30, 1906, organization consisted of 1,812 men. Principal work the repairing and enlarging of shops, building of new ones, repairing and maintaining locomotives, dump cars, and miscellaneous equipment of the old French stock until it could be replaced with more modern and American plant. Division handicapped by unsatisfactory employees. Air-compressor and pipe-line plants erected at Rio Grande, Empire, and Las Cascadas; plans made for capacity of 30,000 cubic feet per minute for air compressors throughout the cut. Installation of electric plants. Table showing nature of miscellaneous work done. "Division * * * has had to create its own plant, to repair old, practically worn-out, and dismantled equipment * * *; it has had to keep up repairs on all machinery and equipment, and it has also had to design, make specifications, receive and erect, ready for service, new and modern equipment." **P-06**, 107.

-1907-08. (See Municipal Engineering; Motive Power and Machinery.)

1909. Mechanical division (second division, O. C. E.).—Organization: Placed under the supervision of the second division of O. C. E. At the beginning of the year shops at Gorgona, Empire, and Paraiso in charge of a master mechanic having jurisdiction over the field repair shops. There was also an electrical subdivision under an electrical engineer.

Concentration of work: During the year shops at Paraiso closed; heavy work there transferred to Gorgona and Empire. Running repairs to cars and locomotives transferred to Pedro Miguel engine house. Work of electrical subdivision consolidated with the work of the Gorgona shops; both placed in charge of the electrical engineer. All heavy repairs to equipment other than steam shovels and steel cars, as well as manufacturing work, performed at Gorgona shops. Heavy repairs to steam shovels and steel dump cars made at Empire.

Gorgona shops: Extensions made to machine shop, boiler shop, and planing mill. Car shop made for car repairs. Lye vat built for cleaning engine parts. Oil fuel adopted; great saving. 4,586,342 pounds iron castings made, and 333,416 pounds brass castings. Extensive repairs made to Lidgeerwood flat cars, as hard usage necessitated practically rebuilding larger portion of those on hand.

Electrical subdivision: Controls all electric lighting on the Isthmus, except in Cristobal and Colon; latter operated by Panama R. R. Panama R. R. power plant at Balboa trans-

ferred to the Isthmian Canal Commission July, 1908. Plant augmented; electric current extended to various places.

Empire shops: Various extensions made. Machinery of Paraiso shop, when closed, transferred, most of it to this place. **P-09**, 19, 20.

1910. Second division, O. C. E., has charge of all mechanical questions and supervises expenditures, preparation of estimates, allotments for work, and cost keeping. Under H. H. Rousseau, U. S. Navy.

To reduce delays on account of breakdown of machinery, etc., which reflect largely in unit cost of work, and to provide proper facilities for overhauling plant and equipment, as well as manufacturing necessary repair parts, large shops provided at certain points on Isthmus, in which are employed 1,399 "gold" men and 2,992 "silver" men. Other small shops employing one-half dozen or less men distributed around. Cars converted into portable machine shops are also used, and in a similar way floating machine shops provided for repairing marine equipment.

Repair shops and equipment on Isthmus adequate to meet requirements during construction. Nothing as yet done toward permanent shop facilities needed after completion of canal; but Isthmian Canal Commission declared itself in favor of policy of confining permanent shop facilities to two points.

Special attention paid to reducing cost of maintenance and operation of equipment in shops, including the standardization of salaries and wages, and of material and supplies. Two traveling engineers appointed, who have been instructing and supervising engineers, firemen, and hostlers, in use of fuel and oil in connection therewith. Saving resulted of fully 50 per cent in amount of lubricants used, and of approximately 10 per cent in coal consumption per train-mile.

On Apr. 29, 1910, position of inspector of shops established, and toward latter part of year traveling engineer appointed to inspect fuel and oil consumption on Isthmus, except on locomotives and marine equipment.

Gorgona shops: Empire shops transferred to central division for performance of steam shovel, general repairs, and manufacture of steam shovel repair parts. Repairs to steel cars, formerly done at these shops, transferred to Gorgona shops, centralizing at latter shops all repair work to rolling equipment other than steam shovels, as well as all manufacturing work. Car-repair yards at Las Cascadas and Gamboa abolished. Work at Pedro Miguel yard confined to lightest running repairs only. Under new car-inspection service, every car in service given thorough inspection once a day.

To provide for increased work at Gorgona shops, additions to buildings and equipment made. Among the former a new 2-story building 42' by 100' for storage of patterns aggregating

16,000; estimated value, \$150,000 to \$200,000. Old pattern-storage building converted into brass foundry and 3 crucible melting furnaces installed. This enabled enlargement of iron foundry by addition of 4,160 sq. ft.; 4,820,762 pounds iron castings and 393,995 pounds brass castings made.

Division continued operation of all electric-power plants, except those at Gatun and Miraflores, furnishing current for about 31,000 lights. Pole line $5\frac{1}{2}$ miles long constructed between Gatun and Cristobal to convey current from Gatun plant to Panama R. R. old plant at Cristobal.

Air compressors also under this division, and 7,227,203,513 cubic feet of compressed air generated. Additional compressors installed at Empire and Rio Grande plants, and 18,810' of main pipe line removed and re-built on account of slides occurring through Culebra Cut, and 3,600' of 8' main installed between Balboa plant and Ancon crushing plant of Pacific division.

Appropriations: Available to close of fiscal year 1909, \$210,146,468.58, or 56 per cent of total estimated cost, fixed at \$375,201,000. June 25, 1910, \$37,855,000 appropriated for fiscal year 1910-11, leaving \$127,199,531.42 of estimated cost of canal to be appropriated. Total classified expenditures for canal work to June 30, 1910, \$191,258,113.93, of which \$31,188,426.37 were net expenditures during fiscal year. Of total classified expenditures to June 30, 1910, \$25,699,450.81 for plant and equipment for construction work, of which \$4,388,511.55 expended during fiscal year. P-10, 32-34.

1911. The employees in all shops on Isthmus totaled 4,405, of which 1,532 "gold" employees and 2,873 "silver" men. Hourly "gold" men taken on during year, 94 per cent of force employed, indicating that average length of service on the Isthmus for mechanical trades continued to be about one year.

New shop erected and put in operation, Toro Point, for repairing locomotives, cars, and other equipment used in construction of breakwater. Equipped with machines taken from other shops. Shed at Pedro Miguel shop used for repairing cars doubled in size to save time previously lost by workmen during rains. At Gorgona shops addition to erecting shop made for pipe, tin, and copper shop, so as to move equipment therefrom boiler shop, the latter needing additional space. Small building erected for oxy-acetylene plant, and small building erected and provided with 25-ton crane, affording facilities for making large iron castings. Order placed for steel casting plant consisting principally of a 2-ton converter, blower, and sand grinder; when installed, stock of steel castings kept on hand can be reduced and practice stopped of making repair parts urgently required of cast iron and brass. Permanent equipment

augmented by addition of one 6" turret lathe for making bushings, two heavy milling machines for cutting gears and general work, one automatic tool grinder, oxy-acetylene plant, one washer cutter for making washers out of scrap metal, 25-ton overhead crane for use in foundry, and Taylor-Barth belt outfit.

Work in Cocoli shop transferred to mechanical division Sept. 1 and shop closed Sept. 15. Lirio planing mill closed and manufacture of woodwork consolidated at Gorgona. Keeping of permanent gang of craftsmen and helpers for making repairs to cableways and concrete mixers at Gatun Locks and day repairs to steam shovels done away with. Consolidation of heavy repairs at Gorgona and transfer of repairs to vessels and other apparatus in vicinity of Colon and Cristobal to dry-dock shops enabled closing of blacksmith machine, boiler, and erecting shops of Panama R. R. in Cristobal. So that repair and manufacturing work could be done with greater dispatch, night shifts put in machine, erecting, and boiler shops in Gorgona, Aug. and Sept. While work of the class involved usually more expensive at night than during day, night shifts have proven efficient and save expense by elimination of overtime. Another advantage was in reducing length of time required for completing urgent orders. By putting on night shift in wood-car repair shop Feb. 1, Lidgerwood flats cut out of service for light and medium repairs on one day returned to service next morning. According to program, Gorgona shops to be retained in operation until waters of Gatun Lake reach elevation 70. By that time, manufacturing and repair work, especially in connection with locomotives, cars, and excavating machinery, will have largely diminished and steps can be taken for erection of necessary buildings to which transfer of machines now at Gorgona can be made. Shops at Balboa and Cristobal in operation, together with Panama R. R. machine shops, to afford necessary repair facilities while transfer of machinery from Gorgona in progress.

At beginning of year additional traveling engineer appointed to have supervision over fuel and oil consumption and to supplement work of two traveling engineers, whose jurisdiction extended to locomotives only, and later to supervising and instructing engineers in respect to handling oil, and firemen in regard to methods of firing and fuel consumption. Duties of new traveling engineer covered steam shovels, unloaders, spreaders, and all stationary plants, and subsequently extended to marine equipment. Satisfactory results in saving both fuel and lubricants. Current for lighting and power generated at 5 stations—Balboa, Miraflores, Empire, Gorgona, and Gatun. Output of Gatun and Miraflores plants largely used in construc-

tion work in Atlantic and Pacific divisions. Cost per kilowatt hour averaged \$0.026. Oil fuel used in all stations. Current generated at Gatun and Miraflores plants by steam turbines, at Empire and Gorgona plants by noncondensing engines, and at Balboa plant by condensing engines.

Principal air-compressor plants located at Las Cascadas, Empire, Rio Grande, and Balboa, and furnish compressed air to central and Pacific divisions, and along high line around Gold Hill on relocation of Panama R. R. Output aggregated 8,261,199,541 cubic feet. Air for Gorgona shops furnished by smaller plant.

Total appropriations by Congress available to June 30, 1911, \$248,001,468.58, or 66 per cent of total estimate of \$375,201,000 for canal. By act Mar. 4, 1911, additional appropriations made for fiscal year 1912, \$45,560,000, exclusive of fortifications, leaving \$81,639,531.42 of total estimate of canal to be appropriated. By June 30, 1911, \$225,470,053.26 charged into work. Of this, \$33,048,607.97 expended during fiscal year 1911. Of total classified expenditures to June 30, 1911, \$27,580,724.37 for plant and equipment for construction, of which amount \$626,330.86 expended during fiscal year 1911. P-11, 33-36.

1912. Second division, O. C. E.: This division has charge of all mechanical questions that may arise and supervises expenditures and allotments for the work. The third division of O. C. E. abolished Jan. 24, 1912, after resignation of C. M. Saville, assistant engineer formerly in charge, and work transferred to second division. To this division also assigned design of dry dock, coaling stations, shops, and appliances in form of harbor tugs, cranes, and barges. Division in charge of H. H. Rousseau, U. S. Navy, as assistant to chief engineer.

On the assumption that favorable legislation would be provided, general and detailed plans of terminals undertaken with view to beginning work of construction as soon as funds become available. General layout of terminals at Atlantic and Pacific entrances arranged with object of affording sufficient wharves and piers to meet all requirements when canal is opened, and to permit extension. In addition to wharf space, the general plan provides necessary facilities for docking and repairing all classes of vessels and for furnishing them with fuel, fresh water, and supplies of all kinds. As these facilities may be required for military purposes as well as commercial, all general plans submitted to Navy Department for its views, which have been followed in final designs.

Main coaling plant at Atlantic end of canal will be located on north end of island opposite Dock No. 11, at Cristobal, with railroad connection across French canal. It will be capable of handling and storing 200,000 tons of coal, with possible increase of 50 per cent;

100,000 tons will be in subaqueous storage. Coaling plant at Pacific terminus will be located at Balboa, adjacent to site of dry dock, and will be capable of handling and storing 100,000 tons of coal, with possible increase of 50 per cent; subaqueous storage will be provided for 50,000 tons. Arrangements are made for supplying fuel oil, and 4 tanks of 40,000 barrels capacity each under advertisement, to give initial storage capacity of 80,000 barrels at each terminus.

Piers or docks on Atlantic side to be protected against storms by mole or breakwater extending out in prolongation of line separating zone from Colon; to be 1,000' in length, 209' in width, and 300' apart. At present the Panama R. R. Co. engaged in building one of the piers, with slip on either side, and a 1,000' wharf, together with necessary length of mole or breakwater to afford protection. On Pacific side piers for commercial use will be placed at right angles to axis of canal, with ends of piers 2,650' from center of 500' canal channel. Piers will be 1,000' long and 200' wide, with 300' slips between piers. One pier is to be undertaken. Superstructure of commercial piers and wharves will be one-story steel sheds, with clear height of 25'. Sheds, of fireproof construction, will cover entire pier, except for space of about 18' along each side and outer ends. Track will extend along each edge of piers at floor level, and two tracks will run through center of pier sheds, depressed to bring car floor level with floors of sheds.

Plans provide for one dry dock capable of accommodating vessels passing through locks; usable length, 1,000'; entrance width, 110'; depth over keel blocks, 35' at mean sea level. Dock will be built in the rock, which will be lined with concrete. Borings indicate that rock is strong, solid, and well suited for such construction. In lieu of marine railway at first contemplated for smaller vessels, auxiliary dry dock will be provided, and suitable foundation on similar rock found for it. This dock will have usable length of 350', entrance width of 71', and depth over keel blocks of 13½' at mean tide. On Atlantic side "present" dry dock at Cristobal, which has usable length of 300' and width at entrance of 50', with depth over sill of 13' at mean sea level, will be retained.

Plans for various shops, foundries, storehouses, and subsidiary buildings approved, and specifications prepared for furnishing material, as it is desirable to have erection completed and machine shops moved from Gorgona by July 1, 1913. Machines now in use will be installed in new shops, and they will be electrically driven, individual and group drives being used. Floor area of buildings in connection with shops aggregates 491,880 sq. f. Until further requirements more definitely developed, shop facilities for emergency repairs will be retained in vicinity of dry dock at Cristobal.

For expeditious and convenient handling of lock gate leaves, as well as for commercial and other canal needs and for general wrecking purposes, necessary to provide floating crane of largest practicable capacity at each terminus. An investigation under way to determine best manner in which these requirements can be filled.

For handling vessels of largest size, harbor tugs of high power required and must be secured, as tugs now owned by Isthmian Canal Commission will not be satisfactory or economical for that service. Intended to provide two large harbor tugs at each end.

Expected that large quantity of coal will have to be furnished to shipping in barges or lighters; canal must be equipped with sufficient number, not only for this service, but also for supplying fuel oil and fresh water. Navy Department recommended provisions be made for sufficient lighters to give capacity of 16,000 tons of coal for Atlantic terminus and 8,000 tons for Pacific end.

Locations of permanent administration building and canal headquarters and permanent settlements for employees determined. Permanent administration building will be on knoll west of Ancon quarry, and quarters for employees attached thereto will be erected in general area adjacent to and northeast of this building. Employees connected with shops, docks, and other terminal facilities will be housed in quarters erected in area surrounding slope of Sosa Hill and on fill adjoining Ancon-Balboa highway. There will be permanent settlement at Pedro Miguel for employees of Pacific Locks and one at Gatun for employees of Atlantic Locks. Settlement at Cristobal will be maintained and also one at Ancon.

During year applications received from individuals and companies for leases of land in vicinity of Atlantic and Pacific terminals for various purposes connected with operation of the canal.

Three first-class meteorological stations at Ancon, Culebra, and Cristobal continued. Two second-class stations at Gatun and Pedro Miguel, at which wind velocity, temperature, and rainfall recorded. Twenty-six rainfall stations in operation, 15 of which equipped with standard and 11 with automatic rain gauges. Evaporation stations in operation at Ancon, Rio Grande Reservoir, Gatun Lake, Brazos Brook Reservoir, and Colon. Two seismograph stations in operation, one at Ancon and the other on Guarapo Island, near Gatun. Duplicate automatic tide registers located on Dock No. 1 at Colon and two on the Panama R. R. dock at Balboa. Gauging stations maintained throughout the year, one on Chagres River at Gatun, one at Gamboa, and one at Alhajuela. Automatic water-stage registers put in operation above and below spillway at Gatun and on Chagres River at Bohio, Gamboa, Alhajuela, and Vigia. Automatic registers on Trinidad

and Pedro Miguel Rivers continued in operation throughout the year at the old locations. July 1, 1911, to July 1, 1912, minimum dry season and total flow for 12 consecutive months for years of record occurred. Previous minimum dry-season flow occurred during calendar year 1908. Total flow for 1911 was minimum flow for calendar years of record since 1905, and new low-water records established at Alhajuela and Gamboa. At Alhajuela minimum 91' on Apr. 20, 1912, and at Gamboa 43.5' on May 7 and 8, 1912. Previous low-water records, 91.86 at Alhajuela on Apr. 26, 1905, and 44.40 at Gamboa on Apr. 4, 1911. According to discharge measurements at Gamboa, heaviest freshet of year occurred Aug. 21, 1911, when there was a rise at that point of 11.4' and discharge 35,120 cubic feet per second. Minimum flow at Gamboa on Apr. 10 and 11, 1912, discharge 250 cubic feet per second. Backwater from Lake Gatun interfered with gauging work on Trinidad River, at Bohio, and on Gatun River.

Temperature for 1911 generally above normal. July was warmest month in Ancon and Culebra and Dec. at Colon. Highest temperature recorded, 95° F., at Ancon, Oct. 16, and lowest 65° F., at Culebra, Mar. 27.

Rainfall in zone below normal, being lightest of record at Gamboa, Bohio, and several of stations for which only few years' records available. Deficiencies ranged from 10 per cent at Balboa to 41 per cent at Bohio. Dry-season rainfall 12 per cent of annual total in Pacific section and 8 per cent and 9 per cent, respectively, in central and Atlantic sections. Average rainfall for 1911, 67.20" in Pacific section, 79.10" in central section, and 116.45" in Atlantic section. Rainy days in Pacific section 172, in central section 214, and in Atlantic section 265. Heaviest precipitation occurred at Porto Bello, Nov. 29, when during the storm 7.60" of rain fell in 12 hours, maximum fall for 5 minutes being approximately 2.48".

There was moderate excess of wind movement at the various stations during 1911. Prevailing direction from northwest at Ancon and Culebra and from north at Colon. Relative humidity generally below normal during 1911 and first half of 1912; mean for 1911, 81 per cent at Ancon and 84 per cent at Culebra and Colon.

Slight seismic disturbances of frequent occurrence. Stadia survey made to locate ridge line between upper Gatun River and Atlantic Ocean, and 19 miles of line run between Mount Bruja and Santa Rita Mountain.

Stadia survey made of Atlantic coast, line in vicinity of Margarita Island, near Colon, and triangulation station established on island. Majagual and Escondido Rivers run up to limits of tidewater. Several islands and inlets not heretofore shown on maps located.

No marked changes in conduct of mechanical work. Constant efforts made to reduce cost of repairs to equipment. General repairs were required to greater extent.

Principal shops at Gorgona, and policy of concentrating manufacturing work and repairs to rolling equipment at these shops continued. With construction work drawing to a close, general policy of gradually reducing repair parts and other material carried in storehouses caused mechanical division to handle more and more manufacturing work on short notice, and also resulted in installation of Tropenas 2-ton converter, blower, sand grinder, and all necessary apparatus for manufacture of steel castings. Two additional pipe cutting and threading machines—one 8" and one 12"—installed in main shops, and in planing mill French horizontal compound engine replaced by stationary engine removed from Lirio planing mill and supplemented with 50-horsepower motor.

Engine houses and repair shops operated at Pedro Miguel, Gatun, Las Cascadas, Gamboa, and Gold Hill. Removal of material from top of slides on Gold Hill side of cut required establishment of engine house, and temporary repair shop and storehouse, made of two old box cars, were installed, with necessary storage and cleaning tracks. Gatun machine and repair shop transferred to mechanical division, and July 1, 1912, Empire shops for repair of steam shovels also transferred to same division.

Operation and maintenance of air-compressor plants at Las Cascadas, Empire, Rio Grande, and Balboa under mechanical division, as well as operation and maintenance of electric power and lighting plants at Cristobal, Gorgona, Empire, and Balboa. Output of air-compressor plants operated during the year, 8,795,157,453 cubic feet of free air at 70° F. Increased construction work on Pacific division and decrease of work on north end of Atlantic division increased air consumption at Pedro Miguel and Miraflores so as to necessitate removal from Las Cascadas plant and installation in Aguadulce pumping plant of Pacific division of two 2,200' Ingersoll-Rand compressors. Mechanical division's electric plants totaled output of 4,966,953 kilowatt hours, which, with 2,279,151 kilowatt hours furnished by construction divisions to mechanical division, makes total of 7,246,104 kilowatt hours.

Total appropriations by Congress to June 30, 1912, \$293,561,468.58. Act Aug. 24, 1912, additional appropriations made for fiscal year 1913 amounting to \$28,980,000, exclusive of fortifications. June 30, 1912, \$259,653,236.74, or about 69 per cent of the total estimate, had been charged into the work. Of this amount, \$34,183,183.48 expended during fiscal year 1911, or about 9 per cent of total estimate of canal. Of total classified expenditures to June 30, 1912, \$32,547,720.75, or about 12½ per cent, for plant and equipment for construction and

for 4 steamships; of this amount, \$1,254,697.70 expended during fiscal year 1912. P-12, 39-45.

1913. Act Aug. 28, 1902, authorizing construction of canal directed President to "also construct such safe and commodious harbors at the termini of said canal as shall be necessary for the safe and convenient use thereof." Estimate of cost of canal, in Dec., 1908, made provision for construction of necessary breakwaters, but did not include anything for such harbor improvements as may be classed as terminal facilities, which had been operated and provided heretofore by the Panama R. R. Co. in connection with handling of its commercial and other business. Early in the work it was apparent that terminal facilities required by the Panama R. R. would not be adequate for probable needs of shipping, and, in view of the fact that savings on estimates would probably enable their construction as part of canal work, this advocated in 1910. Act Aug. 24, 1912, authorized President to "establish, maintain, and operate, through the Panama R. R. or otherwise, dry docks, repair shops, yards, docks, wharves, warehouses, storehouses, and other necessary facilities for the purpose of providing coal and other materials, labor, repairs, and supplies for vessels for the Government of the U. S. and, incidentally, for supplying such at a reasonable price to passing vessels." Act Aug. 24, 1912, made necessary appropriations. While, in anticipation of favorable action by Congress, some preliminary work undertaken, active operations could not be begun until last fall; consequently terminal facilities can not be completed by time canal ready for passing vessels.

Pacific terminals, being constructed by Isthmian Canal Commission, will consist of main dry dock capable of docking any vessel that can utilize the locks, a smaller dry dock for use of smaller craft, plant for supplying coal and fuel oil to vessels, necessary wharves and piers for commercial purposes, and permanent shops for use in connection with dry docks.

Atlantic terminals consist of wharves and piers at Cristobal, including Cristobal mole, all being constructed by Panama R. R. at its own expense, and main plant for supplying coal and fuel oil to vessels; cost of coaling plant will be divided between Isthmian Canal Commission and Panama R. R. Co., while Isthmian Canal Commission will furnish facilities for oil. General drawings showing layout of these terminals will be found in report for 1912.

General design of dry docks worked out and preparation of detail drawings commenced. Mitering lock gates will form closure to dock, and beyond gates proper a seat for floating caisson which will be constructed for general canal use. Dock will be flooded by longitudinal ducts in side walls communicating with

dock body through grated openings in floor along bottom of walls. Water will be controlled by 4 metal "wagon-body" valves operated by suitable machinery. Time required for flooding at extreme high water estimated at 25 minutes. Pumping plant for emptying dock, 4 vertical shaft centrifugal pumps driven by electric motors. Discharge from pumps will be carried through concrete duct entirely separate from flooding ducts. Time required for pumping out estimated at 2 hours and 20 minutes at mean high water. Suitable tracks for a 50-ton locomotive jib crane will be provided around dock. Capstans and bollards will be installed and a pipe tunnel, with suitable outlets, will be constructed around dock. Stairways leading to floor will be built. Contract entered into Oct. 22, 1912, for one pair of steel mitering leaves and fixed irons to be fabricated and delivered on Isthmus.

Smaller dry dock will be closed by a floating steel caisson bearing against granite sills when in place. Flooding will be similar to that for larger dock and flow of water will be similarly controlled. For emptying dock pumping plant of larger dock will be utilized. Access to floor of dock will be by means of 4 stairways.

Wharves and docks contemplated will consist of quay wall 1,238' long between head of Slip No. 1 and northeast end of Panama R. R. concrete dock, and 1 pier 1,000' long by 201' wide. Permanent walls will be built at ends of slips, each 303' wide, so constructed that part of length of each will afford landing places for small boats. Including length of wharf constructed for Panama R. R. Co. and completed during previous year, total water frontage under construction will be 4,650' long. Quay walls and all of Pier No. 1, excepting center section 50' wide, will be supported on circular reinforced concrete piers sunk to rock; 50' center section of Pier No. 1 will be rock fill. Slips will be excavated to 45' below mean tide. Elevation of Pier No. 1 and the adjoining wharves at head of slips placed at 16' 6". Level of quay wall adjoining Panama R. R. dock fixed at elevation 17, same level as Panama R. R. dock.

Coaling station on Pacific side will be adjacent to site of dry dock and will be capable of handling and storing 100,000 tons of coal, with possible increase of 50 per cent. Subaqueous storage will be provided for 50,000 tons. Specifications issued for coal-handling plants at the two terminals. Bids opened June 14, and when award is determined plans conforming with machinery will be prepared for substructure. Specified rate for unloading coal from vessels into storage piles fixed at 250 tons per hour for each machine; desire is to unload 2 vessels at one time at Atlantic plant, with 2 unloading machines to each vessel, and 1 vessel at Pacific plant with 2 machines. Reloading capacity—that is, transferring coal from

storage into collier or barge—fixed, after consideration of reloading capacity of modern commercial plants in U. S., at rate of 500 tons per hour for each machine. Proposed to equip Atlantic plant so that 2 vessels can be loaded at one time, with 2 machines serving each vessel, and on Pacific side so that 1 vessel can be loaded with 2 machines.

Main machine shops located at Gorgona, which will be flooded by lake as waters rise. Shops at Balboa and Cristobal generally adequate for maintenance and repair of dredging fleet. With adoption of policy of giving repair facilities to any vessel that could use the locks, as well as to Navy, construction of new shops near dry docks became necessary. Permanent shops will consist of 18 buildings for machine, erecting, and tool shops; forge shop; steel storage shed; boiler and shipfitter shop; general storehouse; paint shop; car shop; planing mill; galvanizing plant; lumber and equipment shed; pattern storage; foundry; coke shed; boiler house; roundhouse; gas house; paint house; and sand house. In addition to office building, 9 auxiliary buildings. On Pacific terminals preparatory work begun; operations pushed. Site cleared by removal of settlement at Balboa, as well as buildings which formed old town. Panama R. R. yard abandoned after new yard and track facilities provided for temporary use. Considerable difficulty experienced in carrying on work expeditiously and economically because of interests of other divisions and departments whose work and operations could not be interrupted. To provide room around head of location of main dry dock for tracks and highway leading to old French pier, northwest slope of Sosa Hill removed, 184,682 c. y. rock and 181,729 c. y. earth, or total of 366,411 c. y. excavated. Total quantity excavated in preparing site, 389,567 c. y. Greater part of material used to fill in adjacent swamp to bring area up to adopted grade, and some rock furnished Atlantic division for paving south slope Gatun Dam. Original surface elevation of dry-dock site was 18; deepest general excavation for foundation will therefore be about 74'. Lowest shovel cut June 30, 12' below sea level, on coaling-plant site at southwest end of excavation. From this site 203,699 c. y. removed, of which 56,900 c. y. rock. Site for smaller dry dock at present occupied by shipways and shops of dredging division. To protect entrance of main dry dock and entire area to be occupied by smaller dock, and to enable removal in dry of as much rock as possible from entrance basin of main dry dock, as well as to facilitate construction of coaling-plant quay wall and basin, cofferdam around these various works begun Apr. 1, 1913. It will be about 1,000' in length. For construction of quay walls and pier rock found at an average elevation of 60' below mean tide, in some cases being as high as

33' and in others as low as 66' below this level. Elevation of original swamp was about 9 and material through which concrete cylinders to be sunk is fine, sticky, black clay with thin strata of sand. Cylinders are sunk by open-caisson method. They consist of sections of reinforced concrete shell in 6' lengths, 1' thick, and 73' outside diameter. About 4,750 sections required and special plant for their manufacture built. Steel collapsible forms used. Bottom section of each cylinder 8' outside diameter and 6" thick, with cutting shoe on the bottom. Excavation done by hand and by orange-peel buckets. When cylinders would not sink of their own weight, descent facilitated by use of cast iron and concrete weights in conjunction with water jet. Not considered advisable at this late date to increase plant, so progress of sinking cylinders depended on crane service available. After cylinders were sunk several feet into rock they were filled with concrete. They are to be capped by reinforced concrete beams for supporting floor. Area within which quay walls and pier to be constructed inclosed by dike begun July, 1912. Of 28,500' of cylinders required, 12,435' placed. Of this, 8,450' were for main quay wall, 289' for walls at head of Slips 1 and 2, and 3,696' for Pier No. 1. Greater portion of area to be occupied by shops brought up to grade by filling low, swampy land. Natural surface of ground not sufficiently stable to hold up buildings; necessary to reach rock for foundations by excavating to it where sufficiently near the surface, or by driving piles to rock, in places as low as 56' below sea level. Near water front necessary to use 4' steel cylinders, filled with concrete and sunk to rock, as foundations. Piles driven, 3,750, and 7,787 c. y. concrete placed in footings and in tunnel. Operating tunnel, running through center and at right angles to length of main shop buildings, under construction for carrying and making accessible all pipe and cable conduits. Main trunk will have clear height of 6' and width of 4' 6", with branches of same height and width of 3' 6". Tunnel will contain all power, light, telephone, and fire-alarm cables, and water, steam, fuel oil, and compressed air mains, and main sewer. Rain water will be carried off the area occupied by shop buildings by means of surface gutters and drains. For its construction steam shovel mounted on skids, with special boom, commenced work Mar. 20, 1913. Where hard rock is not deeper than about mean sea level tunnel built on piers excavated to rock; at all other points carried on wooden piles driven to rock and cut off below mean elevation of ground water. Built in sections 15' in length, special means being provided to make tunnel as water-tight as practicable. Work started June 5, 1913, on foundations for machines for planing mill; considerable portion of concrete necessary for these and for floor of building completed during year.

25 miles of track laid, of which amount 9,212' permanent tracks for Panama R. R., remainder for construction purposes. Road at foot of Sosa Hill reconstructed, 3,300' long. Steel framework for shop buildings, about 6,000 tons, being furnished and erected under contract dated Oct. 22, 1912.

Contract made Oct. 24, 1912, for 6,500 squares of reinforced cement tile roofing for all quarter-pitched roofs of the machine shops. All tile being manufactured on Isthmus, at Paraiso. Contract required all plant to be on Isthmus by Jan. 25, 1913, and completion of manufacture by June 25, 1913.

For Atlantic terminals quay wall and one pier practically completed by Panama R. R. during year, the material purchased for steel work for sheds, and subsequent contract made for erection. Panama R. R. also made diamond-drill borings at site of coaling station, and work begun by dredging division June, 1913, drilling and blasting preparatory to dredging alongside proposed coaling pier. In designing permanent shops principal aimed at to reduce to minimum cost of repairs and renewals, without exceeding reasonable first cost.

Selection and location of equipment in different shops practically completed. Greater number of machines and tools for permanent shops will be taken from "present" shops. Electric power at 44,000 volts is to be delivered by transmission line to substation adjacent to pump well of Dry Dock No. 1, where voltage will be reduced to 2,200 volts. Shops have been arranged in 4 groups as regards electric distribution and each group provided with transformers and switchboards for reducing voltage. Power used in plant will be 3-phase, 25-cycle, 220-volt, except 220-volt direct current in machine shop for variable-speed tools. Duplicate motor-generator sets will be installed.

Investigations and inspections made of the principal floating cranes in U. S. and Canada, as well as abroad, with view to determining type of crane to best meet canal requirements; conclusion that 2 floating cranes of largest size would be necessary. Oct. 30, 1912, proposals invited for delivery of 2 floating cranes of revolving type, having maximum lifting capacity of 250 gross tons. Award made Apr. 17, 1913, to the Deutsche Maschinen Fabrik, A. G., for approximately \$327,550 for the 2 cranes, delivered in 580 days.

Investigation and inspection of most modern and largest harbor tugs in use on Atlantic coast of U. S. and in leading ports of England also made during last 2 years, and estimates for year 1913-14 included amount considered sufficient for purchase of 4 such tugs. Arrangements made at close of past year for preparation of plans and specifications for suitable tugs.

Numerous applications received from coal dealers for loading space for handling of coal in supplying vessels. No authority exists for leasing any land or land under water in zone,

except act of Feb. 27, 1909, which provides for leasing of land for agricultural purposes only. Never intended that U. S. should exercise monopoly of coal business on Isthmus, but to utilize coal stored here for use of Navy in maintaining uniform prices of this product to shipping. To encourage individuals and companies in business of furnishing coal to vessels which use the canal, policy adopted of providing storage in connection with both coaling plants for coal piles of individuals and companies who desire to participate. There will be certain rental and a real estate tax of 1 per cent of value of improvements, should any be made, and a merchandise tax of 5 cents for each 2,000 pounds of coal sold. U. S. will do all handling; charge for putting coal into storage and taking it out; for use of coal barges and other labor in connection with this service will be fixed at cost price to the U. S. for such service. Same policy adopted with reference to oil. Proposed to equip wharf in vicinity of coaling station at Pacific terminus and Docks 13 and 14 at Mount Hope on Atlantic side with fuel-oil supply and delivery mains in duplicate, together with necessary pumps, so that the U. S. will be able to handle satisfactorily all fuel oil, including fuel oil of individuals and companies who may wish to participate in fuel-oil business on Isthmus, on same general terms as those applying to coal business. Contract was entered into Oct. 1, 1912, for 4 storage tanks 93' in diameter and 35' in height, each having a capacity of 40,000 barrels, to be erected at cost of \$62,800. At end of year tanks had been practically completed, 2 at Mount Hope and 2 at Balboa dump, southeast of Sosa Hill, and plans under way to connect them with water front.

Three first-class meteorological stations at Ancon, Culebra, and Colon continued. Wind records kept at Gatun, Pedro Miguel, Sosa, and Miraflores. 26 rainfall stations in operation, 15 of which equipped with standard and 11 with automatic rain gauges. Evaporation stations maintained at Ancon, Rio Grande, Gatun Lake, Brazos Brook Reservoir, and Colon. Seismograph stations in operation at Ancon and Gatun. Duplicate automatic tide registers located at Colon and Balboa. For use by Fortification Board, maximum and minimum temperatures recorded on Miraflores dumps. Regular gauging work discontinued on smaller streams at end of 1912, work being interfered with by backwater from Gatun Lake.

Most important hydrological change was rise of Gatun Lake. On July 1, 1912, elevation was 31. Stage of water fluctuated, as regulated at spillway, reaching extreme height of 56.28' above sea level on Nov. 29. From studies it appears that lake basin is subject to very little seepage or other underground losses. Records of Chagres River and tributaries show year 1912 to be second in order of dryness since U. S. occupation in 1904.

Largest freshet since Dec., 1910, occurred Nov. 28 and 29, 1912; rise of 19.6' at Vigia and 12.3' at Alhajuela; discharge at latter point being 54,000 cubic feet per second.

Average temperature for year 1912 well above normal. Mar. warmest month at Ancon and Apr. at Culebra and Colon. Highest temperatures recorded Apr.—97° F. at Ancon and 96° F. at Culebra—established new high temperature records at these stations. Nov. coolest month at all stations, minimum recorded being 65° F. at Culebra.

Rainfall of 1912 below normal everywhere except immediately along Pacific coast, although generally heavier than annual rainfall for 1911. Heaviest precipitation 147.61" at Porto Bello and minimum rainfall 71.78" at Ancon.

Notable excess in wind movement in 1912. Average velocities abnormally high during dry season; maximum velocity of 49 miles an hour from the east recorded at Gatun. Prevailing direction was from northwest at Ancon and Culebra and from north at Colon. Relative humidity generally below normal, mean being 81 per cent at Ancon, 82 per cent at Culebra, and 83 per cent at Colon.

Number of seismic disturbances registered, but none so violent as to be sensibly felt in zone.

Surveys made of Miraflores Lake watershed, Corozal Hospital farm, Darien Radio Station Reservation for the Navy Department, Chagres River from Gamboa to the zone boundary to locate gravel banks, and area in vicinity of Mount Hope proposed for oil storage. Boundary line between city of Panama and zone run out and monuments located. Error of 100 meters found in recorded distance between triangulation stations Gamboa and Obispo, recorded distance being 1,093.34 and correct distance, 1,193.34 meters. Considerable survey work done for department of law and joint land commission. P-13, 44-48.

1914. Division in charge of A. L. Robinson until July 19, 1913. Subsequent to and until Mar. 6, 1914, Lt. Col. T. C. Dickson, U. S. Army, performed general duties relating to organization and personnel, while operation of shops under supervision of J. J. Eason. On Jan. 26, 1914, D. C. Nutting, U. S. Navy, reporting for duty, assigned as superintendent and took over all duties.

Establishments under operation by division consisted of Balboa shops (including roundhouse and car shops), Cristobal shops and dry dock, Paraiso shops.

Cristobal roundhouse, small hoisting establishments at Gatun, Empire, and Paraiso, and car-inspecting establishments at Cristobal and Balboa. Cristobal shops and dry dock charged with all repairs to floating equipment; this dock only one available when dry dock necessary, in continuous use. For docking 5 submarines on duty on Isthmus and for docking "Corozal," upper lock of east flight at Gatun used. Paraiso shops reestablished Oct. 22, 1913, for repairs on

dredging equipment in Culebra Cut. Hostling of 4 engines operating in this vicinity turned over to these shops May 25, 1914. Cristobal roundhouse turned over to mechanical division Apr. 1, 1914; all hostling at north end of canal concentrated there. The establishment, in addition to roundhouse, comprises a small boiler plant and 2 air compressors with capacity of 2,000' per minute. Plant supplies air for hostling purposes and also for work on new pier of the Panama R. R. Small hostling plant established at Empire, in shops vacated, Mar. 1. With establishment of electrical division Apr. 1, 1914, electrical plants at Empire, Miraflores, Gatun, and Balboa, previously operated by mechanical division, turned over to that division; air compressors likewise turned over to electrical division. Old shipways shops at Pacific entrance turned over to mechanical division Oct. 22, 1913, and torn down in Mar. and Apr. Machine shops and engine house at Gatun operated for work in connection with installation of lock machinery and caring for locomotives engaged in that vicinity; abandoned Apr. 1, 1914, and work transferred to Balboa and Cristobal. Pedro Miguel engine house abandoned Sept. 15, 1913, and greater portion of equipment moved to Gold Hill engine house and buildings turned over to quartermaster's department and torn down. Engine house established at Gold Hill Sept., 1913, to care for equipment employed in dry excavation north of Gold Hill. Engine house continued in operation until completion of excavation work; discontinued Mar. 31, 1914. Air-compressor plant at Rio Grande, in operation since 1905, shut down Oct. 15, 1913, and such compressed air as was required in district previously supplied by Rio Grande furnished by plant at Empire. Cristobal car shops in operation until Mar. 7, 1914, when abandoned; car work concentrated at Balboa shops. When Balboa roundhouse put into service Apr. 1, 1914, Panama roundhouse of Panama R. R. placed out of use.

Throughout year, while shops in operation, 2 shifts regularly worked at Gorgona, Empire, Paraiso, and Balboa. In addition to double shift, emergencies necessitated overtime. **P-14**, 34, 35.

Meteorology Operations.

1905. Division of meteorology and river hydraulics reorganized. Stations installed; men trained, looking toward systematic and correct reports. **P-05**, 117.

1907. Division of meteorology and river hydraulics organized during fiscal year. Rain gauges established, system being reduced later to observing stations at about 12 places. Highest water in Chagres week ending May 12, rising 13' in 14 hours at Gamboa and 12½' in 16 hours at Bohio. Maximum discharge at Gamboa on Oct. 20, when river gauged 25,532 c. y. per second; on Apr. 3 it showed 417' per second. Temperature 97°, minimum 67°, mean humidity 87.3°. No severe windstorms. Percentage of sunshine, 53. Only 1 earthquake noted by seismograph, slight only; no record of San Francisco movement. **P-06**, 113.

1909. Organization: With resignation of Ricardo Arango, Sept. 18, 1908, because of ill health, division of river hydraulics and meteorology merged into the third division of O. C. E.

Chagres River: Gauging continued at various stations; flow during dry season of 1908

lowest on record. Dry season of 1909 gave a discharge which was notably large; between Jan. 27 and Feb. 1 the largest freshet since the flood of 1906 occurred. First-class gauging stations established at Alhajuela, Bohio, Gatun River, Trinidad River, and Gatun; and river stations at Gamboa and Vigia. Three to eight hours' notice can be given of an approaching flood.

Meteorological stations: Three in operation; 22 rainfall stations, etc.

Earthquakes: Seismograph station completed, and instruments installed at Ancon. Tremors recorded of no greater frequency or magnitude than occur at Washington, D. C.

Surveys: Of Chagres River to more accurately determine its drainage area and run-off of adjacent territory.

Maps: Three general maps continued.

Trinidad River: Investigations begun of low divides at the headwaters of the Trinidad River, looking toward prevention of overflow thereat. **P-09, 21.**

1910. Division in charge of C. M. Saville, assistant engineer.

Gauging stations maintained at Gatun, Bohio, and Alhajuela, on Chagres River, Monte Lirio on Gatun River, and on Trinidad River. River stations maintained at Vigia and Gamboa for predicting floods.

Minimum flow at Bohio in Mar., 1910, when discharge was 1,220 cubic feet per second; maximum in Dec., when it reached 90,000 cubic feet per second. First freshet Sept. 14, when river reached elevation 61.6 at Gamboa. Crest of Nov. flood reached elevation at Gamboa of 72.6' on Nov. 19, 1909, and at Gatun an elevation of 21.50 above mean tide, flooding area of 32.47 sq. m. Three floods occurred in Dec.; first reported from Vigia Dec. 6, due to rainfall in Chagres Basin above this station. Greatest flood of year began Dec. 26; river rose rapidly, and within 8 hours after beginning of rise at Vigia observer's house and water-stage register washed away. At Alhajuela crest of flood reached elevation 121, or 2' higher than flood of Dec., 1906; at Gamboa it reached elevation 78.2, or 3' lower than flood of 1906. Before high water of this flood had subsided another freshet occurred on 30th and 31st, crest of which reached elevation of 112' at Alhajuela. Floods interrupted operation of Panama R. R.; communication between Colon and Panama cut off entirely for 3 days.

Three first-class meteorological stations maintained at Ancon, Culebra, and Cristobal. Twenty rainfall stations also operated, 9 supplied with standard rain gauges and 11 with automatic registers of the tipping-bucket type.

Temperature for 1909 below normal, average being 78° F. at Cristobal and Culebra and 79° F. at Ancon. Minimum, 61° F. at Culebra on Mar. 1, 1910, and maximum at Culebra, Apr. 15, 1909, 94° F.

Rainfall for year greater at all stations; maximum at Porto Bello, where 237.28" recorded. Maximum monthly rainfall at Porto Bello, Dec., 1909, registered 58.17". Hail fell at Alhajuela on May 28, 1910. Deficiency of wind movement during year, though in storm at Ancon July 10, 1909, wind attained maximum velocity for 1 minute of 70 miles an hour, and for 5 minutes of 59 miles an hour, greatest velocity of record on Isthmus.

Slight seismic disturbances of frequent occurrence, very few of which physically observed in zone. Except in cases of minor local tremors, records at Ancon harmonize with records in U. S., Mexico, and Europe.

Careful record of evaporations at various points along line and the time of duration of fogs also kept.

Survey of watershed of Chagres completed.

Triangulation survey under way for combining all existing surveys for different parts of the work and tying them together in complete survey of zone. Nineteen new stations established which, with 3 existing survey stations near Colon wireless station, Colon Light, and Toro-Point Light, comprise system from Atlantic to Pacific Oceans.

Investigations started previous year of low divides at headwaters of Trinidad to determine what steps, if any, should be taken to prevent overflow of lake continued. At one of the Cano saddles distance through the range at elevation 85 is 50', and at no place between 90' contours is it more than 100'. Investigation of this locality indicates it will probably be necessary to increase height, which can readily be done with material easily accessible. East of Gatun another saddle will probably require some reinforcement. **P-10, 34-36.**

1911. Gauging station maintained at Alhajuela on Chagres River, and hydrographer at this station had charge of the gaugings on upper and lower tributaries. Discharge measurements begun at Gamboa Nov., 1910, and continued. According to past records, elevation of river at Gamboa reached minimum during dry season of 1911, and discharge at this point less than on many previous occasions. Bohio abandoned as regular gauging station, though measurements of cross section taken from time to time to permit gaugings in times of flood. As entire run-off from Chagres Basin has passed through spillway since Apr., 1910, regular gaugings made at this point. Back water from Gatun Lake and construction of relocation of Panama R. R. at Monte Lirio interfered with permanent stations heretofore maintained on these rivers.

Vigia, Alhajuela, and Gamboa used as warning stations in times of freshets, and reports sent to construction divisions as soon as indications of rise in river noted.

According to discharge measurements at Gamboa, heaviest freshet Dec. 3, 1910, when there was a rise of 12.7' and discharge

was 57,200 cubic feet per second. Minimum flow at Gamboa during year on Mar. 31, 1911, when discharge was 700 cubic feet per second. Three first-class meteorological stations at Ancon, Culebra, and Cristobal continued. There are also 3 second-class stations at Gatun, Pedro Miguel, and Gamboa, at which wind direction and velocity, temperature, and rainfall recorded. Twenty rainfall stations in operation, 12 equipped with standard and 8 with automatic rain gauges. At request of department of sanitation, anemometer erected at Corozal in Feb., 1911, for use in studies concerning mosquito migration. For determining effects of varied conditions on evaporation from lake surfaces, 3 evaporation pans, each equipped with standard rain gauge, and 2 of them with anemometers, installed in Gatun Lake in vicinity of Gatun, one in an exposed location in open part of lake about 1,000' from shore, the second among the trees near lake border, and third in an extensive patch of tall rushes. Evaporation stations also maintained at Ancon, Cristobal, Rio Grande Reservoir, and Brazos Brook Reservoir. Automatic tide register installed in canal opposite Corozal, in addition to those in operation at Balboa and Cristobal. Two seismograph stations in operation for purpose of recording disturbances, one at Ancon and one erected during the year on Guarapo Island in Lake Gatun near spillway of dam, Apr., 1911.

Temperature for 1910 about normal for all stations. Highest, 94° F., at Ancon, Mar. 13, 1910, and lowest, 61° F., at Culebra, Mar. 21, 1910.

Average rainfall over zone well above normal, unusually heavy in July and Dec., but below that of previous year. For first half of fiscal year 1911 rainfall below normal. Dry season for 1910 above normal. Average rainfall for 1910, 90.83" in Pacific section, 129.18" in central section, and 157.86" in Atlantic section. Average rainy days, 220 in Pacific section, 271 in central section, and 292 in Atlantic section; greatest number being 344 at Monte Lirio and the least 211 at Balboa. Slight seismic disturbances of frequent occurrence.

Triangulation survey continued, primary scheme completed, 15 additional stations having been occupied. Secondary system established containing 42 additional stations. Triangulation scheme designed primarily to serve as framework upon which the lands survey could be hung, and majority of stations established in vicinity of important section corners. Adjustment of secondary system not completed at close of year. Original plan for survey of zone lands, for which specific appropriation made by Congress, contemplated laying out of lands of zone in quadrilaterals 2 kilometers on a side, referring lots and subdivisions to a system of rectangular coordinates. South-

eastern part of zone, including most of territory between Las Cascadas and Panama city, surveyed with this in view. Expense such, however, that method was changed, as it was considered neither necessary nor advisable to secure accuracy attempted, and remainder of zone being surveyed with view of locating principal rivers, mountain ranges, trails, and roads with more topographic detail than the other method contemplated. Number of detailed surveys made for land office of Isthmian Canal Commission and Panama R. R. Co. after consolidation of offices effected.

Investigations continued during previous year of low divides at headwaters of Trinidad and Gatun Rivers continued until Jan., 1911; work completed. Section explored during year between Gatun and headwaters of Gatun River. Investigations included Canoa, Barro, and Egronal saddles. Results show ridges are of such thickness and composed of such materials as to permit no loss of water from Gatun Lake. At Canoa saddle, near headwaters of Trinidad, as reported previously, it will be necessary to construct dike or wall, and similar work will be required at headwaters of Las Guacas Creek, about half a mile east of Gatun. On account of location of the former, this work will not be attempted until waters of Gatun Lake are at sufficient elevation to enable easy access to the locality. P-11, 36-38.

1912. Third division of O. C. E., which formerly had charge of general surveys not embraced with the limits of any construction division, together with the meteorological and hydrographic work, abolished Jan. 24, 1912, when general survey work was practically completed. What remained of this, together with the collection of meteorological and hydrographic data, consolidated with second division of O. C. E. P-12. 1.

1913. See immediately above and below.

1914. Until Apr. 1, 1914, meteorological and hydrographic sections continued under separate heads; on that date consolidated into one division under chief hydrographer reporting to engineer of maintenance, and reduction of 3 "gold" men effected.

Wind records discontinued at Sosa Hill Jan. 1, 1914; wind station moved from Guarapo Island to administration building at Gatun Dec. 14, 1913; and new wind station established at Gamboa Nov. 11, 1913. Evaporation records at Brazos Brook discontinued Apr. 1, 1914. Rainfall station established on Siri branch of Trinidad River Jan., 1914, and similar station established near head of Gatun River branch of Gatun Lake May, 1914. Records from these stations obtained for use in estimating monthly rainfall over lake watershed. Seismic disturbances more numerous and severe than

in any previous year since American occupation, 87 distinct shocks being recorded at Ancon. Practically all shocks seemed to originate in vicinity of lower coast of Los Santos Province, 115 miles southwest of Ancon. Most violent shocks occurred Oct. 2, 1913, and May 28, 1914; in each instance maximum amplitude of 75+ recorded, when the recording pens were thrown off. Shock May 28 resulted in slight damage to new administration building, in course of erection at Balboa Heights; with this exception canal works suffered no damage. For use of Fortification Board, maximum and minimum temperatures recorded on Miraflores dumps. Duplicate automatic tide registers continued at Balboa and Colon.

Main hydrographic features of year were filling of Gatun and Miraflores Lakes and subsequent control of their water levels by spillway gates, auxiliary culvert valves, etc. Total yield of Gatun Lake watershed for calendar year 1913 was 77 per cent of yearly mean since May, 1908, and 70.3 per cent of mean for 24-year period 1890-1913. No large freshets during year.

Average temperature for calendar year 1913 slightly above normal. Apr. was warmest month at Ancon and Culebra and June was warmest month at Colon, 93° F. at Culebra on Apr. 24 established new high temperature record at that station.

Rainfall during 1913 below normal at all stations except Brazos Brook, Colon, and Porto Bello. Heaviest precipitation, 171.19" at Porto Bello, and minimum 59.54" at Balboa.

Wind movement over zone for year slightly above normal. North and northwest winds prevailed. Mar. windiest month at all stations, and Nov. month of least movement. June 27 to Dec. 27, 1913, Gatun Lake level rose from plus 48.22 to plus 84.7. Since latter date has been controlled by spillway gates between 85.14 and 84.13. During year possible for first time to determine velocity which would be caused in prism at Gamboa by floods in upper Chagres. On May 26, with discharge at Alhajuela of 16,000' per second, velocity at Gamboa Bridge 0.65 mile per hour, lake level being at 84.92 and rising to 84.98. On June 30, with discharge at Alhajuela of 20,050' per second, velocity at Gamboa Bridge 1.05 miles per hour, with lake at 84.88 to 84.86. P-14, 26, 27.

1905. Charge of the designing and construction of waterworks and sewers; care and maintenance of same; construction and repair of roads and works of a like character. 55 per cent of Panama waterworks completed. Ancon Reservoir practically completed. Temporary water supply of Colon in progress. Work being done at Ancon Hospital, La Boca, Culebra, Empire, Las Cascadas, Gorgona, Corozal, Paraiso, and Pedro Miguel. **P-05, 110.**

1906. Reports made on details of constructing Panama waterworks, sewers, paving; Colon water supply. Long and vexatious delays made in the furnishing of material; labor inferior also. Resignations and dismissals another source of delay. Work of the department a "great and satisfying success." **P-06, 92.**

1907. Paving of streets and construction of waterworks in Panama and Colon; paving, road making, grading, construction of waterworks and sewer systems, and other work in the zone; expenditure, \$1,741,953, divided about equally between zone and Panama and Colon. Cost of work in cities named to be reimbursed to U. S. under a contract made after end of fiscal year; U. S. to collect water rates sufficient to reimburse itself. Cost of work to date for Colon and Panama, about \$1,750,000. **P-07, 7.**

13,000' water pipe laid in Panama; extensions mainly to outlying districts. Waterworks system in Panama complete. Connections made to 2,093 houses; average consumption, 20 gallons per person per day. 12,232' sewer pipe laid; piping, etc., provided for storm sewers. Brick paving in city completed; streets made 2-team wide. Waterworks system in Colon complete. Sewerage system of Colon complete; 24,521' pipe laid. Sump built, into which all sewage flows. House connections under way. Paving in Colon under way; marked progress made. Drainage system of streets under way. Road work at Ancon. Filtration plant, etc., added to waterworks system at Ancon. Piping laid, houses connected; sewerage provided for. Similar work of piping, etc., at La Boca, Corozal, Pedro Miguel, Paraiso. 18" Venturi meter installed to measure water consumption from Rio Grande Reservoir, which has an available capacity of 248,230,000 gallons; plans made to increase this by 75,000,000 gallons. Crusher plant enlarged.

Culebra: Pumping station, daily capacity of 160,000 gallons, built; distilling plant placed in operation, supplying distilled water to Culebra and Rio Grande. Piping added, houses connected, standpipes built; sewers laid and connected; roads and paths built.

Camacho: Reservoir with capacity of 258,000,000 gallons completed. In Camacho and Em-

pire water piping laid, standpipes built; sewers laid; roads built. **P-07, 9.**

Las Cascadas: 10" mains put in; condensing plant installed to replace sterilizer; road built.

Bas Obispo, Chagrescito, Santa Cruz, and other places along the line of the canal: Water system installed; sewerage provided.

Gorgona: Storage capacity of Carabali Dam increased from 40,000,000 to 85,000,000 gallons. Condensing plant installed; fire system installed at machine shops; sewers for shops built; road built.

Tabernilla: Water service installed; also sewerage.

Gatun: 5" main laid connecting all white quarters; distilling plant erected; fire protection installed; roads built.

Bas Obispo: Road built.

Cristobal and Colon: Mount Hope Reservoir completed; capacity, 435,000,000 gallons; pumping station constructed; filtration plant working. Roads and paths under way; 2 bridges built at cemetery. Water system extended at Cristobal, to cover docks, ice plant, bakery, laundry, etc.; sewerage extended; road work; open drains and catch basins built; fire plugs installed. **P-07, 10.**

Labor supply: Ample at all times. Average daily force, 2,593. **P-07, 11.**

1908. Duties: Completion of waterworks, sewerage system, and paving in Panama and Colon; and construction of waterworks and sewerage systems, paving, grading, and road making in the zone. Cost of work done, \$1,067,150.52.

Cities of Panama and Colon: In Panama, 60,469' water pipe laid, 2,093 houses connected; 67,925' sewer pipe laid, 1,019 houses connected, and almost 90,000 sq. y. paving laid. In Colon, 69,280' water pipe laid, 1,147 houses connected, 37,896' sewer pipe laid, and 264 houses connected; nearly 70,000 sq. y. paving laid; sewage sump provided.

Cost of city works: To Panama, \$1,018,387.27; Colon, \$894,275.17. Rental to be charged cities for auxiliary water system maintained by U. S. in zone; fixed rentals to be charged to credit of U. S. for water.

City works, maintenance: Sewers, waterworks and pavements of Panama and Colon transferred to division of public works, department of civil administration.

Panama and Colon, further works: Needed because of growth of some districts due to canal population, etc. Estimate, \$1,000,000 (not to be undertaken without specific appropriation by Congress). **P-08, 15, 16.**

Canal Zone: 462,951' of water pipe laid up to June 30, 1908; 2,320 houses connected. Water supplied from 4 reservoirs and 2 pumping stations; former at Rio Grande, Camacho, Gorgona, and Brazos Brook; latter at Tabernilla and Gatun. 12 additional pumping plants maintained as auxiliary and emergency units.

Rio Grande Reservoir: Capacity, 496,670,000 gallons; supplies water to all points south of Culebra, including Panama, Ancon, and La Boca. Annual consumption, 942,200,000 gallons (0.3 for city of Panama). All water for Panama and Ancon filtered at Ancon filter plant.

Camacho Reservoir: Capacity, 295,867,000 gallons. Supplies territory between Culebra and Bas Obispo. Annual consumption, 131,765,000 gallons.

Carabali Reservoir: Located back of Gorgona. Capacity, 80,000,000 gallons. Furnishes water for territory between Matachin and Mamei. **P-08**, 16, 17.

Brazos Brook Reservoir: At Mount Hope. Supplies from Mount Hope to and including Cristobal and Colon. Annual consumption, 457,544,000 gallons, with a capacity of 641,000,000 gallons.

Tabernilla pumping plant: Supplies water to territory between San Pablo and Frijoles. 500,000 gallons pumped daily.

Gatun pumping station: On Gatuncillo River. Pumps to Gatun. 1,200 gallons of distilled water daily.

Ancon Hill: For fire protection, to Ancon, Panama, and La Boca, 1,000,000 reserve storage reservoir to be built.

Locks, Miraflores and Pedro Miguel, water for: Surveys made of valley drained by Pedro Miguel River to ascertain extent of probable water supply for construction work. Daily flow of 674,000 gallons in dry season; ample.

Fires: Two at Panama and 2 at Colon; water service efficient.

Zone sewage: 98 per cent of all Isthmian Canal Commission quarters connected; 217,975' at end of year, 2,163 house connections, 12 catch basins.

Roads: At end of year, 172,148' macadam road built and 18,133' paths laid.

Public works, Culebra Island: Waterworks, sewage system, walks, and landing stage built. Island used as a quarantine station.

Native settlements: Public works of various kinds constructed. Cost paid by Isthmian Canal Commission.

Rio Grande rock crusher: Delivered 57,329 c. y. broken stone. Cost, \$1.75 per c. y.

Employees: 1,015 men on rolls at end of year.

Costs: System for keeping installed. Total cost of municipal works in zone, waterworks and sewers, \$2,358,840.44; roads, etc., \$1,174,778.26. **P-08**, 17, 18.

1909-13. (See Atlantic, Central, and Pacific divisions, respectively.)

1914. All municipal engineering work in zone formerly performed by construction divisions, as well as that performed in Colon and Panama by division of public works, department of civil administration, consolidated July 16, 1913, forming division of municipal engineering, under George M. Wells, resident engineer, reporting to chief engineer. **P-14**, 1.

Division divided into 5 principal sections: Northern district embraces all municipal construction, maintenance, and operation work, exclusive of operation of filtration plants, from and including Colon to Darien, 25.27 miles; southern district embraces similar work from Darien to Balboa, including city of Panama, 22.34 miles; waterworks for southern end of Panama Canal embrace construction of purification works at Miraflores, pumping stations at Gamboa, Miraflores, and Ancon, reservoirs, and laying of new mains; fourth subdivision embraces operation and care of purification plants and care and analyses of zone water supplies; and fifth subdivision embraces all work of design for division.

Improvements in Colon in progress at close of previous year being paid from appropriation by Congress of \$800,000, completed in early part of Aug., 1913, at final cost of \$520,212.57.

Plant at Gatun for manufacture of concrete pipe operated until May. Usual maintenance in connection with reservoirs of northern district performed, and level of water in Brazos Brook Reservoir kept at about same elevation during dry season by letting water from Gatun Lake through tunnel constructed during previous year. New purification plant located at Mount Hope and furnishing water to Colon, Cristobal, and adjacent district completed and placed in service Feb., 1914; has been successfully operated since. Total division cost of plant, \$292,198.10.

In addition to maintenance in southern district a considerable amount of construction work undertaken, including streets, water and sewer systems, and roads in new silver town of La Boca, storm sewers in gold town site of Balboa, water and sewer systems and streets at Pedro Miguel, installation of water and sewer systems for Darien radio station, and work in connection with addition to Panama, for which Republic of Panama made special appropriation of \$76,000.

Question of providing permanent, adequate, and suitable water supply for towns of zone from Pedro Miguel south under consideration for some time. Demands greater than could be supplied by Rio Grande Reservoir, and with depopulation of zone, contemplating elimination of all towns on west side of canal, plan prepared for utilizing Camacho and Rio Grande Reservoirs, connecting them by pipe line, and increasing capacity of Rio Grande Reservoir by raising dam, diverting railroad for purpose. With adoption of policy of quartering troops on west side of canal, utilizing old canal buildings for the purpose, together with fact that rainfall had not been sufficient to raise level of water in reservoir to full height, whole subject taken up anew Mar., 1913. Five projects presented; cheapest contemplated use of water from Miraflores Lake, and adopted. It contemplated laying of mains, construction of purification plant

of the rapid mechanical gravity type on Miraflores Hill, and construction of high-service reservoir on side of Ancon Hill, all to be based on nominal maximum capacity of 12,000,000 gallons filtered water per day. At the time that use of Miraflores Lake water considered, possible objection advanced that chlorine content, by reason of operation of Miraflores Locks, might increase beyond .75 to 100 parts per million, but at the time it did not seem possible this would occur, at least for a period of years, on the assumption that intimate diffusion between salt water admitted by locks and fresh water of lake would not be rapid, especially in view of fact that water could be pumped from one of the fresh arms of the lake. At any rate, the enormous saving that would result seemed to warrant adopting Miraflores Lake project.

In Jan., after pumps from Coccolí had been transferred to Miraflores and increased in capacity to take care of demand, chlorine-sampling stations established in lake; discovered that with continued operation of locks chlorine content steadily rose. By Feb. it became apparent that constant diffusion taking place throughout all areas of lake in general, as high as 15 per cent salt water. To bring this down, temporary pump station installed at Pedro Miguel and approximately 4,000 gallons of water per minute pumped from Culebra Cut north of locks and discharged into Miraflores Lake immediately in front of temporary pumping station. This reduced chlorine content going to Panama, but it increased turbidity of water due to condition in cut. As result of these observations, it became evident that Miraflores Lake would be impracticable for use as source of water supply for southern end of canal, and it was decided to move pumping station to Chagres River at Gamboa, water to be taken from this point through 30" to 36" cast-iron mains laid along line of Panama R. R. to purification plant on Miraflores Hill. Before final action taken, effort made to reduce chlorine content by drawing off water from Miraflores Lake through locks and admitting fresh water through Pedro Miguel Locks, but results not satisfactory. Work commenced on purification plant, Miraflores Hill, Aug. 1, and steam shovel and hand excavation completed Jan. 28 by removal of 91,233 c. y. For high-service reservoir at Ancon there were laid 1,477 c. y. reinforced concrete, and in purification plant, Miraflores Hill, there were laid 5,656 c. y. reinforced concrete. Total expended for new waterworks in southern district estimated at \$1,261,000. Total amount expended at close of year, \$703,585.05. **P-14**, 23-26.

Municipalities, operations.

1905. Oct. 24, 1904, legislative enactment of the Isthmian Canal Commission established 5 municipal districts in the zone. Area, 475 sq. m. Population, embracing everyone, estimated at 25,000. Officers of local government, a mayor, judge, secretary, and a treasurer, who are appointed, and whose salaries are fixed by the governor of the zone. Each municipality has a council of 5 members, appointed by the governor of the zone upon the recommendation of the mayor. Various public works projected and in progress under the auspices of the municipalities, such as courthouses, slaughterhouses, etc. Liquor-license tax increased from about \$2.50 to \$10 per month to \$600 gold annually, increasing revenues and reducing disorder, wiping out disreputable places. **P-05**, 71.

1906. Great amount of public work done; finances have improved, and respect and admiration of inhabitants of zone gained. Satisfaction over fact that taxes are not all spent for maintenance of the central government. Slaughterhouses, market houses, schoolhouses, municipal buildings, sidewalks, lighting systems, jails, parks, opening of roads and trails some of the work done. Compulsory attendance of children between 6 and 12 at school increased attendance from 20 to 40 per cent. Cash balance to credit of municipalities of \$145,291.29 silver, as against \$61,054.01 Sept. 30, 1905. **P-06**, 37.

Navigation, Operation.

1914. Construction and placing of lights and beacons continued. With exception of light at extremity of west breakwater and construction of 6 which can not be placed until work in connection with slides in Culebra Gut is completed, all aids to navigation finished and turned over to superintendent of canal transportation, for maintenance and operation, June 16, 1914. Design for west breakwater light was for rather elaborate structure founded on a caisson built during previous year. Taken to site, but in sinking it valves could not be controlled and caisson sunk. After expending \$8,602.22 in attempt to straighten caisson it was abandoned, as was also the design. Total expended in completing entire system of beacons, lights, and buoys to date, \$514,878.81, exclusive of general expenses. **P-14**, 27, 28.

Union Oil Co. of California granted concession for pipe line over land owned by Isthmian Canal Commission and Panama R. R. Similar concession gained from Panama Oct. 30, 1906. License revokable; \$500 a month to be paid to zone treasury for benefit of special fund for schools. Isthmian Canal Commission and Panama R. R. may purchase oil for 90 cents a barrel. **P-06**, 22.

Opening.

Of canal, act, **P-12**, 599.

Operation and Maintenance of the Canal, P-14, 63.

1899-1901. Data obtained from famous canals; i. e., Suez, Manchester, Kiel, etc. Cost of maintenance and operation of Suez; of Kiel and Manchester Canals; of St. Marys Falls Canal. Maintenance and operation of Nicaragua Canal much greater than for Panama Canal. Former has 4 times the total length of the latter. Has more locks, weirs, etc. Greytown a most difficult harbor to maintain, and is in region of greatest rainfall. Annual cost, for Nicaragua, \$3,300,000; for Panama, \$2,000,000. Commission d'Etudes, using a different method, estimated the cost

for the Panama route at \$1,940,000. **P-09**, 169, 170.

1911. As work nears completion, it is intended to concentrate construction until what remains will be in immediate charge of directing office, thereby reducing costs and overhead charges. Believed that more satisfactory operating force can be secured by selection of suitable men from "present" organization. There has been considerable criticism because of high wage scale, but this due to fact it was difficult to obtain men when work started, on account of bad reputation of country, and also because of temporary character of the work. Complaints made constantly because salaries disproportionate to responsibilities, and because of lack of uniformity in percentage of excess over wage scale for similar labor in States. After inauguration of scale it was not considered advisable to make reduction, and rearrangements made from time to time as necessities required, but inequalities still exist. Conditions different now. Chief sanitary officer declares death rate of zone to be "much lower than that for most parts of the U. S.," and general health of about 8,000 white Americans in the zone to be "fully as good as it was in the U. S.;" also, continuance in employment can be assured. Believed that lower wage scale can be put into effect for operating canal, and that necessary force can be secured from men who will remain in service during next year or two. This an important consideration, since it is essential that cost of operation shall be reduced to minimum consistent with efficiency. With operating organization provided for, steps can be taken to adopt salary and wage scale, after which there can be created from construction force one for operation without delay or confusion.

Total outlay for maintaining the canal will be for wages of force engaged in its operation, expense of engineering work connected therewith, and cost of sanitation and civil administration.

Revenues of canal should go to pay not only operating expenses, but to repay capital invested. Every legitimate means for increasing revenue should therefore be adopted. U. S. should have coal and fuel oil on hand for its own vessels, and these commodities should be sold to shipping using the canal. These should be supplied at established rate and purchased after advertisement. Existing commissary, manufacturing plant, and laundry should be continued for the benefit of U. S. forces and to furnish supplies and service to shipping. Wireless-telegraph station should be established for commercial as well as military purposes. Canal authorities should be authorized to sell tools and appliances needed by ships, and to make repairs as may be necessary while ships in vicinity of canal. Dry dock should

be built with dimensions conforming to locks. Both dry dock and machine shops would be available for use by Navy. If this policy be adopted, early legislation needed that construction necessary to make it effective may be undertaken without delay. **P-11, 60-63.**

1914. As already outlined, organization made effective Apr. 1, 1914, provided for department of operation and maintenance under governor, who was to be assisted in the administration of the department by engineer of maintenance and superintendent of canal transportation. Capt. H. Rodman, U. S. Navy, appointed superintendent of canal transportation, and charged with safe conduct of vessels through Panama Canal, except at locks. Also given supervision of port captains, board of local inspectors, pilots, operation of lights and beacons subsequent to June 15, and inspection and admeasuring of vessels. Offices of captains of ports at Cristobal and Balboa established May 5; charged with duty of assignment of wharves, docking and berthing of vessels, furnishing of pilot service to shipping, admeasurement of vessels for transit through canal, and general supervision and enforcement of canal and harbor regulations relating to shipping. Eight pilots appointed—four at each end; their services have been utilized in piloting vessels in and out of terminal ports, in connection with lightering cargo through canal, familiarizing themselves with aids to navigation and with canal route.

Due to condition of affairs in Mexico and interruption of the Tehuantepec route, demands upon Panama R. R. for transshipment of freight became so great that it was necessary to institute barge service through canal; this made effective on May 15, when barges were towed through canal from Colon to Balboa, and continued rest of year. Tolls paid by Panama R. R., and aggregated for year \$11,610.69.

Maintenance work undertaken at locks covered miscellaneous repairs, as well as care necessary to keep machinery in satisfactory working order. Maintenance charges made applicable only after work had been entirely completed in each instance. Amount expended for such repairs and maintenance work, \$120,287.99. Heavier expenditures were at locks and were incurred in connection with gates, emergency dams, miter gate moving machines, rising stem valve machines, cylindrical valve machines, and in lighting. Work done in repainting gates, caissons, and caring for machines of spillways. Also expended \$16,570.44 of amount above noted for maintenance in clearing vegetation and pulling trees from canal channel, and removing timbers and driftwood from vicinity of locks. **P-14, 63, 64.**

1905. Isthmian Canal Commission No. 3 organized under Executive order of the President and of the Sec. of War, Apr. 1 and 3, 1905.

Contents of order: Practical result of preceding commission not satisfactory. Isthmian Canal Commission No. 3 charged with the general duty of the adoption of plans for the construction and maintenance of the canal and with the execution of the work of the same; with the purchase and delivery of supplies, machinery, and necessary plant; the employment of the necessary officers, employees, and laborers; and with the fixing of their salaries and wages; with the commercial operations of the Panama R. R. and its steamship lines as common carriers; with the utilization of the railroad as a means of constructing the canal; with the making of contracts for construction and excavation; and with all other matters incident and necessary to the building of a waterway across the Isthmus of Panama, as provided by the act of June 28, 1902. Executive committee to act for the commission during the intervals between the regular quarterly meetings. There shall be three executive departments: (a) Fiscal affairs, purchase and delivery of materials and supplies, accounts, commercial operation of railroad, etc.; (b) government of zone, sanitary matters; (c) construction plant, operation of railroad, etc. Officers and employees to be appointed generally by their respective department heads. Contracts to be essentially competitive. Board of 9 civil engineers to be appointed by the President to cooperate with the Isthmian Canal Commission No. 3. **P-05**, 2, 3.

Isthmian Canal Commission No. 3 assumed office Apr. 3, 1905, **P-05**, 1.

Members Isthmian Canal Commission No. 3: Theodore P. Shonts, chairman; Charles E. Magoon, governor of zone and member; John F. Wallace, chief engineer and member; Rear Admiral Mordecai T. Endicott, U. S. Navy; Brig. Gen. Peter C. Hains, U. S. Army (retired); Col. Oswald H. Ernst, Corps of Engineers, U. S. Army; Benj. M. Harrod, **P-05**, 4.

Salaries: \$7,500 per annum; chairman, \$22,500 additional; chief engineer, \$17,500 additional; governor of zone, \$10,000 additional. Foregoing officers to have use of furnished dwell-

ing house on Isthmus. Travel expenses for all members. **P-05, 5.**

Secretary, Joseph Bucklin Bishop; appointed Sept. 7, 1905, **P-05, 5.**

Well fitted to accomplish what was intended, **P-05, 109.**

Chief Engineer John F. Stevens, appointed July 1, 1905, **P-05, 108, 123.**

The following divisions were found in operation on Mr. Stevens assuming charge, July, 1905: Colon construction division, Chagres division, Gamboa division, Culebra division, La Boca division; and bureau of personnel, transportation, and quarters, of supplies, of waterworks, sewers and roads; of machinery and equipment, of architecture and building, of meteorology and river hydraulics, of map making, lithography, and printing; and bureau of communication (telephones and telegraphs, etc.), **P-05, 124.**

Department of construction and engineering: Secretary of chief engineer; assistant chief engineer; manager of labor and quarters, **P-05, 151.**

Superintendent of motive power and machinery; architect; master builder, **P-05, 152.**

Principal assistant or assistant engineers; office engineer; division engineers; mechanical engineer, **P-05, 153.**

Executive department: Charles E. Magoon, member of Isthmian Canal Commission No. 3, governor, **P-05, 27, 107.**

Act 8, Laws of the Canal Zone, established the executive branch of the zone government, created the office of governor, and provided for the following departments: Executive, health, revenues, justice, police and prisons, treasurer of the zone, and auditor of the zone, **P-05, 29.**

Department of health: Col. W. C. Gorgas, chief sanitary officer, **P-05, 107.**

Judicial department (supreme court): F. Otis Duran, chief justice; Hezekiah A. Gudger, associate justice; Lorin C. Collins, associate justice, **P-05, 107.**

Duties of the head of the department of government and sanitation of the Isthmian Canal Commission No. 3, and governor of the Canal Zone: Defined by order of Apr. 1, 1905, of President. He shall administer and enforce the laws of the zone, supervise all measures of sanitation within the zone and the cities of Panama and Colon, act as custodian of supplies required for sanitary purposes, and perform such other duties as he may be charged with by Sec. of War. **P-05, 28.**

Treasury: Paymaster G. C. Schaefer, U. S. Navy, treasurer, **P-05, 107.**

Washington office: Organized Apr. 3, 1905. Chief of office appointed, Col. C. R. Edwards, U. S. Army. Sections or divisions: Central office, or office of administration proper; office of general auditor; general pur-

chasing officer; disbursing officer; committee on engineering, **P-05, 148.**

Col. Edwards resigned as chief of Washington office, Nov. 15, 1905, **P-05, 150.**

Duties of chief of Washington office assigned to assistant chief, **P-05, 150.**

1906. Reorganization: The President, Nov. 17, 1906, during a visit to Panama, amended Executive order of Apr. 1, 1905, to divide the work of the project among the following departments: Engineering and construction, law and government, sanitation, auditing, purchasing, disbursing, and labor, quarters, and subsistence. Head of each department made directly responsible for the work carried on under his direction. All appointed by and report directly to the chairman of the Isthmian Canal Commission No. 3, who, in turn, is responsible to the President through the Sec. of War. **P-06, 15.**

Executive committee abolished, legal and governmental departments consolidated, separation of sanitary department from governmental department. In the absence of the chairman, the chief engineer acts in matters requiring immediate attention. **P-06, 16.**

Executive order of Apr. 1, 1905, changed Nov. 17, 1906, to provide: Quarterly sessions of the Isthmian Canal Commission (4 members a quorum) on the Isthmus; with general charge of all operations incident to the building of an Isthmian Canal at Panama, including sanitation, local government, etc.; executive committee of Isthmian Canal Commission abolished.

General organization: Chairman, chief engineer, general counsel, chief sanitary officer, general purchasing officer, general auditor, disbursing officer, and manager of labor and quarters.

Besides being in general charge, the chairman shall appoint the heads of the various departments, subject to the approval of the Isthmian Canal Commission; the head of each department shall report to and receive instructions from the chairman; he shall have charge of the operations of the Panama R. R. and steamship lines.

The chief engineer shall have charge of all engineering work relating to the canal, etc.; all construction work on the Isthmus; operation of Panama R. R. so far as it relates to canal work; the custody of all the supplies and plant of the Isthmian Canal Commission on the Isthmus. He shall act, in absence, for the chairman.

The general counsel shall have charge of all legal matters pertaining to the Isthmian Canal Commission; the administration of civil government within the zone, exercising through a local administrator the authority heretofore vested in the governor of the zone. The chief sanitary officer shall have charge of all matters of sanitation within the zone,

and also in the cities of Panama and Colon, and the harbors, etc., between the U. S. and Panama; the custody of all medical supplies needed for sanitary purposes.

The general purchasing officer shall have charge of the purchase and delivery of all supplies, machinery, and necessary plant.

The general auditor shall have charge of the general bookkeeping, of property accounts, of statistics, of administrative audit of the Isthmian Canal Commission, and of the accounting, bookkeeping, and audit of the government of the zone.

The disbursing officer shall have charge of the timekeeping, of preparation of time rolls and vouchers, and payment of the same.

The manager of labor and quarters shall have charge of the employment of all necessary labor; of record of employees; quarters, assignment of same to employees or contractors; and operation of all Isthmian Canal Commission hotels and mess houses.

Appointments: All officers and employees shall be appointed and their salaries fixed by the respective heads of the departments, subject to the later approval of the Isthmian Canal Commission. Contracts for labor shall be negotiated by the chairman of the Isthmian Canal Commission, where the contract is made in the U. S. Employment of labor upon the Isthmus or outside the U. S. shall be conducted under the supervision of the chief engineer, subject to the approval of the chairman.

Contracts: Amounting to over \$10,000, by public advertising; award to lowest responsible bidder. More than \$1,000 and less than \$10,000, competitive bids by invitation or advertisement whenever practicable.

Reports: Head of departments to report to the Isthmian Canal Commission, as may be required; chairman to report to Sec. of War; Sec. of War to report to President. **P-06,** 151-153.

1907. (See No. 217, p. 236, this Index.)

1914. Effective Apr. 1, 1914, by Executive order and in conformity with Panama Canal act Aug. 24, 1912, "existing" organization abolished and one contemplated by act made effective. Under this there were created department of operation and maintenance, purchasing department, supply department, accounting department, health department, executive office, and Washington office.

Department of operation and maintenance placed in charge of governor, and in administration of affairs of department he is assisted by an engineer of maintenance and a superintendent of canal transportation. To provide for remaining construction work as well as maintenance and operation of canal, department organized with following divisions:

Division of terminal construction, which embraces charge of design, inspection, and construction of dry docks, shops, coaling and fuel-oil plants, floating cranes, docks, and

other terminal facilities; construction transportation by rail; road, street, and sewer work in new town of Balboa; and break-water construction at Atlantic terminal, reporting to governor.

Division of erection; electrical division; division of municipal engineering; division of light-houses (until June 16, 1914, when it was abolished); and office engineer with his forces, placed under engineer of maintenance.

Dredging division, fortification division, mechanical division, and remaining construction work, consisting of sluicing in vicinity of Gold Hill, completion of Naos Island Breakwater, excavation in dry to relieve side pressure in vicinity of Culebra, and grading and filling at locks and dams, combined in general construction division, report directly to governor.

Division of canal transportation, under supervision of superintendent of transportation reporting to governor is charged with safe conduct of vessels through canal. Port captains, board of local inspectors, pilots, and measurers of vessels, and, since June 16, 1914, care and operation of lights and beacons, directly in charge of superintendent of transportation.

Col. H. F. Hodges, U. S. Army, designated as engineer of maintenance; H. H. Rousseau, U. S. Navy, as engineer of terminal construction; and Capt. H. Rodman, U. S. Navy, as superintendent of transportation.

Quartermaster's department and subsistence department, consolidated to constitute supply department, placed in charge of Capt. R. E. Wood as chief quartermaster. Has charge of storing and distribution of all material and supplies for use of Panama Canal and its employees, and for other departments on Isthmus and their employees, and for vessels of U. S. and other vessels when required. Operates commissaries, hotels, and messes; has charge of maintenance of buildings, assignment of quarters, and care of grounds. Recruits and distributes unskilled labor and is in charge of necessary animal transportation.

Accounting department, as organized, consists of auditor's, paymaster's, and collector's offices. Consolidation made for administrative purposes only, to secure economy, auditor having supervision and direction of entire department; heads of subdivisions are independent in their own particular spheres. Department has charge of general bookkeeping, auditing, and accounting for both money and property, examination of pay rolls and vouchers, inspection of time books and of money and property accounts, administrative examination of accounts as required by law, and collection, custody, and disbursement of funds for Panama Canal and zone. Accounting department placed in charge of H. A. A. Smith as auditor for Panama Canal, with J. H. McLean as paymaster and T. L. Clear as collector.

Health department organized under supervision and direction of a chief health officer,

Lt. Col. C. F. Mason, U. S. Army. Department charged with all matters relating to maritime sanitation and quarantine in ports and waters of zone and in harbors of cities of Panama and Colon, and with land sanitation in zone and sanitary matters in terminal cities in conformity with canal treaty between U. S. and the Republic, together with all matters relating to hospitals and charities.

Civil functions of zone placed in charge of executive secretary who, under direction of governor, has supervision of all matters relating to keeping of time of employees, to post offices, customs, taxes and excises, excepting collection thereof, police and prisons, fire protection, land offices, schools, clubs, and law library, custody of files and records, and administration of estates of deceased and insane employees. He conducts all correspondence and communications between authorities of zone and Republic and diplomatic representatives from other countries. C. A. McIlvaine appointed executive secretary.

Scope of work of Washington office remained about the same as previously reported, Maj. F. C. Boggs, U. S. Army, being continued in charge as general purchasing officer and chief of office.

By Executive order May 20, 1914, committee of 6 members created to arrange and provide suitable ceremonies for formal and official opening of Panama Canal, as provided for in section 4 of Panama Canal act. Committee composed of persons who were members of Isthmian Canal Commission and is to be known and referred to as committee for formal and official opening of Panama Canal.

1909. Duties: Construction of locks and dam at Pedro Miguel, at Miraflores; Ancon quarry work; sand supply at Chame; dredging and excavating channel between the locks and below Miraflores Locks to deep water in the Pacific; and such municipal, building construction, and sanitary work as required by the district. District takes in the former La Boca dredging, and Pacific Locks and dams divisions.

In charge: S. B. Williamson, as division engineer. **P-09**, 15.

Pedro Miguel; foundations of locks: Durable rock of ample strength; no underlying water-bearing strata. Rock of such quality that portion will be left in place under the central culvert to form part of the separating wall between the lock chambers; this core will be faced with concrete.

Culverts: Later culverts will be built in trenches; lock floors connecting them will be 1' thick.

Excavation, locks: Continued during the year; total amount removed, 715,726 c. y. (167,061 c. y. used to construct rock toes of the dam).

Results of work to date: Completion of west lock chamber to grade; and of east lock chamber, excepting about 45,000 c. y. to be removed.

West dam: To be of earth, connecting the lock with the hill to the northwest; about 1,400' long; reference of top at 105; top width 50', and side slopes approximately 8 to 1. Maximum pressure that from head of 40'. Two rock piles are formed of spoil from lock excavation; puddled clay between. Maximum thickness at bottom of this clay core, 140'. Material underlying dam impervious generally.

Approach piers: Character undetermined.

East lock wall: To be turned toward hill on east and connected thereto, by concrete core wall resting on rock 550' long, 4' thick on top, and 10' thick at bottom.

Drainage: Dike made across south end of lock site to keep out tide water; pumping plant installed to take care of seepage, etc. **P-09**, 15, 16.

Miraflores; lock site excavation: Continued by steam shovels in the upper locks and by a suction dredge. Total removed, 1,147,527 c. y. (about half the total estimated quantity). Of this amount, 307,060 c. y. placed in toes of

the dam, and 239,400 c. y. for fills for construction purposes.

Plans for dams: Adopted and approved during the year. West dam to extend from head of the lock to Cocoli Hill; will dam the Cocoli River (discharge of which will be thrown into Lake Miraflores). Dam to be built of 2 rock piles, as at Pedro Miguel. Will rest upon impervious material; cored to lock walls and Cocoli Hill with concrete. Length, 2,300'; top width, 40' at reference 70; side slopes approximately 12 to 1. Average head to which dam will be subjected, 30'; maximum, 45'. Plan of east dam approved; details not completed. Of concrete on rock; 500' long; with regulating works as at Gatun; crest at elevation 39. Openings will permit of discharge of 75,000' per second. Approach piers of locks: Under study.

Locks: Of concrete. Quarry for stone opened on west side of Ancon Hill. Crushing plant being installed; capacity, 2,500 c. y. daily. Sand to be procured with suitable plant from Point Chame, 23 miles west of Balboa. Cement shed built on west side of Miraflores Locks, having a capacity of 75,000 barrels. Construction plant for locks under contract. Four berm cranes and four chamber cranes. **P-09, 16, 17.**

Channel excavation, Pedro Miguel to Pacific deep water: 1,279,600 c. y. to be removed (63,600 c. y. rock) between Pedro Miguel and Miraflores; between Miraflores and deep water in Pacific, 13,000,900 c. y. loam and 1,725,000 c. y. rock. Because of tidal oscillations, etc., decided to remove all rock between the locks and for 2 miles below Miraflores, in the dry. Temporary dam to be placed about 2 miles below Miraflores locks to permit dry excavation. This would leave below the temporary dam about 3,600,000 c. y. of loam and 123,000 c. y. rock, to be removed by dredging, etc.

Dredging: Fleet consisted of 1 seagoing suction, one 20" suction and pipe line, one 5-yard dipper, and 4 French ladder dredges. 8,475,931 c. y. dredged from the channel proper, completed for about 5 miles from deep water in the Pacific.

Marine shops: At Balboa, maintained. Repairs made to plant; new equipment erected. **Municipal, sanitary, and building work:** 1,000,000 capacity concrete reservoir built at Ancon Hill to replace smaller tank. Alterations made in Ancon pumping and filtration station. Considerable work done in changing the water main from the Rio Grande Reservoir to permit the excavation of the locks at Pedro Miguel; various pipe connections made.

Roads: Constructed under the direction of the department of civil government from Panama to Corozal, and from Paraiso station to Pedro Miguel.

Buildings: 23 begun in previous year finished; were entirely erected by day labor, and 4 under contract. Repairs, etc.

Sanitary work: Digging and cleaning ditches, laying concrete and tile drains, and filling swamp lands. **P-09, 15-18.**

1910. Work in division consists of construction of locks and dam at Pedro Miguel, locks and dams at Miraflores, Ancon quarry, dredging sand at Chame, excavating channel between locks and below Miraflores Locks to deep water in Pacific, such municipal work as may be required within territorial limits of division, and such sanitary engineering work as may be prescribed by sanitary department within same area. Work in charge of S. B. Williamson, as division engineer.

Pedro Miguel: Work continued excavating lock site and approaches thereto from south. When excavation nearly completed two slides on east side, delaying work and increasing amount to be removed by 75,299 c. y. Total excavation during year, 277,935 c. y. by steam shovels, and 65,513 c. y. by hand, of which 44,948 c. y. classed as preparing foundations.

Subsequent to completion of steam-shovel work preparation of foundations for reception of concrete undertaken by removing loose rock which remained and by excavating 42 trenches, 13' wide, 11' deep, and 137' long for lateral culverts, and an area of 2,500 sq. ft. to 5' below floor level at miter sills. Greater portion of material handled by pick and shovel into buckets or skips, which were unloaded into cars by locomotive cranes or derricks. Small portion handled directly into cars by Thew shovel. In preparation of foundations 64,084 c. y. removed.

Bids invited for lock construction plant Oct. 8, 1908. Largest amount of concrete in division to be laid at Miraflores, and while in the selection of plant economical handling of this material was guiding consideration, another factor was that plant should be capable of being adapted to work at Pedro Miguel. Cantilever cranes adopted, general description given in report for 1908. Contract entered into with Wellman-Seaver-Morgan Co., Cleveland, Ohio, May 8, 1909, for furnishing material and assistance in erection. One arm of berm cranes will transport material from storage piles to mixers on cranes. Product will be passed by boom arms to side walls or to chamber cranes in locks, which will place concrete in center walls. Both berm and chamber cranes will handle forms and steel or cast iron embedded in the concrete.

At Pedro Miguel banks adjacent to lock pit are such as to prevent berm cranes from functioning as at Miraflores, so they are arranged with two cantilever arms, placed in forebay of locks, and used solely for transporting material from stock piles to mixers and for mixing. Chamber cranes place the mixture in both side and center walls, as

well as handle all forms and steel or iron work. Concrete is carried from mixers by narrow-gauge construction locomotives hauling two flat cars, each carrying 2-yard bottom-dump bucket, which is taken by chamber crane and concrete deposited in the walls.

Contract required delivery of one berm and one chamber crane by Aug. 20, and one berm and two chamber cranes by Sept. 20, 1909. Due to causes beyond control of contractor deliveries delayed, and as cement deliveries were based on dates noted, when advised of delays, arrangements made to install mixers for building lower guide or approach wall and for laying concrete in floors in advance of receipt of construction plant. To this end three $\frac{3}{4}$ -yard mixers employed in approach walls, and two 2-yard mixers installed temporarily, one on east and one on west side of lock pit, for laying lateral culverts and floors.

First berm crane delivered Oct. 10, and first chamber crane Oct. 25, 1909, but erection interfered with by excessive rains, so that it was not until Apr. 4, 1910, that one-half of regular plant was installed and began laying concrete in west and center walls. Temporary mixer on west side then dismantled, but one on east side continued in service until close of year. Entire construction plant at Pedro Miguel began operations July 15.

Storage trestles in forebay of locks constructed on both sides of and parallel to canal axis, each having height of 28' and length of 880' available for storage. For this purpose 3,525 linear feet of trestle erected.

Crushed stone and sand delivered by trains made up of 12-yard dump cars; stone dumped on the inside, to minimize average haul to the mixers. Total storage capacity, about 45,000 and 50,000 c. y. of sand and stone, respectively, capable of supplying mixers for 17 working days of 8 hours each.

Necessary tracks for berm cranes required laying of two parallel 5' gauge tracks 50' apart in forebay.

Total of 11,000' of narrow-gauge track constructed from forebay to lock chambers, necessitating construction of 1,400 linear feet of trestles for these tracks, which are laid on incline of $2\frac{1}{2}$ per cent.

Total concrete laid, 166,869 c. y., of which 1,656 c. y. large stone placed in mass. Of this total, permanent plant laid 73,063 c. y. on basis of 8-hour day. Estimated concrete in locks, including approach and wing walls, 858,600 c. y., so there remain 691,732 c. y. to complete.

Steel collapsible forms used for main and lateral culverts, and wooden forms in built-up panels, 15' long and 8' high, are used for construction of walls. Panels are series of uprights, 14' long, held together by walling strips and lagging. Latter placed on upper 6', lower 8' acting as cantilevers on concrete

previously placed. Anchor bolts extend into masonry for 2', and are removed as work progresses, leaving anchor nut embedded. Each panel used at least 12 times.

Filling back of west wall begun about June 1. Material obtained from Ancon quarry site.

West dam at Pedro Miguel consists of two mounds or toes of all classes of waste material, large percentage being rock, with intervening space filled with selected material, forming impervious core. Selected material clay, excavated from canal prism south of locks, and deposited from dump cars in layers about 6' deep, each layer being thoroughly wetted down and compacted. Within the year 51,827 c. y. added to impervious portion and 41,964 c. y. to the toes.

Total of 99,703 c. y. removed below locks at Pedro Miguel. Bulk of this material placed in dam.

Miraflores: Excavation for upper locks of flight at Miraflores practically completed, work of preparing foundations, erecting concrete plant, and placing concrete begun. Total excavated, 234,731 c. y. by steam shovels, and 59,098 c. y. by hand, scrapers, and cranes. Of total excavated, 157,483 c. y. placed in toes of Miraflores west dam and 121,080 c. y. used as back fill.

Twenty-inch suction dredge worked in lower lock site until Dec. 20, 1909. Because of large number of bowlders and character of material, output small and performance of dredge unsatisfactory. As this dredge could be utilized to advantage in Atlantic division, it was transferred, arrangements being made for excavating remainder of material by hydraulic means. Dredge removed 141,759 c. y.

Preparing foundation of upper locks begun as soon as excavation completed sufficiently, and consisted of cleaning up loose material and excavating for lateral culverts and areas above miter sills. Work done by these steam shovel and by hand, total being 39,381 c. y. Excavation by steam shovels, classed as preparing foundations, 24,655 c. y.

Handling plant in these locks will consist of 4 berm cranes, 2 of which in operation in forebay at Pedro Miguel, and 4 chamber cranes, in use at Pedro Miguel. Tower and movable boom of one of berm cranes in place completely erected, and another on west side partly erected. Cantilever arms will be placed on these cranes when berm cranes at Pedro Miguel dismantled and transferred.

On east side of lock storage trestle 3,200' long under construction, and 1,400 linear feet of tracks for berm crane laid and balasted. Two concrete mixers will be installed in storage trestle on east side and will supply concrete to berm crane for placing until mixers can be permanently installed on crane after work at Pedro Miguel permits. On west side berm-crane tracks and erection of trestles for storage in progress; fourth crane being assembled.

On June 1 concreting in upper lock begun on floor and lateral culverts, mixture being furnished by two $\frac{1}{2}$ -yard mixers, as it is desired to complete the floors before permanent plant is transferred from Pedro Miguel. Total concrete laid, 1,630 c. y. Estimated concrete in locks, including approach and wing walls, 1,327,300 c. y.

Reinforced concrete power house at Miraflores finished and in operation. Building 157' 6" long, 76' 6" wide, and eaves 39' above generator-room floor, beneath which is basement. One end of building and portion of turbine-room floor of temporary construction, as depth and width of water turbines to be used have not yet been determined. Equipment similar to that at Gatun, described in last report. Furnishes power for operation of all cranes, for crusher plant at Ancon, and for sand-unloading cranes at Balboa.

West dam, from head of locks to Coccol Hill, consisting of two mounds or toes made up of waster material obtained from lock excavation, mostly rock, and of hydraulic fill between them, continued. 157,483 c. y. placed in toes and 120,910 c. y. impervious material added by dredge.

Stone and sand: Broken stone for concrete furnished by quarry opened on west side of Ancon Hill, as described in last report. Installation of plant continued during early part of year, and practically complete Oct., 1909, when bad slide occurred on face of hill between crushers and storage bins, which delayed operations until material which had been moved could be excavated and some provision made to guard against future slides.

Slide necessitated removal of 40,960 c. y. building large amount of rock-fill cribwork, and replacing conveyor connecting crusher and bins. In opening up quarry, 2,384 c. y. removed in preparing necessary grade, and 194,112 c. y. of stripping. Plant finally installed and operations begun Feb. 10, 1910, and 175,174 c. y. crushed stone secured. Quarry worked 8 hours per day, and during June furnished 32,232 c. y., or 155 c. y. per hour in service and 265 c. y. per actual working time. As large amount of screening required for road surfacing in connection with municipal improvements, small jaw crusher installed, fed directly from storage-bin pocket, which reduces size to $\frac{1}{2}$ " or less; produced from 30 to 40 c. y. of finishing material per day.

Prior to operation of Ancon quarry, stone for concrete obtained from Rio Grande quarry, which furnished broken stone for ballast and highway construction. This quarry operated until Feb. 10 and supplied 58,928 c. y. In addition, 3,750 c. y. obtained from Atlantic division.

Sand for concrete obtained from bay formed by Point Chame, about 20 miles up coast from Balboa. Sand secured by French self-propelling ladder dredge and loaded into barges of 500 c. y. capacity, which are towed

to Balboa, where it is removed from barges to storage bins by means of rapid unloading cranes. Dump cars loaded from bins by gravity and sand transferred to storage trestles at lock sites.

Under contract with Cleveland Crane & Engineering Co., 3 unloading cranes furnished, each having single cantilever 33' long projecting beyond face of dock, operated electrically. Delay, due to defects in machines. Structural weaknesses developed, which required modification. Brakes originally furnished not satisfactory, and air-controlled brakes substituted.

229,250 c. y. sand secured during year, of which 101,748 c. y. sent to Atlantic division for use in concreting.

Hydraulic machinery: Material to be removed in 2-mile stretch of channel below Miraflores Locks amounts to 9,650,000 c. y., of which over 1,500,000 c. y. rock. As time is an important element and it was impossible to assemble sufficiently large plant to complete this section within limit fixed, hydraulic excavating plant selected as being most expeditious method of handling loam overlying the rock, and cheapest.

Plant as designed contemplates washing of material overlying rock to sumps by water jet under high pressure, and dredging pumps elevating and conveying material from sumps through flumes. Consists of central pumping station, pipe lines, hydraulic monitors, and dredging pumps. Central station located on west bank of canal, and in center of area to be excavated. There are mounted 4 Worthington horizontal, direct-acting, triple-expansion pumping engines with 24" stroke, 24 $\frac{1}{2}$ " water cylinders, and 19, 30, and 50" steam cylinders. Each pump provided with surface condenser and direct acting single cylinder 12 by 20 by 24" vacuum pump. Pumps discharge into common delivery pipe equipped with necessary checking gate valves. Steam supplied by 4 Babcock & Wilcox standard water-tube boilers arranged in batteries of two. Oil will be used for fuel, for which purpose 2 steel tanks of 2,000-barrel capacity each erected on hill at rear of station to feed oil burners by gravity. Supply pipe from pumping station 3,600' long, of 2,000' of 40" and 800' of 32" lock-bar pipe, and 800' of 24" spiral riveted pipe. Main is provided with valves and tees suitably located for connecting branch lines leading to monitors. Branch lines 16" spiral riveted pipe laid in groups of 3, so that 2 giants may be continued at work while third is being changed. Monitors are fitted with special deflecting nozzels. Dredging pumps, 3, are 18" single suction centrifugal pumps, direct connected to 655-horsepower induction motor. Pumps, with motors, switchboard, and priming pump, all mounted on reinforced concrete barges specially designed by

division engineer and constructed for the purpose.

Rio Grande River, which originally occupied portion of area to be excavated, diverted and dike constructed across south end to prevent access of tidewater to area. After removal of loam overlying rock by hydraulic process, rock will be excavated by steam shovel in dry.

South of area to be excavated by hydraulic means, necessary depth and width of channel will be secured by ordinary dredging operations. During year there were employed at this work 20" seagoing suction dredge "Culebra," one 5-yard dipper dredge "Cardenas," and four French ladder dredges. Total output of dredges, 6,914,384 c. y., of which 57,161 c. y. classified as plant. Bids invited for delivery of ladder dredge having capacity of 1,200 c. y. per hour in sand and mud, for use in division and subsequently for maintenance work through canal.

Three methods employed in breaking up rock that it may be handled by dredges; rock lies in separate shoals of comparatively small area and volume. First method, by drilling and mining, in which case well drills operate through overlying earth to depth below required grade; holes are sprung, charged, and fired. By this means 274,339 c. y. rock broken up, of which 19,392 c. y. removed by dredges.

Second method, by subaqueous blasting, for which purpose drill barge constructed, consisting of steel hull 112' long by 36' 8" wide provided with timber spuds—one at each corner of the barge. Three drill frames 38' high located along one of gunnels, arranged to move lengthwise of barge on rails. Each frame carries slide to which is attached 5½' rock drill, and each slide operated by hydraulic ram and may be moved vertically through 10'. Drills operated over distance of 85' from one position of barge, and holes spaced 5' apart on 6' centers located by ranges on shore. Barge began Mar., 1910, and blasted over area of 49,600 sq. feet.

Third method, by rock breaking, and Lobnitz rock breaker placed in commission Aug., 1909. It consists of a ram or cutter of steel fitted with hardened steel conical point which is alternately hoisted and dropped. Device mounted on steel hull 100 by 28 by 8'. Tidal range requires three sizes of rams, 30, 40, and 56', weighing approximately 15, 16, and 19½ tons. General practice has been to attack surface of rock shoal which has been exposed by dredging with rock breaker at intervals of 4' each way, points of attack being located by ranges on shore and permanent marks on bay. Average limit of penetration has been 3.12'. After entire area of shoal is gone over, rock breaker is removed and broken rock dredged. Area covered, 266,230 sq. feet, from which 25,515 c. y. dredged.

Balboa shops and shipways operated in construction of some new pieces of plant, including drill barge, erection of dump scows, construction of floating repair shop and crane boat. In addition, dredges, tugs, and barges were kept in good condition.

Municipal and sanitary work: In addition to municipal improvements carried on in Panama under separate appropriation by Congress, principal municipal work was erection of Cocoli pumping and filtration station installed to augment water supply for domestic and construction purposes furnished by Rio Grande Reservoir, consumption from which had increased so as to materially reduce pressure and supply at south end. Necessary pumps, treating and settling tanks, and filters erected at total cost of \$34,324.39.

Reinforced concrete reservoirs of 10,000 and 100,000 gallons capacity constructed for Palo Seco Leper Asylum and Culebra Island quarantine station, respectively.

About 9,000 linear feet road connecting Corozal with Pedro Miguel completed, and portion of road connecting Corozal and Camp Diablo added. Extensive repairs made to Balboa and Sabanas roads.

Sanitary work consisted in cleaning 573,942 linear feet earth drains; construction of new earth drains requiring removal of 2,661 c. y.; filling swamps and holes at various points necessitating handling of 689 c. y., and construction of 9,700 linear feet of cement drains, and 3,338 linear feet of tile drains. **P-10, 21-29.**

1911. Pedro Miguel: Excavation of lock chamber, including slides, completed by removal of 16,423 c. y. In addition, 76,847 c. y. handled in preparing foundations. Greater portion removed with picks and shovels, loading into skips handled by locomotive cranes or derricks; steam shovels, however, used wherever practicable.

Construction plant in its entirety began operations July 15, 1910, and continued as a whole until Jan. 31, 1911, when dismantling plant was begun preparatory to moving it to Miraflores, under contract made for taking down cranes and erecting them at Miraflores. Total concrete laid during year at Pedro Miguel, 498,187 c. y. Of this, 376,657 c. y. laid by construction plant and remainder, 121,530 c. y., supplied by three 2 c.-y. auxiliary mixers and by two ½-yard portable mixers. One of these large mixers located at south end of east wall and other two in forebay; one at south end of east storage trestle and other at south end of west trestle; those in forebay subsequently combined at south end of west trestle to make way for drainage of central division through middle wall culvert. Total concrete laid in Pedro Miguel Locks at close of year, 665,056 c. y., and, as estimated amount

remaining July 1, 1911, was 172,345 c. y., lock 79.42 per cent completed.

Concrete supplied by construction plant mixed on berm cranes and transported by narrow-gauge railroad to chamber cranes which placed it in forms. Chamber cranes laid 401,725 c. y. concrete and 1,430 c. y. large rock during year.

Back filling behind side walls continued intermittently; total placed, 273,709 c. y., including 1,434 c. y. in center wall. Filling completed at north end of west wall to provide yard required by gate contractors.

West dam at Pedro Miguel can not be completed until drainage of central division diverted from site; will be done as soon as concreting in forebay of east lock completed, when water will pass through middle culvert. For this reason, no filling added to dam in past year. Trestle driven in continuation of west toe toward north; operations will be resumed during next dry season.

Miraflores: Excavation by steam shovels in upper lock completed except that removed in preparing foundations, aggregating 137,752 c. y.

Construction plant, two berm cranes partly erected at Miraflores consisting of towers and movable booms; one of east side completed Sept. 2 and placed concrete supplied by auxiliary mixers until erection of cantilever arm taken from berm crane used in forebay of Pedro Miguel began Feb. 15, 1911, when mixers placed in position. This machine finally completed and began operations Mar. 22, 1911. Second one assembled on west side of lock site; fixed cantilever arm in position, wiring completed, and put in commission Apr. 7, 1911. Third under erection on west side, and fourth being dismantled at Pedro Miguel. Before chamber cranes transferred to Miraflores, manner of using cranes changed; two to be reerected in east lock of upper pair with longer arms extending over center wall, and concrete to be supplied by portion of narrow-gauge equipment moved from Pedro Miguel from two auxiliary mixers erected in east wall. By this, two additional mixers added to plant, and chamber cranes can handle concrete to both sides of center wall. Moving of first berm crane begun Apr. 20, 1911, and second May 9; former had been assembled ready for wiring at close of year, latter in course of erection.

Prior to transfer of plant concrete laid by means of auxiliary plant consisting of two 2-yard mixers and four $\frac{1}{2}$ -yard mixers. Former installed in east storage trestle until removed to position on east wall for supplying concrete to chamber cranes. $\frac{1}{2}$ -yard mixers were portable and used for placing concrete in floors, lateral culverts, miter walls, and foundations for main walls. Total concrete placed in Miraflores

Locks during year, 272,933 c. y. The partly completed construction plant placed 67,678 c. y., and remaining 205,255 c. y. supplied by auxiliary plant. Total masonry (concrete and large rock) laid by this division in locks on Pacific side, 771,120 c. y. Storage trestles on both sides of locks completed and 156,571 c. y. crushed stone and 164,980 c. y. sand placed in storage. Various types of forms used, the same as described for Pedro Miguel in last report. Some transferred from Pedro Miguel to Miraflores after service at former place ceased.

East wall of upper lock partly back filled, 53,521 c. y. of material placed. Total concrete to complete Miraflores Locks, 1,424,563 c. y., so that locks at close of year 19.27 per cent completed.

Hydraulic excavating plant began operations in lower lock of Miraflores during latter part of Sept., 1910, and continued until Feb., 1911, by which time practically all overlying material had been removed; steam shovels then resorted to for removing rock. Hydraulic plant removed 332,703 c. y., greater part of which pumped into Miraflores Dam. At close of year steam shovels had excavated 247,700 c. y., material being used in Miraflores Dam and back fill for locks at Pedro Miguel.

Stone and sand: Broken stone for concrete furnished by quarry on west side of Ancon Hill, operated throughout year, with exception of 6 days lost by breakdowns and to replace main shaft on No. 16 crusher. Formation of rock is seamy, and seams filled with clay. To exclude this from product, screen added. Total produced, 855,824 c. y. Quarry operated on 9-hour day basis, except from Dec. 1 to Apr. 4, when 12-hour day in force. Of total crushed, 808,767 c. y. for locks; 35,382 c. y. for work in division other than locks, of which 16,505 c. y. for municipal work and 11,675 c. y. supplied to other divisions and departments. Quarry also furnished 76,411 c. y. large rock for back filling lock walls and other purposes.

Sand obtained from bay formed behind Chame Point, 20 miles west from Balboa. Dredged by ladder dredge into barges of 500 c. y. capacity and towed to Balboa, where transferred by rapid unloading cranes to bins. Total produced, 494,841 c. y. Of this, 465,426 c. y. used by Pacific division, 19,814 c. y. delivered to Atlantic division, and 9,601 c. y. sold to other departments. Sand unloaded from barges to bins by 3 electric cranes, 2 being operated 8 hours per day and 1 in reserve; 494,841 c. y. unloaded during year.

Hydraulic excavating plant began work in Sept., 1910, and deposited 444,145 c. y. of impervious material from prism to form hydraulic fill of west dam at Miraflores. In addition, 295,598 c. y. dry fill, obtained from excavation of locks, added to dam. On May

24, 1911, temporary spillway used for draining water from hydraulic fill gave way, through undercutting of outer toe, and about 96,000 c. y. escaped. Large portion of material moved around into Miraflores Lock pit and seriously interfered with prosecution of work. Dam 83 per cent completed.

Channel between locks and the Pacific Ocean: During last 5 months of fiscal year, 197,880 c. y. excavated in dry by steam shovels between Pedro Miguel and Miraflores Locks. Material used as back fill for Pedro Miguel Locks.

In area between Miraflores Locks and Pacific Ocean, excavation done by hydraulic excavating plant and by dredges. After completing work in lower lock chambers Feb., 1911, dredging units of hydraulic plant moved into sea-level section of canal, where they have since been operated. Numerous large boulders and sunken logs encountered in process of sinking barges on which dredging pumps installed, and existence of rock requiring blasting at higher level than borings indicated prevented barges from settling to grades desired, and in some instances injured bottoms. For this reason barges abandoned and dredging pumps placed at intervals along axis of channel with their suction in sumps extending slightly below final grade. Two pumps installed in this manner and third was still operated from barge. Amount removed from channel by this process outside of lock chamber, 197,677 c. y. Cost greater than anticipated, but since the dredging pumps can handle rock after it is blasted, which was not contemplated, resulting cost is less than combined cost of dredging equivalent amounts of earth and rock. Of amount so removed, 111,421 c. y. placed in dam at Miraflores and 86,253 c. y. used in reclaiming swamps east of canal channel.

Dredges operating in channel during year were 20" seagoing suction dredge "Culebra," one 5-yard dipper dredge, and 3 French ladder dredges. Suction dredge operated over 7.5 miles of canal, measured from sea end, and others between point reached by "Culebra" and area inclosed for operation of hydraulic plant. They removed from channel 5,549,642 c. y. At close of year there remained total of 4,693,211 c. y. to be removed from channel south of Miraflores, including estimate for siltage.

Below point 7 miles from Pacific entrance to canal rock in prism lies in separate shoals of small area and volume, which are removed by subaqueous methods, heretofore described. Rock breaker "Vulcan" operated by two 10-hour shifts until Mar., 1911, after which one shift only used, as shoal had been removed to depth that made it impossible to work economically greater length of time, due to range of tides. Area covered by rock breaker aggregated 648,033 sq. feet, and

material removed after breaking 49,266 c. y. Drill barge operated with two 10-hour shifts per day, and drilled and blasted area of 247,560 sq. feet, from which dredges removed 1,300 c. y.; this removed in May; should not be taken as indication of capacity of drill barge, as all rock broken by its operations during year not taken out on account of lack of available dredges, above-mentioned amount having been removed to determine whether or not sufficient amount of explosives used to properly shatter rock. Work continued until Apr. 4, 1911, with well drills operating through overlying earth by means of pipe casing. Estimated rock broken up by this method, 251,812 c. y.; 251,819 c. y. dredged.

Miscellaneous dredging consisted in excavating channel to lumber dock under construction, 705,465 c. y.; deepening berths in front of sand dock, 17,200 c. y.; Panama R. R. Co.'s commercial and coaling docks, 15,633 c. y.; shipways, 19,400 c. y.; and at hydraulic pumping plant, 18,000 c. y.

All necessary running repairs made to plant and floating equipment by Balboa shops and shipways. Equipment in addition to dredges already enumerated consists of 4 tugs, 7 scows, and 12 barges.

Municipal and sanitary works: In addition to municipal improvements carried on in Panama under separate appropriation by Congress, plant described in last report as installed at Coccol Lake increased by installation of 8" motor-driven centrifugal pump to lift water from lake to mixing tanks, which enables use of both 10" pumps to force filtered water through mains. This addition made necessary because of demands for increased pressure in city of Panama. To permit of excavation of drainage channel from central division to Pedro Miguel Locks and to admit raising Balboa dumps, water mains moved.

Reinforced concrete reservoir at Palo Seco Leper Asylum completed July, 1910, and distributing system constructed. Aside from completing sewer system at Palo Seco, work performed during year consisted in making repairs, extensions, and house connections.

Of main highway practically parallel to canal and extending from Panama to Gorgona 3.14 miles constructed by Pacific division between Pedro Miguel and Corozal.

Sanitary work consisted in cleaning 511,010 linear feet of new earth drains, requiring removal of 3,257 c. y.; filling swamps and holes at various points, necessitating handling of 1,063 c. y.; construction of 6,136 linear feet cement drains; and laying 2,509 linear feet tile drains. P-11, 21-27.

1912. Excavation necessary to prepare for work on terminals, including coaling station, dry dock, and machine shops, placed under this division.

Excavation for Pedro Miguel Locks extended to include 95,156 c. y. removed during last year from French dump east of site, making total excavation done by this division for Pedro Miguel Lock 1,130,236 c. y., exclusive of material removed preparing foundations. In preparing lock foundations, which consisted of removing material below floor level to secure footings for walls, foundations for lateral culverts, sills, and sumps, 38,826 c. y. handled. Large portion removed with picks and shovels and loaded into skips handled by locomotive cranes or derricks into cars. Steam shovels employed wherever practicable.

At beginning of fiscal year construction plant moved to Miraflores, with exception of two chamber cranes. Dismantling of these began Dec. 12 and Feb. 7, respectively. Total concrete laid during year at Pedro Miguel, 182,870 c. y., mixed entirely by auxiliary plant, which consisted of one 2-yard mixer located at south end of east wall until Sept. 25, two 2-yard mixers installed at south end of west storage trestle in forebay, one of which moved on Mar. 15, and an average of 3.16 $\frac{1}{2}$ -yard mixers, moved about as considered most advantageous. Prior to dismantling, chamber cranes handled 28,450 c. y. of concrete supplied by auxiliary plant and were also engaged in setting ironwork and filling the center wall. Remaining 154,420 c. y. handled either by locomotive cranes and derricks or poured into forms from $\frac{1}{2}$ -yard mixers. Yardage for year, 134,193 c. y. plain concrete and 48,677 c. y. reinforced concrete. Revised estimates July 1, 1912, showed increase of 61,761 c. y. in total concrete previously estimated for these locks. Amount placed to June 30, 1912, 847,926 c. y. and estimated amount remaining 51,150 c. y. Back filling behind side walls continued and total of 371,212 c. y. placed, of which 186,518 c. y. back of east wall, 162,757 c. y. back of west wall, and 21,937 c. y. in center wall.

Drainage from central division turned through culvert in center wall at Pedro Miguel Aug. 15, which permitted resumption of building west dam, and 321,589 c. y. added. Dam 87 per cent completed. Excavation for concrete core wall, to connect dam with wing wall of lock, begun and 95 per cent completed; material removed, 3,937 c. y.

At Miraflores excavation of lock pit continued; resulted in removal of 624,747 c. y., exclusive of that for preparing foundations. Of amount excavated, 120,351 c. y. earth and 504,396 c. y. rock. Of this, 364,767 c. y. used for back filling and 259,980 c. y. placed in toes of west dam. Surface of rock on which Miraflores Locks founded dips rapidly at north end of site. Walls originally located with their northern extremities on rock which was only few feet above desired grade. After excavation for locks had been begun, changes in design necessitated extending

walls 98' farther north, thereby not only increasing amount and depth of excavation required to secure suitable foundations, but adding materially to difficulties and cost, in that additional work had to be done in confined space below surface-water level; necessary to remove number of construction tracks located according to original plan. In this work and preparing lower lock foundations 165,145 c. y. removed, of which 26,832 c. y. earth and remainder rock.

On June 30, 1911, there were 2 berm cranes in operation at Miraflores, and the other 2 put in commission July 25 and Oct. 28, respectively. They handled concrete for side walls, forms, and irons, and worked on basis of 8-hour day, except from Dec. 21 to May 11, and from May 15 to June 8, when 2 cranes operated on basis of 12-hour day. The 8 mixers connected with them produced 409,651 c. y. concrete.

Four chamber cranes assembled and began placing concrete, handling forms, and steel July 13, Aug. 3, Feb. 15, and Mar. 26, respectively. Cranes handled 234,520 c. y. concrete and 7,342 c. y. filling for center wall. Operated on basis of 8-hour day, with some exceptions.

Two auxiliary 2-yard mixers installed in east wall of upper locks supplied concrete until June 15, 1912, and from May 8 two 2-yard mixers installed on east wall of lower locks operated, making average of 2.09 mixers of this size for year; produced 253,450 c. y. concrete.

In addition to regular plant, average of 4.24 $\frac{1}{2}$ -yard portable mixers used, mainly constructing walls of forebay and upper reinforced-concrete approach pier.

Total concrete placed in Miraflores Locks, 751,540 c. y., made up of 729,096 c. y. plain and 22,444 c. y. reinforced concrete. Construction and auxiliary plants placed 401,079 c. y. and 350,461 c. y., respectively. Total masonry laid in locks on Pacific side, 934,410 c. y. and 174 c. y. in wing walls.

Total concrete laid in Pacific division locks to July 1, 1912, aggregated 1,874,029 c. y. There remained to complete locks 51,150 c. y. at Pedro Miguel, as already noted, and 386,729 c. y. at Miraflores; in addition, there will be required to complete cut-off walls at Pedro Miguel 3,000 c. y. and dam at Miraflores 75,000 c. y.

Back filling lock walls continued with material from locks and prism below locks, and 450,686 c. y. placed, of which 315,487 c. y. placed back of east wall, 127,287 c. y. back of west wall, and 7,912 c. y. in center wall.

Crushed stone for concrete in Pacific Locks obtained from Ancon quarry which, with crusher plant, operated throughout year. For most part, operation was on basis of 9-hour day, but for few months was necessary to put on night shift for week or two at a time. Total produced by plant, 839,279 c. y. Of total crushed, 782,818 c. y. placed in stor-

age piles for use at locks, 31,467 c. y. used in other work under charge of division, 21,642 c. y. sold to other departments and divisions, and 3,352 c. y. used in municipal work.

Sand for lock masonry and other concrete construction obtained from Chame Bay, located about 20 miles west of Balboa. Secured by dredging, thence loaded into barges, towed to Balboa, and transferred to bins by rapid unloading cranes. Of 3 electric cranes 2 operated 8 hours per day and 1 held in reserve. During year 564,837 c. y. unloaded. From bins it is loaded by gravity into cars and transported to storage piles at lock sites or to such other points as may be desired. Total produced during year, 564,837 c. y. Of this, 509,587 c. y. placed in storage piles for use in concrete, 34,394 c. y. delivered to Atlantic division, and 20,856 c. y. delivered to other divisions.

Hydraulic fill in west dam at Miraflores completed Dec. 4, 1911, and contains 625,048 c. y., of which 78,316 c. y. pumped into dam during year. Dry filling continued; 425,125 c. y. placed. Dam 87 per cent completed; remaining work consists in connecting north end of "present" work and lock wall over space occupied by west storage trestle and train tracks.

Excavation of channel by steam shovels between Pedro Miguel and Miraflores and south of latter continued; 864,475 c. y. removed during year, of which 411,987 c. y. earth and remainder rock.

Hydraulic excavation plant in operation throughout year in sea-level section of canal south of Miraflores and excavated 900,596 c. y. Of this, 78,316 c. y. dumped into west dam at Miraflores and 822,280 c. y. deposited in swamps east of prism. Material deposited on adjacent swamps reclaimed 76 acres of tidal swamp land east of prism.

Dredges operating in canal below Miraflores were 20" seagoing suction dredge, "Culebra," 5-yard dipper dredge "Cardenas," 3 French ladder dredges, and, for a period of 3 months at close of year, new ladder dredge "Corozal." Operating in prism dredges worked between stations 2100 and 2236, or for 13,600', lower end of which is 1,855' north of French dock. During year dredges removed 4,683,902 c. y. Of this, 3,884,287 c. y. removed from channel, including about 1,044,203 c. y. in maintaining channel, and 799,615 c. y. outside of prism in vicinity of terminals at Balboa, in maintaining berth at sand dock, and in excavating channel to Flamenco Island. Of latter, 370,607 c. y. removed from area of basin in connection with terminals on Pacific side. Ladder dredges could not dredge economically on account of depth of water at high tide, and rather than tie them up they worked in this area pending action by Congress on recommendations relative to terminals. There remained at close of fiscal year to complete excavation in channel 4,194,059 c. y., including 700,000 c. y. estimated allowance for silting.

South of station 2142 rock that must be removed in order to secure required depth lies in separate shoals of relatively small area and volume, and rock is broken up for dredging by drilling under water with drill scow and breaking below water with Lobnitz rock breaker. Three drills operated on drill barge, on two 10-hour shifts, and covered area of 236,082 sq. feet, through which 153,819 linear feet of holes drilled. Of amount broken up, 160,903 c. y. removed by dredging. By rock-breaker method area covered approximately 563,617 sq. feet and depth of penetration averaged 3.69'. Amount dredged from area thus broken aggregated 77,156 c. y.

Dredge "Corozal" is self-propelling center ladder dredge designed to excavate mud or sand at rate of 1,200 c. y. per hour from depth of 50' and to discharge spoil directly into hoppers of 1,020 c. y. capacity or into barges alongside. Two sets of 39 buckets provided, one set with capacity of 54 cubic feet per bucket for use in soft material and other set with capacity of 34 cubic feet per bucket to be used when digging rock. Dredge delivered by contractors Balboa Mar. 27, 1912. No equipment assembled or erected during year at Balboa shops and shipways. All necessary running repairs made to plant and floating equipment at these shops. Equipment, in addition to dredges already enumerated, consisted of 5 tugs, 6 clapnets, 7 dump scows, and 6 sand and 4 service barges.

In addition to municipal improvements carried on in Panama under separate appropriation made by Congress, municipal improvements consisted in replacing 16" main from Rio Grande Reservoir by 20" main at cost of \$158,562.87. 16" pipe from reservoir to Pedro Miguel Locks left in position, where, together with 20" main, connected to 24" pipe embedded in emergency dam sills. Both mains again connected on east side of locks and double line extended to within 2,490' of Ancon pumping supply. This done not only to insure supply and pressure at south end of system, but to avoid changing large number of temporary connections already made for construction work with 16" line. Second 10" line from Cocoli pumping station to main at Miraflores also added. Cocoli pumping and filtration plant, installed for pumping from Cocoli Reservoir to make up deficiency in Rio Grande supply, increased by addition of two pumps; 3-stage, motor-driven centrifugal, with capacity of 1,500 gallons per minute each against a head of 300', and are direct-connected with 200-horsepower, 3-phase, 25-cycle motors.

Reinforced concrete dock constructed for Panama R. R. by Pacific division and described in last report completed, including back filling. Dredging in front of wharf, aggregating 1,005,983 c. y., not completed, but advanced sufficiently to permit docking vessels for 575'. 45 caissons sunk to rock, greatest depth found

being 64.08' below mean tide and least depth 52' below mean tide. Total cost of dock, \$351,741.39.

Borings made over area to be occupied by dry docks, coaling station, terminal docks, and machine shops, and, based on these, permanent locations selected.

Sanitary work consisted in cleaning 654,531 linear feet of earth drains; excavation of new earth drains, requiring removal of 3,274 c. y. earth; sweeping 627,009 linear feet of cement drains; filling swamps and holes at various points, necessitating handling of 975 c. y. material; laying 270 linear feet of tile drains; constructing 5,164 linear feet of cement drains; and clearing 112½ acres of vegetation. **P-12**, 31-38.

1914. S. B. Williamson, division engineer, concluding that the work of his division had advanced to such a state that the I. C. C., not warranted in continuing his position, tendered his resignation, effective Dec. 11, 1912; reluctantly accepted. This action necessitated a reorganization of work on Pacific side. That relating to terminals, which during the previous year had been assigned to Pacific division, transferred to second division, which had charge of preparing designs for shops, dry docks, and coaling stations. Locks, dams, spillway, dry excavation between and below locks, the quarry, and municipal engineering work organized into fifth division of O. C. E. and placed in charge of H. O. Cole as resident engineer. Dredging and operations for procurement of sand constituted sixth division of O. C. E., under W. G. Comber as resident engineer. **P-13**, 1.

U. S. representative at transfer of Panama Canal properties: Lt. Mark Brooke, Corps of Engineers, U. S. Army, **P-04**, 36.

Transfer: Republic of Panama desired appropriate ceremonies at transfer; action taken to delimit the probable boundaries of the zone. Officials told to proceed with their duties according to laws in force. U. S. officials willing to have ceremonies, but none of any special character conducted. **P-04**, 78.

Panama Canal Act. (See Acts; Laws.)

Panama Canal Act. Approved Aug. 24, 1912.

Act providing for the opening, maintenance, protection, and operation of The Panama Can-

nal, and the sanitation and government of the Canal Zone. **P-12**, 599-605

Zone to extend 5 miles on each side of center line of canal, from 3 mile limit in Caribbean to 3-mile limit in Pacific, excluding cities of Colon and Panama and their adjacent harbors within the zone, but including certain islands, and any necessary lands and waters necessary from time to time. Sec. 1.

Existing laws, orders, regulations, etc., ratified. Sec. 2.

Claims and titles of occupants of land wanted for U. S. purposes to be extinguished. Sec. 3. Providing for discontinuance of I. C. C., and for government, etc., through a governor, and such other persons as the President may deem competent. Sec. 4.

Governor to be appointed for 4 years by the President and Senate and until his successor shall be appointed and qualified. Salary, \$10,000 a year. Sec. 4.

The Panama Canal, upon completion, to be officially and formally opened. Sec. 4.

Commission of Arts to report to the President recommendation regarding artistic character of the structures of the canal, the report to be transmitted to Congress. Sec. 4.

The President authorized to prescribe or change tolls. Changes to be after 6 months' notice. Sec. 5.

No tolls to be levied upon vessels engaged in the coastwise trade of the U. S. Sec. 5.

Tolls may be based upon gross or net registered tonnage, displacement tonnage, or otherwise; there may be one form of tonnage for warships and another for other ships. Sec. 5.

When based upon net registered tonnage tolls shall not exceed \$1.25 per ton. Modifications relating to U. S. ships, treaty with Panama, etc. Sec. 5.

Toll for each passenger shall not be more than \$1.50. Sec. 5.

The President authorized to amend regulations governing operation of the canal, etc. Sec. 5. Regulations to provide for prompt adjustment of claims, etc., relating to passage of commerce. Sec. 5.

The President to provide a method for the determination and adjustment of all personal-injury claims of employees, etc. Sec. 5.

Wireless installations authorized. Sec. 6.

The President authorized to establish, maintain, and operate dry docks, repair shops, yards, docks, wharves, warehouses, etc., for U. S. craft and, incidentally, passing craft at reasonable prices. Money thus obtained to be expended or reinvested, but monthly reports of receipts and expenditures required. Annual report to be made to Congress. Sec. 6.

Civil government of the zone shall be under official control and jurisdiction of the Governor of the Panama Canal. Sec. 7.

The President to determine what towns shall exist in the zone. Provision for courts, etc. Magistrates, etc., to be appointed by the governor for 4 years, etc. Rules governing courts, etc., to be established by order of the Presi-

dent. Notaries to be appointed by the governor. Sec. 7.

One district court with two divisions to be established in the zone. Rules of practice to be prescribed or amended by the President. Scope of the authority of the court. There shall be a district attorney and a marshal. The judge, attorney, and marshal to be appointed by the President, in conjunction with the Senate, for 4 years. Sec. 8.

New courts shall take over and carry forward pending proceedings at time of formation of the new court with its divisions. Sec. 9.

All existing laws in the zone governing practice and procedure shall be applicable and adapted to new courts. Sec. 9.

The Circuit Court of Appeals of the Fifth Circuit of the U. S. to have jurisdiction, etc., over zone court, final appeal or review to be to the Supreme Court of the U. S. Sec. 9.

The governor to make rules and regulations governing trespass, injury of works, etc. Penalties. Sec. 10.

From July 1, 1914, unlawful for railroad company to conduct, etc., directly or indirectly, common carriage by water through the Panama Canal or elsewhere, etc. Penalty. Sec. 11.

Jurisdiction conferred on Interstate Commerce Commission to determine questions of fact concerning alleged competition of railways through water carriage. Order of I. C. C. to be final. Sec. 11.

If I. C. C. of opinion that existing water service controlled by railways other than through the Panama Canal beneficial to the public, extension of it may be arranged. Sec. 11.

No vessel engaged in coastwise or foreign trade of the U. S. shall be permitted to use the Panama Canal, if owned, etc., by monopolies, etc.; provision for determining fact. Sec. 11.

The I. C. C. to have jurisdiction over interstate commerce in certain particulars relating to connection with the Panama Canal. Sec. 11.

Extradition for crime to be governed subject to treaties; otherwise the zone shall be considered and treated as an organized territory of the U. S. Sec. 12.

In time of war or imminent war an officer of the Army designated by the President shall assume and have exclusive authority and jurisdiction over the Panama Canal and zone, and the Governor of the Panama Canal shall be subject to his order, etc. Sec. 13.

The act to be known as the Panama Canal act. Sec. 14. P-12, 599-605.

Repeal, June 15, 1914, of provision that no tolls shall be levied upon vessels engaged in the coastwise trade of the United States, P-14, 557.

Third sentence of third paragraph of the Panama Canal act amended June 15, 1914, to read: "When based upon net registered tonnage for ships of commerce the tolls shall not exceed \$1.25 per net registered ton, nor be less than 75 cents per net registered ton" subject to convention between U. S.

and Panama of Nov. 18, 1903: *Provided*, the passage of "this act" not to be construed, etc., as waiver, etc., of any right U. S. may have under treaty with Great Britain of Feb. 21, 1902, or with Panama, of Feb. 26, 1904, to discriminate in favor of its vessels by exempting the vessels of the United States or its citizens from the payment of tolls for passage through said canal, or as in any way waiving, impairing, or affecting any right of the United States under said treaties, or otherwise, with respect to the sovereignty over or the ownership, control, and management of said canal and the regulation of the conditions or charges of traffic through the same. Panama Railroad. Operation.

1904. Suggestions of Sec. of War Taft looking to complete control of the railroad by Isthmian Canal Commission No. 2. Directors of the road ordered to end agreement with Pacific Mail S. S. Co. for issuance of exclusive through bills of lading. Agrees with Gen. Davis that it might be better for the railroad to get out of the steamship business by leasing or selling its three steamers. Best course for Isthmian Canal Commission No. 2 to pursue to limit commercial business as a common carrier to the railroad on the Isthmus, and to offer to all American lines at least reasonable rates, with through bills of lading, without discrimination in favor of any line. **P-04**, 13-16.

The French canal company sold to the U. S. 68,887 shares of stock in the Panama R. R. Total shares, 70,000; hence, U. S. acquired 98½ per cent. History of railroad. First concession acquired 1848; in 1849 New York incorporated the company by a special act; road continuously existed under that act, and one amendatory passed in 1855. Road completed in 1855. Road, instead of receiving subsidy for its construction, has

had to pay Colombia \$250,000 annually, and to transport free of charge the troops, chiefs, and officers, and their equipage, ammunition, armament, clothing, etc., and new settlers to the number of 2,000 annually. When turned over to the U. S. road consisted of 47.65 miles of single track, with 26.07 miles of sidings and yards. 24 locomotives, 11 switching engines, over 20 passenger cars, about 1,000 freight cars, etc. Equipment in poor condition. Three steamships owned by the company, with total tonnage of over 8,000; American built, on the Delaware. Description of property and right of way owned by the company. Table showing gross receipts, operating expenses, fixed charges, dividends, etc., 1895-1904. Bond issues. During the year Isthmian Canal Commission purchased 100 additional shares of the company, leaving but 1,013 shares outstanding in hands of private individuals. Offer made publicly to buy the remaining shares at par; considered liberal in view of the past returns on the shares. In view of the large amount of transportation which has been free under its concession, the railroad has had to charge high rates; steps taken to reduce this traffic. In 1903, 4,633 first-class paying passengers were carried and, also, 11,098 passengers and 6,601 troops carried free. New and additional steamers planned. Management of road vested in 13 directors; 7 resigned, and their places filled by members of the Isthmian Canal Commission. **P-04**, 57-65.

1905. Entire stock owned by the U. S. Bonds largely in hands of public. Essentially a part of the canal construction plant. Road neglected by French. New wharves begun, terminal yards, machine shops, etc. Complete rehabilitation under way. Personnel reorganized. Double-tracking at places, paid for by Isthmian Canal Commission No. 3. **P-05**, 18.

Before coming of the Americans no enterprise exhibited. Plant antiquated. Lack of equipment, terminal, and line facilities. Freight tied up for months on the road. 500 flat cars added; 200 of them in commission. Dock facilities increased. Terminal yards improved. Double-tracking in progress. Personnel improved. Methods for reducing cost of handling freight installed. 56-pound rail being replaced with 70-pound rail. Haulage congested through an unlooked-for quarantine placed on shipments by South American ports. Nature of traffic such that low cost of handling freight not in sight. Commissary opened by road for benefit of employees. **P-05**, 121.

1906. Great progress made in enlarging and improving the road; new organization completed; shipping at terminals promptly discharged; Nov. 6, 1906, new schedule of sailing cut off one day from the lay-over at each end of the route; no congestion of freight

since Dec., 1905; across-Isthmus freight rates, etc., settled with steamship lines; reconstruction of old tracks; double-tracking going on and almost finished; probability that sections of the road will require more than 2 tracks. **P-06**, 10.

1907. Surveys for new line, made necessary by canal line, begun latter part of July; completed Nov. Location practically determined in Mar., 1907. Involves excavation of 1,600,000 c. y., and placing of 12,000,000 c. y. in embankments. Work on new location vicinity of Gatun and Mindi begun in May. Diversion tracks opened, to fills for Culebra and Chagres stuff. 30 branches started at various places; trestle built at Gatun and at Pedro Miguel; culverts begun. 36,661 c. y. excavated. 92,180 c. y. hauled and placed in embankments, permitting laying of 6,852 linear feet permanent track. 4 steam shovels, 1 pile driver, and an aggregate of 1,100 laborers. **P-07**, 14, 15.

Rebuilding of old line completed; building of new double-track, save 4 miles from Gatun to Lion Hill, completed. Sidings, storage tracks, and block systems installed. 15 miles of track washed out between Mindi and Bas Obispo, during an unusual flood in Dec., 1906, in Chagres River. 90-pound rails being installed; 70-pound rails too light for traffic. Coal-handling plants, yards, etc., installed. Lay-over time of steamships lengthened by one day to former lay-over; only because of time needed to repair steamship machinery. Equipment increased; 100 Rogers ballast cars, 273 box cars, 10 stock cars, 12 caboose cars; 2 Rogers ballast-sand plows; 9 first-class coaches, 10 second-class coaches, and 4 baggage and mail coaches. **P-07**, 33.

1908. Relocation: Made necessary by overflow of the existing roadbed by water storage for lock canal. Atlantic terminal to Mindi (5 miles), and from Corozal to Panama and La Boca, the old line to be used. Between Mindi and Corozal road will be carried to the east, and at a general elevation of 95, or 100' above the normal surface of the lake.

Progress of relocation: Connecting tracks made last year. Preparatory work continued; work shut down due to lack of funds. Portion on Gatun site moved.

Embankments: A number of valleys north of the Chagres require heavy revetments, material being obtained best from Culebra division. Bridge built across Chagres near Gamboa to make connection.

Tunnel work: Miraflores Tunnel continued; material treacherous; work advanced to permit laying of concrete for lining.

Culverts: Two constructed; one for flow of Pedro Miguel River and the other for the Caimitillo River.

Double-tracking and viaduct work: Isthmian Canal Commission paid for some advantageous work of these classes.

New lines: Changing locks from La Boca to Miraflores saved the construction of a new line from the Cardenas River to La Boca, as well as the erection of new wharves. **P-08**, 20, 21.

1909. New Panama R. R. between Gatun and San Pablo: 20 miles; final location not yet determined; decided to abandon originally selected crossing of the Gatun Valley, to gain unobstructed passage to the anchorage basin; surveys along the Bohio, Agua Salud, and Baldo Espino ridges developed shorter line of much less curvature.

Plans: Entire relocated line to be 46.2 miles long; maximum grade, 1.25 per cent Mindi to Gatun, and 0.45 per cent between Gatun and Panama; maximum curvature, 6°.

Value of road: Opinions differ as to value of road after completion of canal.

Construction: Fill south of Gatun station brought up to grade. Main work has been confined to construction along the ridge bordering the Gatun Valley, grading in the vicinity of Gatun River crossing, opening up and grading the line from the crossing to the connection at Caimito, and building the Miraflores Tunnel and grading in that vicinity. Trestle work and filling; branch tracks built to old line; culverts under construction.

Work prosecuted with a view of having the line advanced for its operation between Gatun and Bas Obispo when the lake level is raised sufficiently to permit the operation of dredges in the lake sections of the central division.

Construction work done by the Panama R. R. under an agreement with the Isthmian Canal Commission.

In charge: R. Budd, chief engineer of the Panama R. R., and Lt. F. Mears, First Cavalry, U. S. Army, as assistant. **P-09**, 18, 19.

1910. Construction of new line for Panama R. R. being done by Panama R. R. Co. under agreement with Isthmian Canal Commission. In charge of R. Budd, chief engineer of Panama R. R., until he resigned, Sept. 21, 1909, since which date Lt. F. Mears, First Cavalry, U. S. Army, has continued in charge.

At beginning of year work in progress upon entire stretch, Gatun to Gamboa, with exception of 8 miles through valley of Gatun River. As canal construction contemplated closing of west diversion and discharging Chagres River through spillway, elevation of which was placed 10' above sea level, work on relocation had to be arranged to give continuous communication at such times as main line of Panama R. R. is flooded. Work therefore pushed to have through route available, and temporary line on 60' level completed Apr. 23. Trestles driven over bottoms of Quebrancha, Brazos, Baja, and Gatun, and while

outside center line, they are so arranged that these fills will form parts of completed embankments. Filling in of these trestles under way; no special difficulty met except across Baja bottom, where material overlying rock very soft and treacherous. In embankment across Gatun River arrangements will be made for bridge of three spans at 95' level to allow for floods; one span will be converted into lift span for navigation of eastern arm of Gatun Lake. Temporary provision made for floods by use of two girders formerly spanning Chagres at Barbacoas.

Trestles along line from Caimito to Gamboa Bridge turned over to central division for filling and used as waste dumps for material from cut; this portion practically complete. When floods necessitate use of relocated line during construction, connection between Gamboa and "present" line of railroad will be at Matachin over construction track of central division laid on the barrier which separates cut from the Chagres.

Permanent culverts of reinforced concrete constructed to take care of various streams crossed by embankments.

In addition to 2,350,000 c. y. dumped by central division along new line, 2,500,000 c. y. excavated and disposed of in embankments, 17,000 c. y. concrete laid, 25,000 linear feet of temporary trestle constructed, and 15,000 linear feet of bridge piling driven..

Completed track for most part ballasted by gravel secured during dry season from gravel pit opened on the Chagres about 1 mile above Gamboa Bridge, and from Gorgona gravel pit operated by maintenance of way department of Panama R. R. In all, about 42,000 c. y. secured, 18,000 c. y. of which placed on line and balance stored.

Present plan contemplates use of 95' berm on east side of Culebra Cut as location of new railroad, and will be finished by central division in connection with excavation.

During early part of year decided to push work on section from Paraiso to Corozal that "present" line of railroad might be turned over to Isthmian Canal Commission for moving spoil trains. Section 4 miles long; consists largely of embankments made from spoil from Culebra. Practically complete, and laid with new 90-pound steel rails. To secure better alignment for high line, part of operated line diverted. Two temporary stations built to replace those of old line abandoned at Pedro Miguel and at Miraflores. P-10, 30, 31.

1911. All grading from Gatun to Gamboa practically completed at beginning of fiscal year, except for 3 miles where line crosses valleys of Quebrancha, Brazos, Baja, and Gatun Rivers. Ground level of Quebrancha bottom at average elevation of 20' above sea level, while soundings indicate rock is from 150' to 180' below this elevation and overlaid with soft, sandy clay, with harder

stratum of clay and pure sand near surface. As height of embankment across bottom averages 71', necessary to spread out base of fill so weight would not disturb upper stratum sufficiently to squeeze out softer material below. First fill carried to elevation 50 and out to 2:1 slope stakes. After this fill made, trestle to elevation 70 driven across it and filling from this level started. Small settlement occurred along trestle with corresponding upheaval beyond slope stakes and additional counterweight added on both sides well beyond stakes, after which raising of center line to permanent grade continued. By June 30, 653,505 c. y. placed.

Across Brazos bottom original elevation 30' above mean tide, necessitating construction of embankment averaging 60' in height. Filling across bottom has given no trouble and 1,112,036 c. y. placed.

Baja bottom has given trouble from time filling began. Elevation of natural ground 25' and depth to rock 60'; overlying material softest kind of clay intermixed with decomposed wood and vegetation. As embankment settled additional weight put along toes and in this way fill gradually raised until at close of year it was about 10' below grade. Average fill over valley, 67', and at close of fiscal year 495,925 c. y. placed in fill.

Gatun River bottom at crossing of railroad line requires fill averaging 62' in height. Permanent bridge to be located at this point and embankment at bridge to be raised to plus 97. Small settlement occurred on south end of Gatun River Valley, which rolled and pushed up natural ground for two or three hundred feet. This well filled over and counterweighted. Total material placed in this fill to close of fiscal year, 932,238 c. y. As but few main line cuts remained to be excavated at close of last fiscal year, greater part of material for fills across these valleys secured from borrow pits.

Reinforced concrete piers for permanent bridge across Gatun River built during dry season. Designed to carry three plate girders which now form north span of Barbacoas Bridge in operated line. Creosoted pile bridge driven to west of these piers, to be available for operation during dismantling of Barbacoas Bridge, and for erection of girders. To give access to upper Gatun Valley, one span of bridge will be of bascule type.

Under original plans for relocation of Panama R. R., operating track to be carried through Culebra Cut on berm at elevation 95. Because of slides along east side of Culebra Cut, and necessity of maintaining through communication when line is flooded, permanent location on berm line through Culebra Cut had to be abandoned, and high line around Gold Hill adopted; will be used until condition of banks through Culebra Cut permit return to original location. Surveys for location of

high line begun July, 1910; construction commenced Jan. 1, 1911. Location necessitates $1\frac{1}{2}$ per cent grade and maximum curvature of 7". Cuts and fills about balance at 1,250,000 c. y. Length of line, $9\frac{1}{2}$ miles from Gamboa to Paraiso. New culverts will require placing of 9,000 c. y. concrete, and new fills will necessitate driving 2 $\frac{1}{2}$ miles of temporary trestle.

During year 896,742 c. y. excavation completed; 7,035 c. y. concrete placed; 11,446 linear feet trestle driven; 53,639 linear feet temporary track laid; and 257 acres of clearing done.

Construction of permanent telegraph and telephone line undertaken, and built of 56-pound steel rails for poles, with 4 cross arms, 10 pins to arm, making 40-wire line. On June 30 line Gatun to Gamboa Bridge 50 per cent completed.

On completed section, near Gatun and south of Monte Lirio, 6 miles of 90-pound steel rails laid, in large part on hardwood ties. Ballasting continued along permanent track, Chagres River gravel being used. Relocated line from Paraiso Junction to Corozal Junction formally turned over to Panama R. R. Co. Sept. 4, 1910.

To complete excavation of central division through Chagres section at Tavernilla and San Pablo during next dry season, necessary to interrupt operation of old line; to this end every effort being made to complete new line Gatun to Gamboa by Jan. 1, 1912. P-11, 31-33.

1912. At beginning of year construction work confined to stretch from Gatun to Gamboa—Gatun Valley section—and consisted in completing embankments across Quebrancha, Brazos, and Baja bottoms, under construction since 1910. Material reported as necessary at beginning of fiscal year for their completion, 850,000 c. y., exceeded and, though practically completed Jan. 1, 1912, two steam shovels at work during following month and a half furnishing material for riprapping slopes. Largest embankment on this section 4,800' long, across Brazos bottom. Rock in this valley from 150 to 200' below surface, which is of fairly good clay, 20 to 30' thick, but between this and rock the material very soft. Embankment, 60.70' high, given side slopes of 1 on 2 with hope that this would spread foundation sufficiently to enable layer of clay to support it without disturbing soft strata. Just before full height reached, however, pressure became too great and soft material moved out, upheaving natural ground beyond toes of slopes. When this occurred base was widened to secure slope of about 1 on 3 before any weight was added to upper level, after which embankment completed to grade. Trouble with settlements encountered in fills over Quebrancha and Baja bottoms, where it was necessary to spread base to secure slope of 1 on 4; these fills

72.70' and 68.70', respectively, above natural surface of ground. In the 3 miles covered by these bottoms, 4,736,072 c. y. placed, or an average of 1,578,690 c. y. per mile, all necessary to secure permanent roadbed above proposed lake level.

Laying remainder of permanent track undertaken Dec., 1911, and completed far as practicable by Feb. 15, 1912. Track of 90-pound open-hearth steel, 100 per cent splice bars, and either creosoted or hardwood crossties fitted with "Economy" tie-plates and screw spikes. Track ballasted with gravel obtained from deposits in Chagres River. This section formally turned over to Panama R. R. Co. Feb. 15, 1912, on which date operation of the road transferred from old to new line. Trains now operate east of canal as far as north end of Culebra Cut, where they switch back across canal on construction dike to old main line, following it north to Gorgona, thence south over old route to Panama. Operation over new roadbed attended with no difficulties, except small slides along slopes. Riprapping submerged embankments continued and weight of rock has sometimes caused sides of fill to slide.

Slides on east side of Culebra Cut, and necessity of maintaining through communication caused construction of high line around Gold Hill and abandonment of original plan of carrying railroad on 95' berm through Culebra Cut. Hoped that eventually high line might be abandoned in favor of 95' berm, but this given up on account of excessive cost of rebuilding berm throughout cut. Gold Hill line joins Gamboa Bridge on north with Pedro Miguel on south, and is $9\frac{1}{2}$ miles long. Summit is near La Pita divide at elevation 271' above mean sea level, and Continental Divide is crossed opposite Culebra at elevation of 241' above mean sea level. This section of road well under construction at beginning of fiscal year, and work progressed to completion in early part of 1912. Some difficulty encountered along Pedro Miguel River on account of slides. Laying of permanent track begun in May and line completed and formally turned over to Panama R. R. Co. May 25, 1912.

Construction of telephone and telegraph line continued and completed June 30, 1912. New frame station building and section house erected at town site of Monte Lirio, on Gatun River, and reinforced concrete water station constructed at Frijoles. Dismantling old bridge at Barbacoas—3 girder spans—undertaken as soon as original Panama R. R. abandoned, Feb. 15, 1912. Bridge transferred to Monte Lirio, to be used for carrying relocated line over Gatun River. The two shore spans set in place at new site and center span to be converted into balanced lift span, so that steamers can have access to upper arm of Gatun Lake.

During year 3,209,021 c. y. grading completed and 123,463 lineal feet permanent track laid;

1,820.2 c. y. concrete were placed in bridge culverts. **P-12**, 45-47.

1913. Work during year consisted of rapping slopes of embankments through Gatun Lake section, building lift span of bascule type in bridge spanning Gatun River at Monte Lirio, and installing automatic signals throughout line.

Material from Culebra Cut utilized during year in strengthening embankments near mileposts 20, 21, and 24, and also embankment in Brazos Valley. Total used, 257,831 c. y.

Bridge across Gatun River at Monte Lirio consists of 3 plate-girder spans formerly used on old line of railroad for crossing Chagres River at Barbacoas. Center span, a 103' plate girder, converted into lift span by addition of lifting trusses, lifting mechanism, and counterweight; will provide channel 80' wide in clear, with depth of 45', thus giving ships access to large area of lake which lies east of railroad. Necessary materials purchased under contract for \$24,390, and bridge erected by forces of Panama R. R. at a cost of \$59,611.20, including combined operator's house, block office, and interlocking cabin.

Automatic signals installed Mindi to Corozal, with exception of about 4 miles between Caimito and Gamboa cabin, where main tracks are not on permanent grade and alignment. Signals placed between Pedro Miguel and Corozal removed when it became necessary to use new line for passage of dirt trains to enable cutting of old line for construction of Miraflores spillway. **P-13**, 48-49.

Power and Machinery, Division of Motive.

1907. Embraced the erection and preparation for service of machinery necessary in canal construction, and its maintenance in good repair; the installation and operation of air-compressor plants; work in connection with electrical installation; manufacture and repair work for other divisions.

Employees: 2,479 during year; expenditures, \$6,360,496.56. 63 steam shovels, 284 locomotives, 2,706 dump cars, 18 unloaders, 13 bank spreaders, 33 unloading plows, 3 track shifters, and 7 pile drivers erected and made ready for service. Done mainly at old plants at Cristobal, Gorgona, Empire, and Paraiso. New plants at Empire and Paraiso begun. Some facilities provided at Pedro Miguel, Rio Grande, and Tabernilla. Engine houses built at various points, as well as auxiliary devices. Air-compressor plants located at Empire and Rio Grande, and piping laid to various points. Boiler-inspection service begun. Jurisdiction of mechanical engineer, master car builder, and electrical engineer extended to cover Panama R. R.

Electrical subdivision: Construction of electric lighting plants at Empire and Gorgona. **P-07**, 11, 12.

1908. Duties: Erection, preparation for service, and maintenance in good repair of machinery necessary in canal construction; erection and operation of air-compressor plants; electric installations; manufacture and repair work for other divisions.

Employees: 2,206 men.

Expenditures: \$5,645,622.18.

Shops: Three (Gorgona, Empire, and Paraiso) handle all work except electrical installations; each charged with the maintenance and operation of engine houses, coal chutes, and air-compressor plant in its territory. Gorgona shops to embrace 307,000 sq. feet floor space; Empire shops, 198,000 sq. feet; and Paraiso shops, 41,090 sq. feet.

Gorgona shops: One-third of output manufactured material, including 4,279,237 pounds gray iron castings, 50,000 pounds semisteel castings, and 216,947 pounds brass and bronze castings. **P-08, 14.**

Empire shops: 55 of the 101 shovels in use, 55 given general shop repairs, costing \$145,479.41 for direct material and labor charges. Cost of general shop repairs to steam shovels per cubic yard, \$0.00833. 275,000,000 cubic feet air compressed, at cost of \$0.0344 per 1,000 cubic foot.

Paraiso shops: Light repairs handled.

Equipment erected and made ready: "At the end of the year" there had been erected and made ready for service the following equipment: 101 steam shovels, 300 American and French locomotives, 3,451 American and 659 French cars, 20 cranes, 30 unloaders, 9 track shifters (manufactured on the Isthmus), 18 pile drivers (16 made on the Isthmus), 23 bank or earth spreaders, and 46 unloading plows.

Maintenance and repairs: Including operation of air compressors, cost \$1,951,618.79.

Equipment costs: Including erection, \$2,590,536.94.

Inspections: 77 tests of machinery, etc., including the installation of oil-burning apparatus at various boiler plants. Boiler-inspection service inspected and tested 3,580 boilers. **P-08, 15.**

Electricity: 13,365 16-candlepower lights installed, which would supply all Isthmian Canal Commission settlements. Fire-alarm systems installed. **P-08, 15.**

Projects, summaries of Isthmian Canal

These summaries are arranged under the following heads:

(a) Projects, 1486-1899—Historical surveys, etc.

(b) Projects (Nicaragua v. Panama), 1899-1901.

(c) Projects, Panama route, 1905-1908.

(Embracing consideration of the plans of Isthmian Commission Nos. 1, 2, 3, and of plans proposed by Board of Consulting Engineers of 1906, for lock level or sea level canal.)

(d) Projects, adopted or official project of 1909.

(a) **Projects, 1486-1899.**

1486-87. Portuguese explorations for a route to India. Discovery of the Cape of Good Hope accidentally. **P-99, 18.**

1487-1499. First voyage around Africa to India. Great stimulus of trade by new route, placing Portugal among the foremost nations of Europe. Voyages of Columbus and discovery of America. **P-99, 19.**

1513. Balboa discovers the Pacific.

1515. Balboa transports material for exploration ships across the Isthmus, **P-99, 20.**

1519-20. Magellan discovers Straits of Magellan as an entrance to the Pacific. * * *

- For the first time a continuous voyage had been made around the world. * * * "But this western passage did not reduce the distance nor satisfy the wishes of those who sought a direct way thither (to the far eastern countries) by the discovery of a connecting strait along the coast line of the new continent." * * * "Efforts to discover it (the supposed isthmian strait) were still prosecuted, but they were mainly confined to the isthmian section, from Mexico to Darien, where it had been developed that the two oceans were least widely separated." **P-99, 21.**
- 1516-1523.** Charles V of Spain charged the governors of his American provinces to have the entire coast line thoroughly examined, etc., in search of a passage which would connect the eastern and western shores of the New World and shorten by two-thirds "the route from Cadiz to Cathay." Lake Nicaragua found.
- 1517-1521.** City of Panama founded. Road built across the Isthmus, crossing the Chagres. **P-99, 23.**
- 1519.** Line of posts established across Isthmus, Nombre de Dios being founded as the Atlantic port, old Panama as the Pacific port. **P-99, 22, 23.**
- 1520-1527.** Cortes after conquering Mexico explored adjacent coasts. Constructed vessels on coast near Tehuantepec. Discovered Gulf of California. Course he followed across divide became an important route of communication between Atlantic and Pacific. **P-99, 23, 24.**
- 1529.** Capt. Machuca undertook exploration of Lake Nicaragua and its eastern outlet, and finally reached the Atlantic. At a later period sea vessels passed regularly up and down the San Juan. This commerce maintained as late as 1637. **P-99, 22, 23.**
- 1520-1534.** Royal decree that space between the Chagres and Pacific be examined, with a view to effecting communication between the navigable waters of the river and the ocean. The governor, Pascual Andagoya, reported that such a work was impracticable, and that "no king, however powerful he might be, was capable of forming a junction of the two seas or of furnishing the means of carrying out such an undertaking." Under Philip II of Spain the policy with regard to the isthmian transit changed. Why seek an unobstructed strait? Trade was good enough. Opening a canal would be flying in the face of the Almighty who had thought it wise to make none. Besides, an opening might afford access to enemies of Spain. This policy ruled for two centuries, though the connection between the two oceans was often discussed, and many explorations made. **P-99, 24.**
- 1534.** About this time a route by water for boats and light-draft vessels established from Nombre de Dios along the coast and up the Chagres to Cruces. **P-99, 23.**
- 1597.** Porto Bello made the eastern port of entry instead of Nombre de Dios, latter being so unhealthy as to be termed the "sepulcher of the Spaniards." **P-99, 23.**
- 1585.** Commerce of the Isthmus increased amazingly, and reached its height, 1585, when Panama was called the tollgate between western Europe and eastern Asia. Spain greatly enriched through her establishment of this isthmian route. **P-99, 23.**
- 1695.** Scotch Parliament authorized the formation of a company to trade from Scotland to Africa and the Indies. Known as the Darien Co. In 1698 sent out 1,200 men. Scheme originated with William Paterson. Vessel anchored in Caledonia Bay, yet known by that name. Paterson's plan contemplated establishment of settlements and ports on both oceans. The new colony declared freedom of trade and freedom of conscience in matters of religion. Colonists became discouraged. Climate unhealthy. Only a small remnant returned alive. Several attempts made to revive the colony (Port Escoces). Spain protested that her territory was invaded. Force used; 2,000 lives lost. Project abandoned. **P-99, 25.**
- 1771.** Bronzecannon accidentally discovered, in Mexico, to have been cast in the Philippines, suggested ascertaining if they had not been imported through an isthmian route. Investigation showed they had come in through old Tehuantepec route. Viceroy of Mexico had 2 engineers, Augustin Cramer and Miguel del Corral, survey the Isthmus, hoping to discover water communication. They reported that in one place the mountains formed a group rather than a continuous chain, that a valley existed through which a canal of small dimensions was practicable, connecting two rivers on opposite slopes, which would form a continuous communication across the Isthmus. **P-99, 26.**
- 1774.** Determined effort made to bring Indians under subjection because of their interference with traffic over the various isthmian routes. Military posts were again established on both sides of the Isthmus. Trail cut which was afterwards known as Ariza's Road. But in 1790, posts abandoned. **P-99, 26.**
- 1779-1781.** Under orders of Charles III of Spain, investigation undertaken by Manuel Galisteo to determine practicability of connecting Nicaragua lakes with Pacific. Report discouraging. Lake Nicaragua 134' higher than Pacific, and high mountains between lakes and the ocean. In spite of

this, company formed, but project never commenced. **P-99, 26.**

1780-1786. Galisteo's party was accompanied in a private capacity by British agents; territory claimed in name of Mosquito Indians. Country invaded by British after Spain had declared war against British. Admiral Nelson (then captain) was in charge of naval operations. In his dispatches he spoke of his intention to "possess the Lake of Nicaragua, which for the present may be looked upon as the inland Gibraltar of Spanish America." Invading force was successful, but it was depleted through sickness due to constant rains, fevers, etc. Nelson's life was saved only by careful nursing. Treaty of 1783 terminated the war; Great Britain relinquished whatever territorial rights she claimed in that region, retaining only some rights of woodcutting for dyeing purposes. In 1786 the Spanish sovereignty was again confirmed by the British, but treaties disregarded later after Spanish colonies acquired their independence. (Mosquito tribes, 1894, agreed their territory should become a department of Nicaragua.) **P-99, 27, 28.**

1814-1823. Spanish Cortes, aroused by remarks of Baron Humboldt deploring lamentable lack of knowledge concerning isthmian regions, decreed, 1814, for the construction of a canal through the peninsula for vessels of the largest size, and authorized the formation of a company therefor. No results. Spain's opportunity of making an isthmian passageway terminated 1823, when the last of her central American Provinces seceded. **P-99, 28.**

1819. Republic of Colombia formed from New Granada, Venezuela, and Ecuador. **P-99, 28.**

1823. Guatemala, San Salvador, Honduras, Nicaragua, and Costa Rica established Republic of the United Provinces of Central America, **P-99, 28.**

1824. Mexico had reconnaissance made of Tehuantepec route by Juan de Orbegoso and Tadeo Ortiz. Examination showed the great difficulties of making a navigable canal. Carriage road recommended. (See H. R. 322, 25th Cong., 3d sess.) **P-99, 31.**

1825. Republic of Central America proposes to U. S. cooperation in the building of a canal through Nicaragua. Mr. Clay, then Sec. of State, made favorable response. U. S. representative asked by U. S. for information for guiding the U. S. in the matter. No definite action appears to have been taken. A private concern, headed by A. H. Palmer, New York, had previously made proposals to the Republic looking toward a canal. **P-99, 29.**

1826. President Adams instructed commissioners to a proposed congress of nations at Panama, that subject of canal might be well considered; that the benefits of it ought not to be exclusively appropriated to any one nation, but should be extended to all parts of the globe upon the payment of just compensation or reasonable tolls, **P-99, 29.**

The Republic of Central America, not waiting for action by U. S., accepted terms of Palmer, and made contract. (See Report 145, H. R., 30th Cong., 2d sess., pp. 362-367). Palmer sought to capitalize a company at \$5,000,000; sought English money; was unsuccessful. **P-99, 29, 30.**

Survey of Nicaragua route made by John Bailly, who had been sent out by an English company wanting a concession. Local authorities employed him to make the survey. He favored a route from Greytown to Lake Nicaragua, across the lake to the Lajas, thence to the Pacific. He proposed canal for ships of 1200 tons burthen, depth of 18'. Recognized difficulties of the work. Alternative plan embraced a tunnel. Suggested also route through the Tipitapa and Lake Managua. **P-99, 31.**

1827. J. A. Lloyd explored the Isthmus of Panama under authority of President Bolivar. Recommended new line instead of those in use from Porto Bello and Chagres by Cruces to Panama, beginning at Bay of Limon via Chagres River and Trinidad River. Made no definite recommendation in favor of a canal. **P-99, 32.**

1830. Central American Republic negotiated with Netherlands company for canal. U. S. announced that it would consider itself entitled to all advantages accorded other nations over such a canal through Nicaragua. Project abandoned. **P-99, 30.**

1835. Central America again turned to the U. S. on subject of Isthmian Canal. President Jackson sent Mr. Biddle to examine Nicaragua and Panama routes. In 1837 Senate informed that it was not expedient to take up subject of Isthmian Canal. **P-99, 30.**

1838. Aaron Clark, with citizens, memorialized Congress on the value of an Isthmian Canal, and asked that engineers examine for routes. Interesting and valuable report rendered by C. F. Mercer, 1839 (25th Cong., 3d sess., H. R. No. 322). No notable action. President Van Buren sent John L. Stephens to the Isthmus. Nicaragua route recommended by him; estimate for canal there, \$25,000,000. Times not favorable because of unsettled and revolutionary character of the country. **P-99, 30, 31.**

New Granada, formerly a part of Colombia, in control of the Panama route, granted concession for roads, canals, etc., to French

company; latter made explorations for about 2 years; represented to French Government there was a depression of about 37' above sea vicinity of Panama. French Government sent out Napoleon Garella; latter approved some portions of Lloyd's project; low depression not findable; tunnel proposed, 34 locks with some guard locks; estimate, \$25,000,000 or \$28,000,000, for boats of 1,200 tons, 198½' long, 45½' wide, requiring channel depth of 23' (H. R. 322, 25th Cong, 3d sess.); this report disappointing; no steps taken; concession forfeited. **P-99, 32, 33.**

1846-1848. Extension of Pacific boundaries of the U. S. and discovery of gold in that quarter produced important travel across Isthmus of Panama. U. S. treated with New Granada for right of transit across Isthmus. **P-99, 33, 445.**

1847. New Granada granted to Panama Co. (association of French represented by Mateo Kline) the exclusive privilege of building a railroad between the two oceans, across the Isthmus, for 99 years. Company failed; contract forfeited. **P-99, 37.**

1848-1855. New Granada transferred Kline contract to Aspinwall, Stephens, and Chauncey, who organized the Panama R. R. Co. Road opened to public use 1855, from Aspinwall, or Colon, to Panama, 47½ miles. **P-99, 37.**

1849. U. S. Congress authorized surveys of certain routes for canal and railroads across Isthmus. Importance of canal recognized, but railroads favored meantime. Further surveys recommended. (H. R. 145, 30th Cong. 2d.) **P-99, 33.**

Aspinwall, Stephens, and Chauncey memorialized U. S. Congress for subsidy; only \$250,000 annually to aid in building the road recommended; no action; annual appropriation made for carrying mails across Isthmus. **P-99, 34.**

Treaty with Nicaragua by E. Hise, U. S. chargé d' affaires, for transit routes in favor of U. S.; latter to defend Nicaragua especially against pretensions of British to control of lower waters of San Juan; treaty not ratified by U. S.; Hise succeeded by E. G. Squier; latter negotiated treaty in behalf of American company composed of Cornelius Vanderbilt and others; not ratified. Both treaties, however, subjects of Clayton-Bulwer treaty 1850. **P-99, 34.**

1850. Clayton-Bulwer treaty, July 5, 1850, agreed, among other things, that the two contracting parties (England and U. S.) would support or encourage such persons or companies as might first commence adequately a ship canal through Nicaragua, which terms embraced any contract pending, this latter provision in the interest of

the company Squier had negotiated for. This latter company, the American, Atlantic & Pacific Ship Canal Co., incorporated in Nicaragua. **P-99, 34, 35.**

Col. O. W. Childs, Philadelphia, appointed the chief engineer of the canal project of the A. A. & P. Co., to make a careful instrumental survey from ocean to ocean for a line of location. **P-99, 35, 71.**

1851. The A., A. & P. Ship Canal Co. acquired a separation of its contract; getting a charter for an additional company which would establish a transit route across the Isthmus separate from the canal project. This accessory company maintained a line from Greytown, up the San Juan, across Lake Nicaragua to Virgin Bay, thence by stage coaches 13 miles over a good road to San Juan del Sur. Route much traveled for years, in connection with the influx of settlers to the Pacific coast. **P-99, 34, 35.**

1852. Col. J. J. Abert and Lt. Col. W. Turnbull, U. S. topographical engineers, at the desire of President Fillmore, inspected the Childs report of the surveys made across the Isthmus; reported plan practicable; recommended some changes. Representatives of the British Government were selected by the latter; commended the nature of the information obtained by Col. Childs; recommended channel 20' by 50', and locks of 800'. Nothing further in this connection done by the A., A. & P. Ship Canal Co. **P-99, 36.**

1855. The Panama R. R. was increasing the desire for waterway transit across the Isthmus, the U. S., Great Britain, and France being among the most active in exploring probable routes and in searching out traditional lines of passage. Three lines received major attention: The San Blas, Caledonia Bay, and the Atrato. Exploring parties sometimes aided by the respective Governments. No easy routes found. (Report, Isthmus of Darien, made to Sec. of Navy, by Lt. I. G. Strain, 1854; Sen. Ex. Doc. 1, 33d Cong., 2d sess.; and report, Lt. John T. Sullivan, U. S. Navy, 47th Cong., 2d sess., H. Ex. Doc. 107.) **P-99, 37, 38.**

1856. The President of Nicaragua claims that the project of the A., A. & P. Ship Canal Co. had been abandoned, and decree was issued revoking and annulling contracts made with the company; protest made by the company unavailing. **P-99, 36.**

1858. Nicaragua and Costa Rica united to grant a concession similar to the Squier concession, to Felix Belly, of France, to construct a canal from the mouth of the San Juan, by way of the river and Lake Nicaragua, to the Pacific, to be executed by a company to be formed, the French

Government to have the right to keep two war vessels on Lake Nicaragua. U. S. declared the latter provision obnoxious. Company failed; concession annulled. **P-99, 36.**

1866-67. In response to Senate resolution, Sec. Wells transmitted report of Rear Admiral C. H. Davis (S. Ex. Doc. 62, 39th Cong., 1st sess.), on results of isthmian examinations. Accompanied by general maps of the Isthmus routes. 19 canal and 7 road projects enumerated. Excluded from further consideration the Tehuantepec route and the Honduras as possessing little merit. With reference to 8 routes in Nicaragua, stress was laid on the obstacles connected therewith; suggestion made that easier routes might be found elsewhere. Further examination in detail much needed before it would be reasonable to determine the most practicable route across the Isthmus. Belief expressed that the Isthmus of Darien should be looked to first for a solution of the problem. **P-99, 38.**

1868. Nicaragua and Costa Rica contracted with Michel Chevalier, of France, for the same object as in 1858. Company failed; contract annulled. **P-99, 37, 115, 425.**

1869-1872. President Grant's first message to Congress commended an American canal on American soil. Congress promptly responded by providing for further explorations. In 1872, Congress authorized the appointment of a commission (Interoceanic Canal Commission). Members: Gen. A. A. Humphreys, Chief of Engineers, U. S. Army; C. P. Patterson, Superintendent Coast Survey; Commodore Daniel Ammen, Chief of the Bureau of Navigation, U. S. Navy. Commission studied examinations which had been made, those in progress, and assumed authority over others to be made. In 1870 Capt. R. W. Shufeldt recommended canal line beginning at the head of navigation in the Coatzacoalcas, to dividing ridge at Tarifa, thence to harbors of Salina Cruz, the Pacific terminus. Proposed canal to be 144 miles long, with 140 locks. (S. Ex. Doc. 6, 42d Cong., 2d sess.) **P-99, 39.**

1870-1873. Commander T. O. Selfridge, U. S. Navy, was directed to make a survey of the Isthmus of Darien; large force, assisted by 3 vessels. (H. Misc. Doc. 113, 42d Cong., 3d sess.) **P-99, 40.**

1872. Nicaragua route examined by Commanders Hatfield and Lull, U. S. Navy. A. G. Menocal served as chief civilian engineer. The survey followed the Childs route principally. (S. Ex. Doc. 57, 43d Cong., 1st sess.) **P-99, 39.**

1874. Interoceanic Canal Commission also studied report on Nicaragua route made by

Maj. W. McFarland, Corps of Engineers, U. S. Army, who went over the country; report favorable; rough estimate of 26' canal, \$140,000,000. (S. Ex. Doc. 46, 52d Cong., 2d sess.) **P-99, 39.**

1875. Capt. E. P. Lull and Mr. Menocal made careful instrumental examination of Isthmus of Panama, along the line of the railroad. Reported in favor of line 41.7 miles long, from the Bay of Limon to the Chagres, to the divide, thence to the Bay of Panama. (S. Ex. Doc. 75, 55th Cong., 3d sess.) **P-99, 40.**

1876. The Interoceanic Canal Commission unanimously reported in favor of the Nicaragua route—beginning at Greytown, thence to San Juan River, thence to Lake Nicaragua, through the valleys of the Rio del Medio, and the Rio Grande, to Brito, on the Pacific coast. (S. Ex. Doc. 15, 46th Cong., 1st sess.) **P-99, 40.**

1876-1877. Provisional company organized France for waterways across the Isthmus. Contract made through Lt. L. N. B. Wyse, with Republic of Colombia, giving promoters privilege for 99 years, without any restriction of an important character; general route to be determined by an international congress of engineers and others about 1881. **P-99, 40, 41.**

1879-1881. International Scientific Congress assembled Paris, 1879. Decision reached that the best line for a maritime canal across the Isthmus was from the Gulf of Limon to the Bay of Panama. Concession transferred to the La Compagnie Universelle du Canal Interocéanique de Panama (Panama Canal Co.), organized 1881. In later years this company failed, and went into liquidation. The new Panama Canal Co. undertook its work. **P-99, 41.**

1881. J. B. Eads proposed a ship railway, by way of Tehuantepec. Charter obtained from Mexico. Belief of many that this scheme most practical and more practicable than canal by any route known. **P-99, 41.**

1884. Treaty had been negotiated between U. S. and Nicaragua, authorizing construction of a canal by the former, to be owned by the two contracting parties, **P-99, 41, 359.**

1885. Foregoing treaty withdrawn in the Senate of the U. S. by the President, in the belief that the perpetual alliance it proposed with Nicaragua was against the declared policy of the U. S., **P-99, 41.**

Nicaragua route again surveyed under authority of Sec. of Navy, by A. G. Menocal, who prepared a special plan. (S. Ex. Doc. 99, 49th Cong., 1st sess.) **P-99, 41.**

1887-1889. Nicaragua granted concession to A. G. Menocal and others, authorizing ship canal from Greytown to Brito; like con-

cession secured from Costa Rica. Name of company, "The Maritime Canal Co. of Nicaragua." Incorporated by Congress, Feb., 1889. Failure of construction company; Nicaragua declared contract forfeited; several proposals before Congress for years to aid company. P-99, 41, 42, 389, 431.

1895. Bill pending for several years for a board of engineers to ascertain feasibility, permanence, cost, etc., of canal through Nicaragua, passed and approved Mar. 2. Board composed of Lt. Col. Wm. Ludlow, Corps of Engineers, U. S. Army; Civilian Engineer M. T. Endicott, U. S. Navy; Alfred Noble, civil engineer. Designated as "Nicaragua Canal Board." Reported Nov. 1, 1895. (H. D. 279, 54th, 1st) Reported it was impracticable in the short time allowed to make satisfactory examination; recommended further explorations, etc.; tentative estimate, \$133,000,000. P-99, 42, 82.

1897-1899. Congress authorized continuation of surveys and examinations in Nicaragua, as recommended by Ludlow Board. New board formed—Rear Admiral J. P. Walker, U. S. Navy; Col. P. C. Hains, Corps of Engineers, U. S. Army; Prof. L. M. Haupt, civil engineer. Designation, "Nicaragua Canal Commission." Board reported to the President, May 9, 1899. Route favored practically that of Childs in 1852. Project, however, calls for canal 30' by 150', with locks 665' by 80'. Provision was made also for regulation of lake level, never before adequately dealt with.

At this point in the history of isthmian investigations, the examinations and surveys made under the authority of the U. S. had dispelled all fictions and fanciful views concerning an isthmian waterway passage.

The central American Republics were beginning to realize that the isthmian waterway could be built only through the aid of some powerful nation, instead of by individuals and corporations. There was evidence that these Republics were willing to enter into negotiations toward such an end, provided proper assurances were given that the sovereignties involved would not be disturbed. P-99, 42, 43, 82.

(b) Projects (Nicaragua v. Panama), 1899-1901. (See p. 2549 of this Index.)

The subjects embraced by the above title are as follows:

- Choice to be between Nicaragua and Panama.
- Consideration of the respective rights, privileges, and franchises.
- History of the French Panama companies, including consideration of what they had accomplished.
- Canal dimensions, and unit prices for construction, by either route.
- Panama route. Details, sea level, and lock canals.
- Nicaragua route. Details, lock level canal.
- Conclusions favorable to Nicaragua route after comparing the features of both routes.
- Later conclusions favorable to Panama.

Factors considered by Isthmian Canal Commission No. 1:

"The passages to the Orient around the Cape of Good Hope, through the Strait of Magellan and around Cape Horn, have not satisfied the desire for a direct line of communication eastward or westward. The passage north of the American Continent, discovered (by McClure) in 1851, and that north of Asia, first made in 1879, were valuable only as contributions to geographic knowledge, for they are through arctic regions, where the ice seldom permits a continuous voyage. Lines of transcontinental railroad connecting Atlantic and Pacific ports have facilitated travel and commercial intercourse, but they have not filled the place of a ship canal. The reopening of the ancient communication, mainly upon a new line, between the Mediterranean Sea and the Indian Ocean by the completion of the Suez Canal in 1869 has made the inter-oceanic connection westward of less importance to the people of Europe, but it has had little effect on the American Continent. The demand that the American Isthmus be opened to navigation from sea to sea is each year becoming more imperative. The extension of our territory to include the Hawaiian Islands and afterwards the Philippines has made this connection most desirable for the proper exercise of governmental functions wherever they are to be discharged." P-99, 43.

Probable choice of routes to be made between Nicaragua and Panamá. (See Physical Characteristics; Routes.)

RIGHTS, PRIVILEGES, AND FRANCHISES. (Chap. VIII.) P-99, 115-160.

Contents: Requirements of law as to investigation; proposition before Congress was that U. S. should construct, maintain, and operate a navigable waterway through territory of foreign States; can not be done, "under law of nations," without "their" consent. Sovereignty of U. S. over canal route not requisite. P-99, 115.

Strip or zone 5 miles wide from center thereof on each side recommended; U. S. "should have power to protect the entire line from intrusion by evil-disposed persons, prevent smuggling, regulate the kinds of business that ordinarily require control, and enforce police, sanitary, and other appropriate rules and regulations, as well as contracts relating to the construction and operation of the canal," P-99, 116.

If rights, privileges, and franchises exist, they should be removed. Treaties to be examined. P-99, 116.

Treaties relating to Nicaragua route (see Treaties): Costa Rica also interested. Treaty between U. S. and Nicaragua, 1867. P-99, 116.

Frelinghuysen-Zavala treaty, 1884, P-99, 117.

Two treaties between Nicaragua and Great Britain, 1860, **P-99**, 118.

Between Nicaragua and France, 1859. Other treaties by Nicaragua with other countries. **P-99**, 119.

Relation of Clayton-Bulwer treaty (1850) to Nicaragua; "entered into for the purpose of setting forth and fixing the views and intentions of the two contracting parties (U. S. and England) with reference to any means of communication between the Atlantic and Pacific Oceans, by the way of the River San Juan and either or both of the lakes of Nicaragua and Managua to the Pacific Ocean," **P-99**, 119.

Through Clayton-Bulwer treaty of 1850 Great Britain and the United States declared that neither would ever obtain or maintain for itself any exclusive control over the proposed communication by canal—

That neither would ever erect or maintain any fortifications commanding the same or in the vicinity of, or occupy, fortify, or exercise any dominion over Nicaragua, Costa Rica, or any part of Central America—

That neither would use any alliance or influence that it might possess with any State or Government through whose territory the said canal might pass for the purpose of acquiring for the citizens or subjects of the one any rights or advantages in regard to commerce or navigation through the said canal which should not be offered on the same terms to the citizens or subjects of the other.

In case of war between the contracting parties, it was agreed that the vessels of each country should be exempt from blockade or capture by either of the belligerents while traversing the canal or near either of its ends.

They further agreed to protect the canal when completed and guarantee its neutrality, so that it might be forever open and free and the capital invested in it secure.

They agreed to invite every State to enter into similar stipulations, so that all might share in the honor and advantage of having contributed to a work of such general interest and importance.

The agreement to establish a general principle; agreed that they would, by further treaty stipulations, extend their protection to any other practicable communications across the Isthmus, whether by canal or railway, particularly to the interoceanic communications by the way of Tehuantepec or Panama. **P-99**, 119, 120.

Amendment of Clayton-Bulwer treaty proposed by U. S., 1900, not accepted by Great Britain, **P-99**, 120.

Tabulation of policy with reference to interoceanic canal, **P-99**, 120.

Concession to Nicaragua Canal Association, 1887. (See Treaties.) **P-99**, 120.

Maritime Canal Co. of Nicaragua incorporated, act of Congress (U. S.), Feb. 20, 1889. (See Treaties.) Concession of Maritime Canal Co. forfeited, 1898 and 1899. **P-99**, 121.

Concession to Interoceanic Canal Co., 1898. Company failed to make second payment as guaranteed, due 1900. Concession declared forfeited, 1900. **P-99**, 122.

Various concessions, embracing rights of navigation of Lake Nicaragua and San Juan River by steam, by Nicaragua Mail Steam Navigation & Trading Co., Atlas Steamship Co., Caribbean & Pacific Transit Co., etc., **P-99**, 123, 124.

Boundary between Nicaragua and Costa Rica. Treaty between U. S. and Costa Rica, 1852. Treaty between Costa Rica and Spain, 1850. **P-99**, 124.

Between Costa Rica and Nicaragua, 1869. Other treaties. Policy of Costa Rica, etc., relating to interoceanic canal. **P-99**, 125.

Concession by Costa Rica to Nicaragua Canal Association, 1888. (See Treaties.) **P-99**, 125.

Isthmian Canal Commission No. 1 report "on obligations now in force to prevent an agreement with the U. S. relative to a canal" (via Nicaragua and Costa Rica). Former unwillingness of Nicaragua and Costa Rica to have their territories "occupied by another nationality even for the purpose of promoting the commercial and industrial development of the State" passing. Opinion growing that canal can only be constructed with the large resources "and abundant means of a willing Government." Protocols with Nicaragua and Costa Rica, 1900, expressing willingness that U. S. should make canal. **P-99**, 126, 127.

Treaties relating to Panama route (see Treaties): Treaties with Colombia, or "New Granada," as it was designated prior to 1862. **P-99**, 127. Though waters of the two oceans only 30 miles apart, no action taken by U. S. to secure privileges until 1846. Treaty of 1846 securing transit rights, ratified 1848. In return for the advantages and favors acquired, and in order to secure their tranquil enjoyment, the United States guaranteed to New Granada the perfect neutrality of the Isthmus, so that the free transit from the one to the other sea might not be interrupted during the existence of the treaty; the United States further guaranteed the rights of sovereignty and property which New Granada had and possessed over the said territory. **P-99**, 127.

Treaty of Colombia with France, 1856; with Spain, 1881; various other treaties, **P-99**, 128. Contract with Panama Co. (French) for railroad, 1847. Privileges of French company lapsed, 1848. Grant revived, 1848, in favor of Panama R. R. Co. (American). Road completed, 1855. Rights of Panama R. R. Co. **P-99**, 128, 129.

Contract with Wyse, 1876, for canal. Modification, in behalf of International Inter-

oceanic Canal Association of France. New contract, 1878. Canal route to be determined by international commission of experts. Outline of rights of Colombia and the concession holders, etc. **P-99, 129.**

Expert commission (135 delegates, 11 from U. S.) after session of 2 weeks decided best location was from Gulf of Limon to Bay of Panama; sea-level canal plan. **P-99, 130.**

Panama Canal Co. organized to work on Wyse grant, 1881. Failed, 1888. New agreement, 1890, on behalf of receivers. Contract extended to 1904; again, to 1910. (See Treaties.) **P-99, 130.**

1894 a new company organized, "New Panama Canal Co.," acquiring rights of old company, **P-99, 130, 131.**

"No treaties exist giving U. S. the right to occupy Nicaragua, Costa Rica, or Colombia for canal purposes," **P-99, 131.**

Terms must be arranged by diplomatic negotiations. Concessions from Nicaragua and Costa Rica declared forfeited.

Cost to U. S. of acquiring the privilege of entering and occupying the territory of the States through which the different routes extend, **P-99, 131.**

Nature of title required. Unlimited control by U. S. desirable. Compensation therefore should be definite in amount. Probable bases in determining compensation; Isthmian Canal Commission No. 1 had no power to negotiate. Hise treaty (see Treaties), 1849, with Nicaragua. Contract of Nicaragua, 1849, with American, Atlantic & Pacific Ship Canal Co. **P-99, 132.**

Frelinghuysen-Zavala treaty, 1884 (U. S. and Nicaragua). Contract between Nicaragua and Maritime Canal Co., 1887. Contract between Nicaragua and Interoceanic Canal Co., 1898. (See Treaties.) **P-99, 133.**

Contract between Costa Rica and Maritime Canal Co. Way open for direct negotiations with Nicaragua and Costa Rica. **P-99, 134.**

Way not open for direct negotiations at Panama. Privileges of Panama R. R. Co. continue to 1966; of canal company to 2009. **P-99, 134.**

Both companies prohibited from ceding privileges to foreign Government. These privileges subject to conditions, etc., which would not give U. S. the control, etc., desired. **P-99, 135.**

New arrangements necessary if U. S. shall build canal. "Relinquishment by canal company, with consent of Colombia," of its privileges to U. S. "would leave the way open for treaty negotiations between the two Governments to ascertain whether Colombia will consent to the occupation of its territory by the U. S. for the construction of a canal to be under Government control, management, and ownership, etc." **P-99, 135.**

"The U. S. can obtain from Colombia no concession that does not have the approval of the company, and its concessions do not

permit the company to transfer or attempt to transfer its rights to a foreign Government," **P-99, 136.**

Negotiation with New Panama Canal Co., through President Hutin. Queries propounded by Isthmian Canal Commission No. 1 to company. Delays. Suggestion of company that it reincorporate in New York, and the U. S. become majority stockholder; minority to be New Panama Canal Co., and income to latter protected in opposition to any policy of U. S. to lower tolls. Reference to S. Doc. 188, 56th Cong., 1st sess., pp. 41, 42, relating to sale of its rights. Colombian Government "would give" its consent to company making a sale and transfer "if satisfactory arrangements and conditions could be agreed upon." **P-99, 136, 137.**

Table representing the intrinsic, or real and absolute, value of the work already done and the other property owned by new Panama Canal Co. up to Oct. 4, 1901, on Isthmus, \$109,141,500. In addition, compensation was proposed for the possible profits which might result from operation of canal, ranging from 0.5 franc per ton for a traffic of 7,000,000 tons annually, to 3 francs per ton for traffic of 20,000,000 tons annually. **P-99, 138.**

Company requested a new examination of its schedules; rejected by Isthmian Canal Commission No. 1, as latter felt sufficient examination had been made, and time of final report was approaching rapidly. Isthmian Canal Commission No. 1 named Nov. 5, 1901, as last date for decision of New Panama Canal Co. **P-99, 139.**

Before the time set, President Hutin named price given above, but withdrew claim to compensation on future traffic basis "as an act of conciliation." Correspondence with the company. **P-99, 140-160.**

Documents furnished Isthmian Canal Commission No. 1 by New Panama Canal Co., **P-99, 215.**

HISTORICAL NOTES RELATIVE TO THE UNIVERSAL INTEROCEANIC CANAL CO. (1880-1894) until the organization of the new company. Preliminary remarks: "Now, the real cause of the downfall of the old Panama Co. was the lack of the serious studies which should have preceded its organization."

CHAPTER 1, 1880-1889: Brief sketch of the discoveries, explorations, and plans for maritime canals on the American Isthmus until 1879. **P-99, 197.**

The International Congress of Surveys for an interoceanic canal, 1879, **P-99, 199.**

The first issue of shares, **P-99, 201.**

The International Survey Commission, **P-99, 201.**

The Cuvveux and Hersent contract; success of the second issue of shares, **P-99, 202.**

The superior advisory commission for the work, **P-99, 203.**

Purchase of the shares of the Panama R. R. Co. from the American owners, **P-99**, 204.

The small contracts, 1883-1885. Numerous work yards opened. The highest peaks attacked. Examination by Engineer in Chief of Bridges and Roads Dingler of the entire plan for a sea-level canal. "His report is the only full statement of the question that has been made." Outline of his plan. **P-99**, 204, 205.

The large contracts (1885-1887-1889). Canal work divided into 5 sections. Expert engineers after personal examination did not hesitate to declare that the hopes (engineering plans and methods relating to sea-level canal) entertained by De Lesseps were without foundation. **P-99**, 206.

The temporary canal with locks (1887-88); plan hurriedly made, **P-99**, 207.

Receiver appointed, 1889, **P-99**, 209.

CHAP. II: Receipts to Mar. 8, 1890, 1,329,693,-078.74 francs, and expenditures 1,313,418,-840.28 francs. Cube of excavations done, 50,641,079,861 cubic meters; metallic parts of locks, over 20,000 tons; plant, especially housed plant, in good order, and probably sufficient for completion of work; dwellings for accommodation of 26,000 to 27,000 workmen. The commission (receivers) estimated value of useful work done, and of machinery at 450,000,000 francs. **P-99**, 209, 210, 211.

CHAP. III: The liquidation (1889-1894). Receiver thought new company might be organized. **P-99**, 211.

Receiver's commission of survey reported it was possible to complete canal in 8 years, with a system of locks having a lift of from 8 to 11 meters, united in groups on each slope; that plant was ample; and that 580,000,000 francs needed to complete work. 1890, L. N. B. Wyse gained from Colombia extension of 10 years. New contract signed Apr. 14, 1893, granting extension until Oct. 31, 1894, to organize new company which should have 10 years to complete canal. By-laws of New Panama Canal Co. filed June 26, 1894; capital, 650,000 shares of 100 francs each—50,000 shares to go to Colombia: **P-99**, 212, 213.

DIMENSIONS AND UNIT PRICES: Greater part of world sea commerce carried on by ships of moderate size. In view of increasing draft of ships, 35' of water fixed as minimum. **P-99**, 44.

Width of locks fixed at 84'; length, 740', **P-99**, 44, 45.

Prism of various canals; bottom width of 150' fixed. Side slopes variable; 1 on 3 in soft earth, and 1 on 2 above water; in firm earth, 2 on 3, and 1 on 1 above a berm 10' by 6' under water. In rock, the sides to be vertical from the bottom to a berm 5' above water, with slopes of 4 on 1 in hard rock and 2 on 1 in soft rock above such berm. **P-99**, 45.

Slope of 1 on 1 in Culebra Cut, and retaining walls where required, **P-99**, 45, 46.

Width of channels, 200', 250', 260', 300', 320', 500', 800'. Locks 788' to 793' long from quoin to quoin to give 740' clear. Twin locks and guard gates provided. Intermediate gates proposed, to lock smaller ships. **P-99**, 46.

All locks to have rock foundations; floors to be protected by concrete inverts. Walls of locks to be concrete mainly; climate favorable to concrete. Culvert linings to be protected by 1" iron. Gates of steel, based on actual designs made by U. S. Board of Engineers on Deep Waterways (1900) (from Great Lakes to Atlantic Ocean).

Unit prices: Hard rock, \$1.15 c. y.; soft, 80 cents. Earth removed, 45 cents c. y.; by dredge, 20 cents. Rock removed, under water, \$4.75 c. y. Embankments and back fill; 60 cents c. y. Rock in jetty construction, \$2.50 c. y. Stone pitching, \$2 sq. y. Clearing and grubbing, Nicaragua, \$200 per acre; other routes, \$100 per acre. Concrete, in place, \$8 c. y. Finished granite, \$60 c. y. Culvert lining, brick, \$15 c. y.; metal lining, 0.04 cent pound. Metal in locks and sluices, 0.075 cent pound. Allowance for each lock chamber for operating machinery, \$50,000. Power plant, each group of locks, \$100,000. Timber in locks, \$100 M b. m. Sheet piling, spillways, \$75 M b. m. Bearing piles, spillways, 50 cents linear foot. Pneumatic work, Bohio Dam, \$29.50 c. y. Caisson work, Conchudo Dam, \$20 c. y. Railroad, complete, \$75,000 per mile. 20 per cent additional for contingencies. **P-99**, 47, 48.

PANAMA ROUTE: (See Projects, 1486-1899, above.) Route surveyed, 1875, by Commander E. P. Lull, U. S. Navy. Recommended canal with locks, 26' deep, and bottom width of 60' to 72'. Locks to be 450' long and 65' wide. Summit level fixed at 124' above tide level. 12 locks proposed, on each side. Dam across Chagres River to dam up water supply. Estimate, \$94,511,360. **P-99**, 56.

In 1876, the Société Civile Internationale du Canal Interocéanique sent an expedition under Lt. L. N. B. Wyse, of the French Navy to make surveys. He obtained a concession. In 1879 an international congress of experts (majority French), under auspices of F. de Lesseps, recommended canal at Panama location, at sea level, without locks. The Panama Canal Co. immediately organized. Purchased Wyse concession. Two years devoted to surveys and examinations. Operations on large scale began 1883, for sea-level canal 29.5' deep, and bottom width of 72', involving excavation estimated at 157,000,000 c. y. Line laid about 47 miles long to obtain curvature. Maximum height on center line of Culebra Cut, about 333' above sea. Among various schemes to control floods of Chagres,

dam proposed at Gamboa; decided later to be impracticable; problem never solved (by Panama Canal Co.). Cost estimated by De Lesseps at \$127,600,000 time, 8 years. Works continued on this plan until 1887. Then evident that sea-level canal not completable within estimates. Temporary plan of lock canal adopted; summit level to be supplied from Chagres River with pumps. Company bankrupt, 1889. (See Historical notes relating to Panama Canal Co., above.) Receiver's commission, after study, estimated canal could be completed in 8 years; cost of completion, \$112,500,000 or \$174,600,000. **P-99, 56, 57.**

Legal difficulties, but New Panama Canal Co. formed. Work continued; by 1899 had removed about 5,000,000 c. y. In 1898 a special commission of 14 engineers (European and American) submitted a report (reproduced in S. Doc. 188, 56th Cong., 1st sess., pp. 43-83); reported canal could be built according to the current project. The engineering problems considered solved, but the continuous financial problem made more difficult by the appearance in the field of the U. S. as a probable competitor in the forming of an Isthmian Canal. **P-99, 59.**

Plan of the new company involved 2 levels above the sea level—one an artificial lake to be made with a dam at Bohio, to be reached with 2 locks; and a summit level to be reached with 2 locks from the lake. The summit level to have its bottom 68' above the sea, to be supplied with water by a feeder leading from an artificial reservoir to be made at Alhajuela, in the upper Chagres Valley, the ascent on the Pacific side to be likewise by 4 locks. The canal to have a depth of 29.5' and a bottom width of 98'. General location, the same as that adopted by the old company. Lock chambers, 32'10" x 82' x 738'. Lifts, 26' to 33'. Cost, \$101,850,000, not including administration and finance.

A second plan worked out, apparently preferable, but taking more time. Upper level omitted, the cut through the Continental Divide being deepened until its bottom was 32' above the sea; Lake Bohio made summit level, fed directly by Chagres; one flight of locks on Atlantic side and one lock on Pacific side omitted; feeder from Alhajuela omitted, but dam there retained. Estimate, \$105,500,000. **P-99, 59, 60.**

Old Panama Canal Co. began its work without adequate knowledge of the physical condition at the Isthmus.

Much physical data gathered by the two companies. Made available for uses of Isthmian Canal Commission No. 1. Found essentially correct. **P-99, 60.**

Study of plan for canal by Panama route to be built by U. S. Made on a different basis than would be adopted for a commercial corporation. Time of less vital importance; funds problem much diminished. Canal

should permit passage of craft of largest size for years to come. **P-99, 60, 61.**

A great natural difficulty the control of the Chagres River. Excessive rainfall, and precipitous slopes of the valley give river a torrential character. Rose 23', 1890, in 16 hours. **P-99, 61.**

Sea-level plan rejected by Isthmian Canal Commission No. 1. Excavation required, about 266,228,000 c. y. Cost of plan, \$240,000,000. Time, 20 years. **P-99, 61.**

Canal with locks simplifies problem of flood control, but introduces the problem of supplying the summit level with water. Total amount required to operate canal for a traffic of 10,000,000 tons per annum, 1,063 cubic feet per second. Study of the flood discharge of the Chagres, and for location of impounding dam. Height of spillway fixed at 85' above mean tide; spillway to be a fixed weir 2,000' long. Crest of dam placed at 100', and top of lock walls and gates at 94', to make them entirely safe from severest floods. **P-99, 62, 63.**

Annual flow of the Chagres and the topography of the country favorable to a very large increase in the water supply. Reservoir can be constructed at Alhajuela with a capacity for storing an additional volume 4 times that "now" provided. Overflow disposed of through natural and artificial channels to the Chagres River, thence to sea. **P-99, 62, 63.**

Canal as projected by the Isthmian Canal Commission No. 1 may be described as follows: Beginning at the 6-fathom line in Limon Bay, a channel 500' wide at bottom, with side slopes 1 on 3 excavated, curving gently to the left upon a radius of 6,560', until it reaches a point just inside the jetty of the old Panama Canal Co. Here it changes direction to the right upon a curve of 3,280' radius, then conducted on a straight line for 2,000' to a point 2.39 miles from deep water in the bay. For about a mile this wide channel is inside the shore line, forming a narrow but well protected harbor. Near the apex of the second curve the bottom width is increased to 800' for 800', for a turning basin. Estimate, for this entrance and harbor, \$8,057,707, of which \$1,936,991 for work outside the jetty. Annual cost of maintenance, \$30,000. **P-99, 63 and pls. 21, 22, 23.**

Colon to Bohio: Bottom width 150', side slopes 1 on 3 for 1.86 miles through swamp, reduced to standard used in firm earth, for 12.56 miles to Bohio Locks. Length of level, 14.42 miles. Estimate, \$11,099,939, including \$151,347 for levees to exclude flood waters and \$299,000 for the lower approach, 1,200' long to the lock. **P-99, 63.**

Bohio Locks: Double flight of locks; total lift varying from 82' to 90' at the maximum; 41 to 45 to each lock; normal lift, 85'. Location that of French company. Estimate, \$11,567,275. **P-99, 63 and pl. 24.**

Lake Bohio: Above locks canal enters artificial lake, known as Lake Bohio. Broad, deep water for first 7 miles. Length of channel, 12.68 miles from the locks to the point where the canal leaves the Chagres. Section extends 0.93 mile farther, to where it enters the cut through the divide. Estimate, \$2,952,154, including \$434,400 for the upper approach to the Bohio Locks.

Obispo guard gates: Near entrance to summit will be placed a pair of gates 100' wide, so that if it should become necessary to draw off the water from the summit cut the level of Lake Bohio would not be affected. Estimate, \$295,434. **P-99, 64.**

Culebra Cut: The summit cut, 7.91 miles long from the Obispo gates to the Pedro Miguel Locks. The highest point about 5 miles from the Obispo gates, where the bottom of the canal at the axis is 286' below the natural surface of the ground, this is the famous Culebra Cut. This cut estimated on a basis of a bottom width of 150', with side slopes of 1 on 1 (cut would probably not be finished with this uniform slope, "this furnishes as correct a basis of estimate as can now be arrived at"). Entire cut to be lined with masonry walls. Broad benches on each side to arrest slides and for P. R. R. "Much has been said about the instability of the Culebra Cut; in point of fact, there is a clay in the upper portion of the deep cut which flows readily when saturated, but which will give little trouble if thoroughly drained; probably nine-tenths of the material would naturally be classed as hard clay of stable character; it would weather somewhat, and the surface might require some repairing with concrete in bad places, a practice common in deep cuttings in Europe. This clay disintegrates rapidly in water, and for this reason the canal prism should be confined between masonry walls. With the provision made for broad benches on each side, on which any slight slides would be arrested, it is believed that no trouble will be experienced. * * * It would probably take 8 years to excavate this section of the canal." Estimate of the 6.02 miles of heavy work, \$41,940,480; of the entire 7.91 miles between Obispo gates and the Pedro Miguel Locks, \$44,414,460, including the upper approach. Time, 8 years. Excavation, 43,237,200 c. y. Hugeness suggests thorough organization and tools. "Ample ground for deposit of spoil." Cost estimated at 80 cents c. y.; bad management might make it \$1 c. y.; good management might make it 60 cents c. y. **P-99, 64.**

Pedro Miguel Locks: Similar to Bohio Locks. Aggregate lift, 54' to 62'. Estimate, including an adjacent dam, \$9,081,321. **P-99, 65.**

Pedro Miguel level: From Pedro Miguel Locks to last lock, at Miraflores, 1.33 miles. Estimate, \$1,192,286, including \$388,880 for lock approaches at each end. **P-99, 65, pl. 25.**

Miraflores Lock: Lift varying from 18' to 38' m. l. w. Spillway required. Estimate, lock and spillway, \$5,781,401. **P-99, 65, pl. 25.**

Pacific maritime section: For 4.12 miles beyond the Miraflores Lock canal extends through a low, swampy country, through which the Rio Grande runs. Brings canal to point La Boca, where the Panama R. R. has constructed a large and substantial wharf. Dredged channel 200' wide, with slopes of 1 on 3, will extend from this point 4.41 miles to the 6-fathom line in Panama Bay. Estimate, \$12,427,971, of which \$1,464,513 is for work outside of La Boca. **P-99, 65.**

Bohio Dam: Most important structure on the line. 107 borings made; reached rock. Masonry dam held to be safer than earthen dam. **P-99, 65.**

Width, 20' at top; length, 2,546'. Total height above lowest part of foundation, 228'. Masonry core, 30' thick at and below elevation -30. From that level it tapers to a thickness of 8' at top. Estimate, \$6,369,640. "Before actual construction a better location may be found," and the cost reduced.

Gigante Spillway: Dam of concrete. Crest at elevation 85, terminating in an apron at elevation 65. Estimate, \$1,209,419. **P-99, 66.**

Pena Blanca swamp: Water from spillway will flow across country to this swamp, thence into the Agua Clara swamp by an artificial channel. Estimate, \$2,448,076. **P-99, 67.**

Chagres diversion: In neighborhood of Gatun valley contracts; diversion of Chagres needful. Channel made by the Panama Canal Co. not ample. New one necessary. Estimate, \$1,929,982.

Leaves: Low region above and below Gatun must be protected from overflow. **P-99, 67.**

Gatun diversion: Estimate, \$100,000. **P-99, 67.**

Panama R. R. diversion: Estimate, \$1,267,500. **P-99, 68.**

Total estimate: Including engineering, sanitation, police, etc., \$144,233,358. Total excavation, 94,863,703 c. y., exclusive of excavation for the Bohio Dam and the Gigante Spillway. **P-99, 68.**

Total length, from 36' depth in Atlantic to 36' depth in Pacific, 49.09 miles. Alignment good. Sharpest curve having radius of 6,232', except one at entrance to Colon Harbor, which has a radius of 3,280'. **P-99, 68.**

Alternative line: Shortening distance 1.25 miles. No material saving. Details. **P-99, 253.**

Time of transit: Computed for average ship, one 400' long, 50' beam, and 24.5' draft, 11 hours and 14 minutes. **P-99, 69.**

Advantages of Isthmian Canal Commission No. 1 plan: Simplicity. Control of Chagres. One weir at Bohio instead of two. Reduction of cost.

Value of work done at report of Isthmian Canal Commission No. 1: Considering excavation, plant, etc.—excavation (72,000,000 c. y. excavated by old company, and 5,000,000 by new company), \$27,474,033; Panama R. R. stock at par, \$6,850,000; maps, drawings, etc., \$2,000,000. Total, including 10 per cent for contingencies, \$40,000,000. (No special allowance made for plant though cared for. Probably of small value in American methods of building canal.) **P-99**, 69, 70.

Plates: Locks, Pedro Miguel and Miraflores **P-99**, pl. 25.

Bohio Locks, **P-99**, pl. 24.

Gigante Spillway, **P-99**, pl. 27.

Bohio Dam, **P-99**, pl. 26.

Special studies: Waste weir dimensions and discharges for Lake Bohio, **P-99**, 247.

Lock systems, **P-99**, 179.

Gates, side walls, drawings, middle walls, miter sills, approach walls, culverts and valves, lock floors, time of filling and emptying locks, use of water for lockage of vessels, leakage at locks, single and double locks, **P-99**, 179-196.

NICARAGUA CANAL PROJECT: Childs's projects, 1852. Routes examined by Col. Childs. Water in canal was to be 17' deep and 50' wide on bottom. Dimensions and slopes. Length and cost of canal. Total length of route—western division, 18,588 miles; eastern division, 119,305 miles; summit level, 103.430 miles; across Lake Nicaragua, 56,500 miles (now known to be 70.51 miles). Total cost estimated at \$31,538,319.55, which included 15 per cent for contingencies, and the work was to be completed within 6 years from the time of breaking ground. His reasons for limiting the depth to 17' were that the ratio of increase of the expense of a deeper canal would be very great, and that a canal of the dimensions required for vessels of the largest size would be an injudicious application of means that the company, which had a contract with Nicaragua for a canal big enough to accommodate vessels of all sizes, would scarcely favor or the interests of commerce require. No vessels plying between Atlantic States and eastern coast of Pacific with a draft as great as 17', and that of 261 steam vessels, mostly English, only 15 drew over 17', 21 drew 17', and 225 less than 17' each at the load line. Childs's project submitted by President Fillmore to Corps of Topographical Engineers, U. S. Army; Childs's plan reported practicable, but some modifications to reduce cost suggested. Col. Childs subsequently proposed a project for a canal 12' deep with a smaller prism and smaller locks. **P-99**, 75-77.

Lull's project, 1873: Started out under command of Commander A. F. Crozman, U. S. Navy, who was drowned at landing. Commander Hatfield assumed command; inves-

tigations showed that Col. Childs's survey of the western portion of his line was correct. In Nov. of the same year Commander E. P. Lull, U. S. Navy, had charge of an expedition to continue work of the Hatfield party. Number of routes examined between the lake and the Pacific; one adopted known as the Medio route. Canal depth, 26'; locks to be 75' by 400'; bottom width, 50', 60', and 72'. Waters of the San Juan to be discharged by the Colorado branch. Total estimate, allowing 25 per cent for contingencies, \$65,722,137.

New project submitted, 1885, by a former assistant of Commander Lull, a Mr. A. G. Menocal, civil engineer, U. S. Navy, under the Frelinghuysen-Zavala treaty. Survey had been ordered, to determine advisability of any changes in the route for shortening the canal and diminishing the cost. Radical changes proposed. Instead of following the Medio line, Las Lajas route adopted, the one originally surveyed by Col. Childs, necessitating change of plans for taking care of the waters of the Rio Grande, etc. Dam proposed. Instead of a succession of comparatively low dams, single dam at Ochoa proposed, this dam to create slack water navigation in the river, raising the lake to 110. Ochoa Dam to be of masonry (concrete). Entire surplus water of San Juan to be discharged over crest of the dam. Embankments south of the San Juan, for summit level, not deemed required (later investigations determined them necessary). The divide cut an important feature of this project; almost 3 miles long, nearly all curvature. Elevation between eastern and western flowing waters 280'; impossible to locate canal so as to follow turns of the valley, hence line would cut several spurs. Maximum cutting would have been about 350'. Saving in distance from the Pacific to Atlantic over the Lull route 10.96 miles. Project contemplated depth of 28'; increased in places to 30'. Summit level to be reached by 3 locks on the east side and 4 on the west. Locks, 65' by 650'. Locks 1, 2, 3 on east side had lifts of 26', 27', and 53', respectively. Locks on the west side had lifts of 26.4', 29.7' (for second and third), and 24.2' to 33.18' for a tidal lock. 53' lock to be of rock (cut out of solid rock), the others to be of concrete, etc. Narrow-gauge railroad to be built from Greytown to the dam across the San Juan River, and another between the lake and Brito. Total estimated cost, \$64,036,197. This includes 25 per cent for contingencies, but nothing for surveys, hospitals, shops, management, and other necessary expenses. **P-99**, 79, 80.

In 1889 the Maritime Canal Co. of Nicaragua was granted a congressional charter. Project essentially the same as that of Menocal, 1885, modified in respect to the summit level. This was to be extended on the west side to within 3½ miles of Brito by the construe-

tion of a dam across the Rio Grande at La Flor. Surveys revealed that "continuous" ridges did not exist along the route; necessitating embankments, the construction of which made a somewhat difficult engineering problem, on account of the foundation soils. San Francisco, San Carlos, and other embankments. The Ochoa Dam, originally to be of masonry, modified to be a rock fill backed with earth. Crest of dam fixed at 105' above mean sea level; its width across top 25'. As the water of the San Juan was to be held at 106 in the vicinity of the dam, a constant discharge due to a head of 1' over the dam was expected. "This, however, would not have been the case, for the lake would have fallen to 106 or lower in the dry season and the level at the dam could not have been maintained." Maximum discharge of San Juan at Ochoa might sometimes reach over the dam crest 42,500 cubic feet per second, and the combined discharges with the lake at 111 over the dams, weirs, and through sluices were estimated at a maximum of 147,800 cubic feet per second. P-99, 81.

On the west side of the lake the summit level was to be continued through the west divide and down the valley of the Rio Grande to a point called La Flor, about $3\frac{1}{2}$ miles from the Pacific, where the valley narrowed to about 1,600 feet. At this place the valley was to be closed and the summit level maintained by a large dam. The latter would produce a large, deep basin into which the floods of the Rio Grande, Tola, and other streams would flow. This large pool would render unnecessary the proposed diversion of the upper Rio Grande into Lake Nicaragua, and thus save about \$1,500,000. Locks were to be fixed near western end of dam at La Flor, the combined lift of two being 85'. A third, as a tide lock, was to be located near harbor, lifting from 21' to 29'. Total cost of canal estimated at \$65,000,000, inclusive of 25 per cent for contingencies, but exclusive of interest, commissions, and other charges not coming under the cognizance of engineers.

The project was submitted, 1899, to a board of consulting engineers; considered "unquestionably feasible." Some hazard from San Francisco and other basins, due to probable leakage. Board's estimate, \$87,799,570, including 20 per cent for contingencies. P-99, 82.

A board of engineers was authorized by Congress Mar. 2, 1895, to make a survey and examination for the purpose of ascertaining the feasibility, permanence, and cost of the construction and completion of the Nicaragua canal by the route contemplated and provided for by an act passed in the Senate Jan. 28, 1895, entitled "An act to incorporate the Maritime Canal Co. of Nicaragua," approved Feb. 20, 1899." Report of this board published in H. Doc. 279, 54th Cong., 1st

sess. Report to effect that more specific information, etc., necessary; additional examination and surveys recommended; tentative estimate made of \$133,000,000. P-99, 82.

Appointment of Nicaragua Canal Commission was authorized by Congress June 4, 1897, to carry out recommendations of former or preceding board. Reported to the President May 9, 1899. Route that of Childs's practically, but project modified somewhat. Canal to be 30' by 150' bottom, with locks 80' by 665'. A single high dam across the San Juan, above the mouth of the San Carlos River, provided for; canal carried thence on the left bank of the San Juan River to the Caribbean Sea. Provision made for regulation of lake level; no prior project had adequately dealt with this. Safety as a principle placed before cost. Found that the discharge of San Juan had been greatly underestimated. New dam site at Boca San Carlos. Future duplicate locks kept in view at La Flor. P-99, 83.

The project of the Isthmian Canal Commission No. 1 follows the general route of that of the Nicaragua Canal Commission. Depth of water increased. Locks duplicated and enlarged. New and better site found for dam in the San Juan. P-99, 84.

Cross sections, P-99, pl. 60.

Beginning at the 6-fathom curve, the entrance to the canal will lie between 2 jetties running nearly north and south, about $1\frac{1}{2}$ miles northeast of Greytown and passing close to the most westerly bend of the lower San Juan. Entrance to harbor to be 500' wide and not less than 35' deep. The width gradually narrows to 150', after passing a turning basin, the regular width of the canal at the bottom. The head of the east jetty to extend to 6-fathom curve in Caribbean, and is the zero point to which distances along the canal are referred. Estimated cost of entrance and harbor, \$2,198,860, covering 2.15 miles. Summing up the various items of the project, as follows, the total estimated cost is \$189,864,062, which includes 20 per cent for engineering, police, sanitation, and general contingencies:

| Item. | Miles. | Cost. |
|--|--------|-------------|
| Greytown Harbor and entrance..... | 2.15 | \$2,198,860 |
| Greytown Harbor to Lock 1, including approach wall to lock..... | 7.44 | 4,899,887 |
| Diversion of lower San Juan..... | | 40,100 |
| Diversion of San Juanillo..... | | 116,760 |
| Lock 1, including excavation..... | .20 | 5,719,686 |
| Lock 1 to Lock 2, including approach walls, embankments, and wasteway..... | 10.96 | 6,296,632 |
| Lock 2, including excavation..... | .20 | 4,050,270 |

| Item. | Miles. | Cost. |
|--|--------|--------------|
| Lock 2 to Lock 3, including approach walls, embankments, and wasteway..... | 16.75 | \$19,330,654 |
| Lock 3, including excavation..... | .20 | 3,832,745 |
| Lock 3 to Lock 4, including approach walls, embankments, and wasteway..... | 2.77 | 4,310,580 |
| Lock 4, including excavation..... | .20 | 5,655,871 |
| Lock 4 to San Juan River, including approach walls and embankments..... | 5.30 | 8,579,431 |
| Conchuda Dam, including sluices and machinery..... | | 4,017,650 |
| Auxiliary wasteway, including sluices, machinery, and approach channels..... | | 2,045,322 |
| San Juan section..... | 49.64 | 23,155,670 |
| Lake Nicaragua section..... | 70.51 | 7,877,611 |
| Lake Nicaragua to Lock 5, including approach wall to lock and receiving basins for the Rio Grande and Chocolate..... | 9.09 | 19,566,575 |
| Diversion of the Las Lajas..... | | 199,382 |
| Lock 5, including excavation..... | .20 | 4,913,512 |
| Dam near Buen Retiro. Section from Lock 5 to Lock 6, including approach walls and wasteway..... | 2.04 | 3,259,283 |
| Lock 6, including excavation..... | .20 | 4,368,667 |
| Section from Lock 6 to Lock 7, including approach walls, embankments, and wasteway..... | 1.83 | 2,309,710 |
| Diversion of Rio Grande..... | | 176,180 |
| Lock 7, including excavation..... | .20 | 4,709,502 |
| Section from Lock 7 to Lock 8, including approach walls, embankments, and wasteway..... | 2.43 | 1,787,496 |
| Diversion of Rio Grande..... | | 117,580 |
| Lock 8, including excavation..... | .20 | 4,920,899 |
| Section from Lock 8 to Brito Harbor, including approach wall..... | .23 | 553,476 |
| Brito Harbor and entrance, including jetty..... | .92 | 1,509,470 |
| Railroad, including branch line to Conchuda Dam site, at \$75,000 per mile..... | | 7,575,000 |
| Total..... | 183.66 | 158,220,052 |
| Engineering, police, sanitation, and general contingencies, 20 per cent..... | | 31,644,010 |
| Grand total..... | | 189,864,062 |

P-99, 84, 109.

Table showing amount and length of curvature for the entire line. 56 curves. 49.29 miles. Total degrees of curvature, 2,339° 50' 30". P-99, 91.

As there are no natural harbors at either end of the canal line, artificial harbors to be constructed. Fine harbor once at Greytown—destroyed by moving sands. Jetties needed to gain and hold 35' depth. Dredging also required for maintenance. Jetty needed also at Brito, on the Pacific side. P-99, 91-96.

Regulation of level of Lake Nicaragua: Dam at Conchuda, 52.9 miles from the lake, would extend the waters of the lake to that point. Regulation to be accomplished with dams across the Rio Grande west of the lake and across the San Juan on the east side, having waste ways, etc., for discharge into the San Juan. Details of the problem. Maximum and minimum elevations not precisely determinable. Discharging capacity of the San Juan. Discharge of lake at any given stage. Slopes of canalized river corresponding to various discharges. Conditions governing the regulation of the gates. Precipitation in wet season. Effect of rainfall not felt immediately. October rainfalls heaviest. Satisfactory control gainable, but more data required. Concurrent rainfall and lake stage records not sufficiently extended. Maximum rainfall anticipated. Rise due to maximum rainfall. Results based on assumption that rainfall in basin is proportioned to that at Granada. Salient features of a contemplated control of the greatest lake elevations in seasons of maximum precipitations. Method of discussion of the regulation data, etc., not free from error. Computations show that the net available storage in the lake must be 6.2', if the requirements for evaporation and navigation for two dry seasons and an intermediate dry-wet season are to be met. Storage. Not possible to predict elevation of lake. Certain general principles of control procedure set forth in view of the results of the preceding computation. Oct. the month of heaviest rainfall. The general principle of operation of the sluiceways, etc., about as follows: (1) A full lake with surface probably a little above 110 on Dec. 1; (2) wasteway sluices closed at least from about Dec. 1 to some date in the early portion of the succeeding rainy season, or throughout that season if it be one of unusually low precipitation; (3) a variable opening of wasteway sluices, if necessary, during the intermediate portion of the rainy season, so as to maintain the lake surface elevation but little if any below 110 at the beginning of Oct.; (4) the operation of wasteway sluices during Oct. and Nov. so as to reach the first of Dec. with a full lake, or lake elevation probably a little above 110. P-99, 96-104.

Velocities in the minimum sections of the canalized river San Juan. Effect of tributaries of San Juan. P-99, 104.

Regulation of the lake to be effected with wasteways at the east end of the summit level. Movable dam essential. Vertically moving gates of the Stoney types selected.

Designed to discharge 100,000 cubic feet per second, through 21 sluice gates, with the water in the pool at 104. Depth of water on crest limited to 7'. **P-99, 104, 105.**

Conchuda Dam for regulation of Lake Nicaragua. Details. Most important structure on route. Length, 1,271 feet. Foundation on hard rock. One end in Costa Rica. **P-99, 105, pl. 69.**

Conchuda wasteways. **P-99, 105, pl. 68.**

Locks, Nicaragua. **P-99, pls. 64, 65, 66.**

Locks: Lock No. 1, vicinity of Misterioso; lift, $36\frac{1}{2}$ ' above mean low tide; in duplicate, as well as all others. Lock No. 2, near Negro Hills; lift, $18\frac{1}{2}$ '. Lock No. 3, beyond the Danta; lift, $18\frac{1}{2}$ '. Lock No. 4, beyond the Machado; variable lift, 31 to 37'. Lock No. 5, near Buen Retiro; variable lift, 23 $\frac{1}{2}$ to 28 $\frac{1}{2}$ '. Lock No. 6, near mouth of Rio Tola; lift, 28 $\frac{1}{2}$ '. Lock No. 7, at site once proposed for La Flor Dam, south abutment; lift, 28 $\frac{1}{2}$ '. Lock No. 8 connects with tidewater; lift, 20 $\frac{1}{2}$ to 28 $\frac{1}{2}$ '. **P-99, 84-90.**

Wasteways provided for disposal of floods in the various pools in the form of overfall weirs. Embankments in eastern division given a freeboard of 5' above level to which the assumed floods would rise. **P-99, 106.**

Wasteways provided in each of the levels between the summit level and the Pacific, **P-99, 106.**

Wasteways, **P-99, pls. 67, 68.**

Retaining walls planned for cuts where the rock has disintegrated, etc., **P-99, 106.**

The foregoing project based upon a careful and detailed examination of the route. Examinations and borings have been as complete as possible. Special explorations made also to clear up rumors about possible better lines of location in interior and near terminals. **P-99, 107, 108.**

Observations made which determined that the mean level of the two oceans would be about the same, with respect to terminals, **P-99, 108, 109.**

Sand and stone for construction are in large quantities. Concrete work stands the climate well. **P-99, 109.**

Railroad for construction purposes necessary; provision made for one from Greytown to the mouth of the Sabalos River, and from the west shore of the lake to Brito. The intervening space can be traversed by boats. **P-99, 109.**

Time of passing through the canal 30 hours for ship of average size, 24.5' by 50' by 400', and 37.6 hours for a ship 32' by 70' by 650'; these dimensions corresponding closely with "the largest ships afloat." **P-99, 110.**

None of the property of the Maritime Canal Co. of Nicaragua would have any value in the construction of the canal, except possibly the canal excavation from Greytown lagoon inland, and this only of value as a part of a channel for the diversion of the San Juanillo River; on account of forfeiture of concession, probable that all work and property of the

company owned by Nicaragua. Company had built telegraph and telephone lines; some railroad built, as were some buildings, shops, quarters, hospitals, storehouses, etc.; jetty at Greytown. **P-99, 110, 111.**

COMPARISON OF PANAMA AND NICARAGUAN ROUTES. Conclusions of the Isthmian Canal Commission No. 1 favorable to Nicaragua route.

Selection of an isthmian route must be made between Nicaragua and Panama. Panama route alone is feasible for a sea-level route. Canal with locks preferred. Both routes cross the Continental Divide less than 10 miles from the Pacific Ocean, the Panama summit being about double the height of that in Nicaragua. For more than half its length the location of each route on the Atlantic side is governed by the course of a river, the flow from whose drainage basin is the only source of water supply for a proposed canal. The summit levels, differing but about 20' in elevation (Panama the lower), are formed by lakes—natural at Nicaragua—requiring costly dams and wasteways for their regulation, etc. Water supply features on both lines satisfactory. In constructing the dams, the problem less at Conchuda on the Nicaragua line than at Bohio on the Panama route. Cost of Bohio Dam one-half more. Advantages in the design and construction of dams in favor of the Nicaragua route. Regulation of Lake Bohio automatic; that at Nicaragua dependent on human judgment. Well equipped railroad in existence at Panama; railroad would have to be provided at Nicaragua. Harbors would have to be created at terminals of Nicaragua route; existing harbors at Colon and Panama would have to be modernized. Construction can begin at Panama within one year; at Nicaragua in two years; because of better facilities for handling material, etc., at the former place. Excavation on the Nicaragua route distributed; heaviest on the Panama route at Culebra, etc. Eight years to complete Nicaraguan line; probably 10 years for Panama. Length of Nicaragua route, 183.66 miles; Panama, 49.09 miles. Cost of building, \$45,630,704 more on the Nicaragua line, omitting the cost of acquiring the Panama property. Annual maintenance and operation of Nicaragua Canal \$1,300,000 greater. Panama route would be 134.57 miles shorter from sea to sea, would have less summit elevation, fewer locks, 1,568' and 26.44 miles less curvature. Passage of a deep-draft vessel at Panama, 12 hours; 33 hours for Nicaragua. Risks and delays greater in canal than in open sea. Nicaragua route the most advantageous for all transisthmian commerce except that originating or ending on the west coast of South America. For the commerce in which the U. S. is most interested, that between Pacific and Atlantic ports,

European and American, Nicaragua route shorter by a day. The same advantage exists between Atlantic ports of U. S. and the Orient. For U. S. Gulf ports advantage of Nicaragua route nearly two days. For commerce between North Atlantic ports and the west coast of South America the Panama route is shorter by about two days. Between Gulf ports and the west coast of South America the saving is about one day. For sailing ships, not a large factor in the problem, Nicaragua route more favorable. Opening the Panama route could have no large effect on the adjacent country; large trade development of Nicaragua and Costa Rica would be expected were the Nicaragua line constructed. Nicaragua route has slight advantage hygienically. Cost of Nicaragua line, \$189,864,062; Panama, \$144,233,358. This does not include cost of acquiring concessions from the different Governments, nor the cost of the rights of the Panama Canal Co. (new). Latter estimated by the Isthmian Canal Commission No. 1 as valued at \$40,000,000. U. S. should acquire control of a strip of territory from sea to sea sufficient in area for the convenient and efficient accomplishment of the canal, etc. Strip should be not less than 5 miles wide on each side of the center line of the canal, or 10 miles total width. No treaties existing with any of the States within whose territory the two routes lie authorizing the U. S. to occupy its territory for the construction and operation of a canal. Republics of Nicaragua and Costa Rica untrammelled by any existing concessions or treaty obligations; free to grant rights to U. S.; their willingness demonstrated by a protocol. Colombia has granted concessions to New Panama Canal Co.; Colombia hence not free to treat with U. S. An agreement with the Panama Canal Co. to surrender or transfer its possessions must include a sale of its canal property and unfinished work. Negotiations with the company. Price, \$109,141,500. This would make cost of Panama route \$253,374,858, or \$63,510,796 more than Nicaragua route. Compensation which might be asked by the Republics concerned for the rights and privileges required unknown. Some physical advantages by Panama route, and lower cost of maintenance, etc., "but the price fixed by the Panama Canal Co. for a sale of its property and franchises is so unreasonable that its acceptance can not be recommended by this Commission." "After considering all the facts * * * this commission is of the opinion that 'the most practicable and feasible route' for an Isthmian Canal, to be 'under the control, management, and ownership of the U. S.,' is that known as the Nicaragua route." P-99, 171-175.

Later conclusions of the Isthmian Canal Commission No. 1 favorable to Panama route. The stockholders of the New Panama Canal

Co., Dec. 21, 1901, gave full power to its board of directors to negotiate for the transfer of its property, concessions, and unfinished work to the U. S. Cablegram sent by Marius Bo, president of the company, Jan. 4, 1902: "Admiral Walker, etc. The New Panama Canal Co. declares that it is ready to accept for the totality, without exception, of its property and rights on the Isthmus the amount of \$40,000,000, the above offer to remain in force up to Mar. 4, 1903." This was determined to include maps, plans, archives, and records in Paris. 56 parcels of land, amounting to about 300,000 acres, which, with the lands belonging to the railroad company, covered nearly all the ground needed for canal route. Canal company possessed right to about 625,000 acres of land under a Colombian law, of a land grant in the original Wyse concession. Never delimited. U. S. could relinquish this right as factor in any negotiations with Colombia. 2,431 buildings, used for offices, quarters, storehouses, hospitals, shops, stables, etc. Immense amount of machinery, tugs, launches, dredges, spare parts, rolling plant, stationary plant, etc. (No value attached to this by Isthmian Canal Commission No. 1, as any plant used by the U. S. would be more modern; plant of value to the extent it might be used by the U. S.) Work on canal line of value estimated to be excavation of 36,689,965 c. y.; in Chagres diversion, 210,873 c. y.; in Gatun diversion, 2,685,494 c. y.; monetary value, \$27,474,033. New Panama Canal Co. transfers 70,000 shares in the Panama R. R., except 1,100 shares, held by a few individuals. Estimated value of shares transferred, at par, \$6,886,300. Mortgage bonds to amount of \$3,439,000, issued by Panama R. R. at 4½ per cent; \$871,000 of these bonds owned by the railroad, but pledged as collateral to the Panama Canal Co.; \$1,064,000 in treasury subject to sale or cancellation, leaving outstanding bonds to value of \$1,504,000. Railroad had outstanding also \$996,000 6 per cent sinking fund subsidy bonds, as an amortization of the annual payment of \$225,000 due the Colombian Government under its concession for the period ending Nov. 1, 1910. Railroad owes \$986,918 to the Panama Canal Co., mainly on account of the construction of a pier at La Boca. Total liabilities of the railroad estimated at \$2,490,918, not counting the sinking-fund subsidy bonds, for which the Colombian Government has received the benefit, and for which it should make allowance to the U. S. in the negotiations for treaty rights. Its cash assets Jan. 15, 1902, were \$438,569.33. Railroad owns 3 passenger and freight steamers, about 2,000 tons each. Railroad owns undivided half interest in islands of Naos, Culebra, Perico, and Flamenco, in the Bay of Panama, the Pacific Mail Steamship Co. being the joint owner. Besides its right of way, terminals and

wharves, and considerable areas of land, the railroad owns nearly the whole of the town of Colon. The business from constructing the canal will enable the railroad to pay off its indebtedness; its value will decrease with the completion of the canal. Value of the maps, drawings, records, etc., of the Canal Company placed at \$2,000,000. Purchase of the rights, etc., of the new Panama Canal Co. for \$40,000,000 would make the comparative cost of the two probable routes as follows: Nicaragua, \$189,864,062; Panama, \$184,222,358. Originally the canal company prohibited absolutely from ceding its rights to any nation or foreign Government; applicable also to railroad company; Colombia waived the restrictions, and authorized the Panama Canal Co. to treat directly with the U. S. Liquidator of the old Panama Canal Co. agreeable to negotiations of the New Panama Canal Co. Agreement between the New Panama Canal Co. and the U. S. would require the approval of Colombia in view of the prohibitory clause named above, and also because Colombia owns 50,000 shares of 100 francs of the stock of the company, of which it could not be deprived without its consent. Following this should come negotiations with the Governments concerned for the necessary territory to be under the control of the U. S.

"The question whether the new Panama Canal Co. can make to a purchaser a valid title to the property formerly belonging to the old company, its predecessor, has been considered and answered in the former reports of the Commission, but in view of its importance in connection with the present offer the results of the investigation made will be again presented."

"The old company, in addition to its canal property acquired under its concession from the Colombian Government, owned nearly all of the shares of the Panama Railroad Co. By purchasing these it obtained the control of the concession under which the road had been built. The latter concession will continue in force until 1966; the canal concession is to run for 99 years from the day on which the canal shall be opened to public service, and the date fixed for this in the concession, according to its latest extension, is October 31, 1910. When these periods expire, the different properties are to belong absolutely to Colombia, without compensation, and the Government is under no obligation to extend either concession."

Isthmian Canal Commission No. 1 possessed of no power to make these latter negotiations, as it belongs to the treaty-making power of the U. S. " * * * There has been no change in the views of the commission with reference to any of these conclusions then reached (referring to a former summing up of the respective advantages, etc., of routes in Nicaragua and Panama). * * * There is, however, one important matter which can not enter into its determination, but

which may in the end control the action of the U. S. Reference is made to the disposition of the Government whose territory is necessary for the construction and operation of an Isthmian Canal. It must be assumed by the commission that Colombia will exercise the same fairness and liberality if the Panama route is determined upon that have been expected of Nicaragua and Costa Rica should the Nicaragua route be preferred." "After considering the changed conditions * * * the commission is of the opinion that 'the most practicable and feasible route' for an Isthmian Canal, to be 'under the control, management, and ownership of the U. S.,' is that known as the Panama route." P-99, 675-681.

(c) Projects (Panama Route), 1905-1909.

(See p. 2549 of this Index.)

The matter under this head is arranged as follows:

- Assumption that plan of Isthmian Commission No. 1 the plan approved by Congress.
- Doubt as to following of sea-level or lock plan.
- Board of Consulting Engineers formed.
- Plans proposed to Board of Consulting Engineers.
- Plan of Bunau-Varilla (see below).
- Plan of Bates.
- Plan of Gillette.
- Plan of Isthmian Commission No. 1.
- Lock-level projects.
- Comparison of lock and sea level plans.
- Sea-level plan of Bunau-Varilla. (See above.)
- Efficiency of lock and sea level plans.
- Recommendation by Board of Consulting Engineers of sea-level plan (majority report).
- Recommendation of lock-level plan, Board of Consulting Engineers (minority report).
- Isthmian Canal Commission No. 3, after reviewing foregoing matter, recommended lock-level plan (one member, Endicott, dissenting in favor of sea-level canal).
- Lock-level plan chosen by President Roosevelt, subject to wish of Congress.
- In 1907 project accepted by Congress.

1905. Assumed by Isthmian Canal Commission No. 3 that project adopted by Congress the one submitted by Isthmian Canal Commission No. 1, and "all construction work done thus far has been under and in accordance with that project." Isthmian Canal Commission No. 2 had under consideration a sea-level project. Difference of opinion concerning advisability of sea-level plan. Board of Consulting Engineers appointed by the President to consider type of canal to be adopted. Isthmian Canal Commission No. 3 obtaining data for this board. P-05, 14.

Physical data: "Few engineering works have ever been undertaken with more complete physical data available," P-05, 14.

1906. Project of P. Bunau-Varilla: (See below) Plan contemplates lock canal with a high summit level; after its completion, proceeding with its transformation into a sea-level canal. Estimated time, for lock canal, 4 years, with a summit level of 130'. The transformation would require a widening as well as a deepening of all channels above sea level. Widening above water to be done first by the ordinary methods for excavation in the dry, but all excavation below water to be by dredging. Dams to be used to gain electricity for power, making cost of work "low." Lock gates, etc., to be made deeper than ordinarily, and prism above them to be dredged down to them, in reducing to sea-level plan. Dredgings to be taken through a special lock chamber into Lake Gamboa. Time of completion considered too small. Plan expensive. "If the lock canal is likely to be retained for many years, it should be made for the most efficient service and not be encumbered with modifications in lock construction which would prove inconvenient in use." **P-06***, 30-33.

Projects of L. W. Bates: Three projects presented before Board of Consulting Engineers. Project B contemplates two terminal lakes—one on the Caribbean side formed by a dam at Mindi, called Lake Chagres, having a maximum elevation of water surface of 33.5' above mean tide; another at the Panama end formed by a dam connecting Ancon and Sosa Hills with each other; and a second dam from Sosa Hill to the high ground on the westerly side of the Rio Grande estuary. Four lockages necessary. Two terminal harbors. Breakwaters for harborage. Project A contemplates a summit level of 27' only above mean tide, maintained by two dams—one at Mindi and one connecting Ancon and Sosa Hills with the high ground above Farfan Point. Board of Consulting Engineers unanimously of opinion that if project A alone were to be considered it could not be preferred to a sea-level canal. Plan B preferred by Mr. Bates. Criticism of Board of Consulting Engineers adverse to its details. Disbelief of Board of Consulting Engineers that "Obispo triangle," to make floods of Chagres flow in opposite directions in canal, would be effective. Control of Chagres by number of small reservoirs not so good as plan of one large reservoir. General nature of Mr. Bates's data. Variant of plan B, called project B', calls for summit level 95' elevation; disapproved. The Board of Consulting Engineers' lock-level plan preferable to Mr. Bates's plan B. **P-06***, 26-30.

Correspondence with Mr. Bates relative to the desirability of his presenting the elucidating canal projects for examination by the Board of Consulting Engineers, **P-06***, 247.

New matter in connection with the projects he proposed, **P-06***, 251.

Breakwater at Panama. Disposal of rock from excavations. Cost of rock excavation. Basins kept empty to be ready for flood waters. Gamboa Dam and retention of silt. Mindi Dam data. Navigable capacity of canal. Speed through canals. Speed in curves and tangents. Health record at Panama not so bad as reported. Time of completing projects of Mr. Bates.

Appendices: Tables concerning lockage supply and capacity, low water in the Chagres, requirements of the water supply, prices, and estimates for dams, locks, barrage, etc., **P-06***, 247-265.

Gillette plan: An article which had been printed in the Engineering News, July 27, 1905, was submitted to the Board of Consulting Engineers, embracing a general description of various canal plans, ending with a description and recommendation of a plan for a 100' summit-level canal. Dam at Gatun; to prevent seepage, steel sheet piles and pipes filled with grout to be used. Straight lines for canal from Gatun to deep water in Limon Bay, "almost exactly the line which has been recommended by the board in the sea-level plan." Three locks, 90' by 900', with lifts of 35', 35', and 30' respectively. Suggests floating gates. Estimates considered markedly low; "probable that one cause of this discrepancy is the fact that the board has had the advantage of recent surveys, which show that the maps from which Maj. Gillette worked were inaccurate." **P-06***, 34.

Plan of Isthmian Canal Commission No. 1: (See p. 2549 of this index.) Locks were to have a clear length of 740' and width of 84'. "If the canal then contemplated were now in existence, it would not afford passage to the largest ships now in course of construction." * * * "The plan contemplated 5 lift locks. * * * The plan under consideration would not fulfill present and future requirements." **P-06***, 33.

The sea-level canal proposed by the majority to be a continuous, winding waterway from Limon Bay to dam near Panama Bay, with duplicate locks near Sosa Hill to overcome difference in tidal fluctuations at two ends of the canal. Prism to have depth of 40', minimum bottom width of 150' in earth and 200' in rock, with suitable side slopes for the former, and practically vertical sides for the latter. Floods of Chagres to be controlled by a dam at Gamboa 180' above sea level, with sluice gates for regulating discharge through canal. Dams and levees exterior to canal provided for diverting 5 of the 25 streams crossing the canal line, and for preventing overflows in vicinity of Panama.—**P-06***, v, X, 47.

Lock-level project: The Board of Consulting Engineers' lock-level committee submitted 4 projects to the Board of Consulting Engineers. No. 1: Summit level at elevation 85', to be maintained by a flight of 3 locks at Gatun on the Atlantic side, and with 1 lock at Pedro Miguel, and 2 locks in flight at Sosa Hill adjoining La Boca Pier on the Pacific side, the estimate being \$141,236,000. No. 2: Same as above, except that on the Pacific side there are 2 locks in flight at Pedro Miguel and 1 at Miraflores rather than at Sosa; estimate, \$148,272,000. No. 3: Based on an elevation at summit level of 60', maintained on the Atlantic side by a flight of 2 locks at Gatun, and on the Pacific side with a single lock at Pedro Miguel and another at Miraflores. For the purpose of control of the Chagres River and to furnish a water supply there is included a dam at Gamboa; estimate, \$171,190,000. No. 4: Summit level at elevation 60', to be maintained by a dam with single locks at Gatun and Bohio on the Atlantic side, and with single locks at Pedro Miguel and Miraflores on the Pacific side, with a dam at Alhajuela; estimate, \$175,929,720. **P-06***, 13.

Comparison of sea-level and lock plans: The Board of Consulting Engineers voted 8 to 5 to adopt for comparison with a sea-level canal, one having a summit level at an elevation of 60'. On the Pacific side there should be 1 lock at Sosa and 1 at Pedro Miguel; on the Atlantic side, 1 lock at Gatun and 1 at Bohio, all in duplicate; and there should be a dam for the regulation of the Chagres at Gamboa identical with that proposed for a sea-level canal. Plan not conceded to be the most feasible for conversion to a sea-level type; Board of Consulting Engineers not of opinion latter could be carried out. **P-06***, 14, 35.

Sea-level canal: Project of P. Bunau-Varilla. (See above.) Appendix F, Board of Consulting Engineers. **P-06***, 199-246.

First part: General conditions. Future necessity of a sea-level canal. Nature of the difficulties which prevent the immediate sea-level canal construction. Sources of really practical coefficients for the calculation of time of construction. The coefficients adopted by the Comité Technique would show that a delay of 30 years is necessary for the dry excavation of a sea-level canal. Seemingly incompatible conditions.—Immediate opening and sea-level construction; how they can be satisfied. **P-06***, 199-203.

Second part: Justification of the project. General description. Automatic regulation of Lake Bohio. Advantages of the channel selected for leading to the sea the Chagres floods below Bohio. The Chagres problem.

The Gamboa Dam compared with the Alhajuela Dam; its superiority. No Chagres sediments to be feared with the Gamboa Lake. The efficiency of Gamboa Lake for control of floods vastly superior to that of Alhajuela Lake. Other advantages resulting from the position of the Gamboa Dam. It gives no vital part to the Bohio Lake for the control of the Chagres floods. Proposed system for the control of floods and the storage for dry seasons. The Bohio Lake an emergency flood controller, which may gradually disappear. Storage for dry season. It will be ample for 50,000,000 tons of traffic. Construction of dam at Gamboa impossible with the spoils of the great cut. Must be a concrete dam. Characteristic features of the internal elements of the Culebra Cut. Many errors committed about this substance. No walls at Culebra are necessary. Instability of the spoils embankments during the rainy season paralyzed for years the execution of the work. A tentative dam of 8' to 10' head with the spoils of Culebra a failure. Proofs of the stability of the Culebra argillite when in its original place and under water. Construction of the dam at Bohio. No earth dam on the Isthmus should reach 92' without a core wall. Neither corrol nor masonry are admissible on the Isthmus, owing to lack of skilled and reliable labor. Earth dam at Bohio to consist of a mountain of clayish sand transported and deposited by water. Estimates of time of the Comité Technique can be reduced in the proportion of 4 to 5.375, according to the Isthmian Canal Commission. "My estimation of the time necessary for the Bohio works not contradicted by the Comité Technique's figures." All the works at Bohio can be made in four years. No fear from the pervious subground below the Bohio Dam. Systems proposed in the past for the control of the Chagres floods. The plans of the Isthmian Canal Commission perfect for a perpetual lock canal; defective if transformation to sea level is contemplated. The Culebra problem. Supply of water to summit level perfect in the plans proposed by Varilla. Why level 130 was chosen for the summit. The summit should not be lower in any case for the first form of the Panama waterway. **P-06***, 203-220.

Third part: Transformability of the canal built with locks into a sea-level waterway. The increased width of 300' at the bottom not resulting in an "extravagant cost." International navigation to preserve an independent channel of at least 75' if no increase in the width is admitted. Basic principal of the system of transformation. It has generally been thought that it was impracticable to lower the level without stopping navigation. The canal, when sea-level, will receive the high Chagres waters, controlled

and cleaned, from the Gamboa Lake, and the Chagres tributaries will flow into the canal direct between Gamboa and Bohio. No further tributaries to be received below Bohio. Essential conditions of the transformation. Not one inch of the channel devoted to international navigation will be used by the works of transformation. Not a minute of the time of the international navigation locks, not a drop of the water stored for the international navigation, will be used for the works of transformation. Gamboa Lake, already a flood controller and a water storer, to play a third and a most important part. It will receive all the spoils of the great cut. Computation of time of transformation a conservative one. Size, location, and cost of the locks uniting Lake Gamboa to summit level. Extraordinary superiority of excavation on water compared with dry excavation. Good foundations assured for the Gamboa Locks. How to avoid difficulty of constructing the low Gamboa Locks when summit level is reduced. Cost of Lake Gamboa Locks not to exceed \$15,000,000. Substitution of dredging for dry excavation during the period of transformation. Principal reasons why the wet method is so superior to the dry one for excavating on the Isthmus. Dredging was preferred to open-air rock excavation during the old Panama Co.'s work, with much less powerful dredges "than are now used." The suspension of dredging at Culebra a fatal mistake of the new Panama Canal Co. Why dredging sometimes failed on the Isthmus. The certain way to reduce expenses by dredging lies in the electric working of powerful instruments. Large decrease in the price of excavation and transformation. A depth of excavation 35' to 50' below water level perfectly advantageous for dredges built for the purpose. **P-06***, 220-234.

Fourth part: New prospects opened by the great reduction of price and of time of the works of excavation. The Straits of Panama. The proposed method makes a reality of what was yesterday a dream—the Straits of Panama—which, if built by methods hitherto known, would require three-quarters of a century and \$900,000,000 exclusive of interest. The currents due to tides and floods not to exceed 3.3 knots in the Straits of Panama. Excavation required for the Straits of Panama. Unit prices and total cost of the construction of the Straits of Panama. The Panama sea-level tide-locked narrow canal, if made by dry process, will take as much money and time to build as the Straits of Panama, if later is made by proposed new method. **P-06***, 234-236.

Conclusions: The high-level lock canal first; the Straits of Panama afterwards. Longitudinal profile of the Panama route showing the various points and levels. **P-06***, 237-238.

Memorandum: Omission of sand from concrete. Estimated time required for preparatory works. Time saved by omission of locks. Different costs of dredging on water and on land. Underwater rock breaking not a modern problem. Elements entering into cheap method of transformation of sea level to lock level. Earnings of lock canal should largely, if not fully, pay for transformation into sea-level canal. "My remarks before the Board of Consulting Engineers bearing on 61 different essential points of the Panama Canal problem fully explain the views based on 20 years' study of the great technical problem." Refutation of the popular opinion that the dump cars, locomotives, etc., of French régime were "toys" or inadequate. Equal to European plants. Working capacity hindered by necessarily poor trackage. "Mr. Stevens, chief engineer of the Panama Canal, has nobly declared before the Board of Consulting Engineers that the works made by the French deserved admiration." "The justification of the first Panama company at the beginning was that no human anterior experience was available, and that the only way open was to plunge heroically into the unknown to extract the necessary truth." **P-06***, 238-242.

Second memorandum: Price of dredging on water at the Isthmus. Price of rock breaking. Stone and sand for concrete. Time of construction of the locks. Margins of safety giving full guaranty that the opening of traffic within four years can be surely accomplished. **P-06***, 242-246.

EFFICIENCY OF LOCK AND SEA-LEVEL CANALS: Majority of Board of Consulting Engineers held lock-level canal dangerous because of the lock system required; many curves in sea-level canal; more channel surface in lock canal. In sea-level canal, considerable obstructive current. In passing through, for a small ship the canal at sea level has the advantage by about 36 minutes, provided the number of ships does not exceed 10 per day. If the number of ships exceed 30 per day, the canal with locks has the advantage by about 3 hours. For large ships the canal with locks has the advantage whatever be the number per day. If the number be 10, the advantage is about 36 minutes; if it be 30, the advantage is over 3½ hours. Should there be a current of 2.6 miles per hour, as in a sea-level canal, the time of passage might be greatly increased. Majority of Board of Consulting Engineers claim that locks limit the traffic capacity; that lockages can not exceed 10 per day for each lock, or 20 per day for the pair. The minority point to the experience at the Sault, * * * "and they show that with the double flight of locks proposed, a traffic of at least 80,000,000 tons per annum can be accommodated. Additional locks may be built hereafter if needed." To widen sea-level canal 100'

without deepening it would cost at least \$87,000,000; the canal with locks may be deepened easily and cheaply by simply raising the crests of the spillways and the height of the locks. Cost of operating and maintaining locks alone estimated at over \$500,000 annually; one lock only for sea-level canal, but \$225,000 should be charged against sea-level canal because of turning-out places, etc., totalling \$300,000 per annum as the apparent advantage in operating expenses of the sea-level. Against this is to be placed the interest on the additional investment. If the canal at "sea level will cost \$132,000,000 more than the canal with locks, * * * the interest * * * amounts to \$2,640,000 per annum; that is, the annual fixed charges of the canal at sea level will be \$2,340,000 more than those of a canal with locks." As to military points of view, both canals as vulnerable. "Should the U. S. depart from its true policy of making the canal neutral, it will not gain anything in a military point of view by adopting the canal at sea level in preference to the one with locks." "There is one valid argument, and one only, which can be brought against the canal with locks, and that is the difficulty of fixing the dimensions of the lock chambers to provide for the possible enlarged vessels of the future." Majority of B. C. E. propose locks 40' x 100' x 100', while minority 40' x 95' x 90'. Total estimated cost of all the locks and approach walls in the "present" project, including the contingency item of 20 per cent, is \$44,425,000. "They can therefore be entirely renewed for about half what it would cost to widen the sea-level canal 100'." The water supply for a lock canal is sufficient to accommodate a traffic of about 50,000,000 tons annually; a dam at Alhajuela could provide an additional supply sufficient for 100,000,000 tons, and the Chagres River with its tributaries can be made to provide still further supplies. Opinion unanimous that if sea-level canal is to be built, it should be built from the first. **P-06*, xiv.**

Time of completion: Sea-level type, 12 to 13 years. Lock type, 10 to 11 years. **P-06*, 14.**

Resolution by the Board of Consulting Engineers recommending the adoption of plans for a sea-level canal, **P-06*, 14.**

Sea-level plan: Details. Alignment and description. Estimate of excavation of a sea-level canal 40' deep. Harbors: Colon Harbor; Ancon Harbor; Pacific coast harbors. Cross sections of the canal prism. Estimate of cost. Estimate of time. The considerations held to be important. Canal makes a connection between oceans and continents. Interests it will affect vast. Not merely passage, but safe and uninterrupted passage required. Canal will endure for all time. Report recommending signed by Davis, Parsons, Burr, Hunter, Guerard, Tinceauzer, Welcker, Quellenec. **P-06*, 47-65.**

Plan recommended by majority of board follows essentially the line adopted "heretofore" by Congress, except near the terminals, the depth to be 40', and the width at bottom to be 150' where the side slopes are gentle, and 200' where the side slopes are nearly vertical, as in rock. At the Panama end is to be a tide lock, having a usable length of 1,000' with width of 100', and depth over the miter sills of 40'. In Panama Bay the channel is to be 35' deep at extreme low water of spring tides, which will give the full 40' provided elsewhere in the canal, except upon rare occasions. To control the Chagres River, a dam of masonry or of earth and masonry, is proposed at Gamboa, just off the line of the canal, built to a height 180' above the sea, forming a reservoir called Gamboa Lake, of which the maximum flow line is to be at elevation 170, into which the flood waters are to be received (no design submitted). Of the tributaries entering the Chagres below Gamboa, the most important are diverted entirely from the canal and conducted by separate channels to the sea. A number of tributaries would yet remain to be taken into the canal, creating currents of about 2.6 miles per hour. Extensive harbor improvements proposed at Colon. Cost of sea-level plan estimated at \$247,000,000. Table of more important streams entering such a canal. Total cost would more likely be \$272,000,000. Time required to build canal estimated at from 12 to 13 years; feared by Isthmian Canal Commission that time would be nearer 18 or 20 years. **P-06, x.**

Lock-level plan: Minority report. Reasons given in detail. Presents for comparison with the sea-level plan preferred by the majority of the Board of Consulting Engineers a project with summit level at elevation 85 instead of 60, maintained by a dam and duplicate flights of 3 locks at Gatun; recommended for adoption, "Gen. Abbot preferring a lower dam with duplicate flights of 2 locks at Gatun, supplemented by a dam and duplicate single locks at Bohio, raising the summit level to elevation 85." Colon entrance details. Gatun Dam details. Consideration of the stability of earthen dams. Plan of Gatun Dam. Regulating works. Saving effected by change in location of controlling dam to Gatun. Saving about \$11,894,821. Water supply of the canal ample. Details of the summit level. Lake Sosa details. Channel in Panama Bay. Dimensions and cost of channel. Comparison of two lock-level plans of 60 and 85 elevations. Comparison with the Board of Consulting Engineers sea-level project. Relative time for completion of sea-level and 85' projects. Relative time of transit. Capacity for traffic of the sea-level and 85' elevation lock-plan. The duplicate locks of the latter will afford convenient passage for an annual net registered tonnage of 80,000,000. Fallacy of the theory that locks and other

similar structures are unsafe to navigation as adduced by experience. Safety of gates. Guards against disasters of all kinds. Earthquakes not a danger at Panama. Relative safety of ships in the two types of canal not at all unfavorable to a lock-level plan. Land damages. Extensive lakes in the plans of both the lock-level and the sea-level plans would flood large areas (44.6 square miles for sea-level plan, and 118 square miles for lock-level plan). Estimated cost of these lands only \$300,000. Relocation Panama R. R. would be necessary by any plan. Estimate in detail for 85' elevation plan, \$139,705,200; does not embrace, nor does the sea-level estimate, allowance for any fortifying. Total excavation estimated at 95,955,000 c. y., of which 53,765,000 c. y. from Culebra Cut. Allowance of 20 per cent made for contingencies. Probable cost of maintenance and operation, \$2,360,000 annually. No fear for safety of dams. "The construction of earth dams to retain water 85' deep is not an untried experiment, as there are many earth dams of equal or greater height, nearly all of them made wholly of earth without a masonry core, and none of them having nearly the mass or the stability of those herein recommended."

Summary of conclusions in favor of recommending lock-level canal: "In view of the unquestioned fact that the lock canal herein advocated will cost about \$100,000,000 less than the proposed sea-level canal; believing that it can be built in much less time; that it will afford a better navigation; that it will be adequate for all its uses for a longer time, and can be enlarged, if need should arise, with greater facility and less cost, we recommend the lock canal at elevation 85 for adoption by the U. S." Signed by Noble, Abbot, Stearns, Ripley, and Randolph. P-06*, 67-101.

Plan recommended by Board of Consulting Engineers minority a canal with locks, following in general the same location as the sea-level plan, but with slight variations therefrom in Limon and Panama Bays. Its controlling feature a dam to close the valley of the Chagres at Gatun, thus creating an artificial lake of which the surface is to be 85' above the sea, and which is to constitute the summit level. Length of dam, 7,700'; height of its crest, 135', or 50' above the water surface. To contain about 21,200,000 c. y. of material, principally spoil from canal prism. Channel 500' wide at sea level leads from Limon Bay to the Gatun Dam, where is placed a double flight of 3 locks by means of which vessels are lifted into the artificial lake. The lake provides unrestricted navigation for a large part of its length, but becomes more contracted as the Continental Divide is approached, until in the Culebra Cut the width at bottom is reduced to 200'. It finally terminates at

Pedro Miguel, where the first lock on the Pacific side is placed, having a lift of 30'. By means of this lock vessels are lowered into another artificial lake created by a dam closing the valley of the Rio Grande, and by 2 other dams closing other depressions, the level of the lake being 55' above the sea. The crests of these dams are 80' above the sea. Communication between the lake and Panama Bay is effected by a double flight of 2 locks placed near the shore on the high ground called Sosa Hill. All locks are in duplicate and have a usable length 900', width 95', and depth over the miter sills 40'. The depth of the channel is everywhere at least 45', except in the locks and in Limon Bay, where it is 40'; the depth in Panama Bay, however, being measured from mean tide and not from dead low water. In the lakes the depth is often very much greater, being 75' near the Gatun Dam, and nearly as much for many miles. The width is nowhere less than 200' at bottom, and at most places is very much more. The length of the canal from deep water in Limon Bay to deep water in Panama Bay is 49.72 miles. Of this, 19½ miles is over 1,000' wide, 23 miles is over 800' wide, 35 miles is over 500' wide, and 42½ miles is over 300' wide. That is, for about half the distance navigation is entirely unrestricted, while for more than two-thirds the distance the channels are 500' wide or more, and for only one-seventh of the distance, including the locks, are they less than 300' wide. Estimated cost, \$139,705,200. Time to build, 9 years. The plan is the same recommended by the Isthmian Canal Commission No. 1 and adopted by Congress, at least by inference, act June 28, 1902. Some doubt expressed as to stability of Gatun Dam; opposite opinion to effect that there would be no seepage at this or the other dams. Locks larger than any which have heretofore been built; some express opinion they are beyond the limit of prudent design. "So the proposed locks can be made safer than the Poe Lock at the Soo, because they are designed after 9 years of practical experience with that lock, an experience which shows it to be a safe place for a vessel." P-06*, xiii.

Conclusion and recommendations of Isthmian Canal Commission No. 3: After studying majority and minority reports of the Board of Consulting Engineers on sea-level and lock-level canal at Panama—one signed by 8 members, and one signed by 5 members—the Isthmian Canal Commission No. 3 reported as follows: " * * * The canal proposed by the minority * * * can be built in half the time and a little more than half the cost of the canal proposed by a majority of the board, and that when completed it will be a better canal for the following reasons: (1) It provides greater safety for ships and less danger of interruption to traffic by

reason of its wider and deeper channels; (2) it provides quicker passage across the Isthmus for large ships or a large traffic; (3) it is in much less danger of damage to itself or of delays to ships from the flood waters of the Chagres and other streams; (4) its cost of operation and maintenance, including fixed charges, will be less by some \$2,000,000 or more per annum; (5) it can be enlarged hereafter much more easily and cheaply than can a sea-level canal; (6) its military defense can be effected with as little or, perhaps, less difficulty than the sea-level canal. * * * And, therefore, we recommend that the plan of the minority be adopted, subject, of course, to such changes as may be found desirable during construction and with the understanding that the works in Limon Bay are to be deferred for the present. The entrance now in use at that place must for the present be used in any event, in order to secure harbor room for the landing of supplies immediately needed. * * * What changes should be made can better be determined hereafter." P-06*, xvii.

Minority report of Isthmian Canal Commission No. 3: One member of the Isthmian Canal Commission (Endicott) regards a sea-level canal, as proposed by the majority of the Board of Consulting Engineers, a better canal for commercial and military purposes. Less time of transit, less chance of interruption of traffic from accident, maintenance and operation charges would be less; sea-level canal would permit of ready enlargement for enlarged traffic; better, safer, and more capacious from a military standpoint. "An 85' summit-lock canal once constructed means a lock canal always. If a sea-level canal is desired, it must be built directly without first building a lock canal." P-06*, xviii.

Lock-level canal: Letter of Chief Engineer Stevens, Jan. 26, 1906, after pointing to some "minor" changes in plan proposed, such as building of locks at Miraflores and Pedro Miguel instead of at La Boca, etc., says: "I therefore recommend the adoption of the plan for an 85' summit-level lock canal, as set forth in the minority report of the Board of Consulting Engineers," P-06*, xx.

Lock and sea level canals: The Sec. of War, after summing up the various arguments pro and con, as furnished by the labors of the Board of Consulting Engineers, reports, Feb. 19, 1906, as follows: "I recommend the adoption of the type of canal proposed by the minority of the Board of Consulting Engineers, except so far as relates to the location of the locks at Sosa Hill. * * * Object * * * is the possibility of their destruction by the fire from an enemy's ships. * * * If, however, Sosa Hill will not afford a site with such protection, then

it seems to me wiser to place the locks at Miraflores. * * * When I visited the Isthmus a year and a half ago * * * I received a strong impression that the work of construction upon which the U. S. was about to enter was of such world-wide importance and so likely to continue in active use for centuries to come, that it was wise for the Government not to be impatient of the time to be taken or of the treasure to be spent." Expresses conviction in favor of sea-level canal, "but the report of the minority, in showing the actual result of the use of the locks in ship canals, in pointing out the dangers of so narrow and contracted a canal prism as that which the majority proposes, and in making clear the great additional cost in time and money of a sea-level canal, has led me to a different conclusion." P-06*, vii, viii.

President Roosevelt of opinion that the Board of Consulting Engineers failed to give proper attention to the lessons taught by the Soo Canal, in their study of lock-level and sea-level canals at Isthmus of Panama. "The law now on our statute books seems to contemplate a lock canal. In my judgment, a lock canal, as herein recommended, is advisable. If the Congress directs that a sea-level canal be constructed, its direction will of course, be carried out. Otherwise the canal will be built on substantially the plan for a lock canal outlined in the accompanying papers, such changes being made, of course, as may be found actually necessary, including possibly the change recommended by the Sec. of War as to the size of the dam on the Pacific side." P-06*, iv.

1907. Project adopted by Congress estimated by Board of Consulting Engineers to cost \$139,705,200, exclusive of sanitation and expenses of zone government. Estimates did not contemplate or provide for waterworks, sewers, and paving in Panama and Colon nor was provision made for reequipment of Panama R. R. P-07, 34-38.

(d) Project, Adopted. (See p. 2549 of this Index.)

1909. Lock-canal project as of Jan. 1, 1909: This project is for a lock canal from the -41' contour in the Caribbean Sea to the -45' contour in the Bay of Panama, with a flight of 3 twin locks at Gatun, 1 twin lock at Pedro Miguel, and a flight of 2 twin locks at Miraflores.

The channel from M. 0, in the Caribbean, to the head of Limon Bay, to be 500' wide on the bottom and 41' deep at mean tide. The depth throughout the remainder of the canal and in Panama Bay to be 45' deep below mean tide. The channel from the head of Limon Bay to Gatun Locks to be 500' wide; from south end of Gatun Locks to M. 23.50, not less than 1,000' wide; from M. 23.50 to M. 26.50, 800' wide; from M. 26.50 to M. 27.00,

700' wide; from M. 27.00 to M. 31.25, 500' wide; from M. 31.25 to Pedro Miguel Lock, 300' wide from Pedro Miguel Lock to Miraflores Locks, and from Miraflores Locks to deep water in Panama Bay, 500' wide.

Breakwaters to be constructed in Colon Harbor on different lines from those established by the minority of the Board of Consulting Engineers. The locks to have chambers 110' by 1,000' usable dimensions and to be provided with emergency dams and safety gates.

The summit level extending from Gatun to Pedro Miguel is to be regulated between +82 and +87 by means of the spillway in the dam at Gatun. The level between Pedro Miguel and Miraflores is +55'. These levels are to be maintained by earth dams at Gatun and Pedro Miguel and by an earth dam on the west side and a concrete dam with spillway on the east side of Miraflores.

The principal streams adjacent to the Culebra Cut to be diverted; the Obispo, Camacho, and Mandinga into the Chagres, and the Rio Grande as may hereafter be determined.

The average bottom width of channel in this project is 649'. The minimum width is 300'. This project provides a two-way canal for the largest vessels now afloat or likely to be in the near future. **P-09**, 352.

1906. (See pp. 1263, 2364 of this Index.)

1907. Building construction division: Embraces construction of buildings for the different departments and divisions of the Isthmian Canal Commission. 656 quarters for gold employees built; 335 for silver employees (consisting of barracks, bathhouses, cook sheds, kitchens, etc.). 33 buildings built for sanitary department. Larger office quarters constructed at Empire and Ancon. School building built at Culebra, and similar ones begun at other points. Seven mess halls for American employees, and 11 for laborers completed. Large hotel at Tivoli completed. Machine shed, engine houses, pattern shop, etc., numbering 10, completed.

Extensive plants at Paraiso and Empire begun. Commissaries, storehouses, coal chutes, etc., built. Four clubhouses built. Manufacturing plants operated at Ancon and Lirio. Expenditure, manufacturing, \$276,884.19. 252 of the 2,265 buildings received from the French repaired; 113 destroyed. A total of 767 new buildings were built; on hand June 30, 1907, 2,919 buildings of all classes. Six buildings begun at Porto Bello. Fire houses, jails, churches, post offices, fumigation houses, etc., built along the line.

Employees: 3,570 men; spent, \$4,357,587.57; largest item being \$1,432,415.51 for American quarters. \$482,502.88 for silver quarters. Hospital buildings, \$315,196.57. Supervision and clerical force, \$193,763.73.

Architect's office: 145 finished sets of drawings, consisting of 605 tracings, etc. **P-07**, 12, 13.

1908. Building construction: New buildings, 505 during the year; 1,147 American buildings repaired; additions made to 423 buildings. 1,178 French buildings repaired and additions and improvements made to 275.

Expenditures: \$3,086,138.01.

Employees: Average, 2,366.

Pay: Gold men, \$0.625; silver men, \$0.169.

New buildings: \$2,181,913.39 spent for these; largest item being quarters for gold employees, \$982,771.86.

Total cost: Since American occupation, \$9,824,089.15 (\$421,882.64 being for wire screening, with which all buildings are inclosed).

Important items of construction done: During the year, 33 hospital buildings, 37 storehouses, 7 fire-department houses, 9 laborers' bathhouses, 26 laborers' range closets, 6 fumigation houses, 5 corrals, 9 schoolhouses, 5 commissaries, 1 clubhouse, 4 post offices, 9 office buildings, 2 lodge halls, 18 standard laborers' barracks, 5 band stands, 2 Gallego mess halls, 5 hotels, 4 jails, 8 powder and detonator houses, 4 markets, 35 shop buildings, 8 laborers' washhouses, 3 bridges, and 200 type quarters for gold employees. There are 24 different types of living quarters for the accommodation of gold employees. Total number of buildings built since U. S. occupation, 1,462; total on hand, 3,313.

Ancon wood and machine shop: Cost, \$39,327.87 for labor; 70 men.

Lirio planing mill: Principal manufacturing shop of the division. 56 men. Annual cost, \$55,880.59. All millwork for buildings done at this shop.

Ancon stone crusher: Operated to furnish stone for masonry division. 2,002 c. y. stone crushed. Cost, 88 cents per c. y.

Cement plant, Ancon: 17,969 concrete blocks made; cost, 12½ cents per cubic foot.

Costs: Various measures in force for reducing costs. Economic building work stimulated by a comparison of the cost of buildings erected by contract. Principal type of

buildings constructed by Isthmian Canal Commission costing from 7½ to 9½ cents per foot for bachelor apartments, and from 11 to 13 cents for family quarters. **P-08**, 18, 19.

1909. Organization: Repairs of buildings, not exceeding \$200 in value, placed under the Q. M. department Aug. 1, 1908; the construction work under the various division engineers. Order modified, and effective July 1, 1909, construction and repair of all buildings placed with Q. M. Division of materials and supplies merged, Sept. 1, 1908, into the Q. M. department. On the same date, grass cutting and disposal of night soil and garbage taken over from sanitary department. Physical accountability of property instituted Oct. 1, 1908, with audit by the chief Q. M.

Labor: During the year, 1,093 new employments and 884 reemployments made on the Isthmus; of those appointed in the U. S., 754 arrived on the Isthmus. These figures point to a decrease of over 50 per cent in the number of men employed in the U. S., and 40 per cent in the number of men employed and reemployed on the Isthmus; indicating a more stable population, although there has been an actual decrease in the personnel of the gold force. Steady increase of the unskilled labor force continued until its maximum on Apr. 28, 1909; then 33,699 actually working for the Isthmian Canal Commission and Panama R. R. (largest force on record). Decrease in number of Europeans brought to Isthmus; Spanish Government prohibited emigration to Panama. Assignment of married quarters not guaranteed, beginning Jan. 1, 1908, to those on gold rolls. June 30, 1908, 306 applications for married quarters on file; June 30, 1909, 115 applications from those entitled to quarters and 305 applications from employees not so entitled.

Buildings: Kept in repair; extensive repairs necessary due to climate and insects; minor repairs during last 6 months of the year averaged about \$20,000 monthly. New building done by contractors; Isthmian Canal Commission furnished materials. Repairs, etc., done by Q. M. forces.

Transportation: 12 corral, with 500 mules, 139 horses and ponies; and 136 private animals. Delivery system reorganized to decrease expense.

Supplies: Delay in securing necessary supplies a difficulty, because of distance from available markets and limited transportation facilities to the Isthmus. Annual estimates instead of scattered estimates adopted; and yearly contracts. Specifications being standardized. Storehouses at Culebra and Paraiso consolidated. Main distributing storehouse at Mount Hope. Total value of material received during the year, \$9,600,000; stock on hand June 30, 1909, totaled \$3,000,000. Two new dynamite storehouses erected.

Inspection of magazines, and special transportation of explosives instituted.

Printing plant: Moved from old administration building at Panama to new structure at Mount Hope; consolidated with that of the Panama R. R.

Sanitary work: Grass cutting; garbage removal, etc., taken over by the various district quartermasters Sept. 1, 1908. Work done costs less; appearance of settlements improved.

Property: New system begun, Sept. 15, 1908, that of U. S. Army. An exact check instituted on all property. P-09, 23, 24.

1910. Department charged with recruitment of labor; care, furnishing, and assignment of quarters; distributing fuel, commissary supplies, and distilled water; construction and repair of all buildings; requisitioning for supplies of all kinds, together with receipt and distribution; cutting of grass and disposal of night soil and garbage as prescribed by sanitary department, and auditing of property returns. In charge of Lt. Col. C. A. Devol, chief quartermaster.

Effective July 1, 1909, construction work connected with quarters and other buildings reduced so as not to warrant maintenance of separate gangs by each construction division for erection of buildings; this and all repair work transferred to Q. M. department. Operation of Dock 14, Cristobal, transferred from Panama R. R. to Q. M. department Dec. 1, 1909. Test inventories having disclosed unsatisfactory methods in handling and accounting for property, storehouses at Gatun, Cristobal Dry Dock, and Porto Bello transferred from Atlantic division to Q. M. department Jan. 1, 1910; on same date storehouses at Balboa and Miraflores in Pacific division also transferred, thus placing all storehouses under Q. M. department. Requisitioning for skilled labor transferred from Q. M. department to chairman's office.

Average gold employees, 4,369; and of Panama R. R., 753; or total of 5,122. 2,890 separations from service, and there were employed in U. S. 1,099, on Isthmus 1,092, and reemployments on Isthmus 967, or total of 3,158, indicating more than 60 per cent of force changed during year, showing usual unstable condition of gold force.

Laborers recruited, 2,519; West Indians, larger part from Barbados. Last recruiting, Jan., 1910, since which date immigration exceeded emigration, and, as work has reached maximum, population of zone furnishes ample labor. There has always been independent immigration from West Indian Islands, but it was not until within last 4 months there has been any such movement on part of European laborers. During this period 2,000 came from Spain and Italy. From beginning of year steady increase in force, until maximum—38,676—reached Mar. 30, 1910, including Panama R. R. and relocation, and is largest force on record. Since that a slight decrease, but total effective

force June 30 was 35,578, as compared with 33,493 June 30, 1909.

New quarters constructed, 19 houses for married employees, or 38 families. Eleven buildings, accommodating 29 families, converted into "gold" married quarters. Bulk of new construction at Ancon and Gatun. Under conditions of employment Isthmian Canal Commission obliged to furnish married quarters to all employed prior to Jan. 1, 1908, and all such employees supplied. Of those employed subsequent to Jan. 1, 1908, 525 applications for married quarters. Expansion of work at Gatun created demand for bachelor quarters, and four type 18 houses for 192 bachelors constructed.

Every building on Isthmus utilized, and as progress of work caused employees at Culebra, Empire, and Paraiso to decrease, vacant bachelor quarters have been utilized for "nonhousekeeping married quarters" for employees working at points where unable to secure family quarters. Suites of two or three rooms assigned to each family.

Negroes in quarters remain practically the same—4,925 bachelors and 1,067 families. Increase of 1,300 Europeans occupying Isthmian Canal Commission quarters.

Work performed for sanitary department increased, grass cutting covering largely increased acreage, and increase in population has increased garbage. New incinerator installed at Empire, and new ones erected at Pedro Miguel and Miraflores.

Corral constructed at Ancon; largest on Isthmus; useful after completion of canal. More animals available and used than at any previous period. Unusually heavy loss of mules, due to "swamp fever."

3,078 buildings in zone owned by Isthmian Canal Commission, of which 1,147 acquired by purchase from French. \$478,000 expended for new construction and repairs during year in completing 90 new buildings of every class of construction, clubhouses, hospital wards, corrals, engine houses, storehouses, fire stations, markets, schoolhouses, and quarters; 50 constructed by contract. Reduction in unit cost, 30 per cent type 14 and type 17 houses, and 33 per cent in type 18 houses; cost of repairs, \$78,980. Four traveling gangs of carpenters and two of painters organized.

Total material received from U. S., 350,000 tons, valued at \$10,103,552.34. Local purchases, including coal and oil, \$2,094,131.02; 345,185 tons coal and 465,921 barrels fuel oil used. Stock in storehouses at end of year, \$4,691,034.10. Experiment of annual contracts for standard articles satisfactory; has diminished time between placing of requisition and delivery of material on Isthmus, resulting in fewer shortages of stock in storehouses.

Transfer of Dock 14 from Panama R. R. resulted in reduction of charges, rate on handling general cargo reduced from 40 cents

per ton to 32 cents. Since transfer 100,000 tons handled over dock. Storehouse facilities added at Porto Bello, Gatun, Miraflores, and Balboa.

1911. Transfer of Gatun lumber yard from Atlantic division July 15, 1910; construction of storehouses for care of obsolete material Aug. 24, 1910; transfer of storehouse at Pedro Miguel from mechanical division Oct. 11, 1910; transfer of construction and repair of sidewalks from construction divisions Sept. 1, 1910; transfer of Panama R. R. storehouse at Cristobal Jan. 1, 1911; closing of Lirio planing mill and transfer of work and force to mechanical division Apr. 1, 1911; transfer of scrap operations from Panama R. R. Apr. 10, 1911; and transfer of storehouses containing dredge repair parts at Gatun and Cristobal from Atlantic division Apr. 15, 1911.

Average employees of Panama R. R. and Isthmian Canal Commission at maximum for year in Jan., 1911, when it fell to 37,271. Minimum June, 1911, when it fell to 32,690. Average gold employees of Isthmian Canal Commission, 4,552; of Panama R. R. Co., 833; or total of 5,385. 2,896 separations from service—employed in U. S., 987; and employed on Isthmus, 1,488—indicating more than 60 per cent of force changed during year, unstable condition of gold force still ruling.

First year since inception of work no contract laborers brought to Isthmus. Decided falling off in immigration to zone. Excess of arrivals over departures, 4,910, against 21,114 during previous year. Departure of steerage passengers to foreign ports exceeded arrivals by more than 1,600, and probable at least 1,000 were Europeans. Number of West Indian laborers have gone to the brush and can be relied upon no longer for steady work.

New family quarters erected only at Toro Point. Bachelor quarters became available and utilized for nonhousekeeping quarters; at close of year 122 families accommodated. When work in Chagres section closed in spring, all laborers and gold employees of that division in San Pablo and Tabernilla district transferred to other districts and houses made available assigned to employees of other districts unable to secure family quarters.

Total West Indians in laborers' barracks 200 less than at close of preceding year, and of Europeans 1,000 less. Laborers' barracks in territory Bohio to Mamei abandoned. Camps at Santa Cruz, Cucaracha, and Cartagena abandoned and buildings at Santa Cruz demolished and sold.

Two additional traveling gangs were formed, one of carpenters and one of painters, and corresponding reduction of artisans in districts made. Nine buildings and one addition put up under contract at total of \$44,429.30, nearly all at Toro Point. Con-

tract price on types of houses erected showed reduction; 29 buildings were taken down in sections and reerected at other points. Total buildings June 30, 1911, 2,985, as compared with 3,078 June 30, 1910. Increase in American buildings and decrease of 112 in number of French buildings; 86 buildings demolished and 109 sold.

Centralization of storehouses under one head resulted in more efficient operation. Surplus stock concentrated at Mount Hope, Empire, and Gorgona, certain classes of material being localized, so that steam-shovel, drill repair parts, and electrical material concentrated at Empire, and air-brake material, lubricators, injectors, car, locomotive, and other similar repair parts concentrated at Gorgona. Policy of stock reduction may make it necessary to resort more frequently to emergency purchases, but it is in line with ultimate economy.

Besides regular delivery work and that performed for sanitary department, teams used in construction of Sweet Water Reservoir at Toro Point; Gatun Reservoir; road work between Pedro Miguel and Corozal; street work at Panama and Colon and on the Obispo diversion. Teams and brakes used by department of civil administration during school year. Loss of mules not as heavy as during preceding year; 54 animals died, were condemned, sold, or destroyed. No mules purchased during past two years and no new saddle horses during past two and one-half years. Majority of stock has been in service on Isthmus four to five years and is beginning to show effects.

Work for sanitary department increased, grass-cutting area further extended. Removal of garbage slightly increased. New incinerator installed at Gatun Nov., 1910, and road built to it from New Gatun. Amount expended by Q. M. department on orders from sanitary department for zone sanitation, \$210,403.29, and for hospitals, quarantine, etc., \$77,284.48.

Removing French scrap iron and steel and shipping it to States continued, and since Apr. 10, 1911, under direction of Q. M. department. From inception of work to end of fiscal year 28,933 long tons of iron and steel shipped and disposed of at average selling price of \$11.86 per ton. In addition, 231,598 pounds old screening shipped and sold at average selling price of \$7.75 per cwt.; 58,689 pounds of rope at average selling price of \$2.15 per cwt.; 83,188 pounds of rubber at average selling price of \$2.01 per cwt.; and 113,904 pounds of hose at average selling price of \$2.50 per cwt. Advertisements issued seeking new bids for sale of all French scrap on Isthmus.

Department attends to all purchases on Isthmus, and amount expended in such purchases aggregated \$2,440,226.40, of which \$1,547,568.71 for purchase of coal from Panama R. R. Co., \$772,901.22 for crude oil from Union

Oil Co., \$103,703.62 for miscellaneous purchases from the Panama R. R. Co., leaving \$15,870.10 for purchase of miscellaneous supplies from local merchants; balance used for postage stamps.

1912. Employees on Isthmus fluctuated during year; Mar., 1910, highest recorded force 38,676; June 30, 1911, 32,690; and June 30, 1912, 34,957 men. While there was decrease between June 30, 1911, and June 30, 1912, of approximately 2,900 men in Atlantic division and on relocation of Panama R. R., this more than offset by increases because of construction of docks at Cristobal under Panama R. R., terminals at Balboa under Pacific division, work of first division of O. C. E., and fortifications. Immigration to Isthmus continued to decrease; excess of arrivals over departures, 3,510. At beginning of fiscal year 941 laborers recruited in Barbados and islands adjacent thereto, to meet demand for unskilled labor, which could not be recruited on Isthmus from unemployed living in the brush. Supply of and demand for labor about balanced at end of year. During last three months of year 1,339 laborers taken over by United Fruit Co. for work in Guatemala.

Average American employees, 4,264; on rolls of Panama R. R., 837; or total of 5,101; 2,123 separations from service—559 persons employed in U. S. and 1,286 employed on Isthmus, indicating more than 49 per cent of force changed.

22 new buildings constructed, at total cost of \$26,000; of these, fire station at Cristobal, caretaker's residence at Brazos Brook Reservoir, and type 27 at Toro Point cost \$21,000; remaining 19 costing \$5,000. Fire station and caretaker's house permanent structures of concrete. 18 additions to existing buildings made, at cost of \$71,000; of this \$63,000 expended for alterations and additions to Hotel Tivoli. 36 buildings taken down in sections and moved to new locations, at cost of \$58,000. 15 buildings demolished, material moved to other points and used in construction of 13 buildings, costing \$26,790.30. Of these 51 buildings, 14 removed from Culebra on account of slides and 25 from Tabernilla and San Pablo on account of flooding of lake area. Removal and reerection of American buildings still good, but useless in old locations, accounts for small amount of new construction. Purchase from Pacific Mail Steamship Co. of their undivided half interest in islands in Pacific brought with it 22 buildings, utilized for quarters in connection with fortifications. Of old French buildings, 149 sold, realizing \$8,000, and 131 demolished; loss of 280 buildings. Of 2,148 buildings turned over by French, 1904, 850 remain. Laborers' camp at White House and other buildings in Las Cascadas district altered and repaired

as quarters for Tenth Infantry, U. S. Army. These alterations and repairs made at expense of \$50,000, payable from appropriation for barracks and quarters, U. S. Army.

Analysis of census of occupants of quarters shows decrease of 300 Americans and increase of 700 West Indians in quarters. Number of Europeans remains the same. Of Americans, 210 employees of McClintic-Marshall Construction Co. Census also shows 48 per cent of married men and 20 per cent of bachelors hired prior to 1908. No diminution in demand for married quarters; applications on file June 30, 1912, or 54 more than year before.

Few annual contracts made during spring, as on certain classes of stock prospective requirements so small that orders can be placed when needed.

Quantity and value of supplies received from U. S. larger than during any previous year; 504,004 tons of material, with value of \$10,517,260.99. This does not include piling nor material for McClintic-Marshall Construction Co. Decrease in cement receipts, but increase in amount of piling and of over 4,000,000' b. m. in lumber. Large amount of material recovered from work and returned to stock. Central and Atlantic divisions and relocation, part of whose work completed, turned in material to value of \$680,000. Clean-ups of repair shops made, and repair parts, fittings, and miscellaneous material turned in in large quantities. Total amount of reduction, including material turned in, \$1,652,969.34.

So far, but little of Isthmian Canal Commission's plant retired. Material to value of \$193,313.34 surveyed and turned into storehouse for obsolete material, amount remaining, at price-book prices, \$369,000. Quantity such that additional facilities had to be provided and addition to storehouse for obsolete material constructed. Property to value of \$21,704.65 reissued and \$10,708.94 disposed of by local sales from storehouse for obsolete material. Much of obsolete material and equipment advertised for sale Feb.; bids on 18 classes rejected and awards made on 8 classes for \$20,858.

On Sept. 26, 1911, contract entered into for sale of all French scrap on Isthmus for \$215,000. Approximately 10,000 tons collected for shipment. About 4,603 tons of American scrap collected at Empire and Gorgona shops and stored at Mount Hope. Of this, 1,892 tons shipped and sold in New York at price of \$10.35 per ton, the net price being about \$5 per ton. Sales of scrap screening, rope, rubber hose, and rubber belting continued. Contract, Oct. 12, 1911, for delivery at New York of screening at \$8.25 per cwt., rope at \$2.18 per cwt., rubber at \$2.10 per cwt., and hose at \$2.50 per cwt.

Work for sanitary department, consisting of grass and brush cutting, disposal of night soil and garbage, continued. In accordance with recommendations of a board, grass-cutting areas in various districts plotted and measured and regulations compiled for sanitary inspectors and district quartermasters with reference to method of handling work performed by Q. M. department for department of sanitation. Less grass cutting done since Jan. 9, 1912, as objection raised by sanitary department that keeping grass cut close around quarters not necessary except for æsthetic reasons, and that it could be allowed to grow a foot high, so far as sanitary purposes concerned. As there are no funds available except for sanitary grass cutting, no work of this kind done under existing regulations except on requests by sanitary department. Cost of sanitary work done by Q. M. department, \$251,768.07.

Regular delivery work done by Q. M. department continued, and, in addition, delivery service furnished to Tenth Infantry. Horse mowing machines introduced into all districts, which necessitates use of more teams by sanitary department. 24 horses and mules condemned and destroyed, 10 condemned and sold, 6 killed, and 8 died; total of 48. No animals purchased for over 3 years, and service of those in corrals averages over 6 years.

All purchases on the Isthmus aggregated \$2,639,416.09, of which \$1,540,700.65 for coal from Panama R. R. Co., \$978,055.26 for purchase crude oil from Union Oil Co., and \$96,176.24 for miscellaneous purchases from Panama R. R. Co., leaving \$24,035.94 for purchase of miscellaneous supplies from local merchants. Balance used for postage stamps.

1913. May 27, 1913, Capt. R. E. Wood, U. S. Army, appointed chief Q. M. Force employed increased steadily during first 9 months, until Mar. 26 number reached highest point in history of work; on that date effective working force was 44,733, of which 39,089 on pay rolls of Isthmian Canal Commission and Panama R. R. and 5,644 on pay rolls of contractors handling work on lock gates, emergency dams, and other contracts. Force fluctuated between 34,957, June 30, 1912, to maximum on date specified, and numbered 43,350 at close of fiscal year. In Dec., 1912, necessary to recruit laborers, and 528 received from Barbados during Jan. and Feb., 1913. Decided decrease in immigration to Isthmus as compared with previous years. Excess of arrivals over departures but 3,510. Average American employees on rolls of Isthmian Canal Commission, 4,340; and on rolls of Panama R. R., 870; or total of 5,110. 2,495 separations from service—1,010 persons employed in the U. S. and 1,331 employed on the Isthmus, indicating that more than 57 per cent of gold force changed.

Isthmian Canal Commission has 2,618 buildings in zone, of which 1,856 constructed by Ameri-

cans and 762 by French. Decrease of 121 from total of preceding year. Buildings located at Nombre de Dios abandoned when this locality ceased to be used as a source of sand supply; sold. In addition, 122 demolished and 4 blown down or destroyed by fire. Those demolished located at Bas Obispo, Culebra, Balboa, and Naos Island, and destruction necessary by reason of work or on account of slides. Those demolished small and of no value. New construction less than at any previous time; 20 buildings put up and 15 additions made. Buildings small and only two cost over \$2,000. Additions as a rule chargeable to Hotel Tivoli. Due to slides at Culebra and necessity of transferring buildings from Gorgona and old Balboa, work of removal and reconstruction on large scale. 62 buildings taken down in sections and reconstructed in new locations. Completed work amounted to \$142,000, not including buildings in course of reconstruction June 30, 1913, on which \$33,000 already expended. Up to Apr. 1 new construction, moving, and part of maintenance work handled by 5 traveling gangs of carpenters. All American buildings in Gorgona had to be removed and reerected by Sept. 1, 1913, so that 9 new gangs formed to complete work on schedule time.

On June 30, 1913, 23,184 men, women, and children occupying quarters, practically same as during previous year. Of these, 9,173 in gold quarters, 4,295 in European quarters, and 9,716 in West Indian quarters. Over 90 per cent of American and European employees occupy Isthmian Canal Commission quarters, but less than 25 per cent of West Indians take advantage of them. Problem of housing, employees properly difficult one. Because of opening up of terminal work congestion, especially in bachelor quarters, in this territory. Necessary to move and reerect a large number of houses for use as quarters. Demolition of old settlements of Balboa and Gorgona complicated situation. In moving Gorgona necessary to care for 200 American families, 600 American bachelors, and several hundred West Indians. Movement began in Mar. and was almost completed at close of year.

Value of material received from U. S. greater than for any preceding year; \$13,980,071, not including \$2,535,860 paid to McClintic-Marshall Construction Co., or value of local purchases amounting to \$2,733,867. Consumption of cement decreased from 1,600,000 barrels, 1912, to 1,200,000 barrels, 1913; total consumption to date, 5,797,910 barrels. During year all cement was purchased in sacks, of which 33,475,408 received and 29,882,968 returned to U. S.; of those returned, 269,775 sacks rejected, or less than 1 per cent returned. Consumption of lumber 27,000,000' b. m., about the same as preceding year, and total receipts of lumber since inception of work 231,000,000' b. m. Stock on hand at all storehouses June 30, \$3,436,995; decrease of

\$234,217 from stock June 30, 1912. Actual reduction greater than net decrease would indicate, as approximately \$638,000 worth of material returned to stock by various divisions. Problem of supply especially difficult during year. As work draws to completion considered advisable to keep stock on hand at as low a figure as possible and operate on close margin. This necessitates large number of rush and cable orders, increasing work of supply department on Isthmus and of purchasing agency in U. S. Hoped that spare parts now in stock can be worked off, particularly car, steam shovel, and locomotive repair parts. before completion of work.

Under contract for sale and removal of French scrap, entered into Sept., 1911, 21,730 tons collected from points along line and shipped to storage yard at Cristobal. Price, \$215,000. Time allotted for removal of material, 3 years; almost 2 years have elapsed and Isthmian Canal Commission received but \$13,473. Contract entered into with Chicago House Wrecking Co. covering American iron and steel scrap already accumulated or that would accumulate during fiscal year. Scrap totaled 12,109 tons. Payment to be made on ship's bill of lading as shipped from Isthmus; the Isthmian Canal Commission received only \$18,571, as but 2,466 tons shipped. Sale of scrap screenings removed from buildings netted \$6,866 and scrap rope and hose sold to value of \$4,693. Approximately \$75,000 realized from sale of copper and brass scrap accumulated in operation of Gorgona brass foundry.

Besides regular issues to departments and divisions, sales made to employees, contractors, private individuals, and companies, total aggregating \$106,037.77. Value of stock at obsolete storehouse June 30, \$431,916, an increase of \$70,000 over total on hand at close of previous year. Bids invited for material in obsolete storehouse Feb. 23, 1912; of 24 classes advertised awards made on 6, as either no bids received on other classes or bids below upset price. Under circular issued Feb. 1, 1913, satisfactory bids received on only 4 of 27 classes. These sales demonstrate method of sale of entire equipment and material not satisfactory. Believed that best results would be obtained by placing fair upset price on such material and equipment and selling it when opportunity offers. Board of appraisal appointed to place values on all articles offered for sale. Under this arrangement equipment to value of \$32,000 sold and paid for. In addition, \$18,670 worth of equipment appraised sold to United Fruit Co. in June, 1913, but delivery not yet been effected.

All purchases on Isthmus aggregated \$2,733,867, of which \$1,492,322.52 were for coal from Panama R. R., \$395,408.92 for crude oil from Union Oil Co., and \$223,208.26 for miscellaneous purchases from Panama R. R. Co., leaving \$22,672.81 for purchase of mis-

cellaneous supplies from local merchants. Balance used for postage stamps.

Work done for sanitary department, consisting of grass and brush cutting, disposal of night soil and garbage, continued. Grass cut on request from sanitary department. Total cut, 7,356 acres, of which 4,822 acres cut by scythe and 2,534 acres by horse mower. Area covered by sanitary work, 2,980 acres. Cost of sanitary work done by Q. M. department, \$125,983.21.

Animal transportation inadequate to meet demands, and 50 mules purchased at a cost of \$10,562, reaching Isthmus May 26; scarcely replaced animals condemned or which died. Six horses and 20 mules condemned and destroyed and 5 horses and 4 mules died; total of 35 animals. **P-13**, 53, 57.

Recreation Department. (See Clubhouse and Employees.)

1905. Isthmian Canal Commission convinced social environment of U. S. should be transferred to the Isthmus for American employees. Buildings assigned for churches; schoolhouses building. Houses to be provided for clubs. Reading rooms established. Vessel assigned for free excursions for employees. Free quarters for families of certain employees. **P-05**, 8, 9.

1906. Erection of clubhouses authorized, a few ready; cooperation with Y. M. C. A. in management of club centers planned. Authority given for erection of suitable accommodations for divine service, lodge purposes, etc. Employees solving the problem of entertainment and recreation themselves to a degree. **P-06**, 4.

1907. Four clubhouses completed; under management of Y. M. C. A., subject to an advisory board. "The influences of the clubhouses are excellent." Several religious buildings built. Upper floors of religious service buildings used as lodge rooms, etc. **P-07**, 34.

1908. Lodge and church buildings built. Five bandstands erected. Isthmian Canal Commission band played every Sunday at some point on the line. Clubhouses (4) under care of Y. M. C. A. successful; more recommended. **P-08**, 30.

1909. Type lodge houses erected at Empire and Gatun, band stand at Gatun, and chapel at Ancon; Isthmian Canal Commission clubhouses located at Culebra, Empire, Gorgona,

and Cristobal; operated under the Y. M. C. A. Allotment made for new one at Gatun, and for small recreation halls at Corozal and Porto Bello. Question whether additional clubhouses will be built; fixed charges a factor. **P-09**, 30.

1910. New clubhouse erected at Gatun at cost of \$21,312.88, and smaller hall at Porto Bello at cost of \$4,426.59. These 2 added to 4 clubhouses already constructed at Culebra, Empire, Gorgona, and Cristobal under supervision of Y. M. C. A. Membership largest in June, when it reached 1,643; average monthly membership for year, 1,264. Expenditures from Isthmian Canal Commission funds for clubhouses, \$38,812.41. Small recreation hall constructed at Corozal at cost of \$3,954.66; since completion, under management of employees themselves. **P-10**, 45, 46.

1911. Seven clubhouses in operation. Small recreation hall at Corozal, operated under employees, enlarged and turned over Jan. 24 to supervision of Y. M. C. A. Additions made to clubhouse buildings at Empire and Cristobal and additional bowling alley in stalled in each. Additions, including alleys, paid for from Y. M. C. A. funds at cost of \$4,762.80. Additional equipment, consisting of phonographs, umbrella racks, library books, bowling and pool equipment, and vibrators for the barber shops added. Average monthly membership for year, 1,947, as against 1,264 for previous year. Smallest membership for any month, 1,712, July, 1910; and largest, 2,121, Jan., 1911. Expenditures from funds for support of clubhouses, \$60,488.46, of which \$51,193.90 for operation of clubhouses and \$9,294.56 for equipment for new clubhouses at Gatun and Corozal. **P-11**, 57, 58.

1912. June 30, 1912, clubhouses in operation at Corozal, Culebra, Empire, Gorgona, Gatun, Cristobal, and Porto Bello, under supervision of Y. M. C. A. Bowling alleys, locker rooms, shower baths, and barber shop added to Corozal clubhouse at cost of \$5,000. Average monthly membership for year, 1,944, as against 1,947 for previous year. Smallest membership for any month, 1,784 for Aug., 1911, and largest, 2,092, June, 1912. Expenditures from Isthmian Canal Commission funds for support of clubhouses, \$50,565.61. **P-12**, 65, 66.

1913. June 30, 1913, clubhouses in operation at Corozal, Empire, Gorgona, Gatun, and Cristobal in zone, and at Porto Bello, about 20 miles down Atlantic coast. Clubhouse at Culebra removed because of slides and portion of building reerected at rear of administration building annex at cost of about \$1,700, paid from clubhouse funds. Bowling alleys, pool and billiard tables, soda fountain, barber shop, and reading room were thus provided in this new location. Entertain-

ments given in second story of schoolhouse. Average monthly membership for year, 2,023, as against 1,944 for previous year. Largest membership for any given month, 2,127, largest since organization. Expenditures from Isthmian Canal Commission funds for support of clubhouses, \$49,925.96. **P-13**, 68.

Rivers, Control of.

Plans for diverting or controlling the waters of the Chagres and Gatuncillo, **P-05**, 295.

Control of Chagres and other streams: Above Bohio a clear mountain stream; entire area never determined; drainage estimated to range from 700 to 875 square miles above Bohio. Observations of the discharge of the Chagres at Gamboa have been maintained from 1882 to the "present" (1906) time. There have been but 6 severe floods in half a century, of short duration. Data sufficient for determination of complete reservoir control of the Chagres floods by a dam at Gamboa. This dam would have control only in case of a sea-level canal, and control and water supply in case of a lock canal. During three-fourths of the time the Chagres and other streams discharge an insignificant amount of clear water. When they are in flood they will bring down some silt, and it is recognized that the maintenance of the navigable channel will require a small amount of dredging. **P-06***, 42.

Sanitation, Operations.

1904. Preliminary steps taken, Apr., 1904, for organization of health department. Isthmian Canal Commission No. 2 on its first visit to Isthmus, accompanied by Dr. W. C. Gorgas, colonel, U. S. Army; by Dr. John W. Ross, U. S. Navy; by Dr. L. A. La Garde, major, U. S. Army; and an engineer officer of the Army, Capt. (now Maj.) C. E. Gillette, to study health subject. Officers named of the staff which gained distinction in sanitation matters during the American occupation of Cuba. Final organization of the health department perfected Aug., 1904. The department of health, with jurisdiction extending beyond the limits of the Canal Zone into the cities of Colon and Panama and over the waters adjacent thereto, a branch of the government of the zone, and made an administrative department thereof. Four members in the board of health—the chief sanitary officer, the director of hospitals, the chief quarantine officer, and the chief sanitary inspector of the zone. There were found on the Isthmus as a part of it an extensive hospital at Ancon, and several neglected hospital buildings at Colon. Second hospital at Colon operated by the Panama R. R. In addition to caring for these hospitals, emergency hospitals were established, and dispensaries. Employees on the Isthmus entitled to free medical attention, etc. The sanitary inspectors examined properties, pools, etc., and insisted upon the following of sanitary precautions of all kinds. Quarantine service established, and stations opened. Rules and regulations adopted for Colon and Panama, and Republic asked to enforce them. In the

10 months of service succeeding Aug., 1904, about \$1,100,000 to be spent. Examination made of methods pursued by the Republic of Panama for the care of the sick, etc. **P-04**, 49.
Health and sanitation: Indifferent at transfer. French company could not compel adjacent communities to clean up. French hospital expenditures lavish. Health of zone good at transfer, and so continued. Departmental work begun; force put to work improving sanitary condition in zone and adjacent places; plans preparing for water supply and sewage for towns; hospital service improved. Climate not a deadly one. Statistics of health and sanitary service. **P-04**, 86-91.

1905. Results of the sanitary department such that health of the zone assured. Climate no more a handicap than would be U. S. places 50 miles or so from Gulf of Mexico. **P-05**, 120.

Republic of Panama unable to enforce sanitary regulations in cities of Panama and Colon, and assumption of this duty by Isthmian Canal Commission No. 2, **P-05**, 269.

Disposal of night soil, methods, **P-05**, 273.

Cooperation of Isthmian Canal Commission sanitary department and Republic of Panama with regard to hospitals, and care of sick, insane, etc., **P-05**, 339.

1906. Yellow fever abolished. Last case Nov. 11, 1905. Average daily sick rate among employees during 10 months from Jan. 1, 1906, to Oct. 31, 1906, 28 per thousand; death rate, 17½ per thousand among the whites, and nearly 53 per thousand among the blacks. **P-06**, 2.

Sanitation of near-by countries: Outbreaks of communicable diseases in adjacent countries suggest desirability of U. S. making some arrangements for better sanitation. Yellow fever in Ecuador. Government of that place willing to cooperate with U. S. in abolishing it, but notable local opposition to interference of U. S. **P-06**, 22.

Municipal sanitation: Pushed with energy through the year. 50,000 sq. y. paving in Panama. Sewer system practically completed, 55,840' of piping laid. Water system complete, curb connections being made. Ancon Reservoir in operation; sewer system connected with Ancon. La Boca connected with Rio Grande Reservoir. Corozal and Miraflores connected with Rio Grande Reservoir. At Paraiso, sewer being laid; town supplied with water from Rio Grande. For town of Culebra, reservoir constructed on Mount Zion. Water supply provided for various other points. Dam built across Rio Carabali, impounding approximately 40,000,000 gallons at elevation of 65' above sea level, for Gorgona. Emergency supply for Colon provided by building temporary reservoir connecting with an old French system. Permanent water system for Colon under way, and sewer system. Water

tested; found good; but sterilizing plants, etc., existing or under way. **P-06, 25.**

One of the chief aims of the sanitary brigades the extermination of mosquitoes. Bulk of work against *Anopheles* species. 2,000,000 sq. y. of ground cleared. Zone covered with network of ditches, some of them being lined with stones. Screening of edifices, etc., insisted upon. Screening reduces cases of malaria from outbreak of 33 per cent to only 4 per cent.

Less fumigation required. Sanitary work at Colon more difficult than at other places in zone and vicinity. Progress made, however, toward converting the lowest, wettest, and dirtiest spot in the Republic of Panama into a safe habitation for American employees. **P-06, 29.**

Sanitation and hygiene of Panama route: Early history of the region, with respect to mortality, etc. Mortality among employees engaged in building the Panama R. R. in 1855 not 150,000 (equaling the number of cross-ties), as so often reported; chief engineer of the road asserted repeatedly that the total number of persons engaged on the road never exceeded 7,000 at any one time, and that the laborers and workmen who died in the 5 years of building did not exceed 1,200 in all. Prior to coming of Americans the sanitary methods employed were those known to be most efficacious among scientists. Vital statistics furnished by Col. Gorgas. The records show that it is not only possible but feasible to banish yellow fever from the Isthmus and to maintain the whole force of employees in a good state of health. Sickness on the Suez Canal conquered by killing the dangerous mosquitoes. **P-06*, 18.**

1907. Sanitation separated from department of government, in which it was a division, and created a new department, **P-07, 31.**

Success dependent on its ability to guard against the malarial mosquito; accomplished by draining and clearing the ground in neighborhoods, and proper quartering. 16,000,000 sq. y. brush cut; 1,000,000 sq. y. swamp lands filled and drained; 30,000,000 sq. y. grass burned; 217,000 linear feet ditches dug; 50,000' tile ditches laid; cemented, 50,000 linear feet. Miscellaneous work of every description. Considerable sanitation work done in cities of Panama and Colon. "Too much credit can not be given the department for the elimination of yellow fever." No cases originating in the zone; 1 case got in. Nearly 50 cases of smallpox developed; instant fumigation. 3,000 persons exposed to yellow fever or smallpox quarantined. Largest division of the department to do with the care of the sick, requiring for maintenance thereof more than half the sums appropriated for sanitation. Attention and medicine free to Isthmian Canal Commission and Panama R. R.

employees. To families of employees, a charge made. Average daily sick for year, 916. Statistics show marked improvement in health conditions. Lepers removed to colony at Palo Seco. Five new hospital buildings built in zone; additions made to others. Hospital beds increased from 1,252 to 1,845; increase of emergency cots by 587. Quarters provided for insane. Culebra and Naos Islands to be fitted for quarantine quarters. **P-07, 31-32.**

1908. Duties: General sanitary work of zone (as well as of cities of Colon and Panama); also the care of the sick and the maintenance of the hospitals.

Organization: Changes proposed for economy, removal of friction, and a more definite fixing of responsibility. In addition to the work of policing and grass cutting in vicinity of quarters, the Q. M.'s gangs to be charged with collection of garbage, removal of night soil, cutting of brush and grass for sanitary department. Proposed, also, that tiling and drainage be done by construction forces of engineering department. Proposed to make these transfers Sept. 1, 1908. Sanitary department to indicate what work shall be done so far as it relates to sanitation.

Health: Conditions improved. Average of 43,057 names on pay roll; death rate, 18.32 per thousand. Whites, death rate, 15.34. Blacks, death rate, 19.48; less than half that of the previous year. Better food the ascribed reason for the lowered death rate among the blacks.

Hospitals: 27,523 admitted; 29 deaths; 1,138 undergoing treatment at end of year. Two hospitals care for the sick (Ancon and Colon). 20 sick camps. Old buildings at Culebra converted into hospital for penitentiary patients. **P-08, 27, 28, 29.**

1909. Duties: Supervision of the sanitary department extends over the zone and the terminal cities.

City of Panama: Agreement with Republic of Panama, Sept. 1, 1907, by which street cleaning, etc., to be performed by the city, the U. S. assisting by paying \$10,000, or about one-fourth of the cost of the work.

City of Colon: Agreement with Republic of Panama, July 1, 1908, provided for the payment by the former of \$4,735.19 on account of street cleaning and garbage removal within period from July 1 to Dec. 31, 1908. Beginning Jan. 1, 1909, and continuing from year to year until the contract be canceled by either party upon notice of not less than 30 days before the expiration of an annual period, Panama agrees to pay one-half the cost of such work for the city of Colon.

Transfer of operations: Work in the zone for the first 2 months similar to that of the previous year. Under the general reorganization scheme, actual physical work, except oiling, transferred to the local engineering departments along the line, the sanitary

department exercising general supervision, etc.

Hospitals: Further consolidation of hospitals made; sick concentrated at Ancon; Colon Hospital reduced to 150 beds. Chronic ward established at Colon, for transferred men who by reason of disability must continue to be a charge on the Isthmian Canal Commission as long as they are on the Isthmus.

Health: Improvement over previous year. 46,194 admissions to hospitals and sick camps, and in quarters; being 23.49 out of every 1,000 on the rolls, as against 23.85 for the preceding year. Deaths, 530; rate, 11.97 per thousand, as against 18.32 for the preceding year.

Quarantine: No plague or yellow fever originated on the Isthmus; one case of the plague developed on a ship at Balboa; death ensued at quarantine station. Ship had been required number of days in quarantine from infected port. **P-09**, 29, 30.

1910. Work of department embraces sanitary work in cities of Colon and Panama and, except oiling, designates sanitary work to be done in zone to accomplish desired ends, exercising supervision necessary to see work satisfactorily performed; in addition, department has charge of hospitals and quarantine. In charge of Col. W. C. Gorgas, Medical Corps, U. S. Army, chief sanitary officer. Work in terminal cities consists of cutting grass and brush, oiling pools, and constructing and maintaining ditches for drainage purposes, removal of garbage and night soil, fumigation and street cleaning. On account of juxtaposition of Cristobal and Mount Hope to Colon, these included in Colon area, and for same reason Ancon incorporated with Panama.

In zone, Q. M. department expended under direction of sanitary department \$127,923.28 in grass and brush cutting in and about Isthmian Canal Commission settlements, and \$47,009.87 for removal of night soil and garbage. Expended for removal of garbage and night soil in native settlements, \$25,414.51. In maintenance of existing ditches and construction of new ones for drainage, construction division expended \$88,545.83; new work done in accordance with plans prepared by sanitary department. Total expended for oil, and labor in distribution, \$42,686.58.

Health conditions on Isthmus reported by chief sanitary officer as improvement over preceding year. Admissions to hospitals and sick camps, including sick in quarters, 26,539. Daily average of sick, 23.01 out of every 1,000 employed, as against 23.49 for preceding year. Deaths among employees, 548; equivalent to average of 10.84 per 1,000.

In addition to deaths among Americans, which aggregated 76, 39 deported as physically unfit, 10 recommended for extended leave without pay for same reasons, and 6 given extended

leave with pay in U. S. on account of injuries.

No case of plague or yellow fever originated on the Isthmus. One death from yellow fever, a young Englishman, at Ancon Hospital, Jan. 24, 1910. Deceased passed quarantine at Colon Jan. 6 and taken ill Jan. 8. Case diagnosed yellow fever Jan. 22. On Jan. 24 thorough fumigation undertaken of building in which deceased lived while in Panama, as well as factory in which he worked. **P-10**, 44, 45.

1911. In the zone the Q. M. department expended in and about Isthmian Canal Commission settlements \$114,725.98 for grass and brush cutting, and \$42,184.35 for removal of night soil and garbage. Expended for removal of garbage and night soil in native settlements, \$22,615.03. In maintenance of existing ditches and construction of new ones for drainage purposes construction divisions expended \$81,407.93; new work done in accordance with plans prepared by sanitary department. Sanitary department expended \$11,708.08 for oil and \$16,756.17 for distribution, \$16,711.85 for larvacide, and \$13,489.74 for distribution, or total of \$58,665.84; in addition, \$99,241.19 expended for sanitary work in terminal cities.

Admissions to hospitals and sick camps, including sick in quarters, 53,534; daily average of sick, 24.77 out of every 1,000 employed, as against 23.01 for 1909-10, and 23.49 for 1908-9, on the basis that total number employed during the years mentioned were 49,129, 50,535, and 44,261, respectively; total number of deaths among employees, 557, of which 33 were Americans, 96 white employees of other nationalities, and 428 blacks; deaths from violence among all employees, 178, as against 174 for preceding year; in addition to deaths reported, 134 deportations made—104 for disease and 30 for injuries. **P-11**, 56, 57.

1912. Work in Panama consisted in cleaning 398 miles of ditches, digging 2.5 miles of ditches, and clearing 118 acres of weeds and grass, in addition to oiling, disinfecting, and fumigating. In Colon district, from same source, 112.5 miles ditches maintained, 8 miles ditches constructed, and 217 acres cleared of vegetation, in addition to oiling, disinfecting, fumigating, etc.

Impression general elsewhere than on Isthmus that sanitary work, in the way of clearing land, extends over entire zone; of 278,848 acres comprised within zone limits less than 1,200 acres kept cleared for sanitary purposes and on sanitary requests, outside of military reservations, where work is done by troops. In addition, clearing done for construction purposes, but almost entire zone in original condition as regards brush and jungle.

Expense for sanitary work in zone and in Panama and Colon, \$596,608.73, of which

\$67,968.19 for sanitation proper in two cities, \$409,205.84 for sanitation in zone, \$18,672.50 for removal of garbage and street cleaning in two cities, and \$100,760.20 for removal of garbage and street cleaning in zone. Of amount expended for sanitation proper in zone, construction divisions expended \$89,725.17, principally in maintenance of existing ditches and construction of new ones for drainage purposes; Q. M. department, \$93,876.26 for grass and brush cutting; sanitary department used 719,835 gallons of oil, costing, \$18,862.81, and 124,718 gallons of larvacide, costing \$23,751.64; labor expense for distributing, \$18,820.05 and \$17,514.06, respectively. All work performed by construction divisions and Q. M. department done under direction of sanitary department, new ditching being done in accordance with plans prepared by that department after consultation with divisions interested. Removal of garbage and night soil in zone done by Q. M. department.

Admissions to hospitals and sick camps and sick in quarters, 48,307; daily average sick, 22.91 out of every 1,000 employees, as against 24.77 for 1910-11 and 23.01 for 1909-10 on basis that total numbers employed during years mentioned were 50,008, 49,129, and 50,535, respectively; deaths among employees, 508, of which 35 Americans, 79 white employees of other nationalities, and 394 blacks; deaths from violence among all employees, 154, as against 178 for preceding year. 193 deportations made—141 for disease and 52 for injuries. P-12, 64-65.

1913. Work in Panama consisted in cleaning 220 miles ditches, digging 1.2 miles ditches, and clearing 114 acres of weeds and grass, in addition to filling and cleaning cesspools and wells, oiling, disinfecting, and fumigating. In Colon district, from same source, 72 miles ditches maintained, 77 miles ditches constructed, and 29 acres cleared of vegetation, in addition to oiling, disinfecting, and fumigating.

Expense for sanitary work in zone and in cities of Panama and Colon, \$510,529.17, of which \$62,955.06 for sanitation proper in the two cities, \$371,844.90 for sanitation proper in zone, \$10,627.60 for removal of garbage and street cleaning in the two cities, and \$65,101.61 for removal of garbage and street cleaning in zone. Of amount expended for sanitation in zone, construction divisions expended \$91,877.98, principally in maintenance of existing ditches and construction of new ones for drainage purposes; Q. M. department, \$50,533.13 for grass and brush cutting. Sanitary department used in zone 674,662 gallons of oil, costing \$17,669.69, and 120,992 gallons of larvacide, costing \$21,759.96; labor expense for distributing, \$21,320.39 and \$19,567.39, respectively. All work by construction divisions and Q. M. department done under direction of sanitary department. Removal of garbage

and night soil in zone done by Q. M. department.

Admissions to hospitals and sick camps during year, including sick in quarters, 33,776; daily average number of employees sick, 19.04 out of every 1,000, as against 22.91 for 1911-12 and 24.77 for 1910-11—this on basis that total numbers employed during years mentioned were 54,000, 50,008, and 49,129, respectively. Deaths among employees, 483, of which 36 Americans, 58 white employees of other nationalities, and 389 blacks. Deaths from violence among all employees, 164, as against 154 for preceding year. 183 deportations made—134 for disease and 49 on account of injuries. P-13, 67, 68.

1914. Sanitation of zone placed in charge of health department, under Lt. Col. C. F. Mason, U. S. Army, as chief health officer, and department charged with care of sick and injured of zone, prevention of disease in zone and cities of Panama and Colon, street cleaning and garbage removal in latter cities, and all matters relating to quarantine. Matters relating to charity added. Administration divided into 3 divisions—hospitals and charities, sanitary division, and quarantine division.

Division of hospitals and charities: Maintains hospitals at Ancon and Colon and assists in maintaining Santo Tomas Hospital in city of Panama. Maintains institutions for care of insane and lepers of both zone and Republic of Panama and for employees permanently disabled through injury. Provides dispensary in each district into which zone divided. District physicians attend sick, send patients to hospital, perform vaccinations, make inspections of schools, hotels, restaurants, canal quarters, etc., and report births and deaths.

Sanitary division: Has 3 sections—health office of Panama, health office of Colon, and zone section. In zone section each district has sanitary inspector, with necessary foremen and laborers, all under direct charge of general inspector; inspectors keep close watch upon their districts, with view of preventing and controlling conditions which might give rise to disease, and especially endeavor to prevent breeding of disease-carrying mosquitoes and flies. They supervise construction and maintenance of drainage ditches, and cutting of grass and brush, oil pools and edges of large bodies of water, supervise removal of garbage and night soil, trap and catch mosquitoes in Panama Canal quarters, disinfect pit and other closets, and disinfect buildings for contagious diseases. Charged with enforcement of sanitary regulations, and have authority to personally make arrests when they have witnessed violation of regulations. Issue burial permits, make interments, and care for cemeteries. They keep charts of prevalence of malaria, and immediately investigate and take action upon any increase

therein. Work by health officers of Panama and Colon that by health officers everywhere. In addition, they have charge of street cleaning, garbage removal, grass and brush cutting, oiling of pools, fumigation, disinfection, etc. Duties in enforcing sanitary rules and regulations extensive, and include vaccinations, control of infectious and contagious diseases, special precautions against quarantinable diseases prevailing in Tropics, control of burials, inspection of slaughterhouses and of cattle for slaughter, inspection of markets, enforcement of pure-food regulations, inspection of bakeries and dairies, examination of milk, inspection of stables, bottling works, and barber shops. Large part of their time given up to enforcement of sanitary building regulations, especially with reference to rat-proofing as protection against plague.

Quarantine division: In direct charge of chief quarantine officer, and maintains large establishments at each end of canal—one for Panama and Balboa and the others for Colon and Cristobal. Maintains quarantine officer at Bocas del Toro. Division, already large, expected to increase greatly in proportions when canal is open to traffic; will include new features in arrangement for passage of ships through canal in quarantine. Ground on Balboa dump, fronting upon and adjoining Fort Amador on south and radio station on east, assigned as permanent site for Panama quarantine station. Board appointed to select site for permanent quarantine station at Cristobal. **P-14**, 64, 65.

1905. Census of zone children taken. Plans made for 42 schools. **P-05**, 65.

1906. Although school system was authorized in 1904, but little done until Dec., 1905.

On Jan. 2, 1906, first free public school under the Canal Zone government opened at Corozal. At first 2 sets of schools, but on Feb. 1, 1906, municipal schools made a part of the zone system. Supervision of schools transferred to chief of bureau of municipalities, which was created May 1, 1906. This made for greater progress. May 1, 1906, 18 schools, 21 teachers, 840 pupils; June 1, 22 schools, 1,088 pupils; Sept. 30, term ended with 30 schools, 1,796 pupils. Sept. 30, 12 American teachers, 1 Panamanian, and 19 Jamaican (colored). Of the 30 schools, 4 were for white children; other mixed. Of the 1,800 pupils, about 10 per cent only American and white. Mar. 3, first convention of teachers held. School system essentially American, methods, books, songs, flag, etc. Schools welcomed by zone people. Expenses paid from funds of zone; not from canal-construction funds. **P-06**, 39.

Sixth Division. (See Pacific Division; see No. 256, p. 2368 of this Index.)

1913. On abolition of Pacific division, dredging and procuring of sand from Chame organized into separate district reporting to chief engineer. Decided, Feb., 1913, to flood Culebra Cut, Oct., 1913, by removal of dike at Gamboa. Estimated 350,000 c. y. had to be removed from lake section north of Gamboa, and that this could be done most economically by dredging; Cucaracha slide, largely clay and small spalls, could not be removed economically by steam shovels after heavy rains set in, but could be handled efficiently by suction dredges; conclusion reached that subsequent to admission of water into cut work remaining could be handled most expeditiously and economically by dredging fleet. To get fleet in condition to handle work by that time and to take care of what remained at entrances, it naturally followed that best results could be accomplished by concentrating dredging under one head; May 1 this was done, and division organized with W. G. Comber as resident engineer.

Fleet available on Atlantic side, seagoing dredge "Caribbean," 5-yard dipper dredges "Chargres" and "Mindi," French ladder dredges "No. 1" and "No. 5," and 5 pipe-line suction dredges. One of the pipe-line dredges, after finishing hydraulic fill in dam, overhauled and laid up in Gatun Lake until water in lake was of sufficient depth for it to begin operations north of Gamboa, other dredges operated within prism north of about milepost 6,

covering about 5 miles of channel, removing therefrom during year 5,730,379 c. y. earth and 753,029 c. y. rock. July 1, 1913, there remained to be removed from prism 1,837,000 c. y. earth and 99,600 c. y. rock. Of rock excavated from channel, 680,176 c. y. dumped in vicinity of west breakwater, making total to date furnished by dredges for this purpose 1,810,108 c. y. Of this, 651,000 c. y. dumped within breakwater section. In removal of rock from channel drill boat "Terrier" drilled 43,062 linear feet in prism, breaking 394,526 c. y. material. At end of fiscal year 40' of water could be carried through approximately first $1\frac{1}{2}$ miles of channel, 35' through next 5 miles, and between this and locks depth varied from 10' to 30'. Siltage in prism for year, 2,084,000 c. y.

In addition to work in channel and in excavation for wing walls and north center approach pier of locks already reported, dredges operated in vicinity of new docks at Cristobal, of dry dock at same locality, of mouth of Mindi in French canal, and of Margarita Island. In approach channel to new docks at Cristobal 665,018 c. y. earth removed, and from slip between Piers 16 and 17 on new terminals 155,693 c. y. earth and 189,284 c. y. coral rock dredged. "Terrier" drilled 4,511' at site of permanent bridge across French canal for railroad connection with coaling plant, and 34,448 c. y. material broken up by blasting. From dry dock basin, to provide mooring berth for suction dredge "Caribbean," 3,851 c. y. removed, from French canal at Mindi 295,535 c. y. earth excavated, and 100,957 c. y. dredged from Margarita Bay and used for parapet and swamp fill in that locality. Site cleared for proposed coaling station on Telfer Island.

At Pacific entrance there were employed seagoing suction dredge "Culebra," 5-yard dipper dredge "Cardenas," 4 French ladder dredges, seagoing ladder dredge "Corozal," and 1 pipe-line suction dredge. Pipe-line suction dredge transferred from Atlantic end when it had completed its work on hydraulic fill for Gatun Dam; dismantled, hull cut in sections and moved over by railroad to Balboa, and after reerection put in commission Nov. 16, 1912. For remainder of year employed principally in dredging from site of proposed inner harbor and terminal basin at Balboa.

Total removed from prism during year, 4,321,956 c. y., of which 1,047,929 c. y. rock. At close of fiscal year there remained to be removed from prism 1,847,774 c. y. earth and 1,600,000 c. y. rock. Of total rock removed from prism, 121,161 c. y. drilled and blasted by drill barge "Teredo" and 65,953 c. y. broken by rock breaker "Vulcan." Remainder includes rock broken by Star drill operations in previous years and material which could be handled by dredges without drilling and blasting.

Auxiliary dredging outside of prism, 1,457,342 c. y., of which 3,695 c. y. rock. Of this, 1,453,647 c. y. earth and 3,695 c. y. rock removed from inner harbor and terminal basin site. At close of year there remained to be removed from inner harbor and terminal basin 6,363,240 c. y. earth and 372,062 c. y. rock. Clearing of this site extended over area of 1,050,988 sq. feet and consisted of cutting brush and trees and blasting stumps. Orange-peel dredge excavated 7,800' of diversion channel, for draining swamp lands at Balboa to be reclaimed by hydraulic filling.

During year 445,658 c. y. sand procured from Chame by dredging and transferred to sand bins at Balboa. Of this, 435,758 c. y. transferred to stock piles for use in concrete construction for the fifth division. Sand bins had total length of 260' and were provided with 3 rapid unloading cranes until early in May, 1913, when, because site of bins encroached upon terminal work, 1 unloader removed and bins shortened to 175'. Proposed to erect crane at Gamboa for use in procuring gravel from Chagres River.

Arrangements made by which 2 suction dredges and "Corozal" will be moved into Culebra Cut soon as locks will permit and depth of water is sufficient, with view to attacking Cucaracha slide. Suction dredges will remove clay and, assisted by relay pumps located on 95' level on west bank, will discharge into Rio Grande Valley. "Corozal" will handle heavier material, depositing it in low areas of Gatun Lake. Anticipating necessity for completing cut by dredges, contract entered into Jan. 16, 1913, for construction and delivery at Colon of 2 dipper dredges of largest and most powerful type. To be equipped with 15-yard buckets or dippers for dredging soft material and 10-yard buckets for rock. Deliveries expected at tidewater in U. S., ready for shipment to Isthmus, Dec. 1, 1913, and Jan. 1, 1914. To serve these dredges 6 dump scows of 1,000 c. y. capacity contracted for June 13, 1913; 2 to be delivered on or before Dec. 12, 1913, 2 on or before Jan. 27, 1914, and 2 on or before Mar. 13, 1914. **P-13**, 35-38.

- Spooner Act, P-04**, 23; **P-11**, 549, 550. (See Laws; Acts; Panama.)
- Approved June 28, 1902. Provides for purchase of rights, etc., of New Panama Canal Company at Isthmus of Panama, including certain shares of Panama Railroad Company. Arrangements with Colombia for perpetual control of strip not less than 6 miles wide. Right to waters involved, and to construction and operation of canal, and operation, etc., of Panama Railroad, including jurisdiction over ports at the ends. \$40,000,000 to be paid Panama Canal Company, and sum to be agreed upon to Colombia.
- Canal to be constructed of sufficient capacity and depth as shall afford convenient passage for vessels of the largest tonnage and greatest draft "now in use," and such as may be "reasonably anticipated." Necessary locks to be supplied, and terminal harbors. Measures for defense to be taken. President authorized to employ whoever necessary, etc.
- Failing negotiations with Panama Canal Company, etc., canal by Nicaragua route authorized. Details.
- \$10,000,000 appropriated. Contracts authorized. Additional appropriation may be made, not to exceed in aggregate \$135,000,000 additional by Panama route, or \$180,000,000 by Nicaragua route.
- Special arrangements may be made with Colombia, Nicaragua, and Costa Rica for use of canal and harbors for vessels owned by those states, etc.
- Creation of Isthmian Canal Commission of 7 members, appointed by the President, etc. One to be named as chairman. Four learned and skilled in engineering, 1 an officer of the U. S. Army, 1 an officer of the U. S. Navy. Compensation of the Commission to be named by the President until otherwise fixed by Congress. Employment of engineers, etc., through the Commission. Commission subject to the direction and control of the President, reporting to him.
- Secretary of the Treasury authorized to borrow on credit of the U. S. \$130,000,000.

Subsistence Department. (See Nos. 224, 246, pp. 2366, 2367 of this Index.)

1908-9. Organization: Commissary of Panama R. R. transferred, July 16, 1908, to charge of subsistence officer of Isthmian Canal Commission, and managed in connection with hotels, messes, kitchens, etc.

Sales: \$4,841,647.09. Commissary of no expense to Isthmian Canal Commission; operated at a profit to Panama R. R., surcharges being added to stuffs handled sufficient to pay off expense incurred by railroad company for the erection of buildings and various plants, and to cover freight and handling charges along the line.

New buildings: New commissary buildings constructed by Isthmian Canal Commission at Gatun and Porto Bello.

Hotels, messes, etc.: In addition to Hotel Tivoli, there are 17 hotels, 19 messes, 21 kitchens, providing food for 7,700 people. Hotel Tivoli shows profit, line hotels a loss, messes and kitchens a profit. Subsistence feature of Isthmian Canal Commission self-supporting. **P-09, 24.**

1910. Department charged with operation of Hotel Tivoli, 18 Isthmian Canal Commission hotels, 19 European laborers' messes, and 20 common laborers' kitchens; under charge of Maj. E. T. Wilson, subsistence officer.

Hotel added and one kitchen dropped. Supplies procured from commissary, belonging to Panama R. R., operated by subsistence officer, who is also commissary for Panama R. R.

Hotel Tivoli operated at profit of \$4,574.23. Meals served at line hotels, 2,176,451; price per meal, 30 cents. Cost for supplies per meal, 24.87 cents, and expense in preparing and serving, 6.23 cents. Total increase of \$43,964.31 in cost of the food supplies to line hotels during the year, or of 1.33 cents per meal. Expense in preparation and serving decreased 0.69 cent over preceding year. Total rations furnished European messes, 1,092,487, at cost of 30.18 cents per ration for food and 6.60 cents per ration for expense. Rations served in laborers' kitchens, 781,746, at cost of 22.66 cents for food and 4.63 cents for expense. Total revenue from the line hotels, messes, and kitchens, \$1,350,658.05; decrease of \$168,620.08 over previous year. **P-10, 38, 39.**

1911. At end of fiscal year department operating Tivoli Hotel, 19 line hotels, 3 night restaurants, 16 European laborers' messes, and 14 common laborers' kitchens; an increase of 1 hotel and decrease of 3 messes and 4 kitchens. Total meals served by hotels, 2,216,740; increase of 40,289 over previous year. Cost of supplies per meal, 25.44 cents, or 0.57 cent more than during previous year; and expense preparing and serving meals 0.62 cent less, or 5.61 cents; resulting in decrease in total cost per meal of 0.05 cent. Total rations served European laborers' messes, 1,054,545, or \$7,942 less than last year. Cost of supplies per ration in-

creased 0.16 cent, but cost of service decreased 0.72 cent, making decrease in total cost of ration 0.56 cent, or cost for year of 36.22 cents. Total rations served in laborers' kitchens 444,503; falling off of 337,243 over previous year. Cost of supplies per ration decreased 0.63 cent and cost of service decreased 0.63 cent, making total cost of ration 26.06 cents. Revenue for the year from line hotels, restaurants, messes, and kitchens, \$1,254,216.55; decrease of \$96,395.65. Supplies consumed decreased \$57,660.17 and total cost of service decreased \$37,980.50, giving total cost of operations of \$1,221,469.29. As result of operations, line hotels and restaurants showed loss of \$20,905.44, European messes showed profit of \$39,236.63, and common laborers' kitchens showed profit of \$14,411.00. On Nov. 1, 1910, room rates at Tivoli Hotel reduced approximately 10 per cent; hotel operated at a profit of \$26,427.05. In addition to repairing equipment and replacing such minor dining room and kitchen equipment as necessary, new furniture and fixtures amounting to \$7,000 purchased to replace such as no longer serviceable. **P-11, 4.**

1912. June 30, 1912, department operating line hotels, 3 night restaurants, 18 European laborers' messes, and 18 common laborers' kitchens—increased of 2 messes and 4 kitchens. Hotel and kitchen at Nombre de Dios closed because of completion of work. One of two messes at Obispo closed. Hotels, messes, and kitchen opened at Naos Island and Margarita Island mess and kitchen at Cerro, and kitchen at Rio Grande and Paraiso. Revenue from line hotels, restaurants, messes, and kitchens \$1,263,869.81, an increase of \$9,607.41. Total cost, \$1,226,352.16; increase of \$4,887.65. Profit, \$37,517.65; increase of \$4,724.51. Total meals in line hotels, 2,075,335, 6.38 per cent less; total rations in European laborers' messes, 1,108,175, 5.09 per cent more; rations in common laborers' kitchens, 584,314.9 per cent more. Expenditures in salaries and wages for line hotels, restaurants, messes, and kitchens, \$162,006.78; saving of \$10,000. As result of year's operations, line hotels and restaurants showed loss of \$12,085.37, European laborers' messes showed profit of \$38,455.78, and common laborers' kitchens showed profit of \$11,147.24.

Accommodations of Tivoli Hotel increased. Building new wing, increasing number of rooms opening on private baths from 28 to 32. New furniture and other equipment to the value of \$10,000 purchased, greater part of equipment being for new rooms. Hotel operated at profit of \$53,652.36. **P-12, 53, 54.**

1913. June 30, 1913, department operating Tivoli Hotel, 17 line hotels, 3 night restaurants, 15 European laborers' messes, and 16 common laborers' kitchens—decrease of 2 hotels, 3 messes, and 2 kitchens. I

at Balboa closed and consolidated with one at East Balboa. Hotel near spillway at Gatun closed Mar. 31, and messes at Cerro, Haut Obispo, Gatun (No. 68), and Naos Island closed, and one at Bas Obispo opened. New kitchen opened at Bas Obispo, while those at Ancon, Cerro, and Haut Obispo closed. Revenue from line hotels, restaurants, messes, and kitchens, \$1,235,077.84, decrease of \$28,791.97; while cost of operations was \$1,205,800.76, decrease of \$20,551.40; making profit \$29,277.08, decrease of \$8,240.57. Meals served in line hotels, 2,340,644, an increase of 265,309. Rations served in European laborers' messes, 985,516, or 172,659 less. Rations served in common laborers' kitchens, 461,456; decrease of 123,001. Net expenses for salaries and wages, \$166,398.65; increase of \$4,391.88. As result of year's operations, line hotels and restaurants showed loss of \$3,837.71, increase of \$8,247.66; European laborers' messes showed profit of \$26,845.24, decrease of \$11,610.54; and common laborers' kitchens showed profit of \$6,269.55, decrease of \$4,877.69.

Laundry installed in Tivoli Hotel to handle guests' work opened Dec., 1912. Hotel operated at profit of \$76,256.55. P-13, 57, 58.

Supplies, Material and (Department).

1914. Organized Apr. 1, 1914, by combining Q. M. and subsistence departments under old organization, in charge of Capt. R. E. Wood, U. S. Army, as chief Q. M. Has charge of recruitment of labor; construction and repair of buildings; care, furnishing, and assignment of quarters; distributing fuel, commissary supplies, and distilled water; operation of hotels, messes, and kitchens; requisitioning for supplies, together with receipt and distribution of them; cutting of grass and disposal of night soil and garbage, as prescribed by the health department.

During year work of department more arduous than that of any other on Isthmus, by reason of frequent changes in organization due to consolidation of the work, construction of new buildings, elimination of old towns and transfer to new localities.

Force employed on canal dropped steadily, being 29,673, June 30, 1914, as compared with 43,350 at close of previous year. Large emigration, and for first time since work started excess of departures over arrivals of about 15,000. Free transportation furnished 1,361 Americans, 1,173 West Indians, and 1,615 Europeans. Character of force radically changed, due to completion of dry excavation and large increase in building force for construction of quarters, offices, etc. Shop forces made two transfers, one from Gorgona to Empire and then from Empire to Balboa. Dredging forces shifted from terminals at Balboa and Cristobal to Paraiso. Transportation men transferred from Las Cascadas and Empire to Balboa. These changes made necessary by waters of lake drowning out Gorgona where shops were formerly located, by concentration of dredging fleet in Culebra Cut, and by abandonment of Las Cascadas that it might be available for the military. At close of fiscal year there were 17,938 men, women, and children in canal quarters, as compared with 23,184 previous year. Greatest percentage of decrease among American and European employees.

A new town, La Boca, erected on Balboa dumps south of Sosa Hill for silver employees that will eventually be required for permanent organization. Houses which had to be abandoned or moved transferred and reerected at La Boca and converted into family quarters, and apartments rented. Fifty-two buildings, taken from Gorgona, Bas Obispo, Las Cascadas, Diablo, Empire, Culebra, Porto Bello, Gatun, Pedro Miguel, and Ancon Hospital, moved and reerected at La Boca. Structures accommodate 413 families. Cost varied from \$111 to \$520 per apartment and rents range from \$3

to \$9 per month. Range closets, cook sheds, washhouses, and bathhouses for bachelor and married employees erected at La Boca. Besides settlement at La Boca, silver quarters at Paraiso, Cristobal, and Gatun thoroughly overhauled, repaired, and rented. At close of year 153 houses, with 736 apartments and rooms, rented to employees on silver roll, monthly amount realized being \$3,736.

On June 30, 1914, 2,535 buildings in canal settlement—117 belonged to Panama R. R., 19 to Army, Navy, and Marine Corps, leaving 2,399 belonging to Panama Canal. Of these, 567 French buildings, remaining of total of 2,148 turned over by French company 1904. 136 buildings demolished and 107 sold, practically all French buildings. Raising of lake necessitated removal, demolition, and sale of all buildings at Gorgona and Matachin and most of buildings in labor camps at Chagres and Miraflores, and slides caused demolition and removal of some buildings at Culebra. Of 175 buildings taken down, 153 reerected and 22 in course of erection. Work in connection with erection of buildings for Darien radio station for Navy done by supply department. Permanent buildings constructed consisted of hydroelectric station at Gatun, substations at Gatun, Cristobal, Miraflores, and Balboa, commissary warehouse at Cristobal, the administration building at Balboa, permanent family quarters of concrete blocks (28 four-family and 9 two-family), shops office building, commissary building at Balboa, and commissary building at Ancon. Total expended for these buildings, exclusive of those for commissary, to close of fiscal year, \$1,943,430.05.

Policy continued of limiting stock of material and supplies, which necessitated placing of frequent orders. Material received, \$11,116,395.10; local purchases, \$2,293,144.66. Of local purchases, coal aggregated \$929,176.57; oil, \$863,206.66; and tools from the McClintic-Marshall Construction Co., \$40,000. Decrease of 130,000 tons of cement, but large increase in lumber purchased. Changed conditions of work necessitated closing down of storehouses at various localities and concentration of material at terminals. Gorgona storehouse closed Aug. 15, 1913; Miraflores storehouse Nov. 1, 1913; Pedro Miguel storehouse Sept. 15, 1913; Toro Point storehouse May 1, 1914; Porto Bello storehouse May 15, 1914; and Ancon storehouse June 30, 1914. Storehouse opened at Paraiso Dec. 1, 1913; cement shed erected for storage at Corozal, and new buildings of Balboa storehouse opened Feb., 1914. Mount Hope depot invoiced material to value of \$7,093,963.28, as compared with \$10,580,628 during previous year. Stock on hand at Balboa, June 30, 1914, \$1,098,143.49. 30,000 tons of rail and scrap handled at scrap yard at Mount Hope. Exclusive of con-

tracts with Chicago House Wrecking Co., under which practically no shipments were made during year, approximately \$80,000 worth of scrap sold. In addition, scrap on hand at Mount Hope valued at about \$300,000 based on market prices. Expenses of scrap operations proper, \$25,000. Unloaders, steam shovels, locomotives, spreaders, pile drivers, and track shifters no longer needed for work prepared for storage, at cost of \$14,222.84; this expenditure necessary to secure highest possible prices for material. June 30, 1914, department operating Hotel Tivoli, Hotel Aspinwall, 12 line hotels, and 10 laborers' messes, decrease of 4 hotels and 5 messes. Hotels at Porto Bello, Gorgona, Dump No. 6, Bas Obispo, Las Cascadas, and Miraflores closed. Mess at Ancon for gold employees and Hotel Aspinwall at Taboga Island opened. Messes at Dump No. 6, Bas Obispo, Culebra, Gorgona, Miraflores, and Porto Bello closed, and common laborers' kitchen at Naos Island converted into laborers' mess. Revenue from line hotels, restaurants, and messes, \$1,032,189.51, decrease of \$202,888.33; while cost of operations was \$1,021,856.92, decrease of \$183,942.84; making profit \$10,332.59, decrease of \$18,944.49. Meals served in line hotels, 2,131,912; decrease of 208,732. Immediately after July 1, 1913, European laborers' messes and common laborers' kitchens combined and called laborers' messes. Rations served in these messes, 950,994; total rations served in both messes and kitchens during previous year, 1,396,972. Salaries and wages, \$133,638.81, as compared with \$166,398.65 for previous year. Line hotels and restaurants showed loss of \$18,366.18, as compared with loss of \$3,837.71 during previous year. Laborers' messes show a profit of \$28,698.77, against combined profit of \$33,114.79 on messes and kitchens during previous year. During last fiscal year demand for wagon transportation heavier than since 1904; necessary to purchase 100 new mules. As a result of necessary town-site work, hauling material for new buildings and those transferred, and collection of garbage in city of Panama, which was transferred to health department during year, all U. S. animals worked to limit. This overwork and the fact that all mules, except those purchased during last 15 months, averaged over 7 years' service on Isthmus, resulted in death of 50 animals, considerably heavier loss than during previous year. P-14, 46-50.

Surge.

Surveys, Operations.

1905. Tiger Hill: Surveys for cut-off in route
 shows change to this location would not be
 advantageous, **P-05**, 12.
 Chagres River surveys: Topography taken of
 line of proposed Gatuncillo Tunnel and
 Dique open cut. 67 miles of transit and
 120 miles of compass and level lines run
 and much other engineering work of a re-
 lated character. **P-05**, 116.

1906. Chagres River division: Extends from
 Bas Obispo to Bohio. Surveys mainly
 during the year. " * * * It should be
 borne in mind that every foot of every line
 run has been cut out through a dense tropical
 jungle, and during the rainy season, which
 continues during the greater part of the year,
 these surveyors are working in water from
 ankle to waist deep and are subsisted and
 quartered in temporary camps. Undoubtedly
 the engineers * * * are laboring under
 more adverse and uncomfortable conditions
 than any other class of employees on the
 Isthmus." **P-06**, 86.

1907. Boundary lines: Boundary lines
 marked, aided by engineer of the Republic of
 Panama. Monuments of 4" wrought-iron
 pipe, 4' long, with a brass cap suitably marked.
 Survey in progress, relating to properties
 of the Isthmian Canal Commission, and
 lands claimed by private parties. **P-07**, 16.

1908. Sosa-Coroza Dam area: Survey made
 of this area which would have been flooded
 through project abandoned in favor of the
 dams at Pedro Miguel and Miraflores.

Monuments: Two original maps made of
 boundary monuments, etc., and submitted
 for action by Republic of Panama.

Duplicate precise level line: Mississippi River
 Commission lent 2 precise level men, etc.,
 for running line across the Isthmus. Bench-
 marks placed.

General maps: Projection of 3 general maps of
 the Isthmus from data of all surveys, under
 way. **P-08**, 19, 20.

1909-1914. (See Meteorology and River
 Hydraulics.)

1914. In addition to setting corner and grade
 stakes for building lots in Colon and Panama,
 setting grades for fill in Colon, making sur-
 veys and preparing maps of estates and
 parcels of land in dispute before joint land
 commission, making surveys and inspections
 for department of law, and performing
 considerable amount of miscellaneous work,
 general-surveys section repaired and removed
 certain zone triangulation stations, made
 surveys and maps for other departments of
 Panama Canal, made locations for radio
 stations constructed for Navy Department,
 took readings on settlement hubs in Gatun
 Dam, and performed necessary work in
 connection with precise level benchmarks
 and monuments for tide-gauge registers at
 Colon, Gatun, and Miraflores. **P-14**, 27.

Surveys, Geological. (See Geology*)

Geological surveys made during the year to
 secure character of sites for locks and dams,
 classification of material to be excavated,
 and to determine resources of the country
 in regard to building materials. Valuable
 data obtained. Material for best grades of
 cement found vicinity of Gatun. **P-07**, 15.

Report on geology of the Canal Zone, by
 Ernest Howe. June 26, 1907. **P-07**, 108-138.

Part I: Descriptive geology. Topography:
 Caribbean slope, central slope, Pacific slope.
 Geology—Introduction. Description of for-
 mations: Obispo, Bohio, marls of Pena
 Blanca, Gatun, Culebra, upper limits of
 older sediments, acid tufts and related rocks,
 intrusions of basic rocks. Development of
 the present topography; relation of the
 geology to the topography.

Part II: Applied geology. Excavation. Ge-
 ology of the dam and lock site. Gatun.
 Introduction. Geology of the lock site; of
 the dam site. Character of the material
 filling the Pleistocene valley. Trinidad
 spillways. Lock site at Pedro Miguel; dike.
 Sosa Lock site. Dams: La Boca, Sosa-Coroza,
 La Boca Spillway. Materials available for
 purposes of construction, rock for concrete,
 sand. Cement materials: Burning tests of
 cement materials from Panama; soundness;
 physical character of the raw materials;
 amount of raw material available; kinds of
 material to be used; fuel; costs; effects of
 climate; conclusion. Lignite. General sum-
 mary.

Culebra Cut: Report of geologist. "No difficulties are to be anticipated in continuing the excavation in the Culebra region except at Contractors Hill, where it is possible, but not probable, that landslides may take place when lower levels are reached. Should this danger present itself, it may be overcome by a reduction in the angle of slope." **P-07, 138.**

Dams and locks: Geology of sites. Geologist Howe reported: "The rocks at all points where locks are to be constructed are firm and hard and will make excellent foundations for the lock walls." The materials underlying the sites selected for the various dams will be competent to support the dams and will be impervious to water. **P-07, 138.**

Masonry construction materials: Geologist Howe reported: "There is an abundance of rock suitable for crushing near all points where such material will be needed."

Sand: Sand for building purposes has been found in large quantity on the Pacific coast at Chorrera, while that needed on the Atlantic side may be obtained in the vicinity of Porto Bello.

Cement materials: Raw material from which high-grade Portland cement can be cheaply manufactured on the Isthmus has been found in quantities sufficient to supply all of the cement needed.

Lignite: No coal has been found on the Isthmus, but small deposits of low-grade lignite have been found that are of no commercial value. **P-07, 138.**

Terminals. Operation.

1906. Terminal yards and wharves: Two large wharves built at Atlantic terminus, and coal-hoisting plant reducing cost of handling from 23 cents to 6 cents a ton. Terminal railway yards at Cristobal finished and "a credit." Terminal railway yard at La Boca under way. New wharf provided at La Boca, providing berths for 3 additional ships. **P-06**, 8.

1911. Increase in ships touching at ports on either side of Isthmus made it necessary to extend existing docking facilities. As act June 28, 1902, contemplates construction of terminals for canal, any addition to docks should be such as to form part of final scheme, which should also include coaling facilities and dry dock as necessary adjuncts to the canal. Board appointed Apr. 24, 1911, to consider and report on facilities necessary in connection with use of completed canal, so that after general scope and characteristics of facilities adopted such work as may be needed may be undertaken. These facilities to include storing and furnishing of coal and other fuel for use both afloat and shore; furnishing of fresh water to shipping; furnishing of adequate and convenient facilities for repair of vessels, as well as of rolling stock, equipment, and machinery ashore; and question of storehouses and storing of material and supplies on the Isthmus (other than fuel) for all other purposes after the completion of canal.

Comprehensive scheme outlined having in view construction at Pacific terminus of dry dock, permanent shops, and storehouse for supplies. Coaling station contemplated at each end and

arrangement of docks which would permit subsequent additions. Dry dock is to conform in dimensions to locks, and wharves to be of sufficient dimensions to care for any shipping which can use canal; in other words, docks are to have lengths of 1,000' and depths of water equal to depths provided in channels of approach.

On Atlantic side decided that docks should be within limits of zone, located so as not to interfere with traffic through canal and at same time enable shipping to lie at them in safety during storms. To accomplish these objects, negotiations undertaken to secure part of waterway north of Cristobal Point, which under agreement with Republic of Panama under jurisdiction of latter. Designs prepared for construction of mole extending in a general westerly direction to prism from the intersection of shore by line separating zone from Colon and of dimensions sufficient to protect against storms both docks and basin to be excavated to south of them. During year necessary borings made to determine depths to rock; trestles built for mole and for first slip of new dock; tracks laid from Mount Hope, where material is to be secured from borrow pits, to mole; and material collected for permanent construction. This involved construction of 2,100' trestle and laying of 7,235' track. Work will be done by Panama R. R. with its own forces.

On Pacific side tentative location selected for dry dock and for permanent shops, and arrangement made for scheme of docks. As docking facilities of Panama R. R. at Balboa very much restricted, immediate necessity for additional wharves, and under allotment from Panama R. R. of \$428,700 reinforced concrete dock 706' long and 55' wide begun; at request of Panama R. R. work to be carried on by forces of Pacific division.

In construction of new dock at Balboa test pit and line of borings made along the outer edge of the proposed dock. Sand encountered for about 20', below which heavy bluish-gray clay upon layer of gravel and sand overlying rock. Latter at depths varying from 60' to 70' below mean sea level. In construction of pier, caissons made heavily reinforced concrete shells carried down to rock and filled with concrete. Bottom section of caissons has exterior diameter of 10' at base, tapering to 8' at top, from which piers rise with same thickness to the top; interior diameter 6' throughout and sections cast 6' in height. Caissons connected by tie-girders 3' 6" deep by 2' 6" wide extending transversely between piers, and longitudinally between outside piers at elevation of -10. Floor system consists of girders running perpendicular to axis of docks, with cross section of 4' 8" deep by 2' 6" wide. Girders support system of floor beams running longitudinally along dock 3' 9" deep by 1' 3" wide, on top of which placed slabs 6" thick. Work begun on caisson construction during

last week in Feb., and on July 1 five caissons sunk to rock and 16 in process of sinking; 55 caissons in all.

1914. Division of terminal construction organized Apr. 1, 1914, under H. H. Rousseau, U. S. Navy, as engineer of terminal construction. Division embraces forces of former second division, O. C. E. engaged in design, inspection, and construction of dry docks, shops, coal and fuel-oil plants, floating cranes, docks and other terminal facilities; construction transportation by rail; road, street, and sewer work under landscape architect; and breakwater construction at Atlantic terminal.

Dry docks: General description and principal dimensions of Dry Docks No. 1 and No. 2, Balboa, given in previous report. On account of funds, decided to defer construction of Dry Dock No. 2, but such of dock structure as serves as entrance pier for Dry Dock No. 1, and as will permit future completion of Dry Dock No. 2 in dry without especial increase in cost will be built "now." Cofferdam, begun Apr. 1, 1913, to protect entrance of Dry Dock No. 1, Dry Dock No. 2, entrance basin, and coal-pocket excavations, completed by placing 103,116 c. y. Difficulty experienced through portion of double-track trestle giving way and moving outward after dumping from it had commenced, but this overcome by reinforcing outer toe by dumping material from barges, and cofferdam completed. Leakage, relatively small, controllable by pumps. In excavating for Dry Dock No. 1 and Dry Dock No. 2, coal pockets and entrance basin, old Balboa machine shops forced work to be confined to center and south sides until Nov., when they were demolished and last obstacle to excavation removed. Total taken from site of Dry Dock No. 1, 358,282 c. y., 48,838 c. y. of which earth and balance rock, making 466,975 c. y. excavated from area up to close of year. From site of Dry Dock No. 2, located just north of entrance of Dry Dock No. 1, there were removed 41,548 c. y. earth and 52,129 c. y. rock. Steam-shovel operations deepened excavation from -13.5 to final grade for entire area of approach basin inside of cofferdam, and 351,333 c. y. removed. Area required for storage of coal and for travel of unloading towers measures 800' in length and about 400' in width, measured from outer edge of quay wall. Total excavation during year, 166,104 c. y., 79,837 c. y. of which earth and balance rock. Material excavated from site of dry docks, entrance basin, and coal pocket removed by steam shovels, 3 of which worked 8 hours a day until Feb., 1914, when, on Feb. 5, shovels placed on 12-hour basis and another shovel added. Shovels worked on split shifts, 12 hours a day, continuously to end of the year; 1 shovel removed in June. Contract entered into Oct. 12, 1912, for pair of steel miter-gate leaves and fixed irons, completed

during the year, and material stored on Isthmus awaiting erection. Moving machines for operating leaves, together with motors, controls, and covers, also delivered.

Balboa coaling station: Upon completion of excavation for coaling plant, work begun on masonry for crane runway supports, which extend east and west through center of storage pile, and will support old Pacific division berm cranes to be reerected to rehandle coal. Material mixed by ½-yard mixer and placed by locomotive crane. At close of year all but 3 of piers over deep coal pockets up to construction joint, where girders which carry rail are to be set. Retaining wall between high and low storage pockets up to elevation 12 for three-fourths of length. Rubble retaining wall on south side of low storage area completed, as well as part of small rubble retaining wall at east end of high area. During year 1,330 c. y. concrete and 808 c. y. rubble masonry placed. In foundations for berm cranes 2,620 c. y. concrete also placed.

Total excavation accomplished, including work for dry docks, entrance basin, coaling plant, shops, quay walls, and piers, 1,513,048 c. y., of which 1,477,843 c. y. placed in fills and embankments, remainder being hand excavation wasted in excavation of foundations for shops, and orange-peel excavation thrown to one side during excavation for foundations for wharves and piers. Material used to bring shops' yard up to elevation 18 to make fill behind quay wall, piers, and area to be occupied by Panama R. R. yards, which lie east of head wall of permanent piers, for Naos Island Breakwater, and part wasted on Balboa dumps.

Shops: Lt. Col. T. C. Dickson, U. S. Army, inspector of shops, in immediate charge of design and installation of machinery of new Balboa shops until Mar. 6, 1914. Steelwork carried on by contract and completed. Total material delivered, 11,657,429 pounds. Work completed. Buildings have cement tile roofing, tiles being manufactured on Isthmus and erected in place under contract; total standard red tile squares put on, 6,441.18; gutter-tile squares, 201.15; ridge roll, 7,351 linear feet; ribbed glass pieces, 11,188. Remaining work on foundations pushed to be prepared for contractor for steelwork, and 3,221 c. y. concrete placed. All shop area brought up to grade and surfaced with crushed stone, excepting space occupied by incline from dry-dock excavation and small area between roundhouse yard and foundry. Foundations of 2 buildings interfered with by sand dock and considerable trouble experienced in placing foundations, due to obstructions in mud below low tide, consisting of old barges and other French equipment and old metal which had been dumped into area and subsequently covered up.

Installation of machine foundations in various buildings progressed rapidly as soon as

it was possible to start work inside buildings. In this connection 4,944 c. y. concrete used. Shops' tunnel, which runs through building and yard parallel to axis of dry dock, completed. Proper drainage system provided over entire area.

Mechanical division abandoned Gorgona Aug., 1913, and, together with foundry and planing mill, moved direct to Balboa. Other shops transferred temporarily to Empire, and, commencing Mar. 1, 1914, gradually moved to Balboa. At close of year practically all machines erected in permanent locations and in operation. Total expended on shops, including cost of moving and installing machines, \$2,384,967.33. Shops office building last one under construction. At close of year steel framework and cement tile roofing completed and construction division of supply department putting in walls and floors, and engaged in completion of building.

Breakwaters: As stated in last report, decided to construct detached breakwater on east side of Colon Harbor to protect interior harbor against waves caused by trade winds, its general direction extending out from Coco Solo to point 2,000' east of outer extremity of west breakwater. Breakwater, as originally approved, to be 7,200' long, its inner end 3,893' from end of shore fill. Investigations made in various localities for purpose of securing suitable core and armor rock for use in construction, with view of doing away with necessity of further use of Porto Bello. Upon examination of comparative estimates of costs bearing on different sources of supply of rock to be used, decided to obtain rock from Sosa Hill quarry and transport it across Isthmus. Double-track trestle extended out from Coco Solo and about 11,093 linear feet completed at close of year. Railroad connection completed between root of breakwater and railroad extending from Mount Hope to Margarita Point. Auxiliary lines and sidings built in vicinity of Coco Solo Point and along Margarita Point railroad. In all, 5.2 miles new track laid. Dock 16' by 100', with trestle and track connections, built for unloading of materials, and small harbor for landing of launches and tugs towing piles excavated by dredge "Sandpiper," necessitating removal of 58,650 c. y. sand. A 6" water main laid from Margarita Point main at Coco Solo turnout, and 50,000-gallon storage tank erected for watering locomotives and for additional fire protection. Coco Solo yard filled in to elevation plus 3.3, and approach tracks for trestle raised to elevation plus 14.5. Practically all tracks ballasted to main line of Panama R. R., for which 64,506 c. y. fill used in addition to 11,512 c. y. gravel ballast, and 522 c. y. crushed-rock ballast.

With abolition of Atlantic division Feb. 1, west breakwater work in Colon Harbor and operation of Porto Bello quarry transferred

to division. Armor rock procured from Porto Bello on old crushed-rock quarry level above two lower levels referred to in last report. Dec. 1, 1913, working hours in quarry reduced to 8 hours a day, and on Apr. 30 operation of quarry ceased. 207,654 c. y. of armor rock produced and shipped. Auxiliary excavation by steam shovels, 302,893 c. y.; wasted on shore dump. In May, 1914, quarry closed down in such a manner that it can be reopened if necessary later in connection with east breakwater. Of 207,654 c. y. rock shipped from Porto Bello, 162,951 c. y. placed by 3 derrick barges, and 44,703 c. y. placed by 3 cranes. Rock removed by dredges to extent of 18,254 c. y. placed in breakwater. Work completed May, 1914. Contains 1,945,733 c. y. material, consisting of 669,254 c. y. dredged rock, 819,930 c. y. Toro Point rock, and 456,549 c. y. Porto Bello rock.

Work on Naos Island Breakwater continued. With closing down of dry excavation in Culebra Cut on Oct. 10, borrow pit opened in side of Sosa Hill, as from action of breakwater concluded that too much soft material had been used in its construction and that nothing but rock should be put in to secure completion. Work at Sosa Hill continued Oct. 10, 1913, to Mar., 1914, when output from dry dock, together with character of material, warranted use of spoil from this locality for breakwater. At beginning of year all trestle completed to elevation plus 14 and filled in with exception of 600'. At close of year average elevation of breakwater plus 18.5; finished to full width. Average settlement during last two weeks of year, 0.075', with exception of one stretch about 600' in length, which settled at rate of about $\frac{1}{4}$ " per day. During portion of last three months of year settlement of about 2' a day at south end of breakwater immediately north of Naos Island, whereas settlement at end of year only $\frac{3}{4}$ " per day. During fiscal year 652,587 c. y. placed.

Cristobal coaling plant: Drilling and blasting channel material in vicinity of Cristobal coaling plant started by dredging division July, 1913, and removal of material by pipe-line suction dredge continued. Material pumped ashore where most needed. Largely clean coral rock and sand has been used to bring area in which coal will be stored in dry, measuring about 300' by 1,200', up to elevation plus 2. Work pushed on construction of trestles for use in setting 6' caissons and on construction of two concrete walls supported on piles, about 700' in length, that carry tracks for stocking and reclaiming bridges. At end of year trestle construction about 25 per cent completed. Caissons of steel, 6' in diameter, and by end of year 78 cylinders had been set, and 6 of these driven to rock with steam hammer in advance of any excavation. Total concrete placed, 3,123 c. y.

Contract entered into for materials, necessary machinery, and erection in place of coal-handling plants. Coal-handling plants designed for storage of 485,000 tons at Cristobal and 215,000 tons at Balboa. Of the former, 100,000 tons to be wet storage, and latter 50,000 tons.

Fuel-oil plant: Contract entered into Oct. 1, 1912, for 4 fuel-oil storage tanks, 93' in diameter and 35' in height, each having capacity of 40,000 barrels; cost, \$62,800. Two located at Mount Hope and two on Balboa dump southeast of Sosa Hill. Plans prepared and advertisements issued for necessary pumping plants in connection with these tanks, one at Balboa and one at Mount Hope. Provision made for installation of 3 pumps in each plant, 2 of which will be purchased at present time. They will be able to handle oil from Balboa to Miraflores tank, and from Mount Hope to Gatun tank, at rate of about 400 barrels an hour. On Atlantic side as much of Docks 13 and 14 as necessary will be used as oil docks, and tank field will be located between east diversion and Mount Hope Road, where there are suitable locations for 40 or 50 tanks. Pumping plant will be located immediately east of Mount Hope filtration plant. At Pacific terminal there will be berth for oil vessels 75' wide by about 2,000' long immediately adjoining canal channel and south of old French pier. There will be 3 oil cribs, 2 of which will be constructed at once, consisting of steel and concrete deck supported by 6' concrete cylinders. Pumping plant will be located on lower level of Balboa dump, opposite oil cribs. Tank field laid out on higher level of Balboa dump. Area reserved for accommodation of 33 lots each 200' square. To end of fiscal year expended on fuel-oil plant at Pacific terminal, \$50,289.33, including cost of dredging berth for ships, for which removed 60,776 c. y., and on that at Atlantic terminal \$49,694.15.

Quay walls and pier: Work continued on quay walls and pier at Pacific end. These consist of reinforced concrete deck supported by cylinders sunk to rock. Total length of quay wall or wharf will be 2,662.65', averaging 60' wide. Of this, 648.78' built for Panama R. R. as lumber dock; remaining portions of wharf extend to north and south of this lumber dock. North portion supported upon cylindrical concrete caissons sunk to rock and filled with concrete, reinforced with steel rails. Cylinders themselves reinforced concrete 7' 6" in diameter, with 8' bottom section 5' in length. Of section north of lumber dock, 1,238.42', 16 caissons remained to be sunk, most of substructure having been completed during previous year. 136 caissons in this dock. Superstructure consists of reinforced girders, beams, and floor slab, with vitrified brick surface. Work begun July, 1913, and completed Feb. 1, 1914. Paving brick laid on

sand cushion. 75,683 sq. feet of brick laid on floor of this dock, and completed Apr. 1, 1914.

To counteract any outward pressure against cylinders, "dead men" placed in ground about 85' behind rear edge of wharf and opposite each transverse girder, each with effective bearing area of 48 sq. feet, constructed of reinforced concrete. They were connected to dock by steel rods 2½' in diameter, drawn tight by means of turnbuckles, and incased in concrete.

Wharf south of lumber dock 775.45' in length with return 290' long, and, as work had to be performed in water, reinforced concrete caissons used in other dock not suitable. Caissons for this portion of work steel cylinders 6' in diameter, in sections 5' long. To permit construction of portion of wharf, necessary to remove sand-unloading cranes formerly used by Pacific division, and sand operations transferred to Miraflores Locks. Ladder dredge cleared site and double trestle constructed longitudinally through site for handling of caissons. Excavation inside the cylinders performed by orange-peel buckets as much as possible, but material overlying hard rock so firm that greater part of excavation had to be done by hand, using Star well drills as hoisting engines. At close of year 23 caissons sunk to rock.

Bulkhead quay wall, extending between wharf and Pier No. 1, 300' long and built on concrete cylinders sunk to rock in manner similar to that at wharf north of lumber dock. Rock encountered very much higher than on greater part of other quay walls, and it was necessary to do considerable rock excavation in caissons to get them well below -45. Excavation done by orange-peel buckets operated by locomotive cranes, but removal of rock and cleaning out bottom of caissons required hand excavation. 65 piers required for this dock. All sunk to rock at end of Feb., 1914. Superstructure placed similar to that of other docks. Similar bulkhead, extending from Pier No. 1 to Pier No. 2, begun during year.

Construction of Pier No. 1, 1,000' in length and 201' wide, proceeded in manner similar to that of wharf construction, both as regards excavating in caissons and placing superstructure. Most of material excavated soft, alluvial mud, rock being encountered at upper end, which necessitated hand excavation in order to secure foundation for cylinders. During year 184 piers sunk to rock.

Dock completed during year; area of 77,403 sq. feet, and total division cost \$421,200.57.

At quay wall south of lumber dock, in dredging preparatory to construction of dock, 25,720 c. y. removed; 669 c. y. excavated for and in piers; in filling caissons, 1,487 c. y. concrete placed. To close of fiscal year expended in construction of this dock, \$107,956.85. In construction of bulkhead

quay wall, extending between wharf and Pier No. 1, 7,835 c. y. excavated in and for piers. In construction of caisson shells, 1,657 c. y. concrete used; 3,563 c. y. concrete placed within cylinders; 2,462 c. y. concrete placed in concrete floor; and 21 c. y. in concrete balustrade. Behind structure, 2,313 c. y. back fill placed. Total expended on quay wall to end of fiscal year, \$130,306.14. In construction of pier, 31,666 c. y. excavated for and in cylinders. In construction of caisson shells, 10,773 c. y. concrete used, and 13,346 c. y. concrete used in filling caissons. In connection with floor system there were excavated 7,373 c. y.; 10,222 c. y. concrete laid in floor, and 939 c. y. back fill placed. To end of fiscal year there were expended in construction of this pier \$511,749.14. Total expense in connection with these docks, including preliminary expenditures not located to any of docks, to end of fiscal year, \$1,212,917.01.

Ancon quarry: Ancon quarry continued—by fifth division, July 1, 1913, to Feb. 1, 1914; by fourth division, Feb. 1, 1914, to May 31, 1914; and from latter date to end of year under division of terminal construction. Greater part of work carried on on upper level, over 400' above crushers. Two shovels kept at work until May, 1914, since which time one shovel operated and other held in reserve. In July, 1913, bank under crusher building gave way and threatened to carry away lower part of crusher building and conveyor. Material in slide excavated by steam shovels, working day and night, and about 40,000 c. y. removed and hauled to Miraflores Locks for back filling and to Balboa town site. During this time crushers ran 12 hours a day until danger from slide stopped. Large crusher relined once, main shaft changed twice, and main eccentric changed twice in order to be rebabbitted. Larger output from quarry designated as rock No. 1 and smaller No. 2. Demand for latter size greater than formerly, and crusher arranged to crush the rock smaller. Total crushed rock, 502,798 c. y. In addition, 49,156 c. y. screenings produced, utilized in construction and repair of roads and in manufacture of concrete blocks for construction of buildings.

Sand service: Handling of sand from Chame to Balboa performed by dredging division, and unloading at Balboa continued under dredging division until Feb., 1914, when unloading cranes at Balboa closed down, owing to necessity of moving them off temporary dock on which they had been installed. Unloading operations transferred to Miraflores Apr. 28, and unloading performed by one of berm cranes still remaining. Locomotive crane subsequently added, and both machines worked during May and June. Total of 199,319 c. y. sand received and unloaded.

Panama R. R. freight yards: Panama R. R. freight yards, Diablo Hill to foot of Sosa Hill, practically completed at end of year. Filling and excavation for these performed by division of terminal construction. Material excavated from inner harbor by suction dredges deposited through pipe lines into swamp lying between site and old Panama R. R. line, and considerable amount of dry fill obtained from dry-dock excavation and from Diablo Hill added. Low, swampy area east of Balboa terminals and north of Ancon Hill raised to higher elevation by hydraulic fill dredged from inner harbor.

Colliers: Successful operation of coaling plants, as well as price at which coal can be sold, dependent in some degree upon the ability to control transportation of coal from U. S. During year cost of water transportation \$1.395 per ton. Coal brought down in foreign bottoms. Conclusion reached early in consideration of coal-supply problem that advantages would result from ownership by Panama Canal or Panama R. R. of colliers bringing coal to Isthmus. Estimate submitted in 1912 that would permit construction by Panama Canal of two colliers in accordance with latest type of naval design, and would give Panama Canal desired control over its coal supply. General plans prepared by Navy Department, and bids opened Feb. 2, 1914. Apr. 9, 1914, contract entered into at \$987,500 each; each to have coal-carrying capacity of 12,000 tons and speed of 14 knots per hour loaded to full capacity. June 30, 1914, Sec. of War decided these colliers will be operated by Panama R. R. Panama R. R. has submitted estimate of cost of transportation, 97 cents ton, not including depreciation or interest on capital invested.

Tugs: Estimate for 1913 included purchase of 4 harbor tugs of suitable design and sufficient power to handle largest vessel using canal. Plans and specifications approved Dec., 1913, and bids invited Jan. 6, 1914. When bids received, decided to reduce number from 4 to 2, and contract entered into May 8, 1914.

Floating cranes: Contract entered into Apr. 21, 1913, for 2 floating cranes of revolving type, and 250 tons capacity each, at cost of \$337,500, to be delivered and completed on Isthmus within 580 days, or by Dec. 2, 1914; named "Ajax" and "Hercules," respectively. Pontoons brought from Germany and arrived on Isthmus July.

Balboa town site: Planning of permanent town of Balboa, together with streets, water and sewer systems, placed under this division. Previous study had served to determine location of administration building, and formal mall of buildings on Balboa Plain as recommended by Commission of Fine Arts. Main roadways have width of 24'; roadways of secondary importance have

width of either 18' or 14'. Land which has been set aside for permanent gold site at Balboa includes 29 acres on north and north-westerly slopes of Sosa Hill, intended generally for quartering employees assigned to shops and terminals; area of 72½ acres on southwesterly slope of Ancon Hill, named "Balboa Heights." Employees working in administration building will be housed in this area. Third area, 55 acres, on low ground between two areas above mentioned, on which will be located buildings of public or semipublic character, as well as quarters. Construction started Aug., and progress governed to considerable extent by existing structures and tracks. Sewer and water systems installed and considerable grading and planting completed. Total expended on work, \$409,116.35.

Radio station: In addition to foregoing work, building of Darien radio station placed in charge of this division and \$74,756.88 expended. **P-14**, 35-46.

Timekeeping, P-14, 60, 405.

1913. Jurisdiction of Q. M. department extended from Porto Bello to Balboa, and timekeeping centralized in the chief Q. M. office. To this force later assigned timekeeping for various offices at headquarters. When first division undertook installation of machinery at locks the timekeeping of this division also turned over to timekeeping force of Q. M. department. Same done when fortifications division organized, and results obtained from consolidation so satisfactory as to lead to consolidating all timekeeping under one head. This done gradually under examiner of accounts, in order that it might be properly started, and when all work of this kind for all departments and divisions, except central division, combined, timekeeping force turned over as part of organization of fourth division of O. C. E. July 1, 1913. **P-13**, 1, 2.

Tolls. (See Orders, Executive.)

1911. Tolls and opening of canal: Estimated date for completion of canal, based on report of Board of Consulting Engineers, 1906 (see No. 183, p. 2365 of this Index), fixed at Jan. 1, 1915. Meantime, work advanced rapidly, and apparent it would be possible to pass vessels at least a year earlier. Shipping

interests of world raised question of tolls in July, 1910, and urged early settlement. Attention called to fact that at least 18 months' notice of rates should be given that steps might be taken in time to change routings that would follow if canal were used. Inquiry developed fact that organization of new companies for use of canal contemplated, provided rates should be attractive. Developed, also, that two years' advance notice desired to permit building of necessary ships.

To determine date when canal would be ready, a board convened, composed of those charged with the work. Announcement made that all concrete in locks at Gatun would be laid by June 1, 1912, and in locks on Pacific side by Oct. 1, 1912; that, assuming gates completed by June 1, 1913, locks would be ready for use on this date if operating machinery installed; that work on spillway at Gatun would be completed to elevation 50' by Apr. 1, 1912, and entire dam finished by close of dry season of 1912-13; that excavation through Culebra Cut would be completed by July 1, 1913, if no more material due to slides had to be removed than was estimated; and that exterior channels would be sufficiently advanced to pass shipping.

Need for legislation to fix tolls urgent. Time can be saved in making public announcement of rates by compiling, in advance of legislative action, data of amount of traffic that will probably use canal and formulation of rules by which tonnage of ships to be determined. Steps to this end taken. P-11, 58-60.

1912. Division engineer of the central division reported at close of year that if no more material due to slides had to be removed than increase which revised estimates of July 1, 1912, contemplated, excavation through Culebra Cut would be completed July 1, 1913, or the same date fixed a year ago. Though additional slides have occurred since close of fiscal year, there has been no decrease in force, so that it is still possible to complete it as predicted, though date must depend upon slides. In Atlantic division concrete work at north end of locks remains to be completed. Excavation in area below by dredging not begun until Feb., 1912, and reported by division engineer that, due to slides, date for completing concrete will be June 30, 1913. On account of increase in additional quantity of dry fill to be added to dam, July 1, 1913, now date fixed for completing this work, and Aug. 1, 1913, fixed as date for completing Gatun spillway.

In the Pacific division the division engineer estimates locks will be completed by Jan. 1, 1913, by which date dams at Pedro Miguel and Miraflores will also be finished, and spillway at Miraflores Locks will be completed by June 30, 1913. Delay of 7 months in delivery of dredge "Corozal"

threatened delay in completing excavation in channel below Miraflores by the amount estimated dredge would remove in that time. A large portion of excavation will be done by steam shovels, thus reducing length of time sufficiently to permit completion of channel by June 30, 1913.

Contract for lock gates not been carried out as rapidly as expected, and contractor called upon to finish gates in one flight of locks first, so that, if rest of work is in condition, passage of ships can be permitted by use of one flight. Delays in delivery of lock machinery and accessories, but assistant chief engineer so organizing work as to have completed sufficient machinery to meet conditions that lock-gate contract will furnish. Probable that certain features of work will not be finished until some time after first vessel passes locks, such as power-generating station, transmission line, aids to navigation, etc., which, though important, not essential to preliminary trial of system. P-12, 66, 67.

1913. Concrete work of locks completed, and but for slides central division would also be finished. Contract for completion of gates extended and contemplates finishing up all work on one flight throughout by Oct. 1, 1913. Work on installation of operating machinery concentrated to meet this condition of lock gates, and believed that one flight of locks throughout will be ready for operation Oct. 1, 1913, except fender chains and control houses, but electrical current from existing power plants will be usable until completion of hydroelectric station. Assuming the lake level at elevation 50, July 1, with average rainy season, lake should reach elevation 85 by Dec. 1, 1913. Rainfall during May excessive and above average; rainfall during July below average, so that the lake has not reached elevation that it should have at this time by about 3½'.

Slides which occurred to prevent completion of cut as anticipated a year ago are at Cucaracha, east side opposite Culebra, two in vicinity of Empire suspension bridge, relatively small, and one opposite White House. With exception of Cucaracha slide, these could probably be removed in dry by Jan. 1, 1914, but removal of Cucaracha slide in dry would require until Apr., 1914. Material can not be handled expeditiously by steam shovels during wet season, but lends itself to economical removal by hydraulic dredges. Except at Cucaracha, existing channel by slides is to full depth and of a width of at least 200' at bottom. Assuming that all slides were removed by steam shovels in dry, water in lake could not be raised above elevation 60 and still be kept out of cut by dike at Gamboa, so that after advent of dry season it would not be possible, under normal conditions, to secure full lake level

until Oct. or Nov., 1914. Material in all slides can be handled advantageously by dredging fleet, augmented, as it will be later, by two 15-yard dipper dredges under contract. They will operate against banks in every case and will not be excavating for full depth of 45'. Sea-level sections by time dredges can be moved into cut will be in condition for passage of ships of heaviest draft.

General belief that effect of water in cut would retard slides and experience below Gatun Locks in sustaining power of water against slides fully justifies this belief; on the other hand, geologist of opinion that water may to some extent develop new slides. Again, much ado made in 1909 over seamy character of rock on Isthmus, through which water flows quite rapidly, in consequence of which question raised that lake might leak out through seams and crevices. If these things liable to occur, sooner the better, if official opening of canal is to occur Jan. 1, 1915; for if water were not admitted "this" fall, but were deferred until May 1, 1914, full height could not be reached until Oct., 1914, leaving little time for determination of these questions. These considerations led to conclusion that water should be turned into cut at earliest date practicable for getting dredges to work on slides. Dredges can be passed into cut as soon as gates of one flight completed, and tifts is reasonably certain to be the case by Oct. 1. With average rainfall, lake should reach elevation approximately 70 by Oct. 10, and greater height of water against dike which excludes lake from cut at present would not be safe. Present plans based upon blowing up of Gamboa Dike Oct. 10, its removal by dredges immediately thereafter, transfer of two suction dredges and ladder dredge "Corozal" to Cucaracha slide, smaller dipper dredges to work on other slides until full width of channel attained, and passage of vessels through canal as soon as channels of full depth and of sufficient width secured.

Erroneous impression caused by announcement that water will be turned into cut Oct. 10, as it seems to have been assumed that canal will be practically finished on that date. Before boats can be passed it will be necessary to remove Gamboa Dike by dredges and to remove slides as already outlined. Passage of commercial vessels dependent, therefore, upon the time when proper channels can be dredged through slides; should additional ones occur, they will necessarily advance the date when this will be accomplished. Transit, Time of. (See Nos. 19, 184, pp. 2361, 2365 of this Index.)

Transit, time of, through isthmian canals: Appendix G. Report, Isthmian Canal Commission No. 1. **P-99**, 255-272.

Time for passage of a ship through proposed isthmian canals depends upon the speed attainable and permissible in the various sections, and the delays occasioned by lockages and by meeting other ships, etc. Discussion embraces 4 types of ships: (a) 24' 6" by 50' by 400', 1,900 I. H. P.; (b) 32' by 50' by 400', 2,300 I. H. P.; (c) 32' by 60' by 540', 3,300 I. H. P.; (d) 32' by 70' by 650', 4,500 I. H. P. Fresh-water draft. Power gives 12½ miles in open sea. Statute miles used in discussion. Coefficients. Available data: Experiments in France and Germany summarized by Mr. Elmathan Sweet; analysis of problem by Herr R. Haack, who conducted experiments as to movements of boats in small canals, etc., suggestive and useful in the discussion; back current; approximate formula for backward current; correct formula for back current; tractive resistance; backward current past a ship in a canal; observations in St. Clair Flats Canal; table of observations at St. Clair Flats Canal during passage of ships (Tables I and II); increased head resistance; shoal-water deduction; calculation of attainable speeds; speeds plotted and curve drawn.

Table III: Calculated speeds through Isthmian Canal channels by ships having sufficient power for a speed of 2.5 miles per hour in open sea. **P-99**, 260.

Speed through St. Clair Flats Canal limited by regulations. Reduction of speed in St. Clair Flats Canal. Observations made on Lake Huron and in St. Clair Flats Canal. Calculated speeds may be too high. Observations in Suez Canal. Observations at Kiel Canal. Speed limit fixed by backward currents. Reduction of speed on curves.

Table IV: Schedule of speeds proposed as a basis for calculating the time of transit through the Panama and Nicaragua Canals, **P-99**, 265.

Table V: Time of transit through the Panama Canal without allowance for meetings or lockages, **P-99**, 265.

Table VI: Time of transit through the Nicaragua Canal without allowance for meetings or lockages, **P-99**, 265. Time consumed by lockage.

Table VII: Time required for filling and emptying locks, **P-99**, 266.

Table VIII: Time required to pass Bohio Locks, **P-99**, 267.

Table IX: Time lost by lockages on the Panama route, **P-99**, 267.

Table X: Time lost by lockages on the Nicaragua route, **P-99**, 267. Delays at meeting points. Meetings in channels. Meetings in narrow channel sections.

Table XI: Delay at meeting points in canal section 150' wide at bottom, **P-99**, 268.

Table XII: Number of meetings for each ship in the canal sections of the Panama route and delays therefrom, **P-99**, 269.

Table XIII: Number of meetings for each ship in the canal sections of the Nicaragua route and delays therefrom, **P-99**, 269.

Table XIV: Delay at a meeting point in the channel in San Juan River, Lake Nicaragua, or Panama Bay, **P-99**, 269.

Table XV: Number of meetings for each ship in the channel excavated in Panama Bay and delays therefrom, **P-99**, 269.

Table XVI: Number of meetings for each ship in the channel excavated in the San Juan River and Lake Nicaragua, **P-99**, 269. Meetings at locks, average delay to each ship.

Table XVII: Delay caused by a meeting at Bohio Locks, **P-99**, 270.

Table XVIII: Delays caused by meetings at each of the locks or flights of the Panama route, **P-99**, 270.

Table XIX: Delays at meetings of each of the locks of the Nicaragua route, **P-99**, 270.

Table XX: Number of delays while awaiting lockage on the Panama route, and delays therefrom, **P-99**, 271.

Table XXI: Number of delays while awaiting lockage on the Nicaragua route, and delays therefrom, **P-99**, 271.

Table XXII: Time of transit across Isthmus, **P-99**, 271.

Total time of transit, Panama route: (a) 11.23, (b) 11.89, (c) 12.79, (d) 14.27 hours. Nicaragua route: (a) 30.11, (b) 32.30, (c) 34.35, (d) 37.67 hours. Assumed that passing places where ships can tie up will be provided at intervals of 5 miles in all canal sections, and that navigation can be by night. **P-99**, 271.

p. 2367 of this Index.)

Washington Office. (See Nos. 144, 227, 274, pp. 2364, 2366, 2368 of this Index.)

1907. Until Mar., 1907, the main office of the Isthmian Canal Commission. Reorganized later. In charge of general purchasing officer. Considerable saving in expense. P-07, 34.

1908. Purchases: By Executive order Aug. 15, 1907, placed under the supervision of the Chief of Engineers, U. S. Army, who was authorized to maintain purchasing department in the office of the Isthmian Canal Commission in Washington.

Divisions: Under the direction of the general purchasing officer, who acts as chief of office. General office, general counsel, disbursing office, assistant examiner of accounts, appointment, correspondence, and record divisions, and purchasing department.

Inspections: Part of the inspecting engineer's office was transferred from New York to Washington.

Appointments: 2,160 persons tendered ap-

pointments; 1,947 accepted; 5,397 persons given transportation to Isthmus.

Claims: 10,956; value, \$13,728,288.51. Paid by the disbursing officer in the U. S.

Purchasing offices: Assistant purchasing and shipping agents in New York, New Orleans, and San Francisco. Tacoma office closed; its work undertaken by U. S. engineer offices of Seattle and Washington.

Bids: Circular invitations for bids prepared from requisitions received from the Isthmus, and distributed throughout the country. Practice of allowing bids to cover delivery of materials on the Isthmus has given all sections equal opportunities. P-08, 34.

1909. Duties: Same scope as in previous year.

General counsel: Maintained until Apr. 1, 1909, when he was continued in the position of counsel to the Panama R. R. only, and moved in that capacity to New York.

Employment: 1,466 tendered employment on the Isthmus; 1,033 accepted and were appointed, covering 158 different positions, of which number 754 reported on the Isthmus and were assigned to duty by the Q. M. department.

Disbursing division: Paid vouchers for material and services aggregating \$15,311,021.12. Duplicate set of the general books of the Isthmian Canal Commission kept.

Claims of employees injured: Assistant examiner of accounts assumed charge of such claims arising under act May 30, 1908. Since May 6, 1909, prepared all commission contracts and bonds.

Inspections: Total amount of purchase orders placed during the year, \$16,536,130.42. Preliminary inspections made. P-09, 32.

1910. Work of office continued in charge of Capt. F. C. Boggs, Corps of Engineers, U. S. Army. 2,022 persons within U. S. tendered employment on Isthmus in grades above that of laborer, of which 1,287 accepted and appointed, covering 125 different positions. Total purchase orders placed during year, \$16,107,350.34; most important of purchases castings, structural material, and valves for use in locks, amounting to \$847,000; 4 steel barges; 2 tugboats; 3 launches; one 20" pipe line suction dredge; 1 hydraulic and dredging plant; 13 dredging, discharge, and relay pumps; 449 dump and flat cars; 10 cantilever cranes; 2 rock crushers; 8,745 tons of steel rails; 655,842 cross-ties; 32,715 piles; 30,771,744' of lumber; 14,742,400 pounds of dynamite and blasting powder. Shipments of cement for use in the locks and dams, purchased under contract for 4,500,000 barrels, amounted to 904,727 barrels up to June 30. P-10, 46.

1911. During year 1,706 persons within U. S. tendered employment on the Isthmus in grades above that of laborer, and 1,083 accepted and appointed, covering 58 different

positions. Total purchase orders placed during year, \$6,976,066.59. Most important contracts for 6 emergency dams for locks, amounting to \$2,238,988.40, and for machinery and materials entering into construction and operation of locks, amounting to \$2,456,482.23. Other principal items purchased were: One twin-screw steel ladder dredge with hopper capacity of 1,200 tons of spoil, 2 locomotive cranes, 1 electric trolley crane, 12 concrete mixers, 2 narrow-gauge locomotives, 1 un-loader plow, 19,577,589' of lumber, 3,400 tons of steel rails, 2,775 piles, and 8,000 frames for concrete piles. During year 3 independent inspecting offices established for inspection of lock gates and materials which enter into locks and movable dams. **P-11, 58.**

1912. During year 1,296 persons within U. S. tendered employment for duty on Isthmus in grades above that of laborer; 632 accepted and appointed, covering 51 different positions. Total purchase orders placed for fiscal year, \$10,446,551.23. Most important contracts for permanent equipment in form of structural lock material, \$386,274.60; electric locomotives and tracks, \$249,258.44; spillway gates and materials, \$526,697.03; machinery for operation of locks and spillways, \$2,271,582.01; and hydroelectric station, \$156,586.58. Other important purchases included 10,105,000 pounds of dynamite, 34,424,500' of lumber, and 7,259 gross tons of steel rails. Under contract for 4,500,000 barrels of Portland cement entered into Jan. 7, 1909, 4,354,024 barrels shipped, of which 1,579,210 barrels delivered during past year. During year 3 independent inspecting offices continued for inspection of lock gates and material which enter into construction of locks and dams. **P-12, 66.**

1913. Work made more difficult and arduous by the fact that, in the desire to reduce the amount of stock on hand, the number of rush orders increased. 2,065 persons within U. S. tendered employment for duty on Isthmus in grades above that of laborer; 1,183 accepted and appointed, covering 59 different positions. Total orders placed for fiscal year, \$12,335,973.12. Most important contracts for permanent equipment: Structural material for locks and spillways, \$241,326.33; machinery for operation, \$740,302.02; electric locomotives and tracks, \$548,732.67; hydroelectric station, \$72,540.34; dock material, \$571,723.48; shop buildings and machinery, \$593,649.51; transmission line, \$688,503.38; and two 250-ton revolving floating cranes, \$837,500. Other principal items of purchase included two 15-yard dipper dredges, 6,310,000 pounds of dynamite, and 23,505,695' of lumber. Supplemental contract entered into Sept. 13, 1912, covering additional quantity of cement necessary to complete work. 1,803,762 barrels of cement purchased. **P-13, 68.**

1914. Apr. 1, 1914, under provisions of Executive order Mar. 2, 1914, office of assistant auditor created in place of office of assistant examiner of accounts. Under assistant auditor was placed disbursing clerk, and disbursing office abolished. Scope of work about same as previously reported, except that practically all of independent inspection forces located at points in U. S. outside of Washington abolished or greatly reduced. Due to continued effort to reduce material on Isthmus to minimum, work of purchasing department even greater than during previous fiscal year.

2,248 persons within U. S. tendered employment for duty on Isthmus in grades above that of laborer; 1,429 accepted and appointed, covering 71 different classes of employment.

Total orders placed, \$12,392,407.78. Many of largest contracts for permanent equipment: Chain fenders and chain, \$192,865.90; coal-handling plants, \$1,929,103.85; terminal facilities and docks, \$224,004.44; floating caisson, \$333,851.20; single-track movable span bridge, \$55,674; transmission line, \$505,511.84; filtration plants, \$150,576.79; material and equipment for buildings and quarters, \$53,824.02; Balboa shops, buildings, \$155,547.89; machinery, \$146,367.16; two 12,000-ton colliers, \$1,975,000; 2 tugboats, \$304,000; and 9 gasoline motor boats, \$54,392. Other principal items purchased included 2,490 pounds of explosives, 22,200,000' of lumber, 20,000 cross-ties, and 18,311 piles. During year 592,674 barrels of cement purchased. **P-14, 62, 63.**

Water supply. (Operation.)

1904. Waterworks and sewer system, Panama and Colon: Force for designing and constructing waterworks and sewer systems sailed from New York soon after organization, June, 1904. Various plans considered. Rio Grande Reservoir for city of Panama system; water tested and found satisfactory; best waterworks practice followed. No sewers or drainage system in Panama. City divided into 3 sewer districts, sewage discharged into sea water of Panama Bay; total estimated cost, \$258,450. Difficult to find wholesome water for Colon. On account of lowness of Colon, sewage system a problem also. **P-04**, 44.

1905. Water turned into pipe lines, for supply of Panama, Colon, etc., from the reservoir made by dam across Rio Grande, and Brazos Brook. Reservoirs, and distributing systems established. **P-05**, 13.

Establishment of modern reservoir systems in progress. When piped water was turned on for Panama City the Te Deum was sung in the cathedral, attended by the President of the Republic, etc. **P-05**, 39. View showing opening of the waterworks system, Panama, July 4, 1905, **P-05**, 40.

1906. Water and sewer systems, Panama: Water system complete; at the end of the dry season a year's supply of water remained in reservoirs; "the best paved, best watered, and best sewered city in Central America, or in the northern half of South America," **P-06**, 8.

Water and sewer systems, Colon and Cristobal: Abundant supply of pure and wholesome water from receiving reservoir 2 miles back from Mount Hope, with a capacity of 508,000,000 gallons. Installation of sewer system for Colon begun. Paving under way. **P-06**, 9.

Water commissioner: Plumbing regulations devised. Rates established for water service. Meter system being installed at Panama. **P-06**, 35.

Colon water supply: In dry season, 1906, necessary to supply water to Colon with a water train hauling daily 200,000 to 250,000 gallons; at no time did Colon or Cristobal suffer; more water per inhabitant than ever known

before; charges that salt water pumped through mains "absolutely and unqualifiedly false." **P-06**, 98.

Gatun Lake, **P-13**, 242.

Mass curves, Gatun Lake, **P-14**, pl. 102.

Water Transportation. (See Transportation, Water.)

Waterways. (See Discharge; Rivers; see No. 215, p. 2365 of this Index.)

Artificial waterways, their improvement and navigation. By Joseph Ripley. Appendix S. **P-06***, 421-423.

Improvement. Demand in U. S. insistent for deeper, wider, and straighter channels. Minimum channel width of 1,000 standard for ocean ports. Continuous growth in capacity of internal waterways, such as canals. Instance of waterways connecting the Great Lakes.

Navigation, needs of: Widths; curves. Curvature made by ships in turning the angle at head of Little Mud Lake.

Delays in channels: 1,698 hours in Weitzel Lock, St. Marys Falls, 1881-1905; 1,104 hours in Poe Lock, 1896-1905. **P-06***, 421-423.

 Preventive and fumigation measures, **P-05**, 29, 32.
- 1905.** Important to stamp out source of yellow fever in view of danger of transmitting it by canal traffic to other portions of the world. Elimination of the disease as difficult as the engineering problem of the canal. Epidemic during first 10 months of American occupation. Panic among Americans. Chief sanitary officer assured of entire resources of the Isthmian Canal Commission to stamp the disease out. Campaign adopted to prevent propagation of mosquitoes, to isolate all infected persons, and destruction of all mosquitoes capable of transmission. Stegomyia brigades formed. With apparatus, these brigades destroyed nineteen-twentieths of sources of propagation, open receptacles, pools, etc. Medical inspectors appointed. Houses fumigated by a special fumigating force. Cities of Colon and Panama fumigated. Gradual decrease in death rate. Finally wiped out. **P-05**, 29.
- 1906.** Bocas del Toro: Yellow fever reported here Feb., 1906. Upon urgent representations, the Panama authorities appointed representatives of the Isthmian Canal Commission sanitary department to clean up, part of the expense being paid by the U. S. **P-06**, 23.

Zone, Operations.

1904. Government of zone: The Isthmian Canal Commission required by President Roosevelt under authority of act Apr. 28, 1904, "to make all needful rules and regulations for the government of the zone and for the correct administration of the military, civil, and judicial affairs of its possessions until the close of the 58th Congress." Governor appointed by the Isthmian Canal Commission. Organization of administration of government into three branches—legislative, judicial, and executive. Outlines of the duties of each branch. Zone divided into 5 municipalities; organization outline. List of various laws enacted. Penal and criminal codes enacted, being adaptations of those in force in Porto Rico and the Philippines. **P-04**, 65, 70.

Organization: Maj. Gen. Geo. W. Davis, selected by Isthmian Canal Commission No. 2 to represent the commission on the Isthmus May 8, 1904. Appointed by Presi-

dent Roosevelt; outline of his powers. Col F. J. Hecker appointed to cooperate with Gov. Davis. May 17, 1904, the Government of Panama publicly announced recognition of Gov. Davis's authority over the zone. **P-04**, 77.

Panama officials at transfer ceased holding office as such June 16, 1904. List of tax sources of Panama régime. **P-04**, 82, 83.

Industries and social conditions: Primitive conditions; 2 schools in each town, with poor attendance. No highways outside villages; no masonry buildings. Only industries, cane growing and manufacture of rum. Only exports, bananas and coconuts. **P-04**, 82.

Postal affairs: None before U. S. occupancy; U. S. domestic rate established, and stations, etc., June 24, 1904. Issue of counterfeit Panama stamps not traceable to zone government. **P-04**, 84.

Jails: Jail erection planned; primitive system in vogue, **P-04**, 86.

Lands and buildings: Area of zone estimated. Geographical details. Classification of ownership of lands. Lands which will be needed by the U. S. Old buildings of the Panama Canal Co. leased during cessation of work, and lease continued by U. S., with revenue of about \$30,000 annually. Boundary lines of plots throughout zone indefinite. **P-04**, 91.

Telegraphs and telephones: Old equipment meager. Modern system begun. **P-04**, 94.

Public works: No roads except one at or near city of Panama; to be improved and maintained by the U. S. No great necessity for immediate road work. **P-04**, 93.

Justice and judiciary: Transfer caused a lack of local judges. Zone judiciary created. Circuit court began sessions; judge in each municipality. One circuit judge, etc., held to be plenty. Recommended that appeals be taken out of zone. People not litigious. **P-04**, 85.

Municipalities: Zone divided into 6 municipalities. General description of buildings. **P-04**, 81.

Geography: Panama divided into Provinces, and these into municipalities. Canal route traverses two of these Provinces (Colon and Panama), embracing some 8 municipalities. System of straight dividing lines established, abolishing the existing tortuous ones, the straight lines being determined by the direction of the probable axis of the canal. **P-04**, 80.

Public order: Old Panama Co. property protected by a special force, for the payments of whose services the Republic was reimbursed by the company; continued after transfer; later men were paid directly by the U. S.; establishment of zone police under way. **P-04, 84.**

1905. Delimitation of zone: To settle disputes about tax paying, survey made of the boundary line of the zone. Permanent boundaries not fixable until center line of canal definitely fixed. **P-05, 47.**

Revenues: Organized into 7 divisions—customs and internal revenue, posts and correspondence, lands, records and personnel, accounts, administration of estates, schools, **P-05, 62.**

Taxation of old régime continued. License taxes for rum distillation collected from 8 distilleries. **P-05, 64.**

Zone government: Executive order embracing the duties of governor and general auditor, covering the revenues and expenditures of the government of the zone. Authorization dated Apr. 1, 1905, the White House. Subjects: The general auditor; the local auditor; the chief clerk; accounts of Treasury deposits and withdrawals; revenue accounts; money-order accounts; jurisdiction of the auditor; reports; depositary of Canal Zone; title to be observed in the rendition and certification of accounts; appeals from the action of the auditor. Approved for the President by Sec. of War Taft, Nov. 5, 1905. **P-05, 101.**

1906. American ideals being preserved. Rights of citizens being preserved. **P-06, 18.**

1907. Department of civil administration embraces affairs of government of zone, courts, office of prosecuting attorney, and division of revenues, posts, lands, administration of estates, police, education, fire protection, and public works, **P-07, 27.**

Governor Magoon left Isthmus Sept. 25, 1906.

Executive order Nov. 17, 1906, created department of law and government under the general counsel; governmental matters handled in Washington by general counsel subsequently.

Executive order Apr. 2, 1907, vested authority of chief executive of the zone in the chairman of Isthmian Canal Commission; duties assigned to one of the commissioners.

Five municipalities abolished; administrative districts created in their stead.

U. S. patent, trade-mark, and copyright laws extended to zone.

Provisions made for regulating insurance companies, for registration of land titles, and celebration of marriages.

Penal laws amended; new code of civil procedure effective.

Isthmian Canal Commission authorized, order Mar. 13, 1907, to enact, with the approval of the Secretary of War, ordinances relating to police, sanitation, and taxation, and matters formerly regulated by municipal ordinances. **P-07, 27.**

A commission, of U. S. and Panama representatives, unable to agree on value of certain property affected by canal operations, except the islands in Panama Bay. Payment by U. S. of \$54,037 recommended in case of claims connected with Malambo fire.

Question raised by Panama as to right of the Central & South American Telegraph Co. to land its cable through Manzanillo Bay; claim of Panama would make ends of canal under Panama control.

Contracts made July 1, 1907, with Panama concerning water rates in Panama and Colon, from which the U. S. will gain reimbursement for sanitary work, etc., done in the 2 cities.

37.31 miles of roads and trails built; expected to increase agricultural leases.

Questionable if extradition laws apply to zone; considered advisable to extend U. S. status to zone by Executive order.

56 undesirables deported exclusive of the chronically sick.

16 post offices; 90,928 pieces registered; money orders amounted to \$2,318,965.34, employees finding money-order system a safe depository for their money.

Customs service of zone confined to entering and clearing vessels arriving at ports of Ancon and Cristobal. Docks built, equipped with modern appliances.

Distillation licenses to total of \$5,198.95 collected.

479 leases for building lots; 83 for agricultural lands.

Collector of revenue administered 29 estates.

Funds of zone derived from rental of land, etc., postal service, court costs and fines, and taxes. Expenses of school system, cost of public improvements, etc., paid from these revenues, but postal returns applied solely to that service.

358 civil cases settled in courts. Cases of Coulson and Andrade, among other cases, settled by supreme court. Coulson was convicted in circuit court of murder and sentenced to death; court denied trial by jury; supreme court affirmed circuit court decision. Andrade was ejected from property he claimed; argued Government must prove its title to lands; supreme court held that statute of limitations does not run against the Government, and burden always upon a person claiming adversely to the Government to prove title.

181 officers and men June 30, 1907. 6,236 arrests; 5,193 convictions. As marshal of the courts, chief of police served 310 summonses, 663 subpoenas, and levied 4 executions; acted as coroner at 136 inquests.

Additional fire stations installed; paid firemen increased; volunteer companies organized.

Superintendent of public works operated Panama waterworks and sewer systems. Average daily consumption, 749,800 gallons. Progress made at Colon on such operations.

24 schools opened during year; 31 teachers on rolls; average enrollment, 1,643; attendance, 1,138. **P-07**, 27-31.

1908. Organization: Executive branch includes executive office; the division of posts, customs, and revenues; police and prisons, schools; fire protection; public works; and the office of the prosecuting attorney. Judicial branch includes the supreme, circuit, and district courts. Head of department represents the Isthmian Canal Commission in its relations with the Republic of Panama and foreign representatives accredited to Panama.

Beyond-zone relations: Satisfactory; questions arising on basis of treaty with Panama settled satisfactorily. "The officials of the Republic have manifested at all times a desire to aid the work of the Isthmian Canal Commission."

Legislation, etc.: By Congress, includes provision respecting the use of local revenues of the zone, employer's liability act, and the act providing for compensation of Government employees injured in the performance of duty. By Executive order, Chinese-exclusion law of Panama extended to zone; and trial by jury for criminal prosecutions involving death penalty or life imprisonment.

Ordinances prescribing building regulations, providing for the impounding of stray animals, and revising the liquor regulations and the schedule of general taxes and license fees collected in the Canal Zone enacted by the Isthmian Canal Commission and approved by Sec. of War.

Posts, customs, and revenues: Postage-stamp sales, \$72,708.67. 42,089 parcels registered (45 per cent official). Postal clerks placed on steamers between New York and zone. Money orders for \$4,686,684.98 issued. New post-office buildings erected at Cristobal, Culebra, and Ancon.

412 vessels entered at Ancon and Cristobal. No fees.

1,081 leases; revenue, \$17,436.76. Distillation, liquor, and bonding fees, \$44,743.96. General taxes, \$77,467.47

32 estates administered.

Total revenues, \$231,666.87.

Police and prisons: 232 men. 6,075 arrests; 4,731 convictions. At end of year 108 felony convicts. Prisoners employed on public improvements; did work to value of \$14,856.65.

1,540 writs served in civil cases. 140 deaths investigated. **P-08**, 25, 26.

Schools: 11 places for whites; 15 places for colored children. 721 pupils enrolled in former; 2,146 in latter. New schools completed at various points.

Fire protection: Paid companies organized at Gorgona, Empire, Culebra, and Ancon. Four men to a company. Paid fire company at Cristobal. 18 volunteer companies along the line. Electric-alarm systems installed. 2 tugs equipped for fire protection at Cristobal, Colon, and La Boca. 63 alarms; total loss, \$46,170.50. Cooperation with protection service of Colon and Panama.

Public works: Collections from private consumers of water in Panama, \$42,568.25; \$25,233.90 in Colon. 75 private connections to zone systems; collections, \$2,772.37.

Markets: New ones at various points; 8 in operation.

Prosecuting attorney: 366 persons filed against; 192 convicted.

Courts: 17 sessions of supreme court, acting on 11 decisions of the circuit court in 4 criminal and 7 civil cases. In the circuit courts 65 civil cases disposed of out of total of 111 on the docket. In the district courts criminal cases filed against 5,776 persons; all but 25 had been acted on at end of year. 14 civil cases pending at end of year of 433 cases filed.

Zone funds: Expended, \$183,601.95; balance, \$244,762.31. \$47,175.03 was for public works, etc.; \$35,749.47 for public schools; \$99,673.21 for posts. **P-08**, 26, 27.

PART VI.

TOPICAL INDEX

**TO ENGINEERING DATA IN THE REPORTS
OF THE CHIEF OF ENGINEERS,
U. S. ARMY.**

1866-1912.

Plates or Views of Typical Engineering Works, page 2625.

GUIDE TO THE USE OF PART VI.

What is contained in this part.—The various reports of the Chief of Engineers, and of officers of the Corps of Engineers, U. S. Army, embrace, at times, necessary and valuable details or descriptions of engineering work on fortifications, river and harbor works, public buildings, parks, roads, etc. Part VI of this Index is an alphabetical list of the subjects so described, with adequate references, by year and page, to the reports containing the details.

Nature of the details indexed.—Details which consist of but a few lines or words are not, as a rule, indexed in Part VI. The effort has been to list or index details of a more extended character, if especially informative from an engineering viewpoint.

Page and report references.—These are of the same general form as in other parts of the Index. Illustration—**99**, 776, means the annual reports of the Chief of Engineers for 1899, page 776; **03**, S., 309 means the annual reports of the Chief of Engineers for 1903, supplement, page 309. H. D. 479 (or S. D.), 56th, 1st, means House Document No. 479; 56th Congress, 1st session. Some earlier issues of Professional Papers of the Corps of Engineers are referred to as P. P.

Cross references.—In compiling the Topical Index the advantage of logical cross references to main headings has been kept in view; i. e., "Breakwater" refers to many related topics. It has not been felt necessary, however, to provide copious subcross-references to the subjects arranged under a main heading. It is assumed that any person wanting information on, say, breakwaters, would examine, as is customary, each item under that heading and its modifications, making subcross-references unnecessary.

Panama Canal.—Part V of this Index gives the engineering details pertaining to that work, and they are not repeated in Part VI. See page 2357 of this Index.

Timeliness of data.—As it may be difficult for everyone to get access to the earlier reports of the Chief of Engineers, it should be pointed out that references to reports of more recent date throughout Part VI are the more valuable, because, as engineering is a progressive science, the later references generally cover the matter up to date.

PLATES OF TYPICAL ENGINEERING WORKS.

REPORTS, CHIEF OF ENGINEERS, U. S. ARMY, 1866-1912.

| Plate and figures. | Construction. | Remarks. |
|--------------------|-----------------------|---|
| Plate 1: | | |

| D..... | Pier..... | Sinking caissons, Milwaukee. |
| E..... | Breakwater..... | Duluth-Superior, Minn. |
| Plate 7: | | |
| A..... | Breakwater..... | Crib ready for sinking, Manistee, Mich. |
| B..... | Breakwater..... | Ludington, Mich., sinking crib. |
| C..... | Breakwater..... | Ludington, Mich. |
| D..... | Breakwater..... | Stone breakwater, Buffalo, N. Y. |
| E..... | Pier..... | Winter scene at end of pier, Grand Haven, Mich. |
| Plate 8: | | |
| A..... | Pier and dredging... | Extending old pier; hydraulic dredging; South Haven, Mich. |
| B..... | Breakwater or pier... | Sinking first crib, Manistee, Mich. |
| C..... | Pier and harbor... | Pile revetment; breakwater in background; Keweenaw Waterway. |
| D..... | Pier..... | Driving piles for crib foundation, Ludington, Mich. |
| Plate 9: | | |
| A..... | Pier..... | Concrete superstructure, Milwaukee, Wis. |
| B..... | Breakwater..... | Looking from pier light, Marquette, Mich. |
| C..... | Pier and harbor... | East and west piers, Ontonagon, Mich. |
| D..... | Piers and harbor... | Looking toward Lake Superior, past aerial ferry, Duluth-Superior, Wis. |
| E..... | Breakwater..... | Agate Bay, Minn. |
| Plate 10: | | |
| A..... | Breakwater..... | End of main breakwater, timber post in view stands upon pier-head crib just below surface of water, Ashland, Wis. |
| B..... | Piers and harbor... | Entrance, Grand Marais, Minn. |
| C..... | Breakwater..... | Timber crib breakwater with timber and concrete superstructure, Buffalo, N. Y. |
| D..... | Breakwater..... | Looking toward shore, Marquette Bay (Presque Isle), Mich. |

| Plate and figures. | Construction. | Remarks. |
|--------------------|-----------------------------|---|
| Plate 11: | | |
| A..... | Pier..... | Concrete revetment, looking toward harbor, Superior entry, Duluth-Superior, Minn. |
| B..... | Breakwater..... | Junction of pile pier section and concrete caisson section, Racine, Wis. |
| C..... | Piers..... | Concrete piers, Lorain, Ohio. |
| D..... | Piers and breakwaters. | Completed form for reinforced concrete caisson; finished caisson in rear; Milwaukee, Wis. |
| Plate 12: | | |
| A..... | Jetty..... | Reconstruction; making and depositing concrete; Humboldt Bay, Cal. |
| B..... | Pier..... | Beam and floor reinforcement; superstructure; Balboa terminals, Panama Canal. |
| C..... | Jetty..... | Reconstruction; cars loaded with concrete material; railroad ties embedded in concrete; concrete top of jetty; Humboldt Bay, Cal. |
| D..... | Jetty..... | Reconstruction; concreting top; crest of old jetty at low water shown in background; Humboldt Bay, Cal. |
| Plate 13: | | |
| A..... | Piles..... | Concrete piles, casting and aging, Missouri River. |
| B..... | Piers..... | Concrete superstructure center pier, St. Marys Locks and Canal, Mich. |
| C..... | Jetty..... | Pile driver, mouth of Columbia River. |
| Plate 14: | | |
| A..... | Dike..... | Rubblestone dike, across flats; showing spall bed on which rubblestone was laid; Provincetown Harbor. |
| B..... | Dike..... | Concrete pile dike; building forms for concrete bracing work; Missouri River. |
| C..... | Jetty..... | Pile jetty; Cowlitz River. |
| Plate 15: | | |
| A..... | Dam or dike..... | Closing dam across chute, upper Mississippi River. |
| B..... | Dike..... | Building piling or hurdle dike, central rivers. |
| C..... | Dike..... | Wooden pile dike; plant and supervision furnished at private firm's expense. |
| D..... | Dike..... | Rubblestone dike, Provincetown Harbor. |
| E..... | Dike..... | 3-row standard dike under construction; land pile driver in operation; Missouri River. |
| Plate 16: | | |
| A..... | Dikes..... | Spur and longitudinal dikes, upper Tennessee River. |
| B..... | Dikes..... | Spur and longitudinal dikes, French Broad River. |
| C..... | Dike..... | Concrete pile dike; dike partly braced; workmen pouring concrete into the forms; Missouri River. |
| D..... | Dike..... | Concrete pile dike, before mattress and bracing in place, Missouri River. |
| Plate 17: | | |
| A..... | Barrier or dike..... | Yuba River, Cal. |

| B..... | Locks..... | Lower gates and temporary operating house, Black Rock, N. Y. |
| C..... | Lock gates..... | Various gates, Gatun, Panama Canal, under erection. |
| Plate 41: | | |
| A..... | Lock site..... | Beginning construction, Gatun, Panama Canal. |
| B..... | Locks..... | Construction, Pedro Miguel, Panama Canal. |
| C..... | Lock..... | Construction, No. 19, Ohio River. |
| Plate 42: | | |
| A..... | Dam, movable..... | No. 18, Ohio River. |
| B..... | Dam, movable..... | No. 1, Allegheny River; bear trap dam raised. |
| C..... | Dam, movable..... | No. 1, Allegheny River; bear traps lowered. |
| D..... | Dam, movable..... | No. 26, Ohio River; placing wickets, navigable pass. |
| Plate 43: | | |
| A..... | Dam, movable..... | No. 18, Ohio River; wickets up. |
| B..... | Dam, movable..... | No. 1, Ohio River; raising Chanoine wickets. |
| C..... | Dam, movable..... | No. 41, Ohio River; Boule section. |
| D..... | Dam, movable..... | No. 4, Ohio River; Chanoine wickets up. |
| Plate 44: | | |
| A..... | Dam, emergency..... | Gatun Locks, Panama Canal; ready to swing across lock. |
| B..... | Dam, emergency..... | Operating machinery, St. Marys River, Mich. |
| C..... | Dam, emergency..... | Gatun Locks, Panama Canal; dam lowered in lock. |
| D..... | Dam, emergency..... | Gatun Locks, Panama Canal; east emergency dam subjected to head of 50 feet of water, May 6, 1914. |
| E..... | Dam, emergency..... | Lowering wickets, St. Marys River, Mich. |
| Plate 45: | | |
| A..... | Canal..... | West Neebish rock cut, St. Marys River Canal, Mich. |
| B..... | Canal..... | Completed section, Dalles-Celilo, Columbia River. |
| C..... | Canal..... | Completed section, Dalles-Celilo, Columbia River. |
| D..... | Canal or waterway..... | Clearing right of way through swamp, inland waterway, Pamlico Sound to Beaufort Inlet, N. C. |
| E..... | Canal..... | Excavation, Panama Canal. |
| Plate 46: | | |
| A..... | Cranes..... | Unloading sand, Panama Canal. |
| B..... | Excavation..... | Rock excavated to natural slope, by steam shovels, Balboa Terminals, Panama Canal. |
| C..... | Quarrying..... | Loading rock on cars, Toro Point quarry, Panama Canal. |
| D..... | Excavation..... | Lock site, Gatun, Panama Canal. |
| E..... | Rockwork..... | Rock car used in construction of jetties, Columbia River mouth. |
| Plate 47: | | |
| A..... | Excavation..... | Culebra Cut, between Gold and Contractors Hills, Panama Canal, 1890, looking south. |
| B..... | Excavation..... | Culebra Cut, looking north from Contractors Hill, Dec. 28, 1907. |
| C..... | Excavation..... | Culebra Cut, looking south from Contractors Hill (excavation completed south of Cucaracha slide), July 19, 1913. |
| Plate 48: | | |
| A..... | Canal slides..... | Culebra Cut, Cucaracha, looking north from west bank, Dec. 9, 1913; dredges operating. |
| B..... | Canal slides..... | Culebra Cut, Culebra, Panama Canal; blasting channel through Cucaracha slide, looking north, Oct. 16, 1913. |
| C..... | Canal slides..... | Culebra Cut, Culebra, Panama Canal; looking south from top of Contractors Hill, Cucaracha slide to the left, Dec. 3, 1913. |
| D..... | Canal slide..... | Rock slide, Panama Canal; excavator smothered. |
| Plate 49: | | |
| A..... | Canal excavation..... | Canal trunk excavated in solid rock, Dalles-Celilo Canal, Columbia River; steam-shovel work. |
| B..... | Lock excavation..... | Rock excavation, by derricks, Dalles-Celilo Canal, Columbia River. |
| C..... | Canal excavation..... | Deepest cut, Panama Canal, Culebra Cut. |
| Plate 50: | | |
| A..... | Excavation, hydraulic..... | Stripping hill, Panama Canal. |
| B..... | Excavation..... | Steam shovel on skids, tunnel work, Panama Canal. |
| C..... | Rock blasting..... | Charge of dynamite fired from 25 holes, Willamette River. |
| Plate 51: | | |
| A..... | Excavation..... | Pipe line dredge working below Keokuk, Iowa, upper Mississippi River. |
| B..... | Excavation..... | Hydraulic dredging, suspended or fixed pipe line, San Pablo Bay, Cal. |
| C..... | Excavation rock..... | Drill rafter and tender, with drills at work, Tuscumbia Bar, Tennessee River. |
| D..... | Excavation..... | Floating pipe-line arrangement, hydraulic dredging, San Pablo Bay, Cal. |

| Plate and figures. | Construction. | Remarks. |
|--------------------|---------------------------|--|
| Plate 52: | | |
| A..... | Dredging..... | 20-inch suction dredge with ponton pipe or discharge line at work, Oakland Harbor, Cal. |
| B..... | Dredging..... | United States pump boat working, Savannah River, below Augusta, Ga. |
| C..... | Dredging..... | Dredging and disposal of material ashore, inland waterway, Pamlico Sound to Beaufort Inlet, N. C. |
| Plate 53: | | |
| A..... | Dredge..... | Burton. |
| B..... | Dredge..... | Pipe-line dredge Morgan, used to rehandle dumped material from sea goers in specially prepared pockets. |
| C..... | Dredge..... | Pump boat Augusta, showing cutter, and A frame. |
| D..... | Dredge..... | Savannah, running light. |
| E..... | Dredge..... | Atlantic. |
| F..... | Dredgings..... | Extension or Governors Island, New York Harbor, from dredgings, etc. |
| Plate 54: | | |
| A..... | Dredge..... | New Orleans. |
| B..... | Dredge..... | New Orleans. |
| C..... | Dredge..... | Tennessee working on Tuscumbia Bar, Tennessee River. |
| D..... | Snag boat..... | Dredging shoal, Yazoo River. |
| E..... | Dredge..... | Dipper dredge Ohio. |
| Plate 55: | | |
| A..... | Dredge..... | Savannah loaded. |
| B..... | Dredge..... | Dipper dredge Cheraw removing hard material, Winyah Bay, S. C. |
| C..... | Derrick boat..... | Removing rock shoals, Ocmulgee River, vicinity of Hawkinsville; rock is first blasted, then handled with orange-peel bucket; dump shown in background. |
| D..... | Dredge and pipe line..... | Dredge, floating pipe line, and trestle pipe line, Oakland Harbor, Cal. |
| E..... | Dredge..... | Clatsop. |
| Plate 56: | | |
| A..... | Dredge..... | Alabama working at head of canal, above Lock No. 1, Muscle Shoals Canal, Tennessee River. |
| B..... | Snag boat..... | Macomb, Mississippi River. |
| C..... | Snagging plant..... | Towboat Iroquois and derrick boat Mingot, Ohio River. |
| D..... | Snagging..... | Tree withdrawn from waterways, central rivers. |
| Plate 57: | | |
| A..... | Revetment and banks..... | Hydraulic bank grading, for revetment, Bates Island Bend, Missouri River. |
| B..... | Bank work..... | Protection, front of Augusta, Ga., showing pavement, sub and top. |
| C..... | River floating plant..... | Portion shown, Mississippi River. |
| D..... | Revetment and banks..... | Bank slopes, Mississippi River. |
| E..... | Banks..... | Paving, Savannah River at Augusta, Ga.; plant used to excavate trench at toe of slope; method of handling rock to fill same. |
| Plate 58: | | |
| A..... | Revetment and banks..... | Standard, 1899; Pelican Bend, Missouri River. |
| B..... | Barge..... | Material barge construction, United States engineer depot, Mississippi River. |
| C..... | Banks..... | Paving, Mississippi River. |
| D..... | Banks..... | Paving with stone, Mississippi River. |
| Plate 59: | | |
| A..... | Quarter boat..... | For employees, Mississippi River Commission, Mississippi River. |
| B..... | Banks..... | Rubble slope lining, gravel section, Dalles-Celilo Canal, Columbia River. |
| C..... | Banks..... | Placing concrete slope lining, gravel section, Dalles-Celilo Canal, Columbia River. |
| D..... | Banks..... | Paving; placing reinforced concrete, Arkansas River. |
| Plate 60: | | |
| A..... | Paving..... | Slope, Gatun Lake, Panama Canal, Gatun Dam. |
| B..... | Banks..... | Ice piled in bends, Mississippi River. |
| C..... | Bank and shore..... | Protection, upper Mississippi River. |
| D..... | Banks..... | Concrete bank paving, reinforced, Arkansas River. |
| E..... | Revetment..... | Finished revetment of concrete pavement and willow mattresses, Missouri River. |
| Plate 61: | | |
| A..... | Revetment..... | Mattress weaving, beginning stitch, Missouri River; hydraulic grading in background. |
| B..... | Revetment..... | Mattress weaving, near Sioux City, Iowa, Missouri River. |
| C..... | Revetment..... | Mattress weaving on ice, Missouri River, Williston, N. Dak. |
| D..... | Revetment..... | Mattress weaving; preparations for sinking mattresses, Mississippi River. |
| Plate 62: | | |
| A..... | Revetment..... | Framed mattress for river revetment ready to be sunk, Mississippi River. |
| B..... | Revetment..... | Sinking mattress, Mississippi River. |
| C..... | Revetment..... | Brush and pole mattress work, Trinity Bend, Arkansas River. |
| D..... | Revetment..... | Making mattress, Mississippi River. |
| E..... | Revetment..... | Brush and pole mattress work, Trinity Bend, Arkansas River. |

| Plate and figures. | Construction. | Remarks. |

Abatts.

Shore protection, Missouri River, **01**, S., 398, 401.

Abutments. (See Bridges; Dams; Gates; Locks.)

Building, dams, **97**, 2550.
Building, locks, **00**, 3507.
Building, movable dams, **97**, 2548.
Designing, dams, **00**, 2983.
Designing, lock gates, **00**, 2975.
Deterioration, locks, **93**, 2493.
Failure of, dams, **04**, 3767.
Floods, destroyed by, locks, **03**, 1421.
Grading, locks, **00**, 3511.
Locks, **98**, 2482; **04**, 3763.
Plans of, dams, H. D. 263, 59th, 1st.
Protecting, locks, **00**, 3511.
Quicksand flow, preventing, **98**, 2125.
Reconstruction, dams, **11**, 2106.
Repair, locks, **98**, 2143, 2149.
Sand and gravel for, bridges, **00**, 5444.

Abutments, Concrete.

Locks and dams, **01**, 2115; **04**, 2102.

Abutments, Crib.

Building, locks, **98**, 2125.

Accidents.

Blame difficult to fix, bridges, **07**, 1829.
Liability of vessel owners, **07**, 1825.
Locks, Great Lakes, **09**, 2069.

Accounts.

Rock; accounts, keeping, **93**, 1500.

Accretions. (See Banks; Canals; Rivers; Shores; Waterways.)

Bankheads, due to, **98**, 3530.
Breakwaters, vicinity of, **93**, 2743; **96**, 3140.
Dikes, due to, **93**, 427; **95**, 2217, 2218.
Jetties, vicinity of, **93**, 3141, 3494; **97**, 3372.
Phenomenal growth, H. D. 1506, 60th, 2d.
Piers, vicinity of, **97**, 2779.

Acids.

Lock gates affected by acids in waterways, **09**, 1761.
Locks and dams affected by acids in water, **11**, 2110.

Acts of Congress. (See Index of Laws.)

Mississippi River Commission, relating to, **95**, 3730.

Advertising.

Clear authority necessary, H. D. 641, 60th, 1st.
Objections to, wreck removing, **94**, 606.

Aeration.

Cement, effect on, **95**, 2924.

Agitator.

Hydraulic dredges, **98**, 3170, 3305.

Agreements.

Copy of, between wharf owners and public, H. D. 593, 61st, 2d.

Agriculture.

The only unprotected industry, discussion of, **74**, 608.

Air Bags.

Bear-trap gates, raising, **96**, 1840.
Weirs, raising, **93**, 2265.
Wrecks, raising, **98**, 1234.

Air, Compressed.

Power plant, **00**, 2769.
Power, transmitting, **98**, 1810.
Steam preferable to, rock drilling, **98**, 1952.

Air Compressor.

Turbine auxiliary plant, locks, **11**, 2109.

Air Exposure.

Dams, effect on, **87**, 2107.
Rock, softening of, **99**, 1426.

Air Spaces.

Concrete walls, **97**, 631; **99**, 786; **00**, 849, 978.
Not necessary, San Diego climate, **01**, 923.

Allotments. (See Appropriations.)

Points kept in view, fortifications, **96**, 9.

Amazon River.

Navigation of, Sen. D. 301, 61st, 2d.

Ammunition. (See Fortifications, p. 1793 of this Index.)

Handling, crane, **00**, 850.
Handling, hoists, etc., **93**, 610; **97**, 631; **99**, 795; **00**, 853, 857, 898.
Handling, hydraulic lifts, **05**, 3015.

Anchorage. (See Dredges; Vessels.)

Areas for, increasing, Portland, Me., H. D. 489, 62d, 2d.
Current, against; dredges, **93**, 2449.
Factors justifying construction, Fall R. H., H. D. 778, 61st, 2d.
Guns, **02**, 2466.
Harbor capacity for, determining, **84**, 579; **85**, 531.

Anchorage Area.

Determination of, **84**, 579; **85**, 531.
Various vessels, **84**, 585.

Anchorage Basin.

Hyannis, **95**, 656.

Anchor Bolts.

Grouting-in of, **00**, 2782.
Setting, **93**, 2826; **94**, 453.
Setting, without templets, gun platforms, **96**, 536.
Stripping of threads, lock gates, **11**, 2109.

Anchor, Disk.

Anchor piles substitute, **01**, 2195.
Hurdles, **01**, 2223.
Jetties, **01**, 2221.

Anchor Rods.

Concrete sea walls, **05**, 3026.

Anchors. (See Gates, Lock.)

Dredges, **01**, 2263; **02**, S. 44.
Holding power, **72**, 211.
Lock gates, **00**, 2982.
Mattresses, **03**, 2441.
Mooring buoys, attached to screws, **73**, 294.

Anemograph.

67, 595.

Records, Milwaukee, 67, 594, 755.

Angle Measuring.

Triangulation, 94, 3325; 95, 4167, 4216.

Angle Reading.

94, 3409.

Angles, Observed.

Errors, triangulation, 73, 1178.

Appropriations. (See p. 21 of this Index.)

Allotment of, points kept in view, fortifications, 96, 9.

Consolidated, advantages of, 01, 2049.

Division between Federal and State appropriations, waterways, Sen. D. 301, 61st, 2d.

Illogical, by States, waterways, 01, 1996.

Insufficient app. useless, wreck removal, "Maine," H. D. 919, 61st, 2d.

R. and H. app. should be in proportion to local enterprise, H. D. 1067, 61st, 3d.

Steps necessary before making, waterways, Sen. D. 301, 61st, 2d.

Appropriations, continuing; economy of, 01, S. 4.

Aprons. (See Blast; Concrete; Cribs; Weirs.)**Aqueduct Bridges.**

Design, 82, 2037; 86, 934, 942; 87, 902, 908.

Details, 96, 2670.

Potomac River, 76, 333.

Repairing, 97, 3988.

Aqueducts. (See Bridges; Washington Aqueduct, D. C., Miscellaneous Index.)

Capacity, study, H. D. 342, 61st, 2d.

Concrete, piers, 98, 2482.

Concrete, use of, 87, 2547.

Flow, gauging, 97, 4014.

Illinois and Mississippi Canal, 08, 2020.

Lining, 08, 2020.

Mammoth Hot Springs, 03, 2476.

Muscle Shoals Canal; cleaning, 01, 2446.

Sections, H. D. 342, 61st, 2d.

Sides, strengthening, 02, 1737.

System; Washington, D. C., 77, 1089; 01, 3651.

Tennessee River, 85, 1758.

Arches. (See Stone; Tunnels.)

Stability, P. P. No. 7, C. E.

Arid Regions.

Precipitation, reservoirs, effect, 98, 2865.

Reservoir sites, 98, 2819, 2821, 2842, 2869, 2872, 2878.

Reservoir systems, development of, 98, 2875.

Reservoirs, study of, 98, 2815.

Run-off, 98, 2875.

Watersheds, list of, 98, 2914.

Armor.

Coast defense, 87, 8.

Army.

Militia and, functions, seacoast defense, 81, 402.

Artillery.

Artillery officers added to Board of Engineers, 01, 5.

Arts, Commission of.

Formed to advise public officers, Washington, D. C., 12, 3517.

Asphaltic Concrete.

96, 534, 535.

Asphalting. (See Forts, p. 1793 of this Index.)**Assessments.**

Canal work, 09, 883; 10, 933; H. D. 953, 60th, 1st.

Astronomical Observations. (See Azimuth; Surveys.)

Data concerning, index to, Mississippi River, 95, 3703.

Field observatory, Willets Point, 81, 434.

Resurveys, 94, 332.

Surveys, 97, 4076.

Triangulation, 93, 4348; 96, 4025.

Willets Point, 80, 307; 81, 433; 82, 458; 84, 438; 85, 436.

Attacks.

Seacoast, plans, 80, 8; 81, 401.

Axles.

Lock gates, 11, 2138.

Azimuth Observations.

94, 3387.

B.**Backfilling.** (See Filling.)**Backing, Dry Rubble.**

Voids in tunnels, 99, 3803; 00, 5213.

Backwater.

Deposits, causes of, 97, 1967.

Determining, slack-watering, Mississippi River, H. D. 50, 61st, 1st.

Results of, rivers, 97, 1967.

Bacteria. (See Water Supply.)**Balance.**

Tapes, measuring, 93, 1926.

Ballast. (See Cribs; Filling; Gravel; Rock.)

Experiments, cribs, 02, 2546.

Mattresses, 03, 2442.

Space occupied, cribs, 99, 2639.

Weights for, piers, 04, 3802.

Ballast, Concrete.

Banks, 03, S., 309; 04, S., 278.

Cost, 02, S., 155; 04, S., 278.

Making, 01, S., 357; 02, S., 154.

Mattress work, 01, S., 410.

Ballasting. (See Filling; Mattresses.)

Brush and stone dam, 94, 2893.

Cribs, 99, 2634.

Mattresses, 00, 4921.

Ballasts. (See Vessels.)**Bankheads.** (See Missouri River.)

Accretions due to, 98, 3530.

Bank protection, efficiency in, 98, 3472; 99, 3709.

Building, 97, 3919; 98, 3514.

Experiments, 97, 3844.

Remodeling, 99, 3717.

Bankheads—Continued.Successful, **02**, S., 201.

Types, Missouri River, H. D. 1120, 60th, 2d.

Banks. (See Canals; Caving; Dams; Dikes; Embankments; Levees; Mississippi River, Vol. I; Revetment, and Mattresses. See plates.)Abrasions, **75**, II, 498.Angles, erosion, spurs to prevent, **97**, 3818.Building, hurdles for, **98**, 1698.Caving, **75**, II, 519; **00**, 4963; **05**, S., 196; H. D. 50, 60th, 1st.Caving, causes, sand stratas, **00**, 3189.Caving, checking, bayous, **96**, 1498.Caving, data, index to, Mississippi River, **95**, 3705.Caving, falling stages, **72**, 436; **78**, 615.Caving, Memphis, **80**, 1339.Caving, Mississippi River, **75**, 558, 608; **78**, 84; **79**, 976, 979.Caving, peculiar caving, **78**, 730.Caving, preventing, spur dikes for, low cost of, **98**, 3415.Changes in; cultivation, due to, **78**, 846.Concreting, dikes, **10**, 1842.Dams, **68**, 448; **73**, 232.Dams, effect of, **73**, 232.Dams, effect of, rivers, **76**, II, 408.Erosion, preventing, hurdles for, **98**, 1704.Erosion, preventing, spurs for, **97**, 3818.Erosion, preventing, rivers, **98**, 1777.Erosion, protection against, **94**, 2709.

Flood control, H. D. 81, 62d, 1st.

Floods, effect of, **79**, 1011.Garonne River, **72**, 839; **76**, II, 279.Graders, **92**, 3162.

Grading. (See Hydraulic grading.)

Grading, blasting abandoned for, **95**, 3831.Grading, handwork expensive, **95**, 3831.Grading, machines for, **92**, 3162; **05**, S., 213.Grading, Mississippi River, **93**, 3714.Grading, Missouri River, **03**, 2440.Grading, pile driver used for, **99**, 2156.Grading, scraper and floating derrick, **01**, 2225.Grading, water jet, **80**, 1444-1448; **81**, 1502,1611; **82**, 1504, 1576, 1685, 1688, 1691, 1701,1715; **83**, 1228, 1231, 1310, 1315, 1320, 1325,2296; **84**, 2765, 2780, 2799, 2801, 2836; **85**, 2775,2949; **87**, 2915.

Height, Altamaha system, H. D. 443, 62d, 2d.

Height, difference in, rivers, **79**, 1009.Hydraulic grading, **95**, 3774, 3825, 3830; **00**, 4913.Lines of, resurveys of, data, index to, Mississippi River, **95**, 3705.

Movement, canals; Delaware & Chesapeake, H. D. 391, 62d, 2d.

Movement of, checking, lock building, **99**, 3237.Pavements, **93**, 3729.Paving, methods of, **95**, 3774; **00**, 4913.Peculiar caving of, Red River of the North, **78**, 730.Points, holding, plan for, **97**, 3539.Preservation, Fort Riley, **11**, 2020.Protection, **93**, 2161; **00**, 4913.Protection, bankheads, **99**, 3709.Protection, bankheads, efficiency of, **98**, 3472.**Banks—Continued.**Protection, best methods, **97**, 3770.Protection, borings, **94**, 2881.Protection, checking, **01**, 2192.

Protection, costly, Missouri River, H. D. 862, 62d, 2d.

Protection, curtains, **99**, 3706.Protection, curtains, building, **94**, 1597.Protection, dams, above and below, **94**, 2108.Protection, dikes, **99**, 3505.Protection, dikes, building, **96**, 1879.Protection, fascine mats, **94**, 2904.Protection, framed mattresses for, advantages of, **97**, 3799.Protection, gabions, **99**, 3720.Protection, general plans for, Mississippi River, **97**, 3536.Protection, grading for, **94**, 2901, 2885.Protection, groins for, **99**, 3717, 3720.Protection, hydraulic grading, **96**, 3613.Protection, mattresses for, **94**, 1386; **01**, 2212.Protection, mattresses, building, **96**, 1879.Protection, Mississippi River, **96**, 3419, 3439.

Protection, Missouri River, H. D. 50, 61st, 1st.

Protection, paving, **94**, 2902; **93**, 3729; **02**, S., 154; **03**, 2443; **11**, 2003.Protection, pike and brush, rivers, **96**, 1400.Protection, regulation of private dredging, **12**, 2340.Protection, revetment, Mississippi and Missouri River types, **01**, S., 398; H. D. 638, 62d, 2d.

Protection, river and harbor improvements S. D. 301, 61st, 2d.

Protection, riprapping, Missouri River, **10**, 1826.Protection, spur, **99**, 3590.Protection, structures, Mississippi River, **94**, 1594.Protection, temporary expedients, **99**, 2079.Quicksands, effect of, **00**, 2845.Revetment, building, **96**, 3824; **00**, 2870, 3824, 4350.Revetment, mattresses, **97**, 2205.Rivers; dams, effect of, **76**, II, 408.Rivers, rectification, **72**, 839; **76**, II, 279, 285; **78**, 255.Sliding of, preventing difficult, **00**, 2846.Slopes, consistency with river improvements, **76**, 374; **76**, II, 284.

Sloughing, Altamaha system, H. D. 443, 62d, 2d.

Surfaces, protecting, grass and oats for, **98**, 1919.Width of, Mississippi River, **78**, 841, 844, 847.**Banks, Caving.**

Types, Altamaha system, H. D. 443, 62d, 2d.

Banks, Revetted. (See Banks.)Floods, effects, **98**, 1658.**Banks, Soft Sand.**Holding, **98**, 1702.**Banks, Stable.**

Types, Altamaha system, H. D. 443, 62d, 2d.

Banks, Yellow.Protecting, **95**, 2184.**Banquettes.**Levees, **99**, 3575.

Barge Loads.

- Weighing, displacement method, **94**, 2503.
- Weighing, displacement method not satisfactory, **94**, 1392.
- Weight, determining, **99**, 3265.

Barges. (See Boats; Mattresses; Scows; see plates.)

- Building, **96**, 1662.
- Building schooners and; cost, H. D. 391, 62d, 2d.
- Coal transportation, **97**, 3202.
- Commerce by, cheapest, **04**, 1390.
- Concrete ballast, making, **01**, S., 358; **02**, S., 154.
- Concrete, blocks, making, **01**, S., 358.
- Economical, freight, **01**, 1521-1540.
- Mooring, mattress work, **94**, 2899.
- Piping, supporting, dredging, **01**, 1883.
- Self-dumpers, **00**, 4192.
- Steel barges, special, Ohio River, H. D. 492, 60th, 1st.
- Stone, transfer of, **01**, S., 253.
- Tonnage leaving Duluth, H. D., 263, 59th, 1st.
- Towing system, Ohio River, **04**, 2434.
- Traffic of, Great Lakes, H. D. 263, 59th, 1st.

Barges, Stone. (See Barge Loads.)

- Displacement, measuring, **02**, 2511.

Barge Traffic.

- Canals, **96**, 3060.
- Rivers, **96**, 3060.

Barometers.

- Mercurial and aneroid, comparison of, **81**, 451.
- Surveys, use in, P. P. No. 15, C. E.
- Temperature, effect of, **75**, ii, 971.

Barriers. (See plates.)

- Ice, against, **73**, 874, 877.
- Building, mining stream, **05**, 2590.
- Details, river improvements, **04**, 3700; **05**, 2602.
- Inlet wall, rivers, **06**, 2078.
- System, river protection, **07**, 2265.

Bars. (See Channels; Dredging; Gravel; Harbors; Jetties; Piers; Rivers; Shoals.)

- Changes in river mouths, **93**, 3354.
- Channels through, changes in, **94**, 1006, 1271; **96**, 1307.
- Channels through, changes in, dimensions, Mississippi River, **12**, 3839.
- Channels through, changes in, Dohoy Bar, **97**, 1545.
- Channels through, changes in, Ocracoke Inlet, **94**, 1006.
- Channels through, changes in, Pensacola Harbor, **94**, 1271.
- Channels through, dredging, sand movement, obliteration by, **98**, 2891.
- Channels through, obtaining, **96**, 1293; H. D. 287, 62d, 2d.
- Channels through, opening of, desirable methods, **98**, 1391.
- Channels through, scraping of, rake for, **98**, 2877.
- Crest, movement of, Southwest Pass, **99**, 1895.
- Dikes effective, sand bars, **01**, 1661.
- Dredging, effect of, Mersey Bar, England, **00**, 2301.
- Dredging, economical, South Atlantic coast, **01**, 1662.

Bars—Continued.

- Dredging, over rough bars, **03**, 2296.
- Dynamite, effect of, Brunswick Outer Bar, **96**, 1280.
- Dynamite, efficacy of, with jetties and dredging, **01**, 1664.
- Experimental dredging, Mississippi River, **95**, 3623.
- Floods, effect of, **75**, ii, 477, 507; **79**, 1010.
- Floods, effect of, rivers, **79**, 1010.
- Formation, causes of; piers, faulty design of, **98**, 2246; **99**, 2709.
- Formation, causes of, freshets, rivers, **76**, ii, 541.
- Formation, causes of, storms, rivers, **68**, 111; **77**, 967.
- Formation, checking, pier ends, **95**, 3118; **96**, 2933.
- Formation, checking, relocation of, **96**, 2933.
- Formation, Connecticut River, **78**, 267.
- Formation, deltas, **74**, 804; **76**, 449, 458.
- Formation, deposits a cause, behind dams, **11**, 1581.
- Formation, jetties, effect of, **11**, 2611.
- Formation, jetty channels, **99**, 1595.
- Formation, jetty ends, **94**, 2578.
- Formation, Mississippi River, **74**, 804, 863, 865; **75**, 959, 967, 979; **76**, ii, 179; **78**, 842; **79**, 1010, 1892, 1967.
- Formation, Missouri River, H. D. 1287, 61st, 3d.
- Formation, opposing tides, rivers, **74**, ii, 35.
- Formation, retarding, triangular cribs at end of piers, **95**, 3118.
- Formation, rivers, **72**, 108, 132, 139, 142; **74**, 804, 863, 865; **75**, 959, ii, 457, 474, 476, 477, 484, 502, 504; **76**, 449.
- Formation, rivers, mouths of, **66**, iv, 236; **67**, 376; **68**, 111; **70**, 330; **72**, 242, 244; **73**, 335; **74**, 835, 855; **75**, 311, 959, 967, 979; **77**, 431, 967; **78**, 582, 585.
- Formation, Southwest Pass, **99**, 1869.
- Formation, theory of, Great Lakes, **03**, 2084.
- Formation, theory of, Jamaica Bay, H. D. 1506, 60th, 2d.
- Formation, theory of, Mississippi River, **05**, 1641.
- Formation, tidal rivers, **67**, 421.
- Growth of, Beaufort, **94**, 1032.
- Growth of, piers, vicinity of, **93**, 3098; **95**, 3139.
- Growth of, rivers, mouth of, **00**, 2290.
- Growth of, rivers, mouth of, Mississippi River; **68**, 483; **70**, 322; **74**, 835, 855; **75**, ii, 477, 484, **77**, 429, 430.
- Harbor entrances, **97**, 2779.
- High water, effect of, rivers, **72**, 132.
- Holding, willows for, **97**, 2095.
- Hydraulic dredging of, **96**, 1378.
- Improvement of, at intervals, from 1823, St. Johns Bar, Fla., H. D. 611, 61st, 2d.
- Jetties, channels, **95**, 1601. (See Dynamite, above.)
- Jetties, effect of, **93**, 3316; **95**, 1798; **97**, 2016; **00**, 4470; **05**, 802; H. D. 340, 59th, 2d; H. D. 29, 61st, 2d, H. D. 349, 62d, 2d.
- Jetties, not successful solely, South Atlantic coast, **01**, 1662.
- Length of, Mississippi River, **78**, 841.
- Lines of, and revetments, **05**, S., 196.

Bars—Continued.

- Motion wavelike, rivers, **75**, ii, 502, 504, 507; **76**, 449; **79**, 1751, 1757, 1759, 1892, 1967.
Movement of, controlling, river mouths, **96**, 1907.
Movement of, harbors, **96**, 1190.
Movement of, jetties, effect of, **94**, 2568.
Opposing tides, confluence of, **74**, ii, 35.
Origin, Mississippi River, **83**, 2373.
Portable jetties, effect of, **97**, 2016.
Principles of action of natural forces on, **01**, 1667.
Progressive motion, rivers, **75**, ii, 477, 484; **76**, ii, 179, 256, 402.
Rapid forming of; piers, vicinity of, **96**, 3100.
Removing, dredging, successful, Savannah, **09**, 1321.
Removing, fine methods, **01**, 1664.
Removing, Mississippi River, **05**, 1641.
Removing, water jet for, rivers, **68**, 671; **69**, 310; **79**, 383, 384.
Rivers, widths of, increasing, **78**, 842.
Sand spits, effect of, **93**, 3451.
Scraping, channels, **98**, 2977.
Scraping, rake for, **98**, 2977.
Sparring boat over, **68**, 628.
Surveying, **97**, 1638.
Tides, effect of, harbors, **96**, 1190.
Triangular cribs, effect of, **95**, 3118.
Unusual shape of; piers, vicinity of, **93**, 3082.
Vegetation on, starting of, experiments with willows, **98**, 1786.
Volumes of, computing, **95**, 1649.
Wave action, **81**, 676-685; **82**, 685.

Bars, Artificial. (See Rivers.)**Bars, Ocean.**

- Deepening difficult, **01**, 1709.
Dredging successful, **11**, 423.

Bars, Sand.

- Loose are packed natural, **02**, 2502.
Spur dams ineffective, **01**, 1661.

Base Lines. (See Surveys; Triangulation.)

- Coast surveys, **68**, 939.
Galveston, **00**, 2312.
Lakes, **70**, 549.
Lakes, agreement on, **70**, 549.
Lakes, length on, **70**, 544.
Measurements, **86**, 2952; **88**, 1109; **89**, 1592; **90**, 1830, 1836, 1839, 1844, 3403; **91**, 2871; **92**, 1331; **93**, 4360; **95**, 4230; **98**, 1500, 3748; **00**, 2312.
Measurements, apparatus, **98**, 1498; **93**, 1926.
Measurements, apparatus, lake survey, **68**, 939; **78**, 1406.
Measurements, careful measuring, **68**, 138.
Measurements, Chicago base, **78**, 1401.
Measurements, Crystal River, **00**, 2082.
Measurements, data, index to, Mississippi River, **95**, 3703.
Measurements, Galveston, **98**, 1497; **00**, 2312.
Measurements, Jacksonville, **87**, 1227.
Measurements, lake survey, **68**, 941; **71**, 982, 991; **74**, ii, 444; **75**, ii, 901; **77**, 1123.
Measurements, Mackinac, **97**, 4077; **98**, 3747.
Measurements, Mississippi River survey, **78**, 1381.
Measurements, Red River, **93**, 1926.

Base Lines—Continued.

- Measurements, Soo, **93**, 4360.
Steel tape, **87**, 2943, 2952, 3124; 500-f., **95**, 4230.
Tapes, **87**, 3124; **89**, 2759.
Tapes, correction of, **94**, 2729.
Remasuring, Mackinac, **97**, 4077.
Secondary triangulation, Missouri River, **94**, 3113.

Basements.

- Public buildings, **01**, 3806.

Base Rings.

- Leveling, gun carriages, **00**, 977.
Setting, gun carriages, **00**, 935.

Bases.

- Columns, building, **04**, 3860.

Bases, Secondary.

- Index to data, Mississippi River, **95**, 3703.

Basin, Artificial.

- Brownlow weed, rivers, **78**, 640, 654; **79**, 1014, 1054, 1058, 1061, 1070, 1077, 1080, 1088.

Basin, Expansion.

- Breakwater, right type, experiments, Great Lakes, **06**, 1821.
Helpful, Great Lakes, H. D. 62, 59th, 1st.

Basin, Filling.

- Locks, St. Marys, H. D. 716, 61st, 2d.

Basin, Harbor.

- Plans, new harborage, Jamaica Bay, H. D. 1506, 60th, 2d.

Basin, Interior.

- Enlarging, Grand Marais, H. D. 939, 60th, 1st.

Basin, Settling.

- Mining debris, **00**, 5059.

Basin, Ship.

- Details, Stamford, Conn., **08**, 1024.

Basin, Stilling.

- Breakwater, Duluth, H. D. 221, 60th, 1st.

Basin, Tidal.

- Enlarging, Keweenaw Waterway, H. D. 40, 62d, 1st.
Tides, velocity, **73**, 893; **74**, ii, 276, 279; **78**, 558.

Basin, Turning.

- Dimensions, openings, H. D. 317, 61st, 2d.
Practicability of, lieu of wider channels, Milwaukee, H. D. 667, 61st, 2d.

Basins.

- Drainage, California rivers, H. D. 262, 59th, 1st.

Battallon. (See Miscellaneous, p. 2035 of this Index.)**Batteries. (See p. 1793 of this Index.)****Batteries, Barbette.**

- Guns, cover for, **69**, 5.
Unreliable, 1878, **78**, 4.

Batteries, Storage.

- Electric lighting, forts, **98**, 679.

Battlefields.

- Surveys, **74**, ii, 476.

Bayous.

- Mouths of, bank caving, checking, **96**, 1498.

Bays.

- Bottom, ascertaining character, **01**, 2906.
Deposits in, checking, **93**, 3469.

Bays—Continued.

- Entrance channels, Jamaica Bay, H. D. 1506, 60th, 2d.
 Harbor location, Monterey Bay, Cal., H. D. 1084, 61st, 3d.

Beaches. (See Shores.)

- Erosion, effect of jetties on, Bridgeport, Conn. H. D. 89, 62d, 1st.
 Erosion, preventing, Sandy Hook, 82, 403; 95, 995.
 Erosion, progress of, Sandy Hook, 82, 404.
 Erosion, rate of, Cape Cod and vicinity, H. D. 821, 61st, 2d.
 Erosion, stone for preventing, 72, 897.
 Formation of, wave action on, 72, 107; 74, ii, 188.
 Outside lines, deterioration, H. D. 12, 61st, 1st.
 Protecting, 95, 510.
 Protecting, sea wall, effect of, 95, 995.
 Protecting, stone, effect of, 71, 884; 72, 896; 74, ii, 276.
 Sand movement, 02, 2505; H. D. 747, 61st, 2d.
 Storms, effect, H. D. 12, 61st, 1st.

Beach Grass.

- Shore protection, 67, 46; 73, 1098, 1101; 76, 179, 189; 78, 220; 79, 271, 936, 1746.

Beacons. (See plate 71.)**Beams.** (See Ceilings; I-beams. (See plate 12.)

- Ends of, best form, 83, 1486.
 Sand tightening, pile piers, 75, 243; 78, 1213; 79, 1659.
 Setting of, ceilings of batteries, 00, 898.

Beams, Wooden.

- Best form, 83, 1486.
 Revetments, sand tightening of, 75, 243; 78, 1213; 79, 1659.
 Tests, 83, 1486.

Bearings.

- Wear of, dredges; overcoming, 06, 1300.

Bear-trap Gates. (See Gates.)**Bed Rock.** (See Rock.)**Beds.** (See Rivers.)

- Character, bays, 01, 2906.
 River bed, Mississippi River. (See p. 1085 of this Index.)

Bench Marks.

- 02, 1467.
 Allegheny River, 99, 2446.
 Biloxi, Mississippi River, 99, 3486.
 Birmingham Canal, Ala., 99, 1761, 1770.
 Changes in, 00, 1353.
 Charlotte River to Detour, 97, 4119.
 Columbia River, 93, 3398; 95, 3542.
 Cypress Bayou, 93, 2079.
 Detroit River, 96, 2755.
 Great Lakes, list, 03, 2693.
 Kentucky River, 95, 2486.
 Lake Superior and Mississippi River Canal, 96, 2424, 2454.
 Mississippi River, 93, 2235, 3608, 3644; 94, 2758, 2768; 95, 3748; 96, 3522; 97, 3623; 98, 3218; 00, 4726, 4729, 4730, 4734.
 Mississippi River (mouth), 94, 2754.

Bench Marks—Continued.

- Mississippi River, upper, 99, 3393, 3408; 00, 4608.
 Missouri River, 93, 2306, 4089, 4210; 94, 1757, 3091, 3114.
 Monongahela River, 97, 2407; 00, 3231.
 Proper bench marks, necessity for, 71, 728.
 Red River, 93, 1951.
 Sault Ste. Marie and Waikua Bay, 94, 3426.
 Savannah Harbor, 96, 1224.
 Southwest Pass, 99, 1878.
 Stability, 93, 3621.
 Tennessee River, 93, 2366; 96, 1953.
 Warroad River, 01, 2360.
 Washington Monument, 98, 3670.
 West Fork River, 00, 3281.
 White River, 97, 2489.
 Yazoo River, 94, 1499.

Bench Marks, Permanent.

- Form, 98, 1606.
 Kalamazoo River, 98, 2540.
 Levees, 00, 4861.
 Making, 94, 2179.

Bends.

- Depth, effect on, rivers, 79, 1008.
 Protecting, H. D. 962, 60th, 1st.
 Regiment, effect on, 75, 575, ii, 488; 76, 296, ii, 265.
 Revetment, Mississippi River, 07, 2624.
 Rights across should be free to U. S., H. D. 523, 61st, 2d.
 Widths, proper, 05, 1496.

Beton Agglomerate. (See Cement; Concrete.)

- P. P. No. 19, C. E.

Bins. (See Dredges, Stone.)

- Leakage in, preventing, dredges, 93, 1498.

Blackboard.

- Recesses for, etc., forts, 05, 3032, 3033.

Black Powder.

- Composition of, 69, 429.
 Dynamite and explosions of, comparison, 68, 423; 77, 26.
 Nitroglycerin and, comparison, 68, 423, 738; 77, 27.
 Strength unimpaired under water, 73, 728.
 Wreck removing, 73, 728.

Blast Aprons.

- Batteries, 96, 534, 535.

Blasting. (See Channels; Drilling; Explosives;

- Rock; Stumps; Tunnels. See plates.)
 Ahnapee, 76, ii, 347, 357, 360.
 Ashtabula, 70, 179.
 Bank grading, abandoned in, 95, 3831.
 Bars, rivers, 70, 334.
 Batteries, firing, 68, 814; 69, 432.
 Batteries, firing, Hell Gate, 86, 687, 692.
 Batteries, firing, Waddington, 82, 2466.
 Below bottom, Rock Island Rapids, 69, 246, 247.
 Blast, amount of rock removed at, 69, 19.
 Blossom Rock, 68, 883; 69, 485; 70, 510; 71, 927, 933.
 Boston Harbor, 69, 430.

Blasting—Continued.

- Channels, **95**, 1501, 1621; **96**, 2065.
 Channels, examination of, **93**, 1586.
 Chiseling, drilling and, comparison, **79**, 1134.
 Columbia River, **69**, 475.
 Concrete structures, **94**, 477; **02**, 2471.
 Crater blasting, disadvantages of, **79**, 383.
 Crater explosions, preventing, **79**, 1507.
 Definite plane, difficulty of blasting to, **69**, 246.
 Depth of hole, rockwork, **01**, 1433.
 Dredging, aid to, **94**, 1407, 2473.
 Dredging and, hardpan, **95**, 3201.
 Dynamite from submarine mines used, **99**, 1329.
 Eagle Harbor, **76**, ii, 325, 327; **78**, 1134.
 Effect of, record of, **00**, 1731.
 Explosions, deep, **96**, 1932.
 Explosives, **91**, 2796.
 Explosives, arrangement of, **75**, ii, 200.
 Explosives, rock broken and, ratio, **68**, 423, 425; **69**, 19, 248; **71**, 733; **72**, 877; **73**, 935; **74**, ii, 39, 160; **75**, ii, 82; **76**, ii, 326, 545; **77**, 352; **79**, 61, 62, 379, 533, 535, 1135, 1508.
 Fuses for, Hell Gate, **86**, 687.
 Hallets Point, **77**, 228, 235.
 Hardpan, **95**, 3201.
 Harlem River, **76**, 244.
 Hell Gate, **68**, 737, 739; **71**, 724; **74**, ii, 162; **75**, ii, 209; **76**, 241; **86**, 680, 686.
 Holes for, proper depth, **68**, 425; **00**, 1731.
 Jetties and, channel forming, **98**, 1539.
 Lime Point, **69**, 19.
 Loading tube, **93**, 3164.
 Meters, blast, forts, **04**, 3739.
 Mica powder, nitroglycerin and, comparison, **91**, 2796.
 Middle Rock, New Haven, **67**, 451.
 Mud lumps, **70**, 330, 334.
 Powders, trials of, **69**, 424.
 Physical effect of, **77**, 238.
 Rock, **88**, 1120; **93**, 2378, 3164; **95**, 2911; **97**, 1094; **00**, 1731, 3678, 4216.
 Rock Island Rapids, **68**, 423; **76**, 670; **79**, 1135.
 Rock pinnacles under water, **01**, 3483.
 Stumps, **96**, 1622.
 Surface blasts, effect of, **66**, iv, 334; **67**, 451; **68**, 91, 94, 728, 732, 735, 745, 750, 751, 883, 884; **69**, 77; **71**, 924; **72**, 876.
 Surface blasts, inefficiency of, **68**, 728, 751; **69**, 77, 424, 430; **71**, 772, 776; **72**, 864.
 Surface blasts, successful, **79**, 383.
 Tower rock, **68**, 813; **69**, 423, 433.
 Tunnels, **76**, ii, 124.
 Water column displaced by, height of, **79**, 1508.

Blasting, Rock.

- 88**, 1120; **93**, 2378, 3164; **94**, 1846, 2572; **95**, 2911; **96**, 2065; **97**, 3721; **00**, 1731, 3678, 4216; **01**, 1427.
 Blast, amount removed at a, **69**, 19.
 Bottom below, Rock Island Rapids, **69**, 246, 257.
 Bronx River, **97**, 1094.
 Crater blasting, disadvantages of, **79**, 383.
 Explosions, crater, preventing, **79**, 1507.
 Dynamite, **75**, ii, 695.

Blasting, Rock—Continued.

- Dynamite, from submarine mines, Philadelphia Harbor, **99**, 1329.
 Dynamite, small charges, **96**, 471.
 Effect of, record of, **00**, 1731.
 Electric batteries, formula for, **77**, 236, 239.
 Electric batteries, use of, **68**, 814; **69**, 432; **75**, ii, 695.
 Explosions, deep, **96**, 1932.
 Explosives, ratio of, **80**, 500; **81**, 864; **83**, 541; **86**, 685.
 Explosives, small charges, **95**, 925.
 Firing, method, batteries, **68**, 814; **69**, 432.
 Holes, depths, proper, **00**, 1731.
 Loading tube, **93**, 3164.
 Plane, definite, difficulty of blasting to, **69**, 246.
 Powder and depth of hole, relation of, **68**, 425.
 Powders, various, trials of, **69**, 424.
 Rock, broken, explosives and, ratio, **68**, 423, 425; **69**, 19, 248; **71**, 733; **72**, 877; **73**, 935; **74**, ii, 39, 160; **75**, ii, 82; **76**, ii, 326, 545; **77**, 352; **79**, 61, 62, 379, 533, 1135, 1508; **80**, 500; **81**, 864; **83**, 541; **86**, 685.
 Surface blasts, effect of, **66**, iv, 334; **67**, 451; **68**, 91, 94, 728, 732, 735, 745, 750, 751, 883, 884; **69**, 77; **71**, 924; **72**, 876.
 Surface blasts, inefficiency of, **68**, 728, 751; **69**, 77, 424, 430; **71**, 772, 776; **72**, 864.
 Surface blasts, successful, Hallets Point, **79**, 383.
 Tamping, **69**, 433.
 Tower Rock, results, **69**, 423.

Blasts, Surface.

- Effect of, rock blasting, **71**, 924.
 Rock, effect on, **66**, iv, 334; **67**, 451; **68**, 91, 94, 728, 732, 735, 745, 750, 751, 883, 884; **69**, 77; **71**, 924; **72**, 876.
 Rock, insufficient effect on, **68**, 728, 751; **69**, 77, 424, 430; **71**, 776; **72**, 864.
 Rock, removing, **79**, 383.

Blocks, Concrete.

- Alternate monolithic blocks, piers, **01**, 2832.
 Arrangement, piers, **04**, 3802.
 Breakwaters, **11**, 2260.
 Cutwaters, piers, **01**, 2832.
 Revetment of, **02**, 1106.
 Stone, replacing, revetments, **02**, 1107.

Blocks, Cubical.

- Overturning difficult, rockworks, **01**, 2884.

Blocks, Facing.

- Displacing of, by storms, **01**, 3318.

Blocks, Footing.

- Piers, **98**, 2226, 01, 2832.

Blue-Print Paper.

- Willetts Point paper best in Philippines, **00**, 5446.

Bluffs.

- Course of Missouri River between, H. D. 1120, 60th, 2d.

Boat Railway.

- Appliances, **94**, 2675.

Boat Railway—Continued.

Columbia River, 94, 2668.

Defects, 01, 3524.

Planning, 95, 3590.

Boat Yard.

Plan of, Missouri River, 93, 4259.

Boats. (See Canals; Dredges; Dry Docks; Ice Boats; Quarter Boats; Snag Boats; Steamboats; Towboats; Vessels. See plate 59.)

Building plants, U. S. Engineer Department 12, 2883.

Canal tunnel sections, effect on, 76, ii, 80.

Dimensions of, canal and, relation, 74, 534, 535; ii, 118.

Grounding of, overloading a cause, 99, 3037.

Hyacinth crushing, 01, 341, 395.

Ohio River types, 79, 1369.

Those of Great Lakes not adapted to river traffic, H. D. 50, 61st, 1st.

Types for river traffic, 10, 2976, H. D. 443, 62d, 2d.

Velocity of, canal tunnels, 77, 685, 689, 700.

Board of Engineers. (See p. 2039 of this Index.)**Boards.**

Local boards for levees, 06, 2569.

Boats, Gasoline.

Snag removal made necessary by, 11, 34.

Boats, Maneuvering.

Bridge better than, weirs, or needle dams, 05, 539.

Boats, Moving.

Resistance to, 74, 534; 77, 689, 692.

Resistance to, formula, 78, 383, 532.

Boats, Overloaded. (See Boats.)**Boats, Quarter.**

Survey parties, 97, 2338.

Boats, Steam Canal.

97, 3204.

Boats, Torpedo.

Seacoast defense, 81, 410.

Bolts. (See Driftbolts.)

Advantages of, cribs, 96, 2578.

Cribs, 76, ii, 538.

Cribs, direction in, 69, 154.

Cribs, size in, 68, 210, 239.

Fastenings, cribs, 94, 2411.

Holding power of, concrete mortar, 95, 2940.

Holding power of, cribs, 76, ii, 538.

Miter sills, locks, 00, 2926.

Setting, concrete, 94, 453.

Bolts, Anchor.

Setting, concrete, 02, 2479.

Bolts, Patch.

Piers, 01, 2850.

Bolts, Screw.

Best form, 84, 1643; 85, 1758.

Bonding.

Rockwork, 04, 3830.

Booms. (See Rafting.)

Rafting, 00, 3346.

Rapids, lining over, 96, 3381.

Booms, Rafting.

Maintenance, rules, 00, 3346.

Booms, Sheer.

Bridge piers, 75, ii, 683; 77, 817; 78, 710, 972, 982, 986, 990, 1002, 1005, 1009, 1018.

Bridge piers, protecting, Rock Island Bridge, 78, 710; 79, 1144.

Bridges, 75, ii, 683; 77, 817; 78, 710, 972, 982, 986, 990, 1002, 1005, 1009, 1018.

Efficiency of, 79, 1145.

Operation, difficulties of, 79, 1146.

Plan and section, 78, 710.

Vessels, protecting, from ice, 78, 828; 79, 1363.

Draws of, opening of, frequency of, Chicago, 74, 601, 607, 617.

Draws of, operating, Ohio River, 95, 2333.

Draws of, operating, Rock Island, 72, 289, 291.

Draws of, Rock Island, 70, 245; 72, 289, 293.

Draws of, signal lights on, Rock Island, 73, 415; 78, 723.

Draws of, signals at, 73, 415; 78, 723.

Draws of, spans, Chicago River, 74, 585.

Draws of, weight of, 70, 245.

Draws of, widths of, proper, 68, 383.

Dubuque Railroad, 78, 984.

East River, 95, 933; 96, 856.

Elk River, 95, 2461.

Engineer Troops, 02, 816.

Estimates for, H. D. 263, 59th, 1st.

Flood control. H. D. 81, 62d, 1st.

Floor system, 02, 2658.

Fort Washaki Road, 99, 3900.

Foundations, bedrock, depths to, Mississippi River, 78, 918, 1059.

Grades, effect of, 79, 1461.

Harlem River, 94, 744; 95, 920; 96, 842.

Bridges—Continued.

Height of, navigation, required for, **69**, 395, 401; **74**, 603, 627, 641, 648; **ii**, 654; **75**, **ii**, 681; **76**, **ii**, 302; **78**, 907, 928, 934, 1054.
Hudson River, **96**, 828.
Inlet, type of, **09**, 2357.
Ironwork, strength of, Rock Island, **72**, 286, 291.
Laws relating to, effect of, **82**, 2008.
Legislation concerning, **69**, 309; **71**, 219, 426, 435, 455; **72**, 404, 440; **73**, 561, 570.
Loads on, **69**, 195; **70**, 245, 251, 263; **72**, 286, 291; **77**, 1099; **02**, 2678.
Location of, proper, **68**, 316; **70**, 230.
Many, over Passaic River, H. D. 707, 62d, 2d; H. D. 722, 62d, 2d.
Material in, weight of, **72**, 294.
Material in, various, consideration of, **98**, 3597; **02**, 2670.
Measurements of, Missouri River, **93**, 3944.
Missouri River, **94**, 3108; **96**, 3804; **97**, 3893.
Monongahela River, **95**, 2399; **96**, 2137; **97**, 2407; **98**, 2200.
Muskungum River, **95**, 2375.
Navigable waters, over, **80**, 1849; **81**, 2009; **82**, 1979; **83**, 1591; **84**, 1769; **85**, 1917; **86**, 2111; **87**, 2613.
Navigation, obstructions to, **68**, 717, 822; **69**, 306; **71**, 407, 411, 414, 429, 713; **76**, **ii**, 306; **77**, 646; **78**, 1038, 1054.
Neosho River, **97**, 1986.
Newton Creek, **95**, 938.
Oakland Harbor, **00**, 4219.
Ohio River, **93**, 2465; **00**, 3099.
Obstruction, rivers, **97**, 2796.
Piers, closeness, effect of, **95**, 734.
Piers, concrete in, **96**, 2115.
Piers, cross section occupied by, Ohio River, **71**, 403, 410, 413, 416, 421, 433, 443.
Piers, currents, deflection of, **95**, 734.
Piers, currents, should be parallel to, **68**, 381; **69**, 196.
Piers, examination, **95**, 4085; **96**, 3887.
Piers, foundations, insecure, Potomac River, **96**, 3887.
Piers, protecting, sheer booms for, **78**, 710; **79**, 1144.
Piers, rapid currents, effect on, **95**, 734.
Piers, reconstruction, D. C., **08**, 2346.
Piers, reinforcing with concrete, **10**, 2624.
Piers, repairs, **95**, 4090; **10**, 2623, 2624.
Piers, riprap about, objection to, **75**, **ii**, 687.
Piers, rivers, closing of, with ice, **71**, 716.
Piers, Rock Island, **69**, 195.
Piers, sheer booms at, **75**, **ii**, 683; **77**, 817; **78**, 710, 972, 982, 986, 990, 1002, 1005, 1009, 1018.
Piers, tides, obstruction to, **68**, 717; **69**, 383; **74**, **ii**, 156, 234.
Piers, timber rafts, effect on, **77**, 820; **78**, 931.
Plans, Anacostia River, **96**, 3895.
Propelling system, cars, **02**, 2659.
Railroads, conditions of, use by, **02**, 2654.
Regulations, Duluth, **08**, 1903; **10**, 2061.
Repairing; bridge closing, Potomac River, **95**, 1214.
Requirements for, Detroit River, **74**, 603, 627.
Requirements for, tidal rivers, **96**, 987.

Bridges—Continued.

Rivers, improvement of, where many bridges, H. D. 643, 61st, 2d.
Rivers, navigable, general consideration, **68**, 50, 315, 316, 385; **70**, 67, 261; **71**, 61, 397, 431; **72**, 440; **74**, 583, 636; **75**, **ii**, 677; **76**, 92, **ii**, 260, 298, 299, 306; **77**, 817; **78**, 110, 721, 891, 1038, 1054, 1058, 1078; **79**, 1461.
Roads, **03**, 2456.
Sheer booms at, **75**, **ii**, 683; **77**, 817; **78**, 710, 972, 982, 986, 990, 1002, 1005, 1009, 1018.
Signals and lights, **73**, 415; **78**, 723.
Sill under opening, to direct channel, **11**, 1582.
Sites, borings, Anacostia River, **98**, 3601.
Spans; dimensions required; rafts, passage of, **77**, 820; **78**, 931.
Spans, practical limits of, **71**, 432; **78**, 905, 1019, 1069.
Spans, Rock Island, **69**, 197; **70**, 231, 258; **71**, 301; **72**, 287.
Spans, various, lengths of, **69**, 197; **70**, 231; **72**, 286; **78**, 905, 1019, 1020, 1046, 1062, 1069.
Specifications, **02**, 2666, 2674.
Stone arches, plans, **98**, 3606.
Surveys, Anacostia River, **96**, 3890.
Surveys, borings, **98**, 3576.
Surveys, borings, Anacostia River, **96**, 3901.
Tennessee River, **96**, 1924.
Tidal, flow at, **74**, **ii**, 234.
Trinity River, **96**, 1554.
Trusses, arched, **75**, **ii**, 680.
Trusses, loads on, Rock Island, **69**, 195; **70**, 251, 263; **72**, 286, 291.
Trusses, Rock Island, **69**, 195; **70**, 245, 262; **72**, 286.
Tunnels and, comparison, **74**, 603, 620.
Water main, **90**, 3902.
Weirs; better than maneuvering boat, **05**, 539.
Widths, points determining, **02**, 2656.
Yellowstone Park, **94**, 3447.

Bridges, Arch.

Stability, P. P. No. 7, C. E.

Bridges, Canal.

Types, Delaware & Chesapeake, Sen. D. 215, 59th, 2d.

Bridges, Crib.

Engineer troops, **02**, 816.

Bridges, Highway.

Canals, **98**, 2482; **08**, 2018.
Factors, important, **02**, 2661.
Yellowstone National Park, **02**, 3034.

Bridges, Iron.

Vibration, effect of, **75**, **ii**, 680; **07**, 1099, 1102.

Bridges, Iron Pile.

Building, **89**, 465.

Bridges, Military.

P. P. No. 4, C. E.

Bridges, Mountain.

Mount Rainier National Park, **09**, 2514.

Bridges, Pontoon.

74, 681; **76**, **ii**, 309; **78**, 981.
Draws of, **74**, 681.
Dubuque and Dunleith, **76**, **ii**, 309; **78**, 984.
Engineer troops, **02**, 816.
Railroads, **78**, 981.

Bridges, Railroad.

Illinois & Mississippi Canal, **08**, 2020.

Bridges, Steel-Concrete.

Yellowstone National Park, **08**, 2473.

Bridges, Tubular Arch.

Objections to, **75**, ii, 680.

Strains, **75**, ii, 680; **77**, 1019, 1102.

Bridges, Wagon.

Railroad and, combination, **70**, 244, 261.

Wagon train, built by, **77**, 1354.

Widths, various bridges, **70**, 245.

Bridging.

Harbors, various countries, **96**, 3900.

Briquettes. (See Cement.)

Cement, testing, **95**, 2751; **96**, 2620; **97**, 3942.

Repairing, **01**, 922.

Bronze Case.

Torpedoes, **89**, 492.

Brooming.

Pile driving, **82**, 2164.

Brush. (See Dikes; Jetties; Mattresses; Piers; Revetments.)

Bundles of; jetties, filling of, **93**, 1885.

Cribs, foundations of, **66**, iv, 105; **67**, 106; **68**, 121; **69**, 99.

Dams, piles in, **79**, 1036.

Delivery of, jetties, **00**, 4243.

Disappearance; brush and rock jetties, **95**, 1774.

Earth, stone and, dams, extending, methods, **00**, 2870.

Efficiency of, shore protection, **75**, 316.

Filling, jetties, **93**, 1885.

Filling, pile revetment, **80**, 1839.

Foundations of, failure in, cribs, **69**, 99.

Groins, use of, **74**, ii, 323.

Holding, boxes of gravel for, **93**, 1720.

Jetties, **73**, 444, 448; **74**, 336; **75**, 219; **76**, 180, 188, ii, 403; **77**, 989; **78**, 1194; **79**, 732.

Mats, cost of, **78**, 641, 660.

Mats, crib foundations, **67**, 106; **68**, 121; **69**, 99.

Mats, dikes of, **78**, 659.

Mats, failure of, **69**, 99.

Mats, gabions and, **76**, 574; **79**, 911.

Mats, large, Mississippi River, **76**, 641; **79**, 978, 981.

Mats, making, **77**, 484; **78**, 658; **79**, 737, 977, 981, 1030, 1032, 1052, 1057, 1061, 1063, 1068, 1074, 1078, 1080.

Mats, sand-tightening, piers, **78**, 1211.

Mats, shore protection, **76**, ii, 408; **77**, 492; **79**, 976, 1030, 1032, 1052, 1057, 1061, 1068, 1078, 1080; **93**, 1699.

Mats, teredo attack, **86**, 1312.

Mats, teredo, destruction by, **76**, 316.

Mattresses, **80**, 938, 944, 1211, 1380, 1419; **81**, 1044, 1328, 1504, 1507, 1560, 1598, Plate XV, 1610, 1614, 1639; **82**, 1201, 1362, 1435, 1444, 1455, 1466, 1473, 1500, 1598, 1601, 1603, 1613, 1630, 1647; **83**, 943, 1309, 1312, 1316, 1318, 1326; **84**, 942; **85**, 2988, Plates III, IV, and V; **87**, 1387.

Mattresses, buoyancy, **80**, 1211.

Mattresses, compression of, **87**, 1387.

Brush—Continued.

Mattresses, revetments, **80**, 1275, 1335, 1339, 1389, 1408, 1412, 1417, 1420, 1422, 1427, 1436, 1440, 1442, 1444, 1459, 1496, 1506, 1586; **81**, 1374, 1524, 1552, 1562, 1598, Plate XV, 1610, 1614, 1618, 1639; **82**, 1500, 1598, 1601, 1613, 1683, 1688, 1690, 1694, 1700, 1732; **83**, 1193, 1243, 1308, 1312, 1317, 1326, 1440, 2294, Plate IV, Appendix L; **84**, 2411, 2767, 2776, 2798, 2835, Plates VIII and IX, Appendix L; **85**, 1566, 2776, 2795, 2950, 3026; **86**, 1194, 1489; **87**, 1558, 1565, 2734, 2761, 2765, 3109.

Mattresses, settlement of, resistance to, **89**, 858.

Mattresses, stone jetties, **93**, 3339.

Piers, **66**, iv, 105.

Pile piers, in, **66**, iv, 105; **73**, 201.

Piles and, river banks, protecting, **96**, 1400.

Resistance of, settlement, **89**, 858.

Revetment of, Black Lake Harbor, Mich., **77**, 914.

Revetment of, filling in, **77**, 475.

Sand bags and, shore protection with, **79**, 410.

Sand movement, checking, **00**, 989.

Sand tightening with, piers, **80**, 1906.

Sand tightening with, pile piers, **73**, 201; **75**, 195; **78**, 1211.

Stone and, crevasses, closing, **71**, 207.

Wattling of, **88**, 842.

Wattling of, shore protection, **88**, 842.

Buckets.

Concrete pier construction, **04**, 3802.

Building Material.

Tests, **90**, 421; **91**, 565.

Buildings.

Basements, **01**, 3806.

Ceilings, etc., **01**, 3812.

Cellars, **04**, 3825.

Concrete floors, **96**, 4012.

Concrete work, **04**, 3853.

Electrical wiring, **04**, 3856.

Electric elevators, **98**, 3668.

Elevators, **96**, 4014.

Finish, interior, **04**, 3830.

Fireproofing, **01**, 3811; **04**, 3852.

Floor arches, tests, **96**, 4011.

Floors, **04**, 3852, 3855.

Foundations, **01**, 3803, 3817, 3818, 3821, 3823, 3828.

Grillage, **04**, 3828.

Heating, **01**, 3817; **04**, 3856.

Ironwork, **04**, 3855.

Plumbing, **04**, 3855.

Shoring, **04**, 3826.

Steelwork, designing, **01**, 3808, 3833.

Stonework, **04**, 3854.

Terra cotta in, **96**, 4011.

Trim, iron, **04**, 3854.

Underpinning, **01**, 3817.

Wind pressure, **01**, 3810.

Buildings, Brick.

Concrete piling, foundations, **04**, 3866.

Buildings, Concrete.

Condensation, preventing posts. (See p. 1797 of this Index.)

Buildings, Public.Drinking-water supply, **04**, 3850.**Buildings, Steel.** (See Buildings, above.)Bases, Ceilings, Columns, Costs, Designs, Doorings, Elevators, Fireproofing, Flooring, Foundations, Girders, Heating, Offices, Ornaments, Plumbing, Roofing, Tiling, Toilets, Walls, Windows, Wiring, etc. (See special report, **04**, 3829.) (See plates.)**Bulkheads.** (See Piles.)Cheap bulkheads, retention of, dredgings, **94**, 2609.Dredgings, holding of, **95**, 3419.Dredgings, inclosing of, **95**, 3419.

Harborage, Jamaica Bay, H. D. 1506, 60th, 2d.

Islands, artificial, **02**, 1034.Ore in bags, rocks, removing, **99**, 3279.

Riprapping, Jamaica Bay, H. D. 1506, 60th, 2d.

Should be required, docks, to prevent silting, **08**, 734.**Bulkheads—Continued.**Strengthening, **01**, S., 402.**Bulkheads, Concrete.**

Platforms, on timber piles, H. D. 1506, 60th, 2d.

Bulkheads, Sheet-Pile.Dams, repairs, **02**, 1278.Wave action, preventing, **04**, 3620.**Bulletins.** (See Gauges.)Forms of, gauge readings, **93**, 4222.Gauges, Mississippi River, **93**, 3654; **03**, S., 68.Lake Survey, issue, **08**, 2533.**Bunkers, Material.**Forts, construction, **02**, 2494.**Buoys.** (See Moorings.)**Buttresses.** (See Counterforts.)Piers, protecting, **70**, 187.**By-pass.**Water mains, **90**, 3530.**C.****Cabins.**Dredges, **04**, S., 109.**Cable Gallery.**Submarine mines, **97**, 705.**Cable Hoists.**Building, **96**, 1794.Stone, handling, **96**, 1794; **00**, 2713.**Cables.** (See Mattresses.)Clamps, **05**, 3008.Splices, mattresses, **94**, 2934.Strands (separate wires) better than, mattress weaving, **99**, 3690.Towing with, Dan River, Va., **80**, 788.**Cables, Insulated.**Tests, **90**, 419.**Cable, Multiple.**Insulation, **93**, 656.Tests, **88**, 368.**Cable Tanks.**Clamps, **05**, 3008.**Cable Tramways.**Building work, **02**, 2453.**Cableways.**Lock and dam building, **94**, 1956; **96**, 1937; **99**, 2176; **00**, 2768.**Cage, Diver's.****01**, 2830.**Caissons.** (See plates.)Diver better than, lock repairing, **98**, 1800.Lock gates, caisson type, action, **97**, 2356.Percolation, prevention, **12**, 1777.Sinking; water jet, use of, **79**, 926.Steel and concrete, of, breakwaters, **08**, 1954.**Callsthenics.**Result, Engineer troops, **02**, 806.**Calking.**Columns, steel buildings, **04**, 3860.**Calking Machine.**Lock gates, **96**, 2787.**Camps.** (See Hydrography.)Hydrography, **95**, 4248.**Canal Boats.** (See Boats; Vessels.)Dimensions, Chesapeake & Ohio, **74**, 535.Dimensions, various canals, **73**, 221; **75**, ii, 536.Jetties of, filled with stone, **66**, ii, 36; **75**, ii, 103.Length and breadth, relation, **74**, 534, 536.Proper dimensions, **74**, 534, 535; ii, 118.Tunnels, effect in, **76**, ii, 80.**Canal, Chicago Sanitary.**Illinois River, effect, **99**, 2842.**Canal, Erie.**Shipments on, comparison with those of adjacent railroads, **71**, 647; **73**, 223; **74**, 512, 605.**Canalization.**

Coal fields to reach, Warrior River, H. D. 72, 62d, 1st.

Coal traffic benefited, **11**, 743.

Costs, probable, Tennessee River, H. D. 781, 60th, 1st.

Cumberland River, H. D. 1481, 60th, 2d.

Dredging or canalization, Ohio River, study, H. D. 492, 60th, 1st.

History, Great Lakes, **12**, 2647.

Locks and dams, location a deciding factor, H. D. 219, 58th, 3d.

Locks and dams, Mississippi River, H. D. 50, 61st, 1st.

Canalization—Continued.

- Methods, improved, Cumberland River, H. D. 758, 60th, 1st.
 Overflowage claims, **11**, 2031.
 Panama Canal, effect of, Ohio River commerce, H. D. 492, 60th, 1st.
 Problems, rivers, **11**, 1831.

 Barge traffic, **96**, 3060.
 Bayou St. John to Ship Island, **71**, 66, 524.
 Benefits from, probable and improbable, **96**, 3039.
 Boat dimensions and, relation, **74**, 534, 535; ii, 118.
 Bottoms of, slopes of, **67**, 324; **68**, 444; **69**, 537; **72**, 326.
 Bridges over, building, **95**, 2760, 2768.
 Bridges over, types, **08**, 2018; S. D. 215, 59th, 2d; H. D. 391, 62d, 2d.
 Building, details, **01**, 3027. (See Panama Canal, p. 2357 of this Index.)

Canals—Continued.

- Building, estimates, **96**, 2416, 2447.
 Building, cofferdams, **94**, 1932.
 Capacity of, increasing, **95**, 3577; **00**, 4324.
 Cape Cod, **70**, 484, 492.
 Cape Cod, across the isthmus of, **70**, 447, 492.
 Cascades of Columbia River, **77**, 1047; **78**, 1333; **79**, 1843, 1849; **81**, 2561, 2563; **85**, 2434.
 Celebrated tunnels of, **76**, ii, 81.
 Champlain, **75**, ii, 542.
 Champlain, ship, **75**, ii, 588.
 Change, rate of, **06**, 1372.
 Charter of company, Connecticut River, H. D. 818, 61st, 2d.
 Chesapeake and Delaware, **80**, 722; **83**, 725.
 Chesapeake and Ohio, **74**, 493; **75**, 769; **76**, ii, 73.
 Closing, cofferdam, **94**, 1932.
 Commercial advantages of, **03**, 2349; S. D. 215, 59th, 2d; H. D. 953, 60th, 1st.
 Commerce, decline of, through canals, "The Soo," **05**, 2284.
 Commerce, probable, Great Lakes to Mississippi River, H. D. 304, 61st, 2d.
 Commerce, Illinois and Mississippi Canal, **08**, 2022.
 Commerce, Great Lakes, **12**, 2641.
 Concrete, use of, **74**, 786, 820; **75**, 469, 904; ii, 621, 623; **76**, ii, 74.
 Connecticut River, **72**, 848; **73**, 1008; **78**, 278, 294.
 Connecting lakes of differing levels, Puget Sound, H. D. 953, 60th, 1st.
 Construction, plant, **11**, 2418.
 Construction, suit of landowners, **05**, 1764. (See Building, above.)
 Cost of, items of, **96**, 3034.
 Cost of, various canals, **73**, 223; **75**, 365.
 Costs, Illinois and Mississippi, **08**, 2024.
 Costs, lowering by lease of water power, H. D. 953, 60th, 1st.
 Cross section, modern ships, S. D. 215, 59th, 2d.
 Cross section, Muscle Shoals Canal, **11**, 2056.
 Culverts, cost, **01**, 3046.
 Culverts, siphon-shaped, clearing of sand, **99**, 2857.
 Cumberland and Ohio, **74**, 498, 504, 537.
 Currents, effect of guard locks, **05**, 1755.
 Cuts, Illinois and Mississippi Canal, **98**, 2482.
 Dams, Illinois and Mississippi Canal, **08**, 2019.
 Dams, Lake Superior, Mississippi River Canal, **96**, 2431.
 Delaware and Chesapeake Bays, between, **79**, 588.
 Delaware and Maryland, **83**, 755, 760.
 Deposits, sluicing, **88**, 2166.
 Depths, determining, H. D. 953, 60th, 1st.
 Designing, Puget Sound, H. D. 953, 60th, 1st.
 Des Moines Rapids, **67**, 281, 323; **68**, 385; **69**, 219; **70**, 295; **72**, 327; **76**, 657; **77**, 537; **78**, 734, 745.
 Dimensions, various, **96**, 2409.
 Dismal Swamp, **76**, 392; **80**, 867.
 Diversion, flood, H. D. 262, 59th, 1st.
 Drainage of, Colbert Shoals Canal, **98**, 1921.
 Dredging, **98**, 2482.

Canals—Continued.

- Drift, avoiding sand drifting into canal, **01**, 3515.
 Drifting sand, effect of, **74**, 796.
 Dumps, H. D. 391, 62d, 2d.
 Effect of, on Great Lakes, **02**, 2825.
 Effect of, on future industries, Great Lakes to Mississippi River, H. D. 304, 61st, 2d.
 Embankment, maintenance, **05**, 1768.
 Enlarging, methods, **93**, 2547.
 Entrance of, protecting, **00**, 4328; **09**, 1927.
 Entrances to, shoaling, causes of, **97**, 2671.
 Erie, **75**, ii, 535, 536, 549.
 Erie, cost of, **73**, 223; **75**, ii, 538.
 Estimates, form of, **94**, 2182.
 Estimating for, Birmingham Canal, Ala., **99**, 1743.
 Etowah to Ocmulgee Rivers, **71**, 64; **72**, 60, 526.
 Excavating, **99**, 2272.
 Features of, Muscle Shoals, **01**, 2444.
 Feeder lines, building, **97**, 2859.
 Feeder lines, estimates, **96**, 2661.
 Feeder lines, obstacles, Illinois and Mississippi, **03**, 1924.
 Feeder lines, surveying, **96**, 2656.
 Ferries, H. D. 391, 62d, 2d.
 Ferry, aerial, operating, **05**, 1973.
 Filling, **99**, 2272; **01**, 2066.
 Filtration, **75**, ii, 547, 566; **76**, 527.
 Flooding of, damages from, **98**, 2109; **05**, 1650.
 Floods, repairs, **02**, 1736.
 Florida, across peninsula of, **76**, 508.
 Flowage, damages from, **93**, 2763.
 Flow in, grass, effect of, **73**, 1008; **78**, 294.
 Fort St. Philip, Mississippi River, **74**, 825, 826, 827.
 Fox and Wisconsin Rivers, **72**, 136.
 Freight rates, Buffalo to New York, **00**, 2374.
 Functions of, H. D. 391, 62d, 2d.
 Grass, effect of, **73**, 1008; **78**, 294.
 Hennepin, **83**, 1754, 1788; **84**, 1950; **85**, 2056; **86**, 1733; **87**, 2137.
 Hennepin, to Rock Island, **70**, 32; **71**, 57, 302.
 Highway bridges, **98**, 2482.
 Ice, formation of, Delaware and Chesapeake Canal, **82**, 955.
 Illinois and Michigan, **68**, 454; **83**, 175; **87**, 2141, 2143.
 Illinois and Mississippi, **08**, 2012.
 Illinois River, **68**, 440.
 Improving, cost of, various canals, **96**, 2144.
 Inclined planes, **74**, 498, 550, 552, 555; **75**, 770, 879; **76**, ii, 82, 100; **77**, 682.
 James River and Kanawha, **71**, 624, 626, 634, 650, 651; **74**, ii, 86, 110.
 Jetties, H. D. 391, 62d, 2d.
 Jetties, cheap type of, Delaware and Chesapeake, S. D. 215, 59th, 2d.
 Lake Erie to Lake Ontario, **68**, 271.
 Lake Michigan, and Illinois River, **68**, 448.
 Lake Michigan, Wabash River, **76**, ii, 455.
 Land for, estimates of cost, **96**, 2416.
 Land, leases of, **96**, 3046.
 Land, locating, methods, **98**, 2483.
 Land, usual hindrances to acquiring, **11**, 2282.
 Length of, in U. S., **69**, 546.

Canals—Continued.

- Local sentiment, **08**, 2020.
 Locks, emergency, H. D. 391, 62d, 2d.
 Locks, presence and absence of, S. D. 215, 59th, 2d.
 Locks, defensive measures, H. D. 953, 60th, 1st.
 Locks, water power at, H. D. 953, 60th, 1st.
 Louisville and Portland, **68**, 530, 553; **75**, 773, 774; **76**, 749; **78**, 772, 776, 780.
 Maintenance of, **74**, 832, 874; S. D. 215, 59th, 2d.
 Marne-Rhine, **76**, ii, 61, 64, 97.
 Maumee and Erie, **81**, 2354.
 Mississippi River, mouth of, **74**, 786, 821, 825, 827; **75**, 950, 951.
 Mississippi to Rio Grande Rivers, **75**, 876.
 Modern, need for, Delaware and Chesapeake, S. D. 215, 59th, 2d.
 Muscle Shoals, **72**, 498; **78**, 756.
 Navigation on, rules, **95**, 2661.
 Navigation on, rules, Duluth, **98**, 2226.
 Navigation on, water-power rights and, conflict of, **96**, 2635.
 New York, S. D. 887, 62d, 2d.
 Niagara Falls, **68**, 47, 271, 272.
 North Sea, Holland, **74**, 786; P. P. No. 22, C. E.
 Ohio River, **68**, 529, 530; **96**, 2997.
 Operating, cost of, slightly over 2 per cent of cost of building, Muscle Shoals Canal, **98**, 1928.
 Operating, Des Moines Rapids, **80**, 1555. (See Miss. R., p. 1067 of the Index.)
 Operating, fuel, storage of, economy of, **96**, 2231.
 Operating, Louisville and Portland, **80**, 1724. (See Ohio R., p. 905 of this Index.)
 Operating, regulations, **04**, 2769.
 Operating, St. Marys Falls, **81**. (See p. 1422 of this Index.)
 Passing places, **93**, 2716.
 Piers for, Duluth, **98**, 2226.
 Pipes across, placing, methods, **94**, 1939.
 Planning for, **97**, 3156; **00**, 3860.
 Pools of, height of, preserving, regulations, Fox and Wisconsin Rivers, **98**, 2343.
 Portage Lake, Mich., **87**, 1981.
 Potomac River, **74**, 494.
 Prices, unit, H. D. 263, 59th, 1st.
 Prism, enlarging proposed, Erie Canal, **97**, 3265.
 Prism, abnormal increase in volume, **05**, 1553.
 Profiles, H. D. 823, 60th, 1st.
 Prominent canals, characteristics, **00**, 3627.
 Proposed, commercial points to be considered, **96**, 3035.
 Pumpage for, **76**, 407.
 Purchase, Chesapeake and Albemarle, H. D. 589, 62d, 2d.
 Rafting in, regulations, **93**, 2682.
 Rafts in, towing of, rules for, **95**, 2536.
 Rail and, freight rates, **96**, 3062.
 Railroads and, capacity, comparison of, **71**, 647.
 Railroads and, comparison of, **00**, 3622.
 Railroads and, New York State, **96**, 3063.

Canals—Continued.

Railway along, Muscle Shoals Canal, **00**, 2941.
 Railway, bridges, **08**, 2020.
 Railway, operating, **05**, 1770.
 Rainfall in, **76**, 533.
 Reservoirs and, evaporation, **71**, 639; **72**, 515, 521; **74**, 505, 523; **ii**, 95; **75**, **ii**, 547, 566; **78**, 293.
 Revetment of, **76**, **ii**, 417.
 Revetment of, repairing, **97**, 2666.
 Revetment of, responsibility for damages by vessels, **08**, 1926.
 Right of way, describing, **98**, 2483.
 Right of way, locating, **98**, 2483.
 Riprapping, **08**, 2020.
 Rivers, lateral to, **97**, 2251.
 Rock, removing, cofferdams, **94**, 1932.
 Routes, Great Lakes to the sea, **97**, 3128.
 Routes, rail and canal, comparisons, **00**, 3622.
 Routes, surveys of, Atlantic Coast, H. D. 391, 62d, 2d.
 Rules and regulations, **93**, 20; H. D. 261, 59th, 2d.
 Rules and regulations, enforcement of, **93**, 21.
 St. Clair Flats, **66**, iv, 47.
 St. Marys Falls, **67**, 225; **71**, 42, 161, 164; **72**, 39, 195; **73**, 40, 286; **74**, 45, 196; **75**, 50, 164; **76**, 103; **ii**, 523; **77**, 109, 921; **78**, 124, 1217, 1218; **82**, 2358; **86**, 1786, 1792.
 Santee, S. C., **81**, 1149.
 Sauk Rapids, **75**, **ii**, 450.
 Section, **74**, 534, 817.
 Shipments by, and railroad, compared, **71**, 647; **73**, 223; **74**, 512, 605.
 Signal towers, paint for, **09**, 1861.
 Siphons, H. D. 391, 62d, 2d.
 Slackwater navigation and, comparison, **74**, **ii**, 97, 119; **75**, 365.
 Specifications; S. D. 215, 59th, 2d.
 Speed allowable, various canals, H. D. 391, 62d, 2d.
 Steamboats required for, **75**, 409.
 Structures over, provisions, H. D. 953, 60th, 1st.
 Sturgeon Bay and Lake Michigan, **87**, 2024, 2030.
 Suez, **71**, 187; **74**, 796, 818; **80**, 985.
 Surfaces of, slopes of, **70**, 483; **73**, 1007; **78**, 294.
 Surplus water, definition of, **98**, 2344.
 Surveys, **95**, 3424; **96**, 1088.
 Surveys, methods, **96**, 2390, 3365; **97**, 2870; **99**, 1735.
 Systems, origin of, Ohio, **96**, 2997.
 Tennessee River, **68**, 558, 573.
 Tennessee to Coosa Rivers, **71**, 64; **72**, 60, 520.
 Terminals, H. D. 391, 62d, 2d.
 Three hundred feet wide, St. Clair Flats Canal; too small for vast commerce, **99**, 2998.
 Tidal locks, H. D. 391, 62d, 2d.
 Toledo, **69**, 121.
 Tolls, Connecticut River Falls, **78**, 274. (See Channels, Private.)
 Tolls, Green River, **80**, 1800.
 Tolls, Louisville and Portland, **72**, 449; **73**, 538; **76**, 761, 767; **77**, 613, 616, 619, 640, 649; **78**, 774, 782, 785, 787; **79**, 1286, 1289, 1291, 1297; **80**, 1726; **82**, 1907.

Canals—Continued.

Tolls, Monongahela River, 1841-; **96**, 2160.
 Tolls, rail charges, compared with, **82**, 2497; **86**, 1944.
 Tolls, Suez, **80**, 985.
 Towing on, Belgium system, **77**, 595.
 Towing on, horses, effective power of, **77**, 688, 690, 692.
 Towing on locomotives, **79**, 1251.
 Towing on, methods, various, experiments, **77**, 690, 695, 700.
 Towing on, rate of, Erie Canal, **74**, 535; **75**, **ii**, 537.
 Towing on, small section, effect of, **76**, **ii**, 79.
 Towing on, steam power, application of, **69**, 536; **73**, 833; **74**, 498, **ii**, 90, 101; **75**, **ii**, 537; **77**, 688, 690, 694, 703; **79**, 1251.
 Towing on, submerged cable, **77**, 691, 695, 700.
 Towing on, tunnels, through, experiments, **74**, 513, **ii**, 90; **77**, 686, 692, 694, 700.
 Traffic, U. S. and Canadian, **12**, 2629.
 Trans-Allegheny route, **79**, 1389.
 Transportation by, cost of, **69**, 541; **71**, 630, 639, 644, 646; **73**, 221, 833; **74**, **ii**, 111; **75**, **ii**, 555; **78**, 784; **79**, 1289, 1291.
 Transportation capacity, Albemarle and Chesapeake, **76**, 424.
 Transportation capacity, Erie Canal, **71**, 646; **74**, 512; **ii**, 110, 118, 123; **76**, 424.
 Trunks and embankment, maintenance, **04**, 2384.
 Tunnels on, **76**, **ii**, 79, 124; **77**, 685.
 Tunnels on, boats in, velocity of, **77**, 685, 689, 700.
 Tunnels on, central water route, **71**, 626, 638, 643; **73**, 830; **74**, **ii**, 90, 100, 120; **77**, 684, 767.
 Tunnels on, Chesapeake and Ohio, **76**, **ii**, 124.
 Tunnels on, objection to, **77**, 690.
 Tunnels on, sections, boat effect, **76**, **ii**, 80.
 Tunnels on, towing, **77**, 695.
 Tunnels on, traction, **74**, **ii**, 90; **76**, **ii**, 79; **77**, 686, 689, 700.
 Tunnels on, turnouts, **76**, **ii**, 79; **77**, 689, 691, 694.
 Types, various, costs, H. D. 391, 62d, 2d.
 Use of, rule and regulations, **75**, 784; **76**, 756, 765; **77**, 608; **78**, 745; **95**, 2563.
 Value of, factors of, **00**, 3620.
 Value of, for deep-draft vessels, S. D. 301, 61st, 2d.
 Value of, military and naval, S. D. 215, 59th, 2d.
 Various, **68**, 272; **69**, 535, 539, 546; **73**, 221; **75**, **ii**, 536.
 Various, dimensions, **96**, 2409.
 Vessel dimensions, St. Marys R., H. D. 64, 62d, 1st.
 Vicinity of, caving, **93**, 2780.
 Vicinity of, tile drainage, effect of, **96**, 3047.
 Wabash and Erie, **81**, 2363, 2413.
 Walls, voids filled with grout, **11**, 2110.
 Water, drawing of, rules, **95**, 2659.
 Water, illegal use of, Fox River, **96**, 2525.
 Water, pools, **69**, 535.
 Water power from, **96**, 3046; H. D. 304, 61st, 2d. (See Locks, above.)

Canals—Continued.

- Water power from, dams for, flush boards on, **97**, 2713.
Water power from, navigation interests and, conflict between, **97**, 2721.
Water power from, regulations, Fox River, **96**, 2535.
Water power from, rules, **95**, 2659, 2661.
Watershed, Colbert Shoals Canal, **98**, 1921.
Water storage, dam sites, Lake Superior and Mississippi River Canal, **96**, 2432.
Water supply, **71**, 639; **72**, 515, 521, 530; **73**, 831, 1008; **74**, 495, 504, 507, 520, 523, 538; **ii**, 95, 112; **75**, 411; **ii**, 545, 547, 552, 566, 591; **76**, 406, 519, 525; **ii**, 61, 97; **77**, 389, 704, 755, 756, 770, 798; **78**, 293; **79**, 1391; **96**, 2402, 2446, 3007.
Water supply, evaporation, **71**, 639; **72**, 515, 521; **73**, 1008; **74**, 505, 507, 520, 523; **ii**, 95; **75**, **ii**, 547, 566; **76**, 519, 526, 528; **ii**, 97; **77**, 386, 704, 707, 756; **78**, 293.
Water supply, feeding, economy of, **76**, **ii**, 62.
Water supply, filtration of, **71**, 639; **73**, 1008; **74**, 95, 505, 507, 520, 523; **ii**, 95; **76**, 519, 526, 534; **ii**, 67, 97; **77**, 386, 704, 707; **78**, 293; **81**, 571, 1152; **86**, 1252.
Water supply, Lake Superior and Mississippi River Canal, **96**, 2402.
Water supply, leakage at locks, **71**, 306; **74**, **ii**, 95; **76**, 528; **77**, 389, 704, 707, 756; **78**, 293; **79**, 1540.
Water supply, lockage, **73**, 1008; **76**, 519, 526, 529; **77**, 704, 707, 724, 756, 770; **78**, 293.
Water supply, locks, reservoirs of, **76**, 407.
Water supply, pumpage, **76**, 406, 407.
Water supply, pumping, **81**, 1152.
Water supply, rainfall, **76**, 533.
Water supply, reservoirs, **96**, 3026.
Water supply, summit levels, **80**, 871; **81**, 1152, 1890, 2402, 2410; **86**, 1252.
Water-tightening, concrete for, **76**, **ii**, 74.
Welland, **75**, **ii**, 540.
Widening proposed, St. Marys River, H. D. 215, 58th, 3d.
Width, determining, **82**, 1239; **11**, 2049.
Wisconsin River, **76**, **ii**, 291.
World-famous canals, S. D. 215, 59th, 2d.
Wrecks in, **97**, 2448.
Wrecks in, removing, **96**, 2232.

Canals, Atlantic Coast.

Commercial aspects of, **97**, 3195.
Ferry-aerial, operating, **05**, 1973.
Florida, **77**, 388.
Movement for, history, North Atlantic coast, S. D. 215, 59th, 2d.
Requirements of, **81**, 2576.
St. Marys, **70**, 162.
Sturgeon Bay, **72**, 171; **76**, **ii**, 344; **77**, 856.
Tolls, H. D. 391, 62d, 2d.
Traffic on, lakes to the Atlantic, **97**, 3166.
Transportation by, cost of, **97**, 3207.

Cane Carpets. (See Mattresses.)

- Shore protection, **78**, 616; **79**, 876, 931.

Canvas.

- Dams, for, **96**, 1941.
Leakage, preventing, locks, **73**, 287.

Cape Hatteras.

- Rounding, difficulty of, **93**, 1365.

Capes.

- Erosion, rate, Cape Cod, H. D. 821, 61st, 2d.

Capping. (See Breakwaters; Stone; Timber.)

- Breakwater, laying in, **00**, 4116.
Methods of, levees, **97**, 3796.

Capping, Timber.

- Rapid deterioration, **95**, 1728.

Caps.

- Crib piers, underneath, **96**, 1836.

Capstans.

- Bear-trap gates, raising, **96**, 1840.

Carbolization.

- Piles, preserving, **74**, 787; **79**, 393.

Cargoes.

- Sizes increasing, Portage Lake canals, **06**, 1723.
Transferring, methods, **97**, 3219.

Cars. (See pls. 12, 46.)

- Flat cars and turntable, **04**, 3738.
Propelling system, bridges, **02**, 2659.
Stone, transfer of stone from cars, cheapening, **01**, S., 253.
Supply of freight cars, regulated by waterway improvements, H. D. 510, 61st, 2d.

Casemate.

- Casemate shield, experiments, **70**, 7.

Castings.

- Concrete piers, **04**, 3802.

Catamarans. (See Currents; see pl. 72.)

- Breakwater, sounding for, **00**, 4134.
Current meters on, **00**, 5325.
Currents, measuring, **00**, 5325.
Hyacinth removal, **11**, 461.
Soundings with, for making from, **00**, 4134; **02**, 2774; **03**, 2764.

Catches. (See Sand Catches.)

Caving. (See Banks; Crevasses; Undermining;

Yellow banks; see pls. 63-65.)

Canals, **93**, 2780.

Extent and rate, Mississippi River, H. D. 50, 61st, 1st.

Peculiar, banks, Red River of the North, **78**, 730.Preventing, Mississippi River levees, **04**, S., 235.River banks, **75**, ii, 519.River banks, falling stages, **72**, 436; **78**, 615.

Stopped by cable and sand, H. D., 46, 62d, 1st.

Caving Banks.Mississippi River, **75**, 558, 608; **78**, 841; **79**, 976, 979.Protecting; methods, **96**, 3421.Red River of the North, **80**, 1586.Sacramento River, **80**, 2238.**Cavities.**Repairing, bridge piers, **10**, 2624.**Cedars.**Shore protection, **79**, 931.**Ceilings.** (See Forts, p. 1793 of this Index.)Batteries, **99**, 786, 798; **00**, 843, 859, 898.Beams in, batteries, **00**, 898.Beams in, setting, **00**, 898.Buildings, **01**, 922, 3812; **04**, 3825, 3837, 3841, 3848.I-beams for batteries, **97**, 630.Linings for, forts, **03**, 2380, 2382, 2390, 2396, 2415; **05**, 3009.Tile for, batteries, **99**, 786; **00**, 849; **03**, 2372.Wire boards in, **02**, 2494.**Cement.** (See Beton Agglomerate; Concrete; Sand;

Silica; Slag; Tests.)

Adhesion tests, **95**, 2921.Aeration, effect of, **95**, 2924.Bags of, repair of jetties unsatisfactory, **02**, 2283.Bridges, **02**, 2670.Briquettes, breaking of, clips for, **95**, 2913.Briquettes, making, machine, **96**, 506.Briquettes, mixing, **95**, 2751.Briquettes, molding, **95**, 2751.Briquettes, repairing with sulphur, **01**, 922.Briquettes, tensile stress, applying, **95**, 2916.Character of, San Diego forts, **02**, 2472.Clay in, effect of, **95**, 2924.Clay in, use of, **96**, 2803.Compression tests, **96**, 2803.Coping, **99**, 3826.Defective character of, Muskingum River, **85**, 1823; **87**, 1814.Expansion of, locks injured by, **87**, 1814.Foreign substances in, effect of, **95**, 2938.Freezing tests, **95**, 2745.Fresh-water, salt water and, effect of, **95**, 2918.House for, **99**, 2175.Lime, effect of, **96**, 2803.Limestone screenings and, tests, **94**, 2325.Locks, **97**, 2975.Mixing machine, **85**, 2054.Mixtures of, mortars, tests of, **93**, 3021.Molders for, different tests, **94**, 2331.Molds, filling, **94**, 2349.**Cement—Continued.**Mortars, abrasive tests of, **96**, 2803.Mortars, adhesion of, **96**, 2803.Mortars, adhesion of, tests, **95**, 2921.Mortars, arches, tests, **96**, 2876.Mortars, cement, mixtures of, tests of, **93**, 3021.Mortars, comparison of, **98**, 2274.Mortars, consistency, variations, **94**, 2332.Mortars, ingredients in, **94**, 2326.Mortars, materials, heating, **94**, 2353.Mortars, regauging, effect, **94**, 2327.Mortars, rich and poor, comparison, **95**, 2918.Mortars, sawdust, effect of, **96**, 2803.Mortars, strength, **94**, 2318.Mortars, strength, diagram showing, **93**, 3022.Mortars, temperature, effect of, **94**, 2335.Mortars, terra cotta in, effect of, **96**, 2803.Mortars, tests of, **96**, 2620, 2803.Mortars, tests of, detailed, **93**, 3013.Obtaining, precautions, **98**, 2451.Plaster of Paris in, effect of, **95**, 2938; **96**, 2803.Quicklime in, effect of, **95**, 2917.Salt water in, effect of, **95**, 2955.Sand in, effect of, **95**, 2919.Sand in, tests, **96**, 506.Sea walls, **05**, 3025.Setting of, quicklime, effect of, **95**, 2937.Specifications, **98**, 771.Stonehouse for, **02**, 2453.Strength, diagrams, **93**, 3022.Temperatures, different, effect of, **95**, 2917.Temperatures, various, effect of, **95**, 2917.Tensile strength of, **00**, 918.Tensile strength, tests, **96**, 2803; **98**, 773.Tests of, **88**, 1084; **90**, 423, 1573; **91**, 567; **93**,3009; **94**, 2311; **95**, 2743, 2912; **96**, 471, 505,526, 1941, 2620, 2613, 2803, 3275; **97**, 706, 2623,2627, 3941; **98**, 771, 772, 2256, 2754; **00**, 979,2168, 2180, 2257, 2779, 3473, 3849; **01**, 3042,3252; **02**, 2455, 2471; **04**, 3792.Tests of, air test, **98**, 2480.Tests of, apparatus, **92**, 2412, 2420.Tests of, briquettes, **95**, 2751; **96**, 505; **97**, 3942.Tests of, briquettes, making, **96**, 2620.Tests of, detailed, **95**, 2935.Tests of, different molders, results, **94**, 2331.Tests of, Duluth piers, **99**, 2650.Tests of, elaborate, St. Marys River at the Falls, **94**, 2293.Tests of, equipment for, **00**, 2181.Tests of, exposure, **94**, 2348.Tests of, hot-water, **94**, 2351.Tests of, methods, **01**, 1827.Tests of, mixtures, **96**, 2633.Tests of, moist air, effect of, **94**, 2348.Tests of, molds, filling, variations, **94**, 2349.Tests of, mooring posts, **96**, 1885.Tests of, rammer, **96**, 2670.Tests of, six-month tests, **98**, 2480.Tests of, strength, **94**, 2352.Tests of, various brands, **93**, 3013; **95**, 2745, 2924; **96**, 2803; **98**, 771, 2480; **99**, 741.Tests of, vicat needles, **96**, 2670.Tests of, water for, substances in, various effects of, **95**, 2937.Various brands, fineness, **94**, 2318.

Cement—Continued.

- Various brands, mortars, strength, **94**, 2318.
- Various mixtures, tests of, **95**, 2924.
- Various substances in, effect of, **96**, 2803.
- Various tests, **94**, 2649.

Cement, American. (See Cement, Tests.)

- German cement and, comparison, **96**, 2621.
- Portland, improvement of, **96**, 2613.

Cement, German.

- American cements and, comparison, **96**, 2621.

Cements, Hydraulic.

- P. P. No. 9, C. E.
- Experiments proposed, **69**, 19.
- Failure, St. Louis, **75**, 458.
- Mixing machine, Illinois River, **85**, 2054.
- Rock formation, Elk River, **76**, ii, 176; **79**, 1417.
- Salt, effect of, **82**, 2350.
- Strength determination, experiments, **82**, 2345; **83**, 1848.
- Teredo-proofing with, **76**, 570.
- Testing, instructions for, **95**, 2750.
- Tests, **69**, 19; **75**, 458; **77**, 583; **97**, 2847.
- Tests, summary of, **96**, 2634.
- Utica, superiority of, **76**, 663.

Cement, Natural.

- Slow setting, **98**, 750, 2255.
- Tests, **94**, 2318.
- Tests, 10 brands, **95**, 2918.

Cement, Portland.

- Specifications, **95**, 2756.
- Tests, **94**, 2318.
- Tests, 8 brands, **95**, 2989.
- Use of, advisable for climatic conditions, Maine forts, **01**, 911.

Cement, Sand.

- Making, methods, **00**, 2768.

Cement, Silica.

- Experimental manufacture, **99**, 2177.

Cement, Slag.

- Tests, **98**, 665.
- Tests, satisfactory, **98**, 665.

Cereal Crops.

- Great magnitude of, Columbia River district, **01**, 3523.

Chains. (See Dams.)

- Cribs, sinking of, **74**, 209; **75**, 228, 239, 276.
- Locks, gates, operating, **98**, 1800.
- Movable dams, **98**, 2127.

Chambers, Dry. (See Forts, p. 1797 of this Index.)**Channels.** (See Harbors; Jetties; Piers; Rivers; Walls; Plates.)

- Annual fill, **96**, 2919.
- Bars, changes in, **94**, 1271.
- Bars, making through, Savannah, H. D. 287, 62d, 2d.
- Bars, scraping, **98**, 2977.
- Beds, effect of water power, **01**, 3387.
- Bends, necessity of protection, H. D. 962, 60th, 1st.
- Blasting, **95**, 1501, 1621.
- Bottom of, various tides, effect of, **92**, 1341.
- Bottoms, examining, **02**, 2498.
- Changes in, bars, **94**, 1006, 1271.

Channels—Continued.

- Changes in, cause of, jetties, **93**, 1616.
- Changes in, conditions governing, **93**, 1374.
- Changes in, jetties, effect of, **00**, 4434.
- Changes in, jetties, vicinity of, **97**, 1478, 1534.
- Chute, making through, **02**, 1964.
- Contraction of, dikes for, **00**, 4272.
- Contraction of, portable jetties, **95**, 2062.
- Contraction of, rivers, **00**, 4272.
- Contraction of, with artificial island, **02**, 1033.
- Cost, Mississippi River, **05**, 1590.
- Cross sections, Mobile harbors, **00**, 2166.
- Cross sections, various periods, Nantucket Coasts, H. D. 536, 62d, 2d.
- Cross sections, width, contraction of, elevation due to, formula, **75**, 536.
- Damages from norther, H. D. 328, 61st, 2d.
- Deepening, breakwater and jetty, **96**, 574.
- Deepening, dredging, **93**, 3571.
- Deepening, entrances, harbors, **04**, 3067.
- Deepening, jetties, **93**, 3571; H. D. 328, 61st, 2d.
- Deepening, jetties, Charleston Harbor, **94**, 1110.
- Deepening, levees, effect of, **95**, 3624.
- Deepening, long rivers, Ohio River, H. D. 492, 60th, 1st.
- Deepening, methods, rivers, **00**, 4434.
- Deepening, piers, weakening of, **98**, 2654.
- Deepening, plans for, **95**, 2579.
- Deepening, rivers, **96**, 975; **00**, 4434.
- Deepening, scraping, **93**, 3571.
- Deepening, water-jet, **82**, 1595, 1610; **83**, 1238; **84**, 1302; **85**, 769.
- Deepening, wing dams, **93**, 3571.
- Deposits in, some causes of, **98**, 2620.
- Depths, effect of currents, H. D. 328, 61st, 2d.
- Depths, increasing, methods, H. D. 730, 59th, 1st.
- Depths, not increasing as fast as vessel draft, H. D. 1114, 60th, 2d.
- Depths; Great Lakes, projects, original and amended, **11**, 2323.
- Depths and widths, proposed, Detroit River, H. D. 676, 61st, 2d.
- Depths in, controlling elements, **96**, 1078.
- Depths, restoring, Portland, Me., H. D. 489, 62d, 2d.
- Designing, large vessels, Jamaica Bay, H. D. 1506, 60th, 2d.
- Designing, mathematical computing, of design, **02**, 1750.
- Development of, H. D. 262, 59th, 1st.
- Development of, and water power coordination, Tar and Pamlico Rs., H. D. 270, 62d, 2d.
- Development of, combined aid of jetties and dredges, Mississippi River, mouth, **07**, 1401.
- Development of, importance of revetted levees, **07**, 2622.
- Development of, levees important, **12**, 3725.
- Dikes and dredging combined, Swinomish Slough, H. D. 796, 61st, 2d.
- Dikes for, reducing cost, Galveston Bay, C. D., H. R. 1, 62d, 1st.
- Dimensions, bars, Mississippi River, **12**, 3839.
- Directing, sill for, under bridges, **11**, 1582.
- Diversion of, dam for, **98**, 1954.

Channels—Continued.

- Diversion of, proposed, Mare Island, H. D. 1103, 60th, 2d.
- Diversion of, to control floods, H. D. 1107, 60th, 2d.
- Diverting, rivers, 98, 1952.
- Electric lighting, 93, 1080.
- Enlargement, flood control, H. D. 81, 62d, 1st.
- Establishing, complications, 95, 1081.
- Excavating, water-jet, directed by diver, San Francisco, 99, 3153.
- Fill of, 98, 2698.
- Fill of, advantages of hydraulic dredges, 02, 495.
- Fill of, study of, 96, 2919.
- Flow of, concentrating, ditches for, building, 97, 3400.
- Forming, 00, 2292, 2426.
- Forming, dikes, experiments, 00, 4778.
- Forming, dikes, Mississippi River, 00, 4569.
- Forming, inlet formation, H. D. 1506, 60th, 2d.
- Forming, jetties, 00, 2293.
- Forming, jetties, and blasting for, 98, 1539.
- Forming, temporary expedients, 98, 1705.
- Forming, theory of, from jetties, H. D. 1506, 60th, 2d.
- Hurricane, effect of, 12, 1806.
- Ice in, boats for moving, 73, 874.
- Improvement of; should be local cooperation where benefits of improvement would be local, H. D. 599, 62d, 2d; H. D. 660, 62d, 2d.
- Jetties, not attributable to, 95, 1591.
- Jetties, effect of, 93, 1616, H. D. 340, 59th, 2d.
- Location, factors of, H. D. 724, 59th, 1st.
- Locks and dams of, doubtful value, sediment-bearing streams, H. D. 50, 61st, 1st.
- Maintenance of, fill, effect of, 98, 2697.
- Maintenance of, high cost, Mobile, Ala., H. D. 647, 59th, 1st.
- Maintenance of, various measures and methods, 03, 2298; 07, 1273; 11, 670; H. D. 647, 59th, 1st; H. D. 952, 60th, 1st; H. D. 962, 60th, 1st; H. D. 50, 61st, 1st; C. D., H. R. 17, 61st, 2d; H. D. 772, 61st, 2d.
- Maintenance of, Savannah, Ga., 07, 1273.
- Material, movement of, H. D. 181, 59th, 1st.
- Movement of, 00, 1729; 03, 2230.
- Movement, 1792-1903, Columbia River, 03, 2278, 2305.
- Multiplication of, by jetty, 10, 2407.
- Natural filling, 98, 2698.
- Navigating, rules, Duluth, 98, 2226.
- New towns, to, H. D. 774, 61st, 2d.
- Permanence of, Nantucket Coasts and New Haven, Conn., H. D. 536, 62d, 2d; H. D. 535, 62d, 2d.
- Phosphate industry, development of, St. Johns R., H. D. 281, 62d, 2d.
- Profiles, between jetties, 05, 1432; H. D. 611, 61st, 2d.
- Protecting from great storms, Galveston, 01, 1926.
- Rafts, towing of, rules for, 95, 2536.
- Rectifying, flood control, H. D. 81, 62d, 1st.
- Rectifying, rivers, 72, 839; 76, ii, 279, 285, 408; 78, 255.
- Regulation, dikes successful, H. D. 1103, 60th, 2d.

Channels—Continued.

- Rivers, Mississippi River, 95, 3669.
- Rock in, blasting, methods, 96, 2065.
- Rock in, excavating, methods, 96, 2224.
- Sand, excluding, revetments for, 80, 1906, 1914, 1916; 81, 2078.
- Salt water in, ruinous to rice planting, H. D. 836, 61st, 2d.
- Sawdust in, effect of, 01, 994.
- Scour, action of, 98, 2621.
- Scour, enormous, Savannah, Ga., 07, 1272.
- Scour, produced by jetties, Columbia River 10, 2407.
- Scraping to deepen, 93, 3571.
- Sections of, and shore lines, Mississippi River, 05, S., 196.
- Sediment-bearing rivers, methods of making channels, H. D. 50, 61st, 1st.
- Sewage deposits in, great, 98, 2422.
- Shoaling, causes of, 00, 4436.
- Shoaling, from city sewage, Chicago, 11, 2351.
- Shoaling, from snow, Chicago, 11, 2351.
- Slopes of, Lake Huron to Lake Erie, 00, 5362.
- Slopes of, measuring, St. Clair River, 00, 5362.
- Storms, effect of, Pacific coast, H. D. 961, 60th, 1st.
- Theory of formation; from dredging, H. D. 1506, 60th, 2d.
- Turning basins, Milwaukee Harbor, H. D. 667, 61st, 2d.
- Vessels and; economical types (Raymond Board on Deep Waterways, Great Lakes to Atlantic), H. D. 710, 62d, 2d.
- Width, mathematical computation of, 00, 3034.
- Widths, narrow; a handicap in growing harbors, H. D. 719, 62d, 2d.
- Widths, study of, waterway, Lockport to St. Louis, H. D. 263, 59th, 1st.
- Winds, effect of, Aransas Pass, H. D. 678, 61st, 2d.

Channels, Blasted.

- Examining, methods, 93, 1585.

Channels, Deep.

- Breakwaters necessary, lake harbors, 00, 3773.
- Forty-foot, difficulties of making, 08, 1075.
- Forty-foot, effect on rates problematical, H. D. 340, 59th, 2d.
- Forty-foot, increasing need for, H. D. 340, 59th, 2d.
- Forty-foot, rates of progress on, 09, 1092.
- Fourteen-foot, Mississippi River, 7 methods of gaining, H. D. 50, 61st, 1st.
- Jetties for, 99, 1867.
- Maintaining, rivers, 98, 1111.
- Planning, 97, 1790; 00, 4016.
- Planning, harbors, 97, 1257.
- Rivers, effect on, 00, 4016.
- Thirty-five-foot, Southwest Pass, 99, 1866.
- Thirty-foot, development, St. Johns River, Fla., H. D. 611, 62d, 1st.
- Thirty-foot, over; causes for, Delaware River, H. D. 733, 61st, 2d.

Channels, Diverted.

- Maintenance, cost of, Appomattox River, H. D. 952, 60th, 1st.

Channels, Dredged.

- Currents, flow of, New Haven Harbor, H. D. 535, 62d, 2d.
- Immediate filling of, **95**, 1936.
- Immediate filling of, Calumet River, **94**, 2147.
- Protecting, dikes for, **96**, 2920.
- Sand movement into, **96**, 3140.
- Scour and fill, **94**, 2390; **97**, 1548, 3041, 3055.
- Scour and fill, study of, **93**, 3050.
- Sides of, sinking, **95**, 1936.

Channels, Entrance.

- Designing, harbors of refuge, H. D. 573, 61st, 2d.
- Designing, bay harbors, H. D. 1506, 60th, 2d.

Channels, Improved.

- Bends, proper widths, **05**, 1496.
- Curves, proper widths, **05**, 1496.
- Maintenance by natural causes, Delaware River, C. D., H. D. 7, 59th, 2d.
- Rates reduced by, Great Lakes, **07**, 1898.

Channels, Interior.

- Designing, Jamaica Bay, N. Y., H. D. 1506, 60th, 2d.

Channels, Low-Water.

- Dredging, effect of, **98**, 3166.
- Maintenance practicable, **04**, S., 10.

Channels, Narrow.

- Navigation of, rules, **00**, 4028.
- Rocky sides, injury from; fenders for, **98**, 1046.
- Tortuous and; crib dikes unsatisfactory, **98**, 2069.

Channels, Open.

- Flow through, **73**, 896; **76**, 296.

Channels, Permanent.

- Securing 6-foot channel, Missouri River, H. D. 1287, 61st, 3d.

Channels, Private.

- Right of owner to take toll confirmed, Grand Pass, H. D. 967, 60th, 1st.

Channels, Restricted.

- Flow of, **74**, 346; **79**, 774.

Channels, Rocky.

- Wing dams, effect on, **99**, 1684.

Channels, Ship.

- Surveys, **94**, 2263.

Channels, Slack-Water.

- Obtaining, methods, Bayou Teche, La., H. D. 527, 59th, 1st.

Chanoine Wickets. (See Dams.)**Charges.**

- Torpedoes, **80**, 57.
- Water power, H. D. 50, 61st, 1st.

Charter.

- Waterway and canal company, H. D. 818, 61st, 2d.

Charts. (See Maps; Rainfall; see p. 2041 of this Index.)

- Great Lakes, cost to public, **08**, 892.
- Reproduction, methods; Great Lakes survey, **08**, 2516, 2517.
- Rainfall, **75**, 676.
- St. Marys River, **96**, 4056.

Charts, Old. (See Channels, Columbia River; Mississippi River, pp. 1067 and 1616 of this Index.)

Pensacola Harbor, **95**, 1648.

Chemicals.

Water hyacinth, destroying, **01**, 1748.

Chicago Drainage Canal.

Effect on Lake Huron, **02**, 2825.

Chimneys. (See Steamboats.)**Chipmunks.**

Road cleaning, **03**, 2466.

Chips. (See Quarries; Stone.)**Chips, Quarry.**

In stone jetties, **94**, 1231.

Chisel Boats. (See Boats.)

Rock, breaking, **67**, 267; **68**, 422, 434, 436; **69**, 237; **71**, 164, 269; **72**, 330, 331; **74**, 314; **76**, 661; **77**, 544; **78**, 708.

Rock, removing, **68**, 422, 434, 436; **72**, 321.

Rock, removing, daily work, **74**, 314; **78**, 709; **79**, 1134.

Unsuccessful, rock breaking, **71**, 164.

Chiseling. (See Rock.)

Blasting and, comparison, **79**, 1134.

Blasting and, drilling and, comparison, rock removing, **79**, 1134.

Chiseling Machine.

Rock removing, **94**, 812.

Chrysanthemums.

Growing, **02**, 2718, 2760.

Chutes. (See Drift; Rivers; see pl. 15.)

Channel, making, Ohio River, **02**, 1964.

Closing, a problem, Missouri River, **01**, 2381.

Dredgings, transporting (see Dredging, Hydraulic), **76**, 288; **77**, 886; **79**, 503, 1540; **86**, 883; **87**, 886, 1614, 2345.

Navigable, Ohio River, **72**, 403.

White River, **72**, 375.

Use of, in rivers, **81**, 1935, 1943, 1980.

Circus.

Labor scarce because of, Mississippi River, **05**, S., 215.

Cistern.

Details, forts, **04**, 3738.

Cities. (See Water Supply.)

Aqueduct system, D. C., **01**, 3651.

Dumpings of, harbors, injury of, **76**, ii, 429; **77**, 928; **95**, 3608; **97**, 3499.

Playgrounds, D. C., **01**, 3702.

Refuse of, dumping of, at sea, **93**, 3541; **01**, 3612.

Refuse of, dumping of, at sea, best methods, **96**, 3395.

Refuse of, slowness to use for reclamation, **09**, 2284.

Reservoirs for, **98**, 2854.

Shoaling from dumpings of, **12**, 2541.

Streams within limits, removal difficult, **05**, 2073; **06**, 1774.

Water supply of, improvement methods, **92**, 3363.

Cities—Continued.

- Water supply of, pumps, requirements of, **76**, ii, 697.
- Water supply, measuring, D. C., **01**, 3659.
- Water supply, wastage, D. C., H. D. **342**, 61st, 2d.
- Wharfage, Kansas City, **12**, 2202.

Citizens.

- Rights of citizens or corporations, reservoir systems, waterways, **06**, 1455.

Claims.

- Canalization, **11**, 2031.
- Overflowage, tidal records valuable, **04**, 1647.
- Protecting against, river and harbor works, Bayou Teche, **09**, 1466.

Clamps.

- Torpedo cables, **05**, 3008.

Clay.

- Cement, effect on, **95**, 2920.
- Cofferdams, building, **95**, 2907.
- Facing, sand levees, **76**, ii, 626.
- Filled with bowlders, water-jet, broken by, **79**, 62, 382, 393.
- Foundations on, settlement of, **74**, 829, 830.
- Industries, Ohio, **96**, 3082.
- Use of, cement, **96**, 2803.
- Valley of Mississippi River, **83**, 2315.

Cleanings.

- Shoaling from, **12**, 2541.

Clips.

- Cement, briquettes, breaking, **95**, 2913.

Closets, Lamp.

- Concrete walls, forts, **02**, 2477, 2480, 2494.

Coagulation.

- Substitute for storage of drinking water, H. D. **342**, 61st, 2d.

Coal.

- Analysis, **77**, 314; **79**, 1401, 1427.
- Beds, thickness of, Alabama, **81**, 1236.
- Big Sandy Valley, **01**, 2769.
- Deposits, Appalachian, **77**, 306.
- Deposits, Cuivre River, **72**, 392, 393.
- Deposits, Cumberland River, **71**, 481.
- Deposits, Kanawha River, **77**, 306.
- Deposits, Monongahela River, **76**, ii, 132.
- Deposits, Salisbury River, **74**, 545.
- Deposits, Somerset River, **74**, 545.
- Deposits, Warrior River, **75**, ii, 26.
- Deposits, West Virginia, **74**, ii, 104.
- Marketing helped by slack waterway, Allegheny R., H. D. **540**, 62d, 2d.
- River used as car supply regulator, H. D. **510**, 61st, 2d.
- Soft-coal movement, Wis., **06**, 1754.
- Traffic in, Tradewater River, H. D. **346**, 61st, 2d.

Coal Fields.

- Arkansas, H. D. **510**, 61st, 2d.
- Big Sandy River, **00**, 3417.
- Black and Ouachita Rivers, **00**, 2511.
- Elk River, **04**, 2585.
- Sandy River, **98**, 2164.
- Waterway to, construction, Warrior R., H. D. **72**, 62d, 1st.

Coal Fields—Continued.

- West Fork River, **00**, 3276.
- Youghiogheny River, **00**, 3291.

Coal Fleets. (See Plates.)

- Draws, passage of, **76**, ii, 303.
- Ohio River, **77**, 639, 648, 654.
- Freight, handling, **97**, 3183.
- Kanawha River, **96**, 3086.
- Locks, foundations under, **94**, 1993.
- Various, **75**, ii, 26.

Coal Freight.

- Large saving, by slack water, **10**, 690.
- Rates saved by improved Ohio and Mississippi Rivers, **03**, 1692.
- Towing system, Ohio River, **04**, 2434.

Coal Mining.

- Affected by improved waterways, H. D. **510**, 61st, 2d.
- Philippines, **04**, 3870.

Coal Tar.

- Timber, protection of, **69**, 28.

Coal Tows.

- Size of, Ohio River, **84**, 1685.

Coal Transportation.

- 76**, ii, 134; **77**, 638, 639, 648, 649, 654.
- Barges, coast, **97**, 3202.

Coast Attacks.

- Probable plans, **80**, 8.

Coast Defense.

- Armor questions, injudicious delay due to, **87**, 8.
- Board of 1885, report of, **86**, 499.
- Essentials, **69**, 6; **70**, 5; **71**, 4; **80**, 8; **82**, 6; **84**, 56.
- Guns, **83**, 52.
- Importance of, **81**, 5.
- Metals for, experiments, **69**, 4.
- Navy, restricted value of, **80**, 9.
- Plans, Board of, 1885, **86**, 499.
- System of, principles, **84**, 4.
- Torpedoes, value of, **70**, 5; **84**, 5.

Coast Storms. (See Storms.)**Coasts.**

- Atlantic, commerce, **04**, 1459.
- Sand belt, along, **76**, 378.
- Southern, lands of, richer than Holland's, **00**, 1898.
- Traffic, commercial, H. D. **391**, 62d, 2d.

Coasts, Sea. (See Forts, pp. 1793 and 1818 of this Index.)

- Army and militia, functions, **81**, 402.
- Attacks, character of, **81**, 401.
- Equipment, foreign, **82**, 435.
- Fortifications and accessories, **81**, 405.
- Harbor fleet, defense by, **81**, 403.
- Perfect defense, **81**, 408.
- Strengthening, importance of, **81**, 399.
- Torpedo boats, **81**, 410.

Cofferdams. (See Clay; Countercoffers; Cribbs;

- Locks; see pls. **28**, **31**, **37**, **39**.)
- Blossom Rock, **69**, 488, 491, 493; **71**, 926.

offerdams—Continued.

- Building, 88, 779; 92, 1747; 94, 1698; 98, 1991, 2017, 3572.
- Building, dam, 97, 4020.
- Building, locks, 94, 1919, 1956, 1995; 95, 2500; 96, 2291.
- Building, within, cribs, 95, 2907.
- Canals, building, 94, 1932.
- Canals, closing, 94, 1932.
- Centrifugal pump in, 68, 422; 71, 164; 77, 299.
- Centrifugal pumping, 68, 422.
- Cheap form, 01, 2370.
- Collapsed, repairing, 93, 1731.
- Construction, 75, ii, 623; 01, 1595, 1596.
- Dams, building, 98, 2120.
- Des Moines Rapids, 69, 225; 76, 657, 660.
- Dimensions, proper, 68, 426; 69, 249.
- Excavating in, 94, 1995.
- Excavating in, locks, 94, 1292.
- Excavating, within, 95, 2907.
- Excavation of, 74, 312.
- Filling of, gravelly loam, advantage of, 86, 1451.
- Filling of, proper, 69, 249.
- Great Kanawha, 78, 468.
- Hell Gate, 70, 434.
- Kanawha River, 77, 299, 301, 302.
- Large, 68, 421; 69, 243.
- Leakage, wooden washers on tie-rods, 11, 2030.
- Leaks governed with sand bags, 11, 2030.
- Leaks, preventing, 93, 1726.
- Leaks, preventing, countercoffers, 98, 2125.
- Leaks, repairing, 94, 1956.
- Leaks, stopping, 93, 1726; 98, 2093; 01, 2318; 02, 1668; 09, 2157.

- Gravel in, **00**, 978.
- Gravity mixer, **00**, 821.
- Groins, **93**, 1654.

Concrete—Continued.

Gun platforms, tests, Hampton Roads defenses, **98**, 683.
 Handling, movable dams, **96**, 2260.
 Hand mixing, **98**, 622.
 Ingredients of, **93**, 2840; **94**, 1996; **95**, 515; **96**, 2283; **98**, 1992; **99**, 698.
 Ingredients of, delivery of, rules, **98**, 2454.
 Ingredients of, gun platforms, **96**, 529.
 Ingredients of, powdered granite, **96**, 514.
 Ingredients of, proportions of, **68**, 513; **70**, 298; **74**, 277, ii, 399; **77**, 1068; **79**, 808; **93**, 609, 621; **96**, 471, 2202; **97**, 620, 679, 737, 747, 757, 2431; **98**, 660, 860; **00**, 793, 944, 2256, 2768, 3504.
 Ingredients of, proportions of, rules, **98**, 2452.
 Ingredients of, sand and stone, sharp and smooth, advantages of each, **98**, 2280.
 Jetties. (See Jetties.)
 Joints, vertical; necessity for, in walls, **05**, 1987.
 Laying; cost, **01**, 2320.
 Laying, good and poor work, **02**, 2494.
 Leaks in, linseed oil for, **02**, 2465; **04**, 3718.
 Leaks, laying to prevent, **05**, 3004.
 Leaks, preventing, **03**, 2413.
 Leaks, tamper to prevent, **03**, 2424.
 Levees, in, **00**, 4913.
 Locks and dams. (See Locks; Dams.)
 Locks, special devices for building, **11**, 2029.
 Making, **76**, ii, 75; **99**, 741, 2175; **00**, 2793; **01**, 916; **02**, 2470, 2473, 2484.
 Making, locks, **94**, 1293.
 Making, mattresses, sinking of, **00**, 4921.
 Making, plant for, floating, **89**, 2389, 2392; **94**, 1293; **00**, 4128.
 Masonry, large stones omitted, **94**, 2166.
 Masonry, making, expense, items of, **00**, 3474.
 Masonry, making, rules, locks, **94**, 2165.
 Masonry, placing, guard locks, **94**, 2173.
 Masonry, repair of, **93**, 612.
 Materials for, testing, **97**, 2623.
 Materials, handling, forts, **02**, 2484. (See Forts, p. 1797 of this Index.)
 Materials, sea walls, **05**, 3026.
 Materials, standards, **02**, 2471.
 Materials, tests of years on file, Duluth-Superior office, **05**, 1988.
 Mattresses, sinking, **00**, 4879.
 Mixer, **89**, 1480; **91**, 3335; **94**, 1956, 2172; **95**, 2416; **97**, 716; **00**, 821.
 Mixer, gravity mixer, **00**, 821.
 Mixing of, **88**, 1083; **89**, 1378; **90**, 2389; **94**, 1996, 2172; **98**, 741, 3543; **00**, 950, 1043, 3504.
 Mixing of, building, **02**, 2494.
 Mixing of, costs, **99**, 1001.
 Mixing of, dry and wet, **00**, 906.
 Mixing of, economy of gravity mixer, **01**, 861.
 Mixing of, handwork cheapest at times, **01**, 3805.
 Mixing of, locks and dams, **01**, 2113; **11**, 2030.
 Mixing of, methods, **93**, 602; **96**, 2283; **98**, 620; **02**, 2454, 2494; **03**, 2474; **04**, 3785.
 Mixing of, methods, hand, **98**, 622.
 Mixing of, mixtures, Mississippi River, **01**, 2303.
 Mixing of, monument foundations, **01**, 3831.

Concrete—Continued.

Mixing of, overmixing, advantages, **95**, 2729.
 Mixing of, piers, **04**, 3784; **05**, 1986.
 Mixing of, plant, **94**, 2176; **96**, 2367; **97**, 620, 629, 672, 757; **99**, 679, 732, 792; **00**, 757, 760, 765, 1009; **01**, 702; **S.**, 357; **04**, 3802; **05**, 1986.
 Mixing of, plant, arrangement, convenient, **98**, 1810.
 Mixing of, precautions, **94**, 2173.
 Mixing of, records, keeping, rules, **98**, 2454.
 Mixing of, rules, **98**, 2452.
 Mixing of, without machine, **02**, 2470.
 Molding, **00**, 4128.
 Molding, under water, concrete blocks substituted, **98**, 2753.
 Molds for, breakwaters, **00**, 4134.
 Molds for, piers, **05**, 1986.
 Molds for, sea walls, **05**, 3027.
 Molds for, steel lining, **97**, 2621.
 Monoliths, **02**, 772. (See Concrete Blocks.)
 Mortar battery, proof firing, **94**, 454.
 Mortar, bolts in, tests, **95**, 2940.
 Mortar platforms, tests, gun firing, **98**, 683.
 Names in, making, **05**, 3033.
 Natural formation, **68**, 684.
 Obelisk core, **01**, 3833.
 Overhead cover, forts, **02**, 2480.
 Painting, **03**, 2386.
 Paints and washes, **02**, 2494.
 Pavements, batteries, **00**, 848.
 Paving, banks, **02**, **S.**, 159.
 Percolation, oil treatment, **03**, 2408.
 Percolation, preventing, **04**, 3724. (See also Forts, p. 1797 of this Index.)
 Piers. (See Piers.)
 Piles substituted for, jetties, **95**, 509.
 Placing, **89**, 2389, 2392; **90**, 896, 1629; **91**, 1080; **98**, 3543; **99**, 697, 728; **00**, 969.
 Placing, batteries, **98**, 620; **00**, 757, 765, 770, 809, 979, 1003.
 Placing, breakwater, **91**, 1080; **00**, 4066, 4128.
 Placing, breakwater, foundations, **96**, 2369.
 Placing, dams, **96**, 2200.
 Placing, elevated track, **98**, 620.
 Placing, foundations, locks, **88**, 2167.
 Placing, locks, **95**, 2416; **96**, 2283.
 Placing, locks, building, **94**, 1293.
 Placing, locks, foundations of, **88**, 2167.
 Placing, lock walls, **96**, 2284.
 Placing, plant, **98**, 740; **00**, 2256.
 Placing, simple methods, lock walls, **97**, 2430.
 Placing, stone breakwaters, **00**, 4066.
 Placing, under water, **97**, 2619.
 Plants, **01**, 1596, 2113, 2319; **02**, 2453, 2470; **03**, 2418; **04**, 3754.
 Platforms, loading, forts, **02**, 2478.
 Pressures, unit, piers, **01**, 2859.
 Proportions, proper, forts, **01**, 911.
 Ramming, rules, **98**, 2453.
 Reinforcing, **02**, 2477, 2494.
 Repairing, batteries, **93**, 612.
 Reservoirs, dams, design of, **00**, 2789.
 Resurfacing timber dam, **03**, 1760.
 Revetments. (See Revetments.)
 Salt, effect of, **82**, 2438.
 Sand, crusher dust superior to, **01**, 913; **02**, 2457.

Concrete—Continued.

Sand for, **02**, 2470.
Sand for sea walls, **05**, 3025.
Sea walls, reinforcing and anchor walls, **05**, 3026.
Sea walls, specifications, **05**, 3024.
Shell of, jetties, **04**, 3818.
Shell of, old breakwaters, **04**, 3818.
Slopes, batteries, **97**, 630; **98**, 651; **99**, 798; **00**, 848, 854.
Slopes, gun firing, effect of, batteries, **96**, 534.
Stairways, forts, **05**, 3033.
Steel and, telephone booths, forts, **03**, 2372.
Stone and, ironwork, placing, locks, **94**, 1996.
Stone and, superstructures, crib piers, **97**, 3075.
Stone, broken, for sea walls, **05**, 3025.
Stone in, effect of, **00**, 978.
Stone in, gravel and, in, comparison, **00**, 978.
Strength of, determining, experiments, **82**, 2345; **83**, 1849.
Strengths, tests of, **05**, 3027.
Structures of, blasting, **94**, 477.
Structures of, not monolithic, **94**, 477.
Substitution of, pile jetties, **95**, 509.
Superstructure, breakwater. (See Breakwaters.) **04**, 3818.
Surfaces, checking, preventing, **01**, 923.
Surfaces, coloring, **04**, 3720.
Surfaces, cracks in, closing, **03**, 2411.
Surfaces, cracks, line of fire, **96**, 534.
Surfaces, finishing methods, **96**, 536.
Surfaces, leaks, preventing, **00**, 1025.
Surfaces, seepage, preventing, **03**, 2405. (See Forts, p. 1797 of this Index.)
Surfaces, tests of, **88**, 1084; **95**, 2922.
Tampers for, **03**, 2424.
Timber dikes and, **87**, 970.
Triangulation station, plan and section, **94**, 1378.
Viaducts, **01**, 3778; **03**, 2470.
Walking surfaces, wear proofing, **03**, 2422.
Walks of, building, **97**, 2973.
Walls, coloring, **04**, 3727.
Washes and paints for, **03**, 2420.
Water-tightening, canals, **76**, ii, 74.
Wet and dry spots, and composition behind, **01**, 923.
Wet concrete, advantages of, **01**, 911.
Wood replaced by, breakwaters, **01**, 3314.

Concrete Blocks.

Behavior, breakwaters, **97**, 2622.
Concrete in mass and, comparison, **96**, 1421.
Concrete in situ, preferred to, breakwaters, **97**, 2616.
Concrete molding, under water, substitute for, **98**, 2753.
Concrete upon, **03**, 2097.
Costs, **11**, 2260.
Cracking of, **91**, 1633.
Crib breakwaters, repairs, **94**, 2483.
Failure of, Cherbourg, **67**, 516.
Forming of, special design, **00**, 2769.
Foundation of, breakwaters, **97**, 2619.
Ingredients, **97**, 2625.
Ingredients, proportions of, **98**, 665.

Concrete Blocks—Continued.

Jetties, **68**, 500, 512; **71**, 545; **80**, 1126.
Large, **98**, 2752.
Laying, **98**, 2676; **00**, 4068.
Making, **89**, 2368; **90**, 896, 2817; **95**, 1676; **96**, 2371; **97**, 2620; **00**, 4125.
Making, piers, **07**, 1995.
Making, under cover, advantages of, **97**, 2616.
Molding, **04**, 3781.
Molding, breakwaters, **10**, 2058.
Molding, on barges, experiments, **01**, S., 358.
Molding, under cover, **97**, 2624.
Molds for, steel lining, advantages of, **97**, 2621.
Roofs, forts, **05**, 3006.
Sea walls, proposed, **71**, 520.
Setting, breakwaters, **00**, 4108.
Seven-ton weight, making, **98**, 2224.
Storing, **95**, 1676.
Thirty-ton weight, making, **93**, 3159.
Timber breakwater, repairing, **98**, 2676.
Use of, Galveston, Tex., **68**, 500, 512; **71**, 520.
Weather, effect of, **98**, 2255.

Concrete In Bags.

Concrete blocks, foundations, **97**, 2619.

Concrete In Mass.

Concrete blocks and, comparison, **96**, 1421.

Concrete In Situ.

Concrete blocks, preferred to, breakwaters, **97**, 2616.

Condemnation.

Lands for levees, **03**, 1387.

Condensation. (See Forts, p. 1797 of this Index.)

Conduits. (See Locks; Water.)

Accidents, guarding against, water supply, H. D. 347, 61st, 2d.
Bear-trap dams, **01**, 2314.
Capacity, increasing, water supply, H. D. 347, 61st, 2d.
Concrete in, cracks in, **96**, 3911.
Flushing, locks, **95**, 2366.
Water flow, formula, **93**, 4277.
Water in, gauging, **97**, 4004.
Wire mains and, forts, **02**, 2482; **04**, 3721.

Connections.

Plates, piers, **01**, 2855.
Steelwork, buildings, **04**, 3834.
With railroads, new harborage, Jamaica Bay, N. Y., H. D. 1506, 60th, 2d.

Constructions.

Details, dredges, **06**, 972.
Material bunkers, forts, **02**, 2494.
Methods, forts, **05**, 3030. (See Forts, p. 1797 of this Index.)
Plants, **02**, 2452, 2494. (See Forts.)
Progress, showing, jetties, **06**, 1296.

Continental Divide.

Profile of, between Atlantic and Pacific, **77**, 1246.

Contraction. (See Channels; Dikes; Jetties; Rivers.)

Contraction Works. (See Channels; Works, Contraction.)

Effect of, Savannah Harbor, H. D. 181, 59th, 1st.

Contraction Works—Continued.Failure, causes of, **02**, 1748.

Mississippi River, H. D. 50, 61st, 1st.

Contractors.Aided with advance money, Mississippi levees, **05**, S., 241.**Contracts.** (See Vol. I, p. 21.)Laws regulating, unfavorable action of, **67**, 56, 97, 156, 168, 183, 268, 377, 394, 416, 423, 431.**Contracts, Informal.**Advantages of, small works, improvement, **98**, 2613.**Contract Systems.**Hired labor compared with, **82**, 735.Objections, fortifications, building, **97**, 9.**Conveying Machine.**Dredging, **94**, 1061.**Copings.** (See Capping.)Asphalt courses under, forts, **02**, 2494.Concrete, parks, District of Columbia, **04**, 3918.Lining, forts, **03**, 2373.**Copper.**Cases, corrosion, explosives, **86**, 684.Mines, N. C., **75**, ii, 135.Ore, reducing, method, **75**, ii, 135, 136.**Coral.**

Foundation for breakwaters, H. D. 593, 61st, 2d.

Cords and Floats.Resistance, currents, **74**, 534; **75**, ii, 369; **76**, 216; **78**, 380.**Cores.** (See Jetties; Wall.)Solid, method of giving, Preslor Crawley Co. (mention), **03**, 1713.**Corporate Work.** (See Private Work, pp. 22, 2041 of this Index.)Expenditures for, Glasgow, Scotland, **74**, ii, 43.**Corporations.** (See Citizen; Companies.)

Commerce of one firm, doubtful cause for waterway improvement, H. D. 955, 60th, 1st. Improvements, public; not for benefit of, H. D. 139, 59th, 1st.

Reservoirs, building, **98**, 2866.Rights of, determining value, waterways, **05**, 909, 914.

Waterway development, one corporation better than many, H. D. 781, 60th, 1st.

Water power, legalization of right to, waterways, H. D. 781, 60th, 1st.

Corps of Engineers. (See p. 2039 of this Index.)Promotion, slow rate of, **02**, 5.Plan of increasing, **10**, 8.**Corrosion.**Friction at lock gates due to, **11**, 2096.**Cost of Work.** (See Estimates, p. 21.)

Since the cost of work varies so largely on account of location, competition, and previous experience, only a comparatively small number of references are given. These will be found as subdivisions under the various subjects.

Cotton.  Superstructures, durability, average, **84**, 2020; **87**, 2111.
 Superstructures, early completion of, **78**, 1188.
 Superstructures, form modified, **83**, 1808.
 Superstructures, height of, **71**, 216.
 Superstructures, parapet, form for, **84**, 2144; **85**, 2279, 2307; **87**, 2382.
 Superstructures, removing breakwaters, **96**, 2369.
 Superstructures, stone, **67**, 222; **74**, 151; **76**, ii, 390.
 Supports for, proper, **93**, 3211.
 Suspension, by chains, **74**, 209; **75**, 228, 239, 276.
 Teredo attacks, sand to check, **73**, 800.
 Teredo, destruction by, **75**, ii, 99.
 Timberheads, protecting, **96**, 2937.
 Timber in, amount of, diagram showing, **96**, 2578.
 Timber, protecting by coal tar, **69**, 28.
 Training walls, **95**, 1491.
 Triangular section of, **68**, 127; **70**, 207.
 Undermining, **11**, 2284.
 Undermining, breakwaters, **11**, 2284.
 Undermining of, aprons to prevent, **97**, 3065.
 Unequal settlement of, preventing, **00**, 4071.
 Valuable estimates, **75**, 300, 306.
 Vertical posts, strengthening, **79**, 1588, 1590.
 Wave action on, **68**, 234.
 Wave pressure, **91**, 2557.
 Waves, effect on, **68**, 229, 230, 231; **70**, 197; **71**, 237.
 Wide base, advantage of, **92**, 1519.
 Widths of, proper, **97**, 3287.
 Wooden pins in, **67**, 138, 216.

Cribs, Buttress. (See Breakwaters.)**Cribs, Guide.**

- Building, **00**, 3510.
 Eagle Harbor, Mich., **77**, 848; **78**, 1139; **79**, 1481.
 Locks, **96**, 2269; **04**, 3761.
 Reconstructed with concrete, **11**, 2250.

Cribs, Movable.

- Scows used as, **93**, 626.

Cribs, Old.

- Condition of, **93**, 3141, 3147.

Cribs, Pierhead.

- Sinking upon rock embankment, Ashland, **11**, 2276.
 Omission of bearing piles cause of lower bid, **11**, 2276.

Cribs, Plank.

- Building, **97**, 2690.

Cribs, Protection.

- Dam-extension work, **04**, 2107.

Cribs, Spur.

- 00**, 4172.
 Breakwaters, **84**, 2148, 2150.
 Oswego, N. Y., **84**, 2148, 2150; **87**, 2383.

Cribs, Submerged.

- Weight of, **91**, 2556.

Cribs, Timber. (See Breakwaters; Jetties; Piers.)

- 96**, 2578.
 Building, **00**, 4172.
 Decay, **66**, iv, 71.
 Old, breakwaters, Buffalo, **04**, 3818.
 Piers, **98**, 2660.
 Reconstructed with concrete, **11**, 2250.

Cribs, Triangular.

- Advantages of, piers, **95**, 3118.
 Bars, effect on, **95**, 3118.
 Breaches, preventive, crib piers, **96**, 2966.
 Pier ends, protecting, **95**, 3118.

Cribwork.

- Reservoir dams, **96**, 1837.
 Shore protection, **89**, 770.

Crops, Cereal.

- Great magnitude, Columbia River district, **01**, 3523.

Cross Fences.

- Illegal, levees, **08**, 2654, 2743.

Crossings, Waterway.

- Intraoceanal canals, H. D. 391, 62d, 2d.

Cross Section. (See Breakwaters; Channels;

- Cribs; Dikes; Harbors; Jetties; Levees; Rivers; Waterways.)
 Channels, Nantucket Coasts, H. D. 536, 62d, 2d.
 Elements, Mississippi River, **96**, 3577.
 Elements, Missouri River, **94**, 3140.
 Mississippi River. (See p. 1076.)
 Missouri River. (See p. 1023.)
 Slope and, terms of current velocity, **72**, 139; **79**, 1579.
 Unique, Great Lakes, piers, **06**, 1841.

Cross Weirs. (See Weirs, Cross.)**Crushers.**

- Dust of, superior to sand, for concrete, **02**, 2457.

Culverts. (See Canals; Gates; Locks; Sluices;

- Turbines; see pls. 24, 26, 31, 37, 39.)
 Canals, cost, **01**, 3046.
 Concrete locks, **98**, 2482.
 Designing, locks, **00**, 2976.
 Designing, locks, Lockport to St. Louis, H. D. 263, 59th, 1st.
 Floors, locks, **94**, 2303.
 Locks, **04**, 3758.

Culverts—Continued.

- Plan, locks, **95**, 2906.
- Repairing, locks, **98**, 1800, 2983.
- Roads, **03**, 2458.
- Steel concrete, levees, Mississippi River, **04**, S., 196.
- Syphon-shaped, cleaned of sand, canals, **99**, 2857.

Culverts, Drainage.

- Levees, Mississippi River, **04**, S., 244.

Current Meters.

- Outfit, verticle curves, etc, **02**, 2869.
- Rating, **02**, 2796, 2828.

Current Observations.

- 88**, 1147, 1276, 2385; **89**, 848, 1326; **94**, 1005; **96**, 1228; **98**, 2740; **99**, 2275.
- Biscayne, Fla., H. D. 554, 62d, 2d.

Currents. (See Discharge; Floats; Harbors; Jetties; Piers; Rivers; see pl. 72.)

- Absence of, Mississippi River, mouth, **77**, 433.
- Bottom of, velocity of, **68**, 763; **70**, 563, 629.
- Breakwaters, opening in, effect of, **98**, 2662.
- Bridge piers, **68**, 381; **69**, 196.
- Canals, effect of guard locks, **05**, 1755.
- Changes in, jetties, vicinity of, **96**, 1195.
- Channels, effect on, Galveston, H. D. 328, 61st, 2d.
- Combined currents a cause of erosion, **95**, 2301.
- Concave dikes, effect on, **69**, 382.
- Control of, jetties, effect of, **93**, 3315.
- Control of, rivers, **00**, 4436.
- Control of, Savannah, Ga, **07**, 1274.
- Cross currents, avoiding, Detroit, Mich., H. D. 676, 61st, 2d.
- Deflection of, causes, bridge piers, **95**, 734.
- Deflectors for, **11**, 2002.
- Dikes, effect of, **69**, 382.
- Direction, lakes, **73**, 261.
- Dredges in, anchoring of, **93**, 2449.
- Effect of, large rivers, H. D. 1287, 61st, 3d.
- Flow of, dredged channels, New Haven, Conn. H. D. 535, 62d, 2d.
- Great Lakes harbors, H. D. 82, 59th, 2d.
- High velocity of, necessity of, **85**, 569.

Currents—Continued.

- Hydrometric pendulum, **97**, 4094.
- Ice dikes, effect on, **93**, 1146.
- Ice, effect of, **02**, 2809.
- Investigation of, Great Lakes, **97**, 2776.
- Jetties, oblique to, effect of, **79**, 524.
- Lake Erie, **95**, 3086; **98**, 2713.
- Locks and dams for swift-current streams, **01**, 3513.
- Materials in, velocity required to move, **68**, 764; **76**, 463.
- Matresses, destruction of, **99**, 1859.
- Mean velocity, mid-depth, relation to, **75**, ii, 301, 305; **78**, 260, 349; **79**, 1970.
- Measurements, discharge curve, **01**, 2138.
- Measurements, methods, **01**, 1597.
- Measurements, St. Lawrence, details, **02**, 2792.
- Measuring, **00**, 5327.
- Measuring, catamarans, **00**, 5325.
- Measuring, hydrometric pendulum, **97**, 4094.
- Measuring, loaded poles for, **96**, 1204.
- Measuring, meters, two, **00**, 4744.
- Measuring, reel for, **00**, 5327.
- Metering, computing methods, H. D. 231, 58th, 3d.
- Mid-depth velocity, wind, effect of, **69**, 254.
- Moving across, scows, **77**, 3459.
- Scour due to, **01**, 575.
- Strengthening, rivers, **95**, 3860.
- Strong currents, tides, **95**, 1422.
- Tidal estuaries, sub and surface, relation between, **78**, 558.
- Velocities of, **88**, 429, 475; **89**, 1306, 1333, 1334, 1409; **90**, 1273, 1594; **91**, 1583, 1719; **92**, 1334.
- Velocities of, bends, at, **76**, ii, 265.
- Velocities of, bottom and surface, ratio, **79**, 770, 773, 791.
- Velocities of, Brazos, Santiago River, Tex., **81**, 1353, 1368.
- Velocities of, Columbia River, **79**, 1847, 1851; **93**, 3383.
- Velocities of, comparison of, by floats, **70**, 556; **75**, ii, 301, 304; **78**, 259, 262, 305, 380, 1306, 1308, 1315.
- Velocities of, computation, Tennessee River, **99**, 2279.
- Velocities of, Connecticut River, **68**, 763.
- Velocities of, cross section and slope, terms of, **72**, 139; **79**, 1579.
- Velocities of, depth, relation to, **76**, 451.
- Velocities of, depths, various, **69**, 588; **75**, ii, 313.
- Velocities of, determining, current meters for, **78**, 259, 262, 305, 380, 392.
- Velocities of, determining, harbors, **96**, 1237.
- Velocities of, East River, **72**, 805.
- Velocities of, Erie Harbor, **98**, 2740.
- Velocities of, formula for, **72**, 139; **74**, 790; **75**, ii, 79, 344; **76**, 452, 464; **78**, 1308; **79**, 1970.
- Velocities of, formulas for, **82**, 2480; **83**, 1349; **86**, 1302.
- Velocities of, Galveston Bay, **74**, 728.
- Velocities of, Gulf Stream, **76**, 379.
- Velocities of, head, terms of, **76**, 464.
- Velocities of, Hell Gate, **68**, 736.
- Velocities of, Hudson River, **66**, iv, 214.
- Velocities of, Illinois River, **68**, 448; **69**, 253.
- Velocities of, Lake Michigan, **98**, 2331.

Currents—Continued.

- Velocities of, lakes, outlets of, **68**, 961; **70**, 556.
- Velocities of, Lockport to St. Louis, H. D. 263, 59th, 1st.
- Velocities of, Lynn Harbor, Mass., **84**, 546.
- Velocities of, materials, movement of, **76**, 463.
- Velocities of, measuring, **00**, 5400.
- Velocities of, Mississippi River, **79**, 1009.
- Velocities of, Newburyport, Mass., **81**, 508.
- Velocities of, Niagara River, **68**, 955.
- Velocities of, observing, methods, **93**, 3669.
- Velocities of, Ohio River, **76**, ii, 301.
- Velocities of, piers, **98**, 2740.
- Velocities of, reduction, **93**, 1624.
- Velocities of, Reedy Island, Del., **84**, 820.
- Velocities of, river bends, effect of, **75**, 575; **76**, ii, 265.
- Velocities of, river depth, relations, **76**, 451.
- Velocities of, rivers, **93**, 2366.
- Velocities of, Rock Island Rapids, **68**, 426, 433.
- Velocities of, Sacramento River, **79**, 1752.
- Velocities of, St. Clair River, **68**, 955.
- Velocities of, St. Lawrence River, **68**, 956.
- Velocities of, Ste. Marie River, **68**, 955.
- Velocities of, Sandy Hook, N. J., **85**, 777, 784; **86**, 727, 740.
- Velocities of, South Pass, **94**, 1345.
- Velocities of, subsurfaces, **70**, 574, 626.
- Velocities of, surfaces, **68**, 763.
- Velocities of, Tennessee River, **93**, 2366; **96**, 2021; **00**, 2963.
- Velocities of, terms of hydraulic radius and slope, **79**, 1579.
- Velocities of, Yaquina Bay, Oreg., **87**, 2468.
- Water jet, currents induced by, **79**, 383.
- Winds on, effect of, Lake Erie, **98**, 2712.

Currents, Littoral. (See Shores.)

- Action of, theories, Jamaica Bay, H. D. 1506, 60th, 2d.
- Brazos River, **97**, 1839.
- Directions of, conditions governing, **02**, 2503.
- Directions of, Pacific coast, **00**, 4444.
- Gulf of Mexico, **74**, 738; **75**, 940; **76**, 379; **77**, 433; **81**, 1353, 1369.
- Long Island Sound, **69**, 414.
- Newburyport, Mass., **83**, 437.

Currents, Rapid.

- Boring in, **93**, 3162.
- Bridge piers, effect on, **95**, 734.
- Soundings, **93**, 3162.

Currents, Shore.

- Observing, Great Lakes, **03**, 2086.

Currents, Tidal.

- Enormous, Charleston Harbor, **95**, 1422.
- Ice dikes, effect of, **93**, 1146.
- Nantucket coast, H. D. 536, 62d, 2d.

Currents, Tidal—Continued.

- Observations, **96**, 1228.
- Powerful currents, effect of, Charleston Harbor, **99**, 1552.
- Sand and silt, effect on, **71**, 525; **73**, 994.
- Stone jetties, building; effect on, **93**, 3501.
- Undercurrent, Penobscot River, **68**, 866.
- Velocities, **94**, 999.
- Velocities, Harlem River, **96**, 848.
- Velocities, Ocracoke Inlet, **94**, 999.
- Velocities, Passes, **74**, 790.

Curtaining.

- Dikes, **98**, 1860.

Curtains. (See Dikes.)

- Bank protection, **99**, 3706.
- Building, bank protection, **94**, 1597.

Curtains, Wire.

- Brownlow weed dikes, superior to, **80**, 1458.

Curves. (See Bends; Jetties.)

- Concrete pier construction, **04**, 3802; **05**, 1986.
- Pile driving, jetties, **94**, 2544.
- Proper widths, improved channels, **05**, 1496.
- Waterways, intracoastal, H. D. 391, 62d, 2d.

Cushions, Wooden.

- Stone, effect on, **75**, ii, 845.

Cut-off Boxes.

- Torpedoes, **89**, 492.

Cut-offs. (See Rivers.)

- Advantageous, Mispillion River, H. D. 678, 62d, 2d.
- Danger, rivers, **71**, 381; **75**, 540.
- Disadvantages of, floods, **01**, 2345.
- Forming, rivers, **70**, 376; **75**, ii, 499, 507.
- Inadvisability, rivers, **96**, 1578.
- Method of shortening rivers, Leipsic River, Del., H. D. 574, 61st, 2d.
- Preventing, Mississippi River, **04**, S., 235.
- Rivers, **76**, 292.
- Rivers, injurious effect of, **72**, 435; **73**, 645; **75**, 540; **79**, 899.
- U. S. should get rights across bends free of charge, H. D. 523, 61st, 2d.

Cuts. (See Canals; Dredging.)

- Location, dredging, **97**, 3695.

Cutter. (See pl. 53.)

- Hard material, hydraulic dredges, **05**, 3034; **06**, 1964.
- Frame, hydraulic dredges, **05**, 3034.

Cutwaters.

- Molds for, concrete piers, **01**, 2832; **04**, 3802.

Cypress Stumps.

- Teredo ravages, **76**, 327.

Cypress Timber.

- Remarkable preservation of, **76**, 327.

D.

Damages.

Waived by owners of adjacent land, river and harbor improvements, Manistee, Mich., H. D. 599, 62d, 2d.

Dampness.

In concrete structures. (See Forts, p. 1797 of this Index, for details in various climates, etc.)

Dampproofing. (See Dampness, above.)**Dams.** (See Canals; Reservoirs; Water Power; Weirs; see pls. 15, 17-22, 25, 27, 28, 30, 36.)

Abutments, building, 97, 2550.

Abutments, designing, 00, 2983.

Abutments, failures, 04, 3767.

Abutments, plans, Lockport to St. Louis, H. D. 263, 59th, 1st.

Abutments, reconstruction, timber replaced by concrete, 11, 2106.

Banks above and below, protecting, 94, 2108.

Bear-trap. (See Dams, Bear-trap, below.)

Bear-trap gates for, improved, 93, 2265.

Bear Valley, 98, 2825.

Borings, 01, 2758.

Breaks in, repairing, mattress placing, 95, 3781.

Building, 88, 1007; 91, 2364; 92, 1592, 2115, 2647; Atlas, 116; 97, 2550; 98, 2092, 2120; 00, 2182, 3515.

Building, Allegheny River, 99, 2404.

Building, cableway, 99, 2176.

Building, central power plant, advantages of, 93, 2485.

Building, cofferdams, 98, 2120.

Building, company for, act incorporating, 93, 2097.

Building, gangs, arrangement of, 00, 2788.

Building, hydraulic methods, 98, 2828.

Building, objects to be sought, 04, 3765.

Building, plant for, 93, 2485; 99, 2174; 00, 2775.

Building, scour, preventing, mattress placing, 98, 3030.

Building, Yamhill River, 99, 3236.

Channel diversion, 98, 1954.

Cofferdam. (See Cofferdams.)

Cofferdams, building, 97, 4020.

Commerce, when a benefit to, 03, 1501, 1507.

Concrete in, placing, 96, 2200.

Concrete work, 00, 3472.

Concrete work, building, 95, 1675; 00, 3482, 5001.

Concrete work, building, plant for, 96, 2260.

Concrete work, building, plant for, arrangement of, economical, 00, 2792.

Concrete work, cost of, items of, 96, 2203.

Concrete work, foundations, building, 96, 2202.

Dams—Continued.

Concrete work, plans for, 97, 3946.

Concrete work, proposed, Ohio River, 99, 2556.

Construction, details governing, western rivers, 01, 2768.

Crests for, movable; Kanawha system, H. D. 480, 62d, 2d.

Cribs protecting extension, 04, 2107.

Deposits behind, forming bars, after floods, 11, 1581.

Designing, 00, 2972, 2983.

Designing, Mississippi River, H. D. 263, 59th, 1st; H. D. 50, 61st, 1st.

Discharge over, 79, 1552; 00, 2969.

Drift gaps, 89, 1852.

Effect of, determining, mathematical methods, 00, 2968.

Electric power dams, 94, 1780.

Exposure to air, effect, 87, 2107.

Extension work, 04, 2105, 3772.

Fish, effect on, 73, 929.

Fishways, building, 96, 2240.

Flexure, preventing, 94, 1923.

Floods, effect on, 77, 742; 00, 2172, 2985; 04, 1297.

Flushboards, 98, 2344.

Flushboards, canals, 97, 2713.

Foundations, building, 99, 2483.

Foundations, mattresses for, 89, 1093.

Foundations, pile-driving, 00, 5002.

Freshets, levels, effect on, Merrimac River, Mass., H. D. 2, 61st, 1st.

Gates. (See Gates, Lock.)

Headwaters, Mississippi River, 03, 1534.

Height of, formula, 78, 534; 87, 1306.

Height of, raising, 97, 4020.

Ice. (See Ice.)

Ice movement, lowering dams prior to, Ohio River, 11, 2136.

Illinois and Mississippi Canal, 08, 2019.

Lake Superior and Mississippi Canal route, 96, 2431.

Leaks in, stoppage of, 92, 2075.

Locks and, rivers, improving, 00, 2349. (See Locks.)

Locks and, water-power rights, preserving, 98, 983.

Log sluices, flooring of, 96, 1836.

Mattresses, building, 00, 4804.

Mattresses, placing, 98, 3030.

Mattress foundations, 89, 1093.

Mattress sill, scour at, 96, 3827.

Maximum slope, 76, 374, ii, 284.

Missouri River, 94, 1780.

Navigable passes, 93, 2269.

Navigable passes, bear-trap gates, 96, 1838.

Navigable passes, designing, 93, 2269.

Dams—Continued.

Place for, river regulation, **02**, 1874.
Plans, Lockport to St. Louis, H. D. 263, 59th,
1st.
Ramous, effect of, **76**, 375.
Reconstruction, concrete used, with movable
crest, **05**, 1842.
Reconstruction, condition of, Lake Winne-
bigoshish, **01**, 2313.
Reconstruction, cost, Ohio River, **05**, 1843.
Reconstruction, Leech Lake, **01**, 2316.
Reconstruction, Pokegama Falls, **05**, 1674.
Repairs, Coosa River, **02**, 1278.
Repairs, miter sills, cofferdam for, **05**, 1942.
Repairs needed, after floods, Ohio River, **01**,
2627.
Repairs, procedures, **12**, 2332.
Repairs, sheet-pile bulkhead used in, **02**, 1278.
Retaining walls, method of building new con-
crete wall, **06**, 1611.
River banks and, **68**, 448; **73**, 232.
River banks, contraction, Mississippi River,
94, 1593.
River banks, effect on, **73**, 232.
River banks, rectification of, effect on, **76**, ii,
408.
Rivers, **00**, 2967.

Crib mats, **94**, 2892.
Foot mats, **94**, 2892.
Hoisting plant, **94**, 2893.
Improvement with, abandoned on Wisconsin
River, **87**, 2096.
Mississippi River, **94**, 2863.
Paving, **94**, 2893.
Permanent, **73**, 444, 448; **75**, ii, 461; **76**, ii, 405;
78, 478, 483.
Repairing, **95**, 3782.
Savannah River, **80**, 934, 944, 1085; **82**, 1168.
Willamette River, **80**, 2259, 2289.
Wisconsin River, **80**, 1962.
Yellowstone River, **82**, 1743.
Yuba River, **81**, 2492.

Dams, Chanoine. (See Dams, Wicket.)

Design, special, **02**, 2500.
Not unsafe standing in a rise, **12**, 2313.
Ramming, **12**, 2313.

Dams, Check.

Advantages of, rivers, **93**, 2355.
Longitudinal and, superiority of, rivers, im-
proving, **93**, 2355.

Dams, Chute.

Building, **96**, 1870.
Mattresses, **94**, 3142.
Settlement of, **96**, 1887.

Dams, Concrete.

Design, details of, **02**, 1668.
Logs, effect of, on, **04**, 2650.
Mammoth Hot Springs, **03**, 2476.
Reconstructing, **05**, 1842.

Dams, Crib.

Coosa River, **78**, 764.
Cumberland River, **75**, 797, 800.

Dams, Crlb—Continued.

Foundations of, **96**, 1833.
 Fox River, **76**, ii, 416; **78**, 1178.
 Illinois River, **69**, 218.
 Kentucky River, **79**, 1406, 1411.
 Plan of, **98**, 2019.
 Sliding of, preventing, **93**, 2767.
 Wabash River, **77**, 668; **78**, 832; **79**, 1442.
 Youghiogheny River, **74**, 562.

Dams, Crlb and Stone.

94, 2107.
 Building, **94**, 2107.
 Foundations, dredging, **94**, 2107.
 Plans, **96**, 1434.

Dams, Deflecting.

Hull of sunken steamer used, **98**, 1391.

Dams, Earthen.

Building, **98**, 2828.

Dams, Earthen Reservoir.

Building, **98**, 2828.

Dams, Emergency. (See pls. 44, etc.)**Dams, Fixed.**

Movable and, comparison, **74**, 566; **75**, ii, 95;
77, 643; **79**, 1354; **89**, 1991; **92**, 2102.

Dams, Fixed and Movable.

Canalization of Mississippi River, H. D. 50,
 61st, 1st.

Dams, High.

Efficacy doubtful, **97**, 2100.

Dams, Impounding.

Plans, mining débris, **00**, 5040.

Dams, Longitudinal.

Advantages, rivers, **93**, 2355.
 Check and, superiority of check dam, rivers,
 improving, **93**, 2355.

Dams, Masonry.

Building, **98**, 2206.
 Des Moines Rapids, **67**, 326.
 Elk River, **76**, ii, 170.
 Foundations of, **98**, 2208.
 Greenbrier River, **77**, 711, 718, 730, 734.
 Kentucky River, **79**, 1409, 1411.

1472, 1475; **85**, 1748; **86**, 1502; **87**, 1667, 1675,
1686.
Operating, methods, **93**, 2265.
Potomac River, **84**, 2321; **85**, 2469, 2478, 2496.
Sheet piling, **96**, 1835.
Sites, Lake Superior; Mississippi River Canal,
96, 2432.
System, headwaters, Mississippi River, **06**,
1433.
Tainter gates, counterweights, etc., **01**, 2314.
Varieties of, **98**, 2824, 2877.
Various, **82**, 1830.

Dams, Restraining.

- Hydraulic mining, specifications, **04**, 3698.

Dams, Rolling.

- Falls of St. Anthony, **74**, 284; **76**, 699; **77**, 565.

Dams, Settling.

- 94**, 2864.

Dams, Sheet Pile.

Foundations, quicksand pocket, effect of, **98**, 1487.

Undermining of, **98**, 1487.

Wing, building, **95**, 1727.

Dams, Sheet Pile Wing.

94, 1335.

Dams, Side.

Waterway improvement, Mississippi River, H. D. 50, 61st, 1st.

Dams, Sill.

Effect of, Atchafalaya River, **97**, 3810; **98**, 3447.

Mississippi River, H. D. 50, 61st, 1st.

Sections of, Atchafalaya River, **98**, 3448.

Slopes, Atchafalaya River, **98**, 3447.

Soundings over, **99**, 3637.

Dams, Spillway. (See pl. 19.)**Dams, Spur.**

Fascines, **93**, 1562.

Foundations, **92**, 1318.

Ineffectual, sandbars, **01**, 1661.

Types, Altamaha system, H. D. 443, 62d, 2d.

Dams, Storage.

River regulation, **07**, 2265.

Dams, Submerged.

Fish passage, **01**, 3515.

Dams, Swash.

Damage of, storms, **00**, 1820.

Profile, Cape Fear River, **00**, 1822.

Dams, Temporary.

Building, **93**, 2421; **00**, 3482.

Dams, Timber.

Building, **98**, 2350; **00**, 3508.

Reinforced with concrete, **03**, 1760.

Dams, Timber and Stone.

Strengthening, **98**, 2000.

Dams, Tralling.

Favorable results, river improving, **98**, 1788.

Dams, U. S.

Power derivable through, consideration of, St. Paul to Minneapolis, H. D. 218, 60th, 1st.

Dams, Water-Power.

Proposed, Muscle Shoals Canal, H. D. 781, 60th, 1st.

Dams, Wicket. (See Movable Dams; see plates.)

Lowering, difficulties of, in rises, **12**, 2328.

Movable dams, **80**, 1753.

Operating, movable dams, **98**, 2120.

Dams, Wing. (See plates.)

Building, **87**, 419; **92**, 1472; **93**, 3526; **99**, 2924.

Channel deepening, **93**, 3571.

Cheaper than canalization for securing river channels, H. D. 341, 59th, 2d.

Connecticut River, **78**, 269.

Depths, effect on, rocky channels, **99**, 1684.

Early-built dams, stability of, **98**, 1893.

Efficient, **00**, 2573.

Illinois River, **77**, 562.

Jetties, **94**, 1336.

Mississippi River, **75**, ii, 461, 466.

Dams, Wing—Continued.

Paving, Rock Island Rapids, **94**, 1664.

Piles and horizontal timbers, dams of, **71**, 359.

Rivers, effect on, **97**, 2250.

Rivers, Mississippi River, **74**, 302; **75**, 453;

76, 655; **77**, 529.

Sheet piles, dams of, building, **94**, 1335; **95**, 1727.

Shore protected by, **75**, ii, 460.

Wisconsin River, **72**, 140, 144, 146, 147; **74**, 169; **75**, 225; **76**, ii, 402.

Yamhill River, **99**, 3238.

Dams, Wooden.

Masonry and, comparison, **76**, ii, 87.

Dams, Wooden Reservoir.

Deterioration, rapid, **00**, 2787.

Rock substituted for, advantages, breakwaters, **93**, 3202.

Danubé.

Regulation details, **02**, 1771.

Datums. (See Stations; Surveys.)

Fortifications, **04**, 3721.

Deaths.

Contaminated water supply and, Washington, D. C., **08**, 2364.

Débris, Mining. (See p. 2108 of this Index.)

Barrier system a protection against, **07**, 2265.

Dredging difficult, **95**, 925.

Treatment, Rivers, H. D. 1123, 60th, 2d.

Waterways, protecting, **07**, 2264.

Decisions.

Rights of U. S. to navigable waters, H. D. 99, 58th, 3d.

Decking, Tight.

Importance of, breakwaters, **80**, 2215; **84**, 2144.

Deeds.

Right of way, form, **02**, 1638.

Deep Water.

Mattresses, jetties, **91**, 3187.

Riprap jetties, **91**, 3187.

River bends, convexity of, effect on, **79**, 1192.

Deep Waterway Commission, Great Lakes to Atlantic tidewaters.

Report of this commission printed as H. D. 192, 54th, 2d.

Reports of the board as follows:

(1) Progress report, H. D. No. 110, 55th, 3rd.

(2) Regulation of Lake Erie, H. D. 200, 56th, 1st.

(3) Final report, estimates, H. D. 149, 56th, 2d.

Defense. (See Forts; Torpedoes.)

Appliances for, measures for, obtaining, **8C**, 520.

Canals, value of, Delaware and Chesapeake Canal, S. D. 215, 59th, 2d.

Elements of, estimates, harbor defense, **84**, 54.

Elements of, plans, harbor defense, **87**, 10; **89**, 5.

Harbor fleet, **81**, 403.

Harbors, rivers and, planning, **87**, 10; **89**, 5; **95**, 4.

Defense—Continued.Supplies for, **99**, 14.

Waterways, intracoastal, H. D. 391, 62d, 2d.

Commerce, adequate depths for modern, Mobile Harbor, Ala., H. D. 657, 61st, 2d.

Determining, canals, Puget Sound, H. D. 953, 60th, 1st.

Determining, Detroit River, H. D. 676, 61st, 2d.

Depths—Continued.Determining, harbors, **96**, 1237.Harbors, Great Lakes, **11**, 2323.Increase of, jetties, vicinity of, **95**, 1798.Increasing, wing dams, effect of, rocky channels, **99**, 1684.Jetty currents, **00**, 2233.Jetty ends, **95**, 1735.

Maintaining, before regulation works are constructed, Mississippi River, H. D. 50, 61st, 1st.

Maintaining, Savannah River, **09**, 1323.

Obtaining, various methods, Sabine Pass and vicinity, H. D. 772, 61st, 2d.

Required depths, lake harbors, **67**, 17, 34, 252, 255; **73**, 343; **74**, 213; **76**, ii, 543; **77**, 113, 947, 953.

Restoring, in channels, Portland, Me., H. D. 489, 62d, 2d.

Velocity and, relation, rivers, **76**, 451.

Vessel draft, commerce not increasing as fast as, Wilmington, Ala., H. D. 1114, 60th, 2d.

Depths, Increased.

Demand for, source of, Portland, Me., H. D. 489, 62d, 2d.

Derrick Boat. (See pls. 55, etc.)**Derrick, Floating.**Bank grading, **01**, 2225.**Derrick Work.** (See pls. 49, etc.)**Derricks.**Lock, building, **96**, 1937.Piers, building concrete, **04**, 3802.Pile driving with, **01**, 922.**Descriptions.**

Tabular, of rivers, H. D. 862, 61st, 2d.

Detritus. (See Débris; Mining.)Hydraulic mining, **82**, 2556, 2620.**Dewpoint.**Evaporation and relation, **76**, 526.**Diamonds.**Salted mine, Ruby Gulch, **73**, 1208.**Dikes.** (See Ditches; Harbors; Ice; Jetties; Piers; Rivers; see pls. 5, 14-17, 63.)Accretions, **93**, 4247; **95**, 2217, 2218.Arrangement, Mississippi River, **05**, S., 196.Arrangement of, proper; sand-bearing rivers, **72**, 139.Bank protection, **99**, 3505.Bars, movement of, controlling, **96**, 1907.Bracing, **94**, 1598.Breaks, repairing, Cumberland Sound, **05**, 1287.Brownlow weeds for, **80**, 1438, 1454, 1458.Brush and timber foundations, **76**, 315.Building, **88**, 670; **89**, 2762, 2778, 2789, 2790; **91**, 3365, 3596, 3843, 3849; **92**, 928; **93**, 4240; **95**, 2342; **97**, 3903, 3919.Building, bank protection, **96**, 1879.Building, economy of trestle and track in, **02**, 2401.Building, methods, improved, **98**, 1852.Building, Mississippi River, **00**, 4778.Building, Missouri River, **96**, 3815, 3839.Building, regulations, Skagit River, **98**, 3118.

Dikes—Continued.

Building, St. Johns River, **94**, 1215.
 Building, Upper Mississippi River, **75**, 478, 488.
 Building, various methods in detail, **02**, 1576.
 Building, Winyaw Bay, **95**, 1351.
 Channel, contracting, **00**, 4272.
 Channel, forming of, experiments with dikes, **00**, 4778.
 Channel, making, questionable value, Swinomish Slough, H. D. 796, 61st, 2d.
 Concrete construction, Missouri River, **11**, 1992.
 Concrete in, **87**, 972.
 Concrete pile construction, Missouri River, **11**, 1992.
 Cost, Missouri River, **03**, 2439; **04**, 2319.
 Cost of reducing, Galveston Bay, C. D., 1, H. R., 62d, 1st.
 Cracking of, due to eddies, **02**, S., 102.
 Cross section, and estimate, Galveston, **02**, 1401.
 Current deflector, patent form, Missouri River **11**, 2002.
 Currents, effect on, **69**, 382.
 Curtains, building, **94**, 1597; **98**, 1860.
 Degrading, **97**, 3909.
 Depressions in, repairing, **98**, 3361.
 Design, standard, Missouri River, **11**, 2004.
 Dredging and, channel formation, H. D. 796, 61st, 2d.
 Dredging and, to deepen Savannah River, **09**, 1320.
 Eddy breakers, successful as, **02**, S., 101.
 Effect of, **98**, 3499.
 Effect of, Missouri River, **96**, 3815, 3823, 3843, 3927; H. D. 1287, 61st, 3d.
 Effect, study of possible, Galveston, **02**, 1393.
 Experiments with, **99**, 3505.
 Experiments with, channel forming, **00**, 4569.
 Filling, dredgings for, **94**, 1061.
 Floods, effect on, **04**, 1297.
 Form, simple; experiments, Mississippi River, **01**, S., 235, 245.
 Gasconade River, **96**, 3801.
 Gorges caused by, rivers, **04**, 1092.
 Harbors, **89**, 764.
 Hudson River, **66**, iv, 203, 214, 217; **67**, 445; **69**, 382; **70**, 430, 433; **71**, 720; **73**, 932; **74**, ii, 159; **75**, ii, 199; **76**, 236; **77**, 227.
 Ice, protection against, **93**, 2943.
 Length of, shore protected by dike and, relation, **73**, 453; **74**, 332; **76**, 629.
 Materials, best, **91**, 763.
 Mattress, brush; objectionable, Gulf, **02**, 1401.
 Mattresses, placing of, **00**, 4350.
 Mattress work, **01**, S., 390.
 Objections to, Delaware River, **96**, 887.
 Piles, distance between, measuring apparatus, **98**, 3506.
 Pile driving, improved methods, **98**, 3506.
 Plan of, Ohio River, **78**, 796.
 Pole screens for, **95**, 2236.
 Protection of, dredging, **96**, 2920.
 Protection of, hurdles, **99**, 2058.
 Protection of, ice, against, **74**, ii, 155, 159; **77**, 224.

Dikes—Continued.

Protection of, willows for, **76**, 237.
 Quicksands, settlement in, **95**, 1666.
 Removal, opinions for and against, Flushing Bay, H. D. 98, 58th, 3d.
 Repairs, **96**, 3822, 3842.
 Repairs, Alabama River, **95**, 1666.
 Repairs, mattresses for, **92**, 1519.
 Repairs, profiles, **00**, 2584.
 Restoration methods, **02**, 1605.
 Results from, Missouri River, **94**, 3139.
 Revetment, failure of, **06**, 1882.
 River mouths, effect at, **75**, 949.
 Rivers, contraction of, **94**, 1593.
 Rivers, effect on, **96**, 887; **97**, 1990.
 Rivers, improvement of, **76**, 624; **80**, 1427; **85**, 1576; **87**, 2096, 2761.
 Rivers, improvement of, abandoned for, **87**, 2096.
 Sand closure, preventing, harbor entrances, **96**, 3101.
 Sand foundations, excessive settlement on, **72**, 839; **76**, 629; **79**, 1051.
 Sand movement, controlling, **95**, 2577.
 Scour, effect on, **94**, 1023; **00**, 4336.
 Scour, hindrance to, old dike a, **95**, 2323.
 Screens for, wire netting, **95**, 3964; **98**, 1860.
 Section of, Cape Fear River, **76**, 316.
 Section of, proper, **71**, 326.
 Settlement of, excessive, **72**, 839; **79**, 1051.
 Settlement of, quicksands, **95**, 1666.
 Shore protection by, length of dikes and, relation, **73**, 453; **74**, 332; **76**, 629.
 Sill mattresses, **94**, 2599.
 Solid heads, advantages of, **95**, 4020.
 Specifications for, Missouri River, **96**, 3841.
 Spurs, building, **98**, 3442.
 Stability, double row pile dike filled with stone more stable than cribwork, Great Lakes, **06**, 1699.
 Structures to displace, river improvement, **98**, 3473.
 Success of, regulation of channels, Mare Island, H. D. 1103, 60th, 2d.
 Surveys at, Missouri River, **97**, 3927.
 T-dikes, Missouri River, **01**, S., 410.
 T-heads, strengthening, **98**, 1863.
 Ties, strand, **03**, 2439.
 Timber-groins, **77**, 286.
 Tramway system, **94**, 2893.
 Wire netting, **95**, 4015.

Dikes, Bar.

Details, H. D. 46, 62d, 1st.

Dikes, Brush and Pile.

Building, **94**, 2599; **95**, 3402; **96**, 1400.
 Cape Fear River, **95**, 1337.
 Columbia River, **99**, 3230.

Dikes, Brush and Stone.

78, 672; **80**, 1542; **82**, 1744; **85**, 2378.
 Building, **95**, 2004.
 Sections, Alabama River, **94**, 1280.

Dikes, Close Pile.

Economy of, **95**, 2577.

Dikes, Concave.

Currents, effect on, **69**, 382.

Dikes, Concrete.

Bank protection, **10**, 1842.

Dikes, Crib.

Sand filling, **70**, 428, 432.

Small, building, **97**, 3943.

Unsatisfactory, narrow tortuous channels, **98**, 2069.

Dikes, Crib and Stone.

80, 1738, 1740.

Dikes, Curved.

Ends of, **00**, 4963.

Dikes, Deflecting.

Reversed-abatis, **99**, 3518.

Reducing, **97**, 4097.

Reducing, Mississippi River, **94**, 2808.

Reducing, novel methods, **93**, 1976; **98**, 1612.

St. Johns River, **93**, 1627.

Tennessee River, **99**, 2277, 2285.

Discharge, Tidal.

Charleston Harbor, **95**, 1422.

Displacement.

Cribs, **72**, 260; **74**, 192; **75**, 247; **76**, ii, 444, 447, 477, 515; **77**, 906; **78**, 1268; **79**, 1529, 1587, 1595, 1608.

Dredgings, **93**, 1119.

Measuring by, barge loads, **94**, 2503; **02**, 2511.

Measuring by, unsatisfactory, **94**, 1392.

Ditches. (See Dikes.)

Flood, concentration, channels, **97**, 3400.

Water supply, Yellowstone Park, **02**, 3044.

Divers.

Caissons, substitute for, **98**, 1800.

Suspended cage for, **01**, 2830.

Diver Outfit.

Details of, **76**, ii, 325.

Diversion. (See Channels; Floods; Rivers; Streams.)

Canal for, of floods, H. D. 262, 59th, 1st.

Channel, **98**, 1952.

Effects, Great Lakes, H. D. 779, 61st, 2d.

Floods, to control, Puyallup River, H. D. 1107, 60th, 2d.

Mare Island, proposed at, H. D. 1103, 60th, 2d.

Niagara Falls, **12**, 3552.

Rivers, California, H. D. 262, 59th, 1st.

Streams, reservoir sites, **96**, 3963.

Docks. (See Dry Docks; Wharves.)

Bulkheads, owners should make bulkheads to prevent silting from bank, **06**, 656; **08**, 734.

Ownership, relation to waterway improvements, Sen. D. 301, 61st, 2d.

U. S. piers, used for private purposes, **66**, 15, 22; ii, 37; iii, 5; **67**, 29, 141; **69**, 85; **76**, ii, 559, 561, 571; **79**, 1721.

Docks, End.

End dock substituted for dry dock, mouth of Mississippi River, **73**, 597.

Dock, Floating.

Valette, **68**, 496.

Docks, Iron Ore.

Capacity, Great Lakes, **10**, 2097; **12**, 2488.

Docks, Side.

Snag boat, repairing, **98**, 1619.

Doors. (See Forts; Scows.)

Batteries, **99**, 791.

Closing apparatus, scows, **92**, 1505.

Doors—Continued.

Forts, **01**, 922; **02**, 2494; **04**, 3722; **05**, 3006.

Sliding doors, **05**, 3006. (See Forts.)

Steel buildings, **04**, 3845.

Dovetailing.

Crib breakwaters, abandoned in, **98**, 2664.

Dovetails. (See Cribs.)

Holding power of, cribs, **68**, 241, 242; **84**, 2069.

Draft, Light.

Steamboats, loading, rules for, **95**, 2282.

Strength, inconsistent with, dredges, **78**, 812.

Draft Pipes.

Locks, **94**, 2303.

Drafts.

Atlantic coast trade, H. D. 551, 61st, 2d.

Great Lakes carriers, **12**, 2633.

Drags.

Changes affecting efficiency of hydraulic dredges, **05**, 2336; **06**, 978.

Dredges, **93**, 1498.

Drainage. (See Batteries; Canals; Levees.)

Batteries, **97**, 680; **98**, 604, 645; **99**, 728, 732; **00**, 760, 893, 897, 910. (See Forts, p. 1797 of this Index.)

Borrow pits, **01**, S., 291.

Buildings, **04**, 3818.

Buildings, steel, **04**, 3860.

Canals, California rivers, H. D. 262, 59th, 1st.

Canals, Colbert Shoals, **98**, 1921.

Canals, lock gates, repair of, **99**, 2549.

Comstock mines, **72**, 1153.

Cross section, California rivers, H. D. 262, 59th, 1st.

Culverts, Mississippi River levees, **04**, S., 244.

Evidence of, Great Lakes by Wabash, Illinois, and other rivers, H. D. 769, 62d, 2d.

Faulty drainage, correcting, Forts, **01**, 811.

Flood control, California rivers, H. D. 81, 62d, 1st.

Floors, forts. (See Forts, p. 1797 of this Index.)

Forts. (See Forts, p. 1797 of this Index.)

Foundations, batteries, **96**, 509.

Foundations, locks, **94**, 2166.

Foundations, mortar platforms, **94**, 457.

French Broad River, **00**, 3027.

Lakes, into Mississippi River, **68**, 308, 442; **75**, 396.

Lands, bottom, H. D. 262, 59th, 1st; H. D. 443, 62d, 2d.

Levees, **97**, 3818; **00**, 4861.

Locks, **98**, 1886.

Methods, various. (See Forts, p. 1797 of this Index.)

Mining casemates, **96**, 472.

Mississippi River, **98**, 2387.

Mortar pits. (See Forts, p. 1797 of this Index.)

Mortar platforms, foundations of, **94**, 451.

Rainfall and, relation between, **76**, 532; **77**, 756.

Rainfall, and ratio, **79**, 1391; **81**, 1778.

River basins, H. D. 262, 59th, 1st.

Swamp lands, **77**, 392; H. D. 443, 62d, 2d.

Systems. (See Forts, p. 1797 of this Index.)

Tunnel building, **94**, 3197.

Drainage—Continued.

- Ventilators, forts, **02**, 2494.
- Waterway improvement, relation to, Sen. D. 301, 61st, 2d.

Drainage, Tile.

- Canals, effect on, **96**, 3047.

Drain Holes.

- Forming, concrete work, **00**, 898.

Draining. (See Locks; Mining Casemate.)**Drains.**

- Levees, **93**, 3854.

Drawbridges.

- Improper sites, **96**, 3900.
- Repair, false work, **95**, 1214.

Drawings.

- Celluloid negatives, advantages of, **93**, 2073.
- Negatives, **93**, 2074.
- Photographic, reproduction of, **93**, 2074.

Draws. (See Bridges; Pontoon Bridges.)

- Dimensions, bridges, **95**, 734.
- Novel, **71**, 710.
- Operating, **95**, 2333.
- Passage of, coal fleets, **76**, ii, 303.
- Pontoon bridges, **74**, 681.

Dredge.

- Boats and derrick, plans, **98**, 1957.

Dredged Areas.

- Leveling with I beams, **05**, 1041.
- Shoaling from city sewage and cleanings, **12**, 2541.

Dredge, Improvised.

- Cape Fear River, **95**, 1338.

Dredges. (See Boats; see pls. 53-56.)

- Anchorage of, current, against, **93**, 2449.
- Bearings, overcoming wear of, **06**, 1300.
- Bins, leakage, preventing, **93**, 1498.
- Boilers, testing, **03**, S., 158.
- Boschke's patent, **69**, 460, 466.
- Buckets, shale broken with, **95**, 979.
- Building, **96**, 3630; **98**, 3291.
- Building, economical method, **02**, 1379.
- Building, Mississippi River, **96**, 3606.
- Burned dredges, condition of, **93**, 2318.
- Centrifugal pump, **70**, 316; **72**, 666, 669; **73**, 750; **74**, ii, 11, 71; **75**, ii, 38, 40, 69; **76**, 445; **79**, 560, 1542; **89**, 1097; **90**, 736; **91**, 1472.
- Centrifugal pump, sand, percentage raised by, **72**, 668; **75**, ii, 40.
- Costs, **69**, 466; **71**, 523, **73**, 1119; **78**, 812; **79**, 1192; **06**, 1332.
- Designing, **98**, 3291.
- Designs, obtaining, **95**, 3636.
- Details, New York Harbor, **02**, 2496.
- Dimensions of, Mississippi River, **76**, 656.
- Dimensions of, Ohio River, **78**, 811.
- Drag, new form, **93**, 1498.
- Dredging and, general discussion of, **69**, 460.
- Equipment of, Ohio River, **97**, 2340.
- Experiments with, Mississippi River, **94**, 2875.
- Flow, measuring, **03**, S., 158.
- Flow, Pitot tubes for testing, **03**, S., 158.
- Fuel, costs, **05**, 3036.
- Hire of, difficult, Ohio River, **01**, 2601.
- Jetties and, effect on channel development, **07**, 1401.

Dredges—Continued.

- Levees, building, **95**, 3922; **99**, 3640.
- Light draft, strength inconsistent with, **78**, 812.
- Mississippi River, **99**, 3342.
- Morris & Cumings's, **68**, 519, 522; **69**, 461, 465; **71**, 523; **72**, 311; **73**, 1028; **77**, 1003; **79**, 917.
- Morris & Cumings's, inferiority of, **72**, 311; **77**, 1003.
- New York Harbor, **99**, 1280.
- Ohio River, **99**, 2337.
- Operating, system of, Mississippi River, **96**, 3632.
- Operation, details, New York Harbor, **02**, 2497.
- Osgood's, **69**, 460; **71**, 555; **72**, 311; **79**, 1190.
- Osgood's, superiority of, **72**, 311.
- Pipe lines, efficiency, **03**, S., 143.
- Pipes, discharge; losses in head, **03**, S., 149.
- Pipes in, **93**, 1498.
- Pipes, plans, **03**, S., 158.
- Pipes, stoppage of, oyster shells, **99**, 3206.
- Position of, **95**, 3075.
- Position of, difficult to recover, deep water, **99**, 1273.
- Product and cost, Galveston, **09**, 1516.
- Pumps, capacity, **03**, S., 143.
- Pumps, centrifugal, **02**, S., 44.
- Pumps, design, best, **99**, 3489.
- Pumps, discharge, **03**, S., 162.
- Pumps, efficiency, **03**, S., 165.
- Pumps, jet; efficiency, **03**, S., 148.
- Pumps, plans, **03**, S., 158.
- Pumps, testing, **03**, S., 155; **04**, S., 130.
- Pumps, velocity, Pitot tube measurements, **03**, S., 139.
- Pumps, wear, **99**, 3488; **00**, 4567.
- Pumps, work of, **03**, S., 163.
- Refrigerating plant, specifications, **00**, 4600.
- Remodeling, **01**, S., 218.
- Remodeling, improvements, **01**, 2634.
- Remodeling, Mississippi River, **96**, 3619.
- Repairs, Mississippi River, **02**, S., 75.
- River channelers, **68**, 60, 669; **69**, 460.
- Steamer, improvised, **95**, 1337.
- Suction head, various forms, **03**, S., 146.
- Suction pipes, economical arrangement, **94**, 1407.
- Suction pipes, strengthening, **93**, 1498.
- Suction pumps, **89**, 1097; **90**, 736; **91**, 1472.
- Taggart's patent, **69**, 465, 466.
- Tests, **96**, 3426; **02**, S., 76.
- Tests, methods of, **95**, 3632.
- Tests, Mississippi River, **96**, 3461, 3606, 3630; **99**, 3345, 3495, 3503.
- Tests, preliminaries, **95**, 3632.
- Types, various, output, **03**, 1391.
- Types, various, U. S. plant, **10**, 2449.
- Wide-faced dipper, advantage of, **70**, 315.
- Working of, dipper or grapple, **94**, 811.

Dredges, Bucket.

- 69**, 460, 466; **70**, 315; **72**, 819.

Dredges, Clamshell.

- Breakwaters, excavating for, **99**, 3108.
- Large, **98**, 2769; **00**, 4134.
- Novel details, **01**, 2064.

Dredges, Dipper.

Grapple, change to, **94**, 811.
River work, Tennessee River, **10**, 1864.
Specifications for, **00**, 2932.

Dredges, Elevator.

Details, **96**, 1572.

Dredges, Experimental.

Mississippi River, **95**, 3629.

Dredges, Hydraulic. (See Dredges; Chutes.)

81, 1086; **84**, 1302; **85**, 769, 928; **86**, 731, 739,
883; **87**, 723, 886, 1611, 1614, 2345; **89**, 1720;
90, 1598, 2007; **92**, 1034; **93**, 3517.

Advantages of, filled channels, **02**, 495.

Agitator of, **98**, 3305.

Alterations, specifications, **98**, 3181.

Anchors, sinking, **02**, **S.**, 44.

Building, **97**, 3688.

Cabins, details, **04**, **S.**, 109.

Cutter, disadvantages of, **98**, 3170.

Cutter for hard material, **06**, 1964.

Cutter frame and head, **05**, 3034.

Damages from storms, **94**, 2616.

Details, **01**, 2063; **02**, 1381; **04**, **S.**, 116; **09**,
1488.

Details of construction, Mississippi River, **01**,
2258.

Development, Mississippi River, **05**, **S.**, 59.

Difficult dredging, Habana, **11**, 3039.

Discharge pipes, **95**, 3630.

Discharge pipes, pontoon widening, effect of,
98, 1707.

Discharge pipes, swivel joint, **98**, 1707.

Drag for, **06**, 978.

Drags, efficiency increases by changing, **05**,
2336.

Drawings of, **97**, 2046.

Efficiency, increasing, Mississippi River, **05**,
1642, 1651.

Efficiency, **00**, 4562.

Efficiency, changes to increase, Mississippi
River, **05**, 1651, 2336.

Efficiency tests, Mississippi River, **04**, **S.**, 98.

Fruhling type, advantage of, H. D. 359, 62d, 2d,
Hull, details, **04**, **S.**, 103.

Improvements, **02**, **S.**, 6.

Improvements, desirable, New York Harbor,
07, 1029.

Improvements dictated by experience, **04**, **S.**,
11.

Improvised dredges, **97**, 2017; **98**, 2512.

Indian River, **95**, 1541.

Jet agitator, **98**, 3170.

Light plant, electric, details, **04**, **S.**, 124.

Machinery, arrangement of deck machinery,
05, 3034.

Machinery, miscellaneous, **04**, **S.**, 128.

Measuring load, **05**, 2343.

Mississippi River, **96**, 3630; **98**, 3297; **99**, 3353.

Mud, soft; methods in, **10**, 1258.

Necessity for, New York Harbor, **97**, 1056.

Operating, **95**, 3629; **96**, 3632.

Origin, Mississippi River, **05**, **S.**, 9.

Output, changes to increase, Mississippi River,
05, 1642.

Painting, details, **04**, **S.**, 129.

Pipe line, details, **02**, **S.**, 43.

Dredges, Hydraulic—Continued.

Pipe line, pontoon, details, **04**, **S.**, 127.

Plumbing, etc., details, **04**, **S.**, 112.

Potomac River, **94**, 933.

Product of, Savannah, **09**, 1325.

Propelling machinery, **04**, **S.**, 122.

Pumps and tanks, details, **04**, **S.**, 123.

Pumps, centrifugal; efficiency, **04**, **S.**, 98.

Refrigerating plant, details, **04**, **S.**, 126.

Repairs, details, **02**, **S.**, 37.

Specifications, **94**, 2976; **95**, 3764; **96**, 3467;

97, 3575; **99**, 3353; **00**, 4575; **04**, **S.**, 103.

Steam plant, **04**, **S.**, 113.

Steam tenders, **98**, 3306.

Styles, **95**, 3629.

Tenders, **98**, 3181.

Tests, **95**, 3763, 3792; **96**, 3632; **97**, 3618; **98**,

1707, 3162; **98**, 3313, 3327, 3341.

Type suitable for Arkansas River, **03**, 1413.

Type suitable for river channel maintenance,
H. D. 962, 60th, 1st.

Valves and piping, details, **04**, **S.**, 115.

Working, economical methods, **98**, 1707.

Works, upper, details, **04**, **S.**, 103.

Dredges, Jet.

96, 1724; **98**, 1706.

Improvised, **97**, 2043.

Working, method of, **97**, 2015.

Dredges, Ladder.

90, 726, 3237.

Dredges, Pulsometer.

88, 781; **92**, 909.

Dredges, Pump.

Von Schmidt, **94**, 2503.

Dredges, Rehandling.

Economical, **07**, 1273.

Dredges, Seagoing.

Details, **96**, 1530.

Operating, cost of, items, **96**, 1532.

Small type recommended for local harbors,
H. D. 1395, 61st, 3d.

Dredges, Self-propelling.

99, 3353.

Economy of, **01**, **S.**, 52.

"Iota" first delivered to Mississippi River,
01, **S.**, 47.

Dredges, Side-wheel.

Sand, operating in, **06**, 1300.

Dredges, Small.

Details, **06**, 1995.

Dredges, Steam.

New York Harbor, **93**, 1065; **94**, 776.

Dredges, Suction.

93, 1622.

Altering from end to side, Mississippi River,
05, 1652.

Anchors, advantages of common anchors over
piots, etc., **01**, 2263.

Dredges, U. S.

Advantages of, **06**, 972.

Alterations and repairs required, **06**, 1407.

Capacity on actual work, **12**, 2271.

Construction, details, **06**, 972.

Converted steamboat as, **04**, 2545.

Dredges, U. S.—Continued.

- Defects developed by tests, **09**, 1154.
- Details, "Sabine," **01**, 1911.
- Details, "Texas City," **01**, 1932.
- Effectiveness of, Savannah, Ga., **07**, 1272.
- Efficiency, tests, **03**, S., 136, 160.
- Floating plant, list. (See p. 2337 of this Index.)
- Florida waters, requirements of dredges for, **01**, 1748.
- Fuel, advantages and disadvantages of oil as, **12**, 2611.
- Fuel consumption, **12**, 2154.
- Harbor dredging, H. D. 359, 62d, 2d.
- Maintenance work, commended for, **08**, 1161.
- Ohio River, **95**, 2348.
- Operating, cost of, "Gen. Comstock," **01**, 1926.
- Operating, cost of, suction dredges, **01**, 1504.
- Operating, details of, **06**, 971.
- Operating, low cost of, H. D. 550, 61st, 2d.
- Operating, New York Harbor, cost, **08**, 1076.
- Operating, results of, Great Lakes, **12**, 2612.
- Operation, cost of, **04**, 1977.
- Operation, cost of, clamshell type, **01**, 1504.
- Performances of, **08**, 1538; **09**, 1438, 1695; **12**, 2156.
- Product and cost, southern works, **11**, 1731, 1805.
- Product, Galveston Harbor, **08**, 1538; **10**, 1659.
- Product, "Gillespie," on the Great Lakes, **09**, 2056.
- Product, "Malta," Muskingum River, **11**, 2178.
- Product, "Tortoise," **11**, 2261.
- Rent for, **93**, 1497.
- Repairs required, **06**, 975.
- Running, expense of, **06**, 1332.
- Smaller dredges not economical, **09**, 1092.
- Stern-wheel type, seagoing hopper dredge, **04**, 2252.
- Stones, hydraulic dredges not able to remove large, **07**, 1029.
- Tests, **03**, S., 9, 67, 154.
- Types; hydraulic type apparently best, **08**, 1422.
- Work done by, table of, **12**, 2122.
- Work of, Charleston, **01**, 1602.

Dredges, Vacuum.

- Mixed material, **01**, 1662.

Dredging. (See Bars; Bowlders; Canals; Locks; Plant; Rivers; Waterways; see pls. 8, 48, 51-53.)

- Abandonment of, foundations, locks, **94**, 1826.
- Agitation by, **67**, 364, 366, 367, 370; **68**, 60, 320, 323, 480, 669, 671; **69**, 261, 311, 460; **70**, 323, 324, 329, 340, 447; **71**, 65, 333, 508; **72**, 138, 552; **73**, 596; **74**, 839, 842, 871, ii, 356; **76**, 546, 654, 711; **79**, 903, 1837.
- Bars, coast, **01**, 1662.
- Bars, effect on, **01**, 1664.
- Bars, rough, Columbia River, **03**, 2296.
- Bishop's screw, **67**, 364; **68**, 60, 671.
- Blasting, aided by, **94**, 1407, 2473.
- Blasting, hardpan and, **95**, 3201.
- Bowlders, **00**, 4044.
- Broken rock, **94**, 1847.

Dredging—Continued.

- Canalization or, river deepening, Ohio River, H. D. 492, 60th, 1st.
- Canals, **98**, 2482.
- Centrifugal pumps, **72**, 666, 669; **73**, 750; **74**, ii, 11, 71; **75**, ii, 38, 69; **76**, 445; **79**, 560, 1542; **85**, 2331.
- Channels, forming; theory, Jamaica Bay, H. D. 1506, 60th, 2d.
- Channels made by, sediment-bearing rivers, Mississippi River, H. D. 50, 61st, 1st.
- Cost, **01**, S., 230; **02**, 2499; **04**, 2384.
- Cost of, **82**, 734, 736; **92**, 2271.
- Cost of, Ahnapsee, Wis., **75**, 198.
- Cost of, Atchafalaya Bay, **71**, 555.
- Cost of, centrifugal pumping, **72**, 669; **74**, ii, 12; **75**, ii, 40; **76**, 445.
- Cost of, Chicago, **68**, 111.
- Cost of, Duluth, Minn., **73**, 133; **75**, 181.
- Cost of, Fox River, Wis., **79**, 1540.
- Cost of, Galveston Harbor, **03**, 1326; **07**, 1481 **09**, 1516.
- Cost of, Green Bay, Wis., **78**, 1143; **79**, 1487.
- Cost of, Hell Gate, N. Y., **76**, 241, 242.
- Cost of, Illinois River, **71**, 281.
- Cost of, James River, **74**, ii, 42; **77**, 286.
- Cost of, least recorded, **79**, 674, 1540.
- Cost of, Ludington, Mich., **75**, 248.
- Cost of, Michigan City, Ind., **67**, 96.
- Cost of, Mississippi River, **02**, S., 86; **05**, S., 143; **08**, 2705; **09**, 1602; **10**, 2982; **11**, 1923, 3238; **12**, 3824.
- Cost of, Norfolk, Va., **79**, 674.
- Cost of, Ohio River, **73**, 498; **78**, 800; **01**, 2640; **06**, 1550.
- Cost of, Port Washington, Wis., **78**, 1163; **79**, 1520.
- Cost of, rock removal, **72**, 804; **77**, 229; **78**, 800, 1136.
- Cost of, various years, **00**, 2701.
- Cost of, White River, **70**, 134.
- Cost of, Willamette River, **68**, 872.
- Costs, Wilmington, Cal., **08**, 2211.
- Crib leveling, failure of, **70**, 151.
- Cuts, location, proper, Mississippi River, **97**, 3695.
- Data concerning, Ohio River, **98**, 2064.
- Delays, time lost by, **76**, 355.
- Deposits from, destructive effect on oyster beds, Biloxi Harbor, H. D. 1088, 60th, 2d.
- Difficult dredging, for hydraulic dredges, Habana Harbor, **11**, 3039.
- Dikes and, channel formation, H. D. 796, 61st, 2d.
- Dikes and, to deepen Savannah River, **09**, 1320.
- Dredges and, general discussion of, **69**, 460.
- Dredges, efficiency of, Great Lakes, **05**, 2303.
- Dredges, position of, **95**, 3075.
- Dredgings, disposal of, methods, Norfolk Harbor, H. D. 381, 59th, 1st.
- Dumping grounds, regulations, **01**, 3254.
- Dumping policy, Chicago, **01**, 2989.
- Dunkirk, France, **95**, 1636.
- Effect of, discussion, Mississippi River, **01**, S., 49.
- Effect of, Mersey bar, England, **00**, 2301.

Dredging—Continued.

- Effect of, Mississippi River, **00**, 2299.
Favorable conditions for, **00**, 4202.
Fill, rate of, **01**, 1781, 1804.
Fill, training ashore, **02**, 1426.
Foundations, crib and stone dams, **94**, 2107.
Foundations, locks, **94**, 1826.
Hardpan, **69**, 417; **70**, 212; **74**, 165; **95**, 3201.
Harrowing and, **88**, 1042.
Hindrances, sewage, **95**, 2707.
Improvised dredge, Cape Fear River, **95**, 1338.
Inspection, efficient system, **98**, 2224.
Inspection, methods of, **98**, 2751.
Jetties and, comparison, Pensacola, **95**, 1636.
Jetties, increasing depths obtained by, Coos Bay, H. D. 958, 60th, 1st.
Jetties, preferable, **95**, 1657.
Jetties, supplementary to, **97**, 1393.
Jetty work and, required, mouth of Columbia River, C. D., H. D. 2, 59th, 2d.
Lake Michigan, **93**, 2913.
Locks, foundations of, **94**, 1826.
Low-water channels, effect on, Mississippi River, **98**, 3166.
Material, vacuum dredge for mixed, **01**, 1662.
Measurement of, scow displacement, **79**, 917.
Mersey River, England, **95**, 1644.
Methods, **93**, 2819, 3571.
Methods, suction dredges, **01**, 1288. (See Dredges.)
Obilitation, bar channels, **98**, 2691.
Ocean bars, **11**, 423.
Ohio River, **76**, ii, 9; **77**, 633; **78**, 812; **00**, 8123.
Ostend, Belgium, **95**, 1642.
Oyster beds, injury of, decision in favor of U. S., **00**, 1721.
Parapets formed by, forts, **05**, 3030.
Permanent works and, waterway improvements, H. D. 510, 61st, 2d.
Piers, cribs of, affected by dredging, **01**, 2833.
Pipes, discharge; lengthened by sacking, **01**, 1884.
Pipes, discharge; supported by barges, **01**, 1883.
Pipes, suction; choked by gravel and stones, **11**, 2080.
Place measuring, **94**, 2502.
Pontoons, remodeling, **01**, S., 19.
Prism and scow measurements, relations, **71**, 181, 191, 200, 719; **75**, 275; **77**, 239, 246; **78**, 520, 1136; **79**, 507.
Private parties, statute of State of Washington, **01**, 3599.
Propeller wheel used for, **80**, 2016, 2019; **83**, 1999; **85**, 2380; **87**, 2508.
Pumps, centrifugal; observation of, **01**, S., 52.
Ranges, locating, Mississippi River, **04**, S., 244.
Records of, Duluth Harbor, **00**, 3577.
Regulation works and, **11**, 1592.
Relief by, temporary only, **74**, 839, 842, 874.
Results, Mississippi River, **98**, 3170.
Results of deep-water or explorative dredging, lakes, **71**, 1020.
River regulation; experimental work with training walls and dredging, Savannah, Ga., **08**, 1328.

Dredging—Continued.

- Rivers, large, **97**, 3618.
Rivers, long; large plant needful, Ohio River, **05**, 1803.
Rock difficult to remove by, **95**, 925.
Rock removing by, **71**, 164; **72**, 804; **73**, 776; **74**, 33, ii, 41; **77**, 229; **78**, 800, 1136.
Rock, removing, cost, **04**, 2183.
Rock, removing without drilling, **71**, 164.
Scows, storage of, **01**, 3225.
Scrapers, **67**, 370; **68**, 320, 480, 669; **70**, 324, 329, 340, 447; **71**, 65, 508; **72**, 138, 552.
Sewage, increased by, **99**, 2827.
Snag boats and, proposed combination, **00**, 1844.
Surveys, **94**, 2615.
Surveys, Mississippi River, **95**, 3695.
Tidal rivers, difficult in, **72**, 875; **78**, 407.
Value of, sawdust bars, **00**, 1107.
Water jet, **68**, 671; **69**, 310; **70**, 340; **79**, 383, 384; **82**, 1610; **83**, 1238; **84**, 1302; **85**, 769.
Wharves, area close to private area, **08**, 1921.

Dredging, Daily.

- Elizabeth River, **76**, 355.
Fox River, **79**, 1540.
Illinois River, **78**, 800.
Mississippi River, mouth, **71**, 64; **79**, 903.
Morris & Cumings, **68**, 519, 522; **69**, 465; **77**, 1003.
Ohio River, **78**, 800.
Saginaw River, **67**, 146; **68**, 141.
St. Marys River, **67**, 147, 148; **68**, 139.
Sandusky River, **68**, 39.
Toledo Harbor, **67**, 144; **68**, 39, 146.

Dredging, Difficult.

- Rock debris, **95**, 925.

Dredging, Experimental.

- Bars, **95**, 3628.
Mississippi River, **94**, 2875; **96**, 3630.
Mississippi River, for 14 feet, H. D. 50, 61st, 1st.

Dredging, Explorative.

- Great Lakes, **71**, 1020.

Dredging, Hydraulic.

- Bars, **96**, 1378.
Bars, removal of, Savannah Harbor, **09**, 1321.
Channels, maintaining, Mississippi River, H. D. 50, 61st, 1st.
Cost of, determining, **96**, 1379.
Cost of, items of, **96**, 1379.
Dredgings, amount of, determining, **97**, 3619.
Methods, Mississippi River, H. D. 492, 60th, 1st.
Origin, Mississippi River, **05**, S., 9.
Outfit, **00**, 3904.
Plant, development of, Mississippi River, **05**, S., 59.
Rehandling dredge economical, **07**, 1273.
Slack watering, substitute for, Arkansas River, H. D. 71, 61st, 1st.

Dredging Plant, U. S. (See p. 2337 of this Index.)

- Advantages from, **98**, 2616; **00**, 2444.
Cost, **03**, S., 133; **09**, 1438; **10**, 2449; **12**, 2754.
Cost, Galveston, **05**, 1483.
Cost, Mississippi River, **11**, 1913.
Cost, Ohio River, H. D. 492, 60th, 1st.
Cost, Savannah, **11**, 1593.
Cost, Tennessee River, **09**, 1695.
Development, Mississippi River, **05**, S., 9.

Dredging Plant, U. S.—Continued.

Economical, **97**, 1464; **04**, 1980.
 Efficiency, increasing, **08**, 1619; **10**, 2961.
 Great Lakes, **94**, 2238.
 Items of expense, **00**, 1818.
 Necessity for, Great Lakes, **07**, 1900.
 Operation, low cost, H. D. 550, 61st, 2d.
 Product, Galveston Harbor, **05**, 1483.
 Refrigerating outfit, **01**, S., 52.
 Repairs. (See each annual report M. R. C., and p. 1142 of this Index.)
 Repairs, details, Mississippi River, **01**, S., 46; **03**, S., 124; **11**, 3212.
 Successful, notably, Cape Fear River, **99**, 1508.
 U. S.; desirable for U. S. to have own dredging plant, **07**, 1193.
 Waterways, intracoastal; U. S. plant of special efficiency in maintaining, H. D. 3, 61st, 2d.

Dredging, Private.

Harbors, injury of, **72**, 205; **73**, 291; **74**, 46, 207.
 Regulation of, waterways, **12**, 2340.
 Regulation of, by statute, Washington (State), **01**, 3599.

Dredgings.

Amount, determining, hydraulic dredging, **97**, 3619.
 Bulkheads, inclosing in, **95**, 3419.
 Conveyance of, chutes for, **76**, 288; **77**, 886; **79**, 503, 1540; **86**, 883; **87**, 886, 1614, 2345.
 Conveyance of, floating track, Grand River, **99**, 2921.
 Conveying machine, **94**, 1061.
 Dikes, filling, **94**, 1061.
 Disposal of, artificial island, **00**, 1619.
 Disposal of, dike filling, **94**, 1061.
 Disposal of, Duluth Harbor, **99**, 2630.
 Disposal of, hindrances, Chicago, **00**, 3868.
 Disposal of, land, reclaiming, **95**, 1206; **95**, 3419.
 Disposal of, piers, foundations, Philadelphia Harbor, **95**, 1054.
 Dumping, control of, Great Lakes, **94**, 2410.
 Filling, dikes, **94**, 1061.
 Flats, reclaiming of, **95**, 1206.
 Foundations, piers, **95**, 1054.
 Handling, **93**, 2820.
 Handling, dump cars, **00**, 3900.
 Holding of, bulkhead for, **95**, 3419.
 Impounding, **72**, 709; **73**, 933.
 Inclosing of, bulkhead for, **95**, 3419.
 Measuring, water displacement, calculating, **93**, 1119.
 Placing on shore, box and two dredges for, **93**, 2820.
 Redredging of, lakes, **98**, 2670.
 Retention of, cheap bulkheads, **94**, 2609.
 Stability of, sides of stream, **99**, 1685.

Dredging, Sea.

95, 1643.

Dredging, Supplemental.

Jetties, **97**, 1393.

Dredging, U. S.

Lakes, **95**, 2822; **96**, 2722.

Drift. (See Débris; Mines; Sand; Shores.)

Accumulation, a hindrance in locks, **08**, 1796.
 Cost of, Opher mines, **72**, 1154.

Drift—Continued.

Effect, removal of guard locks, **05**, 1755.
 Jetties, effect on, **94**, 2636.
 Movable dams, effect on, **96**, 2312.
 Movable dams, enemy of, **98**, 2145.
 Piling, injury of, jetties, **94**, 2556.
 Removal, lock chambers, **08**, 1799.
 Utilization of, hurdles, Mississippi River, **94**, 1581.

Driftbolts. (See Cribs.)

Holding power, cribs, **84**, 2051.
 Pneumatic driver, improvised, **00**, 2782.

Drift Chutes.

Locks, **95**, 2366.

Drift Gaps.

Dams, **89**, 1852.

Drift Jams.

Removing, rivers, **97**, 1885.

Drift, Sand.

Avoiding, canals, **01**, 3515.
 Buffalo, **76**, ii, 569.
 Harbors, over piers into, **73**, 275; **75**, 250; **76**, ii, 601.
 Jetties for, **68**, 830; **70**, 457; **72**, 936; **75**, 320.
 Lake shores, **71**, 131; **72**, 896; **74**, ii, 188; **76**, ii, 472, 480, 569.
 New England coast, **70**, 495.
 Piers, ends, around, **74**, 223, 230.
 Pile piers, through, **75**, 255, 258.
 Preventing, fences for, **67**, 457; **75**, 314, 316, 338; **77**, 116, 966, 969.
 Suez Canal, **74**, 796.
 Wave action, **71**, 806; **72**, 896.

Driftwood.

Utilization of, rivers, **95**, 2064.

Drill Holes.

Cleansing of, water jet for, **69**, 427.

Drilling. (See Blasting; Dredging.)

88, 1120; **94**, 1846, 1932; **95**, 2911; **00**, 1731, 4269.
 Ahnapsee, **76**, ii, 346, 357, 360; **79**, 1506.
 Artesian well, **92**, 467.
 Ashtabula, **70**, 180.
 Blasting, chiseling and, comparison, **79**, 1134.
 Blossom Rocks, **68**, 885, 886.
 Boat for, **93**, 3162.
 Columbia River, **69**, 475; **72**, 997.
 Compressed air, superiority of, **98**, 1952.
 Compressor boats, plans, **98**, 1952.
 Cost small when compared with other items, **68**, 738.
 Dome proposed, **69**, 392.
 Dredging dispensed with, **71**, 164.
 Drill borings, jet and, **00**, 2769.
 Eagle Harbor, **68**, 91; **69**, 76; **76**, ii, 324; **77**, 847; **78**, 1134.
 Fixed platform, **74**, ii, 260.
 Georgetown Harbor, **77**, 352.
 Hallets Point, **69**, 392; **73**, 935; **75**, ii, 205; **77**, 228; **79**, 61, 378, 384.
 Harlem River, **76**, 244.
 Hell Gate, **68**, 736; **70**, 439; **71**, 724, 725; **72**, 803; **74**, ii, 160, 164; **75**, ii, 208; **76**, 239, 241.
 Holes, cleaning, jet for, **69**, 427.
 Holes, depth, **68**, 751; **69**, 425.
 Holes, Hell Gate, **71**, 726.

Drilling—Continued.

James River, **73**, 776; **74**, ii, 39; **75**, ii, 82.
 Ludington Rock, Conn., **72**, 877; **74**, ii, 260.
 Methods, **93**, 2378, 3162; **97**, 3117, 3721; **00**, 4496.
 Middle Rock, New Haven, **68**, 751; **70**, 445; **71**, 776.
 New River, **79**, 533.
 Oak Orchard, **74**, 245.
 Platforms, tripods for, **74**, ii, 260; **76**, 670, ii, 323.
 Rafts for, attachments, **96**, 2042.
 Rate of, **72**, 877.
 Rincon Rocks, Cal., **74**, ii, 371; **75**, ii, 695.
 Rock Island, **68**, 423; **79**, 1135.
 Scow for, **68**, 736; **71**, 725; **72**, 805; **73**, 937, **74**, ii, 163; **76**, 239; **79**, 1135, 1154; **93**, 3373, **94**, 1846; **00**, 3677.
 Scow for, Diamond Reef, **72**, 804.
 Scow for, Hell Gate, **68**, 736; **71**, 725; **72**, 805; **74**, ii, 163; **76**, 239.
 Scow for, small, **93**, 3373.
 Tennessee River, **76**, 711.
 Tower rocks, **68**, 812; **69**, 422, 429.
 Tunnels, **76**, ii, 124.

Drilling, Hand.

Detroit River, **77**, 935.
 Rate by, rock drilling, **68**, 425; **76**, ii, 663.

Drilling, Rock. (See pl. 51.)

88, 1120; **93**, 2378, 3162; **94**, 1846, 1932; **95**, 2911; **97**, 3117, 3721; **00**, 1731, 4269, 4496; **01**, 1427.
 Ahnapsee, **76**, ii, 346, 357, 360; **79**, 1506.
 Arch Rock, San Francisco, **01**, 3412.
 Ashtabula, **70**, 180.
 Blossom Rock, **68**, 885, 886.
 Boats for, **93**, 3162.
 Columbia River, **69**, 475; **72**, 997.
 Compressor boats, **98**, 1952.
 Cost, Ohio River, **04**, 2417.
 Dome proposed, **69**, 392.
 Drilling raft and attachments, **96**, 2042.
 Drilling scow, Hell Gate, **68**, 736; **71**, 725; **72**, 805; **74**, ii, 163; **76**, 239.
 Drill scow, **73**, 937; **79**, 1135, 1154; **00**, 3677.
 Drill scow, small, **93**, 3373.
 Eagle Harbor, **68**, 91; **69**, 76; **76**, ii, 324; **77**, 847; **78**, 1134.
 Fixed platform, **74**, ii, 260.
 Georgetown Harbor, **77**, 352.
 Hallets Point, **69**, 392; **73**, 935; **75**, ii, 205; **77**, 228; **79**, 61, 378, 384.
 Harlem River, **76**, 244.
 Hell Gate, **68**, 736; **70**, 439; **71**, 724, 725; **72**, 803; **74**, ii, 160, 164; **75**, ii, 203; **76**, 239, 241.
 Holes, cleaning, water jet for, **69**, 427.
 Holes, depth, **68**, 751; **69**, 425.
 Holes, Hell Gate, **71**, 726.
 James River, **73**, 776; **74**, ii, 39; **75**, ii, 82.
 Ludington Rock, Conn., **72**, 877; **74**, ii, 260.
 Middle Rock, New Haven, **68**, 751; **70**, 445; **71**, 776.
 New River, **79**, 533.
 Oak Orchard, **74**, 245.
 Plant for, compressed air better than steam, **98**, 1952.

Drilling, Rock—Continued.

Platform, tripods for, **74**, ii, 260; **76**, 670; ii, 323.
 Progress, rate of, **72**, 877.
 Rincon Rock, **74**, ii, 371; **75**, ii, 695.
 Rock Island, **68**, 423; **79**, 1135.
 Scow for, Diamond Reef, **72**, 804.
 Tennessee River, **76**, 711.
 Tower Rock, **68**, 812; **69**, 422, 429.
 Tunnels, **76**, ii, 124.

Drills.

Arrangement of, Rock Island Rapids, **79**, 1135.
 Comparison, rock removing, **72**, 803, 877; **73**, 777, 935; **75**, ii, 252.
 Experiments, rock removing, **75**, ii, 204; **76**, 238.
 Steel for, experiments, rock removing, **75**, ii, 204.

Drills, Diamond.

Rock removal, **69**, 388; **71**, 725; **72**, 803; **73**, 776, 935; **74**, ii, 39, 42.
 Steel and, comparison, rock removal, **72**, 803.

Drills, Steam.

Failure, rock removing, **68**, 422.

Driveways.

Riverside, Washington, D. C., **08**, 2400.
 Statues, treatment of, Washington, D. C., **05**, 2646.

Droughts.

Prevention of, and relation to waterway improvements, Sen. D. 301, 61st, 2d.

Drum, Welr.

Chittenden's, **00**, 5001.
 Novel modification, **97**, 3952.

Dry Docks. (See pl. 39.)

Muscle Shoal Canal, **97**, 2307.
 Automatic gates, **98**, 1968.
 End dock substituted for, **73**, 597.
 Fox River, **00**, 3725.
 Plans for, Sault Ste. Marie, **85**, 2125.

Drynness.

Providing, forts. (See p. 1797 of this Index.)

Dry Proofing.

Cellars, **04**, 3825.

Dualin.

Use of, Bath, Me., **71**, 845.
 Use of, Ludington Rock, **72**, 877.

Dump Cars.

Dredgings, handling of, **00**, 3900; **00**, 3904.
 Floating track, **00**, 3900.

Dumps and Dumping. (See Dredging; Fill; see pl. 55.)

Control, Great Lakes, dredgings, **94**, 2410.
 Excavations, canal, H. D. 391, 62d, 2d.
 Illegal dumping, **00**, 4520.
 Illegal dumping, New York Harbor. (See each annual report, supervision of New York Harbor; see p. 2111 of this Index.)
 Methods, **96**, 3395.
 Methods, stone, **95**, 3360.
 Mill refuse, disposal, method proposed, Union River, **99**, 1029.
 Mill refuse, dumping in river, law violated, **99**, 1024.

Dumps and Dumping—Continued.

- Policy, Chicago, **01**, 2989.
- Refuse, cities, **93**, 3541.
- Regulation. (See Illegal dumping, above.)
- Regulation, Duluth-Superior, **10**, 2061.
- Regulation, dumping fleet, **01**, 3224.
- Regulation, grounds, **01**, 3254.
- Regulation, mill refuse, **99**, 1024.
- Regulation, New York Harbor, **94**, 2685.
- Rules, violations, lawsuits, **94**, 2689.
- Sea dumping. (See Illegal dumping, above.)
- Side dumping, stone barges, 800 tons, **99**, 3156.
- Stone, clearing from tracks, **02**, 2131.
- Supervision over, harbors. (See Illegal dumping, above.)

Dwelling. (See pl. 70.)**Dynamite.** (See Blasting; see pls. 50, 70.)

- Bars, effect on, **96**, 1280.
- Black powder, explosions, comparison, **68**, 423; **77**, 26.
- Blasts, surroundings, effect on, **79**, 1508.
- Charges, formula for determination of, **77**, 234.
- Composition, various brands, **77**, 234.
- Efficacy of, bars, **01**, 1664.
- Experiments with, submarine mines, **76**, 31.
- Exploding, methods, Rincon Rock, Cal., **75**, ii, 695.

Dynamite—Continued.

- Explosions, premature, **75**, 524, ii, 695; **76**, ii, 665; **77**, 1042; **79**, 515.
- Explosions, sympathetic, **79**, 37; **80**, 57; **85**, 725; 729, 733; **86**, 686.
- Explosive energy, **79**, 36.
- Gun cotton and, comparison, **81**, 58.
- Gunpowder and, comparison, **77**, 26.
- Nitroglycerin and, comparison, **79**, 1507.
- Old material, strength of, **90**, 416.
- Small charges, rock blasting, **96**, 471.
- Snagging, **73**, 616, 618; **74**, ii, 358; **78**, 538, 539; **79**, 626, 651, 1187.
- Submarine mines, experiments, **76**, 31; **79**, 35.
- Use of, Ahnapsee, Wis., **76**, ii, 348, 360.
- Use of, Eagle Harbor, Mich., **76**, ii, 326; **77**, 846; **78**, 1135.
- Use of, East River, **77**, 229, 233.
- Use of, Hell Gate, **74**, ii, 160.
- Water, action of, **79**, 1507.
- Wrecks, removing, **75**, ii, 714.

Dynamite Batteries.

- Obsolete, and sale of guns, **02**, 11.

Dynamometer.

- Measuring waves, Great Lakes, **03**, 1799.

E.**Earthquake Wave.**

- 77**, 990.

Earth Waves.

- Flood Rock explosion, **86**, 690, 694, 705, 712.

Eddies.

- Dikes, cracking of, due to, **02**, S., 102.
- Scour produced by, bear-trap gates, **11**, 2141.

Efficiency. (See Dredges.)

- Increasing, U. S. dredges, **08**, 1619.

Eflorescence.

- Paraffine, for brickwork, **04**, 3831.

Eight-hour Day.

- Cost of works increased by, **08**, 2271.

Electrical Action.

- Submerged bayonets and cartridges, Habana Harbor, **11**, 3048.

Electrical Installations.

- Forts. (See Forts, p. 1797 of this Index.)
- Water-power plant, Ouachita system, H. D. 588, 62d, 2d.

Electric Batteries.

- Arrangement of, mine explosions, **77**, 237.
- Formula for, rock blasting, **77**, 236, 239.
- Rock blasting, **68**, 814; **69**, 432; **75**, ii, 253, 695; **82**, 2466; **86**, 687, 692.

Electric Elevators.

- Buildings, **98**, 3668.

Electric Fountains.

- 99**, 3824.
- Study for, **00**, 5240.

Electric Lighting. (See Forts, p. 1797 of this Index.)

- Channels, **93**, 1080.
- Storage batteries for, **98**, 679.
- Washington, D. C., **94**, 3256.

Electric Locomotive.

- 96**, 485.

Electric Motors.

- Torpedoes, **83**, 54.

Electric Power.

- Dams, **94**, 1780.
- Dams, surveys for, **94**, 1780.
- Transmission from U. S. to Canada, **08**, 895.

Electric Switch.

- Three-way switch, **04**, 3739.

Electric Wiring. (See Wiring.)**Elevations.** (See Gauge Readings; Water Heights.)

- Black River, **00**, 5391.
- Columbia River, **93**, 3398.
- Detroit-St. Clair Rivers, **00**, 5389.
- Lake Huron, **96**, 2783.
- Lake Winnipeg, **68**, 309.
- Monument, Jefferson City, Mo., **94**, 3085.
- St. Marys Falls, **98**, 2559.

Elevations—Continued.St. Marys Falls Canal, **93**, 2996.St. Marys River, **96**, 2783.**Elevators.** (See Electric.)Buildings, **96**, 4014.**Embankments.** (See Banks; Levees; Slopes.)Floods have bad effect, locks, **11**, 2048.Improvements, Tennessee River, **99**, 2273.Leaks in, stopping, **93**, 2433.Maintenance, canals, **04**, 2384; **05**, 1768.Protecting, canal entrances, **00**, 4328.Repairs, Ohio River, **01**, 2634.Sand for, placing, **99**, 1002.Sand movement, checking, **97**, 690, 972.

Size of, study, H. D. 263, 59th, 1st.

Work on, cost, Mississippi River, **05**, S., 234.**Embankments, Rock.**Sinking cribs on, **11**, 2276.**Embankments, Sandy.**Movement of, checking, **97**, 690.Sand movements, checking, **00**, 598.**Emplacements.** (See Forts, p. 1797 of this Index.)**Employees.**

Quarter boats for. (See pl. 59.)

Enamel.Enameled bricks not best for inside finish, **04**, 3832.**Encroachments, Corporate.** (See Erie H. Pa., p. 1495; and p. 2041.)Private and, harbors, **74**, 202, 207; **76**, ii, 535
77, 828, 928.**Engineer Battalion.** (See p. 2039 of this Index.)Equipment, **01**, 955.**Engineer Corps.**Field manual begun, **01**, 39.**Engineer Depot.**Material, **01**, 951.**Engineer Field Manual.****01**, 911; **02**, 801.**Engineer Tool Box.**Wagon, design, **10**, 1080.**Engineer Tools.**Carbolineum to guard against attacks of white
ants, **10**, 1080.**Engineer Troops.**Bridge, pontoon, **02**, 816.Bridge, trestle, **02**, 816.Bridge, tripod, **02**, 816.Calisthenics, result, **02**, 806.Crib bridge, **02**, 816.Equipment for, **01**, 982; **02**, 811.Pile driver, **02**, 816.Pile driver, floating, **02**, 816.Rafts, building cask rafts, **02**, 816.Railroad work, **02**, 816.Trade school, **02**, 801.Trestles, **02**, 816.**Engineers.** (See Vol. I, p. 11 and p. 2039.)**Engraving, Copperplate.**Charts, Great Lakes surveys, **08**, 2517.**Enrockment.** (See Jetties; Rock; Stone;
Wharves.)Plan of, jetties, **00**, 4450.Profile of, jetties, **94**, 2564.**Enrockment—Continued.**Settlement of, jetties, **00**, 4474.Wharves, **95**, 3494.**Entrances.** (See Canals; Harbors; Parks.)Forts, **04**, 3738. (See also Forts, p. 1797 of this
Index.)Jetties, cheap type, Delaware & Chesapeake
Canal, S. D. 215, 59th, 2d.Navigation difficult, harbors, H. D. 62, 59th,
1st.Parks, **03**, 2469.**Equation.** (See Lockage.)

Flow, H. D. 779, 61st, 2d.

Erosion. (See Abrasion; Banks; Beaches; Cav-

ing; Crevasses; Levees; Sand; Shores; Spurs.)

Beaches, Cape Cod, H. D. 821, 61st, 2d.

California rivers, H. D. 262, 59th, 1st.

Causes, combined currents, **95**, 2301.Causes, wave wash, levees, **00**, 4861.Extensive erosion, jetties, vicinity of, **93**, 3288.

Missouri R., H. D. 1287, 61st, 3d.

Preventing, beaches, **95**, 995.Preventing, locust trees useful for, **98**, 2739.Preventing, river banks, **96**, 1777.Preventing, spurs for, bank angles, **97**, 3818.Preventing, tree planting beneficial, **98**, 2739.River bed, **96**, 3484.**Erosion, Heavy.**Causes of, rivers, **95**, 2273.Jetties, produced by, Brazos River, H. D. 27,
61st, 2d.Progress of, Winthrop Head, Boston, H. D.
144, 59th, 1st.**Estimates.** (See Canals; Costs; Cribs; also Vol.
I, p. 21, Jetties.)Breakwaters, **93**, 3259.Canals, **96**, 2416, 2447.Canals, feeder line of, **96**, 2661.Canals, land for, **96**, 2416.Cribs, **75**, 300, 306.Drinking water, future demands for, H. D. 342,
61st, 2d.Form of, canals, **94**, 2182.Formula, cribs, **98**, 2420.Harbor defense, **84**, 57.Locks, **75**, ii, 616.Locks and dams, Black Warrior River, **04**,
1840.Movable dams, **00**, 2358.River channels, maintaining, **98**, 2697.Rules to be followed, cribs, **75**, 300, 306.**Estuaries.**Currents, sub and surface, relation, **78**, 558.Lengthening, **75**, ii, 196.Regulation works, **01**, 1662.**European Rivers.** (See Rivers, European.)Tides, action of, **66**, iv, 66, 214; **68**, 919; **74**, ii,
379; **75**, ii, 196; **76**, 460.**Evaporation.** (See Water Supply.)Canals and reservoirs, **71**, 639; **72**, 515, 521;
74, 505, 523, ii, 95; **75**, ii, 547, 566; **76**, 756;
78, 293.Determining, **79**, 1213.Determining, rivers, **00**, 3165.Dewpoint, relation to, **76**, 526.Florida coast, **76**, 457, 519, 525.Forests, effect of, **75**, ii, 172; **79**, 1211.

Evaporation—Continued.

- Lakes, **68**, 963, 977, 980; **69**, 645; **70**, 570; **76**, 526; **83**, 2855.
 Land and water evaporation, comparison, **69**, 603; **70**, 570.
 Measuring, **68**, 976.
 Milwaukee, **68**, 977.
 Rainfall and, ratio, **70**, 287.
 St. Clair River, **70**, 570.
 Various places, **68**, 978; **76**, 526; **79**, 1236.
 Water, Florida, **82**, 1207.
 Water supply of canals, **71**, 639; **72**, 515, 521, 73, 1008; **74**, 505, 507, 520, 523, ii, 95; **75**, ii, 547, 566; **76**, 519, 526, 528, ii, 97; **77**, 386, 704, 707, 756; **78**, 293.
 Water surfaces, **76**, 533; **79**, 1200, 1205, 1213, 1226, 1237, 1241.

Examinations. (See Surveys; Sweeping.)

- Blasted channels, **93**, 1586.
 Channels, bottoms, **02**, 2498.
 Must be confined to locality specified, not extended to adjacent land, H. D. 720, 62d, 2d.

Excavation. (See Batteries; Breakwaters; Canals; Channels; Cofferdams; Foundations; Locks; Mortar Pits; Rock; Sand; see pls. 46, 47, 49, 50, 51, 56, 57.)

- Channels, rock in, **96**, 2224.
 Clam-shell dredges, use of, Buffalo, **99**, 3108.
 Cofferdams, **74**, 312; **94**, 1995; **95**, 2907.
 Cofferdams, foundations, locks, **94**, 1292.
 Colbert Shoals Canal, **99**, 2272.
 Costly work, locks, **97**, 2260.
 Dispositions, intracoastal canals, H. D. 391, 62d, 2d.
 Foundations, breakwaters, **00**, 4120.
 Foundations, buildings, **01**, 3817.
 Foundations, locks, **94**, 1292, 1956; **00**, 2769.
 Foundations, mortar platforms, **94**, 450.
 Foundations, stone locks, **96**, 1938.
 Gun batteries, **93**, 603.
 Locks, **95**, 3583; **96**, 3269; **97**, 3420; **98**, 1914, 3542.
 Locks, approaches of, **00**, 2926.
 Locks, entrances, **96**, 2270.
 Mortar pits, **00**, 1002.
 Plant, New York Harbor, **02**, 2495.
 Quicksands, control of, **01**, 913.
 Rock, **99**, 697, 701.
 Rock, Mississippi River, **99**, 2137.
 Sand, **93**, 603.
 Water jet employed, channels, **99**, 3153.

Excavation, Rock.

- Costs, Mississippi River, **01**, 2267.

Excavators. (See Dredges.)**Expansion.** (See Cement.)**Exploring.** (See Foundations.)**Explosions.** (See Blasting; Dynamite; Nitroglycerin.)

- Black powder, dynamite and, comparison, **68**, 423; **77**, 26.
 Craters, formulæ, **79**, 36.
 Duration of, **79**, 37.
 Earth waves, **86**, 690, 694, 705, 712.

Explosions—Continued.

- Fine blasting work, tunneling, **94**, 3199.
 Frozen nitroglycerin, results from, **76**, 31.
 Fuses for, Hell Gate, **86**, 687.
 Large charges, adjacent objects unaffected, **76**, 241.
 Methods followed, Hell Gate, **86**, 680, 686.
 Nitroglycerin explosions, discussions of, **66**, iv, 335; **75**, 523.
 Photographing, Flood Rock, **86**, 691, 716.
 Pressure gauges, submarine mines, **95**, 530.
 Rocks, various, effect of nitroglycerin on, **68**, 91; **73**, 776; **77**, 355.
 Rock waves, destructive effect of, **77**, 233.
 Sympathetic explosions, dynamite, **79**, 37.

Explosions, Crater.

- Preventing, rock blasting, **79**, 1507.

Explosions, Deep.

- Rock blasting, **96**, 1932.

Explosions, Premature.

- Dynamite, **75**, 524, ii, 695; **76**, ii, 665; **77**, 1042; **79**, 515.

Explosions, Submarine.

- Pressure gauge, **89**, 496.

Explosions, Sympathetic.

- Dynamite, **80**, 57; **85**, 725, 729, 733; **86**, 686.
 Torpedoes, **80**, 57.

Explosives. (See Dualin; Dynamite; Mica Powder; Nitroglycerin; Powder.)

- Arrangement of, blasting, **75**, ii, 200.
 Blasting with, **91**, 2796.
 Broken rock and, ratio, **68**, 423, 425; **69**, 19, 248; **71**, 733; **72**, 877; **73**, 935; **74**, ii, 39, 160; **75**, ii, 82; **76**, ii, 326, 545; **77**, 352; **79**, 61, 62, 379, 533, 535, 1135, 1508.
 Crater gauge, **88**, 354; **89**, 479; **90**, 403.
 Crater test, **88**, 353.
 Copper cases for, corrosion of, Hell Gate, **86**, 684.
 Echall's patent, **68**, 751.
 Ehrhardt's patent, **68**, 813.
 Ehrhardt's patent, trial of, **68**, 813.
 Energy of, comparison, **79**, 36, 1507.
 Energy of, dynamite, **79**, 36.
 Energy of, gun cotton, **79**, 36.
 Energy of, nitroglycerin, **79**, 36.
 Experiments with, Hell Gate, **83**, 537; **85**, 724, 728.
 Night tests, **89**, 496.
 Placing, river beds, **93**, 1119.
 Power tests, **90**, 417.
 Rock blasted by, ratio to explosive, **80**, 500; **81**, 864; **83**, 541; **86**, 685.
 Sensitiveness of, **90**, 403, 418.
 Small charges, rock blasting, **95**, 925.
 Testing, **81**, 58; **83**, 537, 1486.
 Tests, **81**, 57; **82**, 59; **90**, 402, 413; **91**, 559.
 Tests, torpedoes, **84**, 59.
 Wreck removal, **68**, 591, 607; **75**, ii, 714; **77**, 931; **12**, 1654.

Exports.

- Importance over imports in considering river and harbor improvements, H. D. 545, 59th 1st.

F.

Factories. (See Manufactures.)

Falls of St. Anthony.

69, 210; 70, 278; 72, 299; 79, 1161.

Preservation of, 71, 294; 72, 296; 73, 408; 74, 277; 75, 356.

Rock formation at, 79, 1161.

Tunnel under, building, 70, 283; 71, 294; 72, 304.

Falls, Niagara. (See p. 2041 of this Index.)

Discharge, changes, 11, 3024.

Falls, Ohio.

Making channel through Indiana Chute, peculiar problem, 02, 1964.

Fascines. (See Mattresses.)

Building, 76, ii, 404; 96, 1876.

Mud and, dike material, 71, 825.

Piles and, spur dams, 93, 1562.

Placed on end, 77, 989.

Shore protection, Missouri River, 01, S., 398, 401.

Spur dams, 93, 1562.

Training walls, 93, 1562.

Use of, generally, 71, 825; 77, 989.

Fastenings.

Cribs, 93, 3091; 95, 3119; 96, 2945.

Feeder Lines.

Building, canals, 97, 2859.

Estimates for, canals, 96, 2661.

Surveys, canals, 96, 2656.

Feet.

Meters, conversion of measures to, table, 93, 1995.

Fences. (See Sand.)

Sand movement, checking, 98, 2681.

Ferries.

Types proposed, canals, H. D. 391, 62d, 2d.

Ferry, Aerial. (See pl. 9.)

Duluth-Superior, 05, 1972; 06, 1698.

Operating regulations, 05, 1973.

Ferryboats.

Detroit River, 74, 596.

Fields. (See Gas Fields.)

Field Work. (See Surveys.)

Hydrography, 91, 3481.

Fill. (See Channels; Deposits; Scour; Sediment.)

Causes, canals, 01, 2066.

Channels, 96, 2919.

Channels, dredged, advantage of hydraulic dredges, 02, 495.

Channels, maintenance of, effect on, 98, 2697.

Dredging, rate of fill during, 01, 1781, 1804.

Gauges and, relation, 96, 3484.

Islands, value of, increased by fill, Jamaica Bay, H. D. 1506, 60th, 2d.

Made by cable and brush, banks, Missouri River, H. D. 46, 62d, 1st.

Fill—Continued.

River beds, 68, 307.

Scour and, dredged channels, 93, 3050; 94, 2390; 97, 3041, 3055.

Scour and, jetties, 96, 1536, 3286.

Scour and, platting, 01, S., 232.

Scour and, rock jetties, 93, 3493.

Scour and, surveying, Mississippi River, 01, S., 44, 128.

Training ashore, 02, 1426.

Fill, Annual. (See Fill.)

Channels, 96, 2919.

Fill, Earth.

Cribs, 71, 658; 75, ii, 185; 79, 1044.

Fill, Rock.

Dams, 98, 2825.

Filling. (See Ballast; Canals; Cofferdams; Cribs; Dikes; Dredgings; Hearting; Jetties; Rivers; Rock; Stone.)

Cofferdams, 69, 249.

Colbert Shoals Canal, 99, 2272.

Crib holes, large concrete blocks for, 93, 3159.

Cribs, 72, 162.

Cribs, furnace slag for, 77, 626.

Dredged channels, 95, 1936.

Dredged cut, 94, 2147.

Dredgings for bulkheads, 94, 2609.

Dredgings, dikes, 94, 1061.

Gravelly-loam material, cofferdams, 86, 1451.

Locks, 00, 2926.

Loss of, grillage bottoms of cribs, 69, 146.

Movement of, dikes, 93, 3031.

Pile and brush dams, 93, 3267.

Revetments, brush in, 77, 475.

River channels, sewage in, 95, 2707.

Sediment as, rivers, 95, 3860.

Thrust of, cribs, 63, 238, 242.

Filling Basins. (See Basins.)

Filling, Sand.

Crib dikes, 70, 428, 432.

Placing, mortar battery, 98, 644.

Revetments, 68, 154.

Sheet-pile jetties, 79, 465.

Filtration. (See Canals; Rivers; Water Supply.)
86, 2022, 2034.

Canals, 75, ii, 547, 566; 76, 527; 81, 571, 1152; 86, 1252.

City water supply, 09, 2325; 12, 3468.

Cost of, cities, 08, 2363.

Drinking water, H. D. 342, 61st, 2d.

Drinking water, not a case of hardness, 06, 2106.

Excessive amount of, Florida, 77, 384.

Experiment in Florida on, 76, 535.

Experiments, Washington, D. C., 07, 2294; 08, 2367.

Methods, Washington, 03, 2511.

Rate of, various soils, 76, ii, 67; 79, 1239.

Filtration—Continued.River beds, **69**, 252.Water for domestic use, **80**, 2361; **86**, 2022, 2034.Water supply, canals, **71**, 639; **73**, 1008; **74**, 505, 507, 520, 523, ii, 95; **76**, 519, 526, 534, ii, 67, 97; **77**, 386, 704, 707; **78**, 293.Works, filtration, cost of, **98**, 3656.**Financing.**

Foreign waterways (Merchant), Sen. D. 301, 61st, 2d.

Finders. (See Range.)**Finish.** (See Concrete; Parapets.)**Fire-control System.**Features of, gun batteries, **99**, 13.**Fireplaces.** (See Forts, p. 1797 of this Index.)Concrete work, in, **02**, 2480, 2494.**Fireproofing.**Brick better than tiling, **04**, 3837.Buildings, **04**, 2852.Government Printing Office, **01**, 3811.Steel buildings, **04**, 3839, 3842, 3860..**Fires.**Ceilings, **04**, 3841.Doors to resist, **04**, 3845.Protection from, buildings, **04**, 3850.Steel buildings to withstand, **04**, 3830.Window framing, **04**, 3844.**Fires, Forest.**Yellowstone Park, **02**, 3042.**Firing.**Torpedoes, **89**, 493.**Firing Circuits.**Mortar batteries, **97**, 753.Wiring of, **97**, 753.**Firing, Judgment.**Stations, submarine mines, **98**, 744.**Firing, Proof.**Concrete mortar battery, **94**, 454.**Firing, Volley.**Mortars, tests, **95**, 519.**Fish.**Dams, effect of, **73**, 829.Passage of, dams, **01**, 3515.Propagation of, **82**, 552.**Fish Traps.**Regulations for using, Puget Sound, **05**, 2558.**Fishways.** (See Potomac River.)Building, dams, **96**, 2248.Fox River, **99**, 2793.**Fissure Veins.**Cause of, mines, **72**, 1143.**Flags.**Substitutes for, shore-line surveys, **94**, 2799.**Flanges.**Covering, steel buildings, **04**, 3860.**Flashboards.**Scour augmentation, **01**, 2626.**Flat Cars.** (See Cars.)**Flats.**Reclaiming, dredgings for, **95**, 1206.**Fleet, Coal.** (See pl. 35.)**Flexure.** (See Dams.)Preventing, dams, **94**, 1923.**Floats.**Cords and, resistance to, rivers, **74**, 534; **75**, ii, 369; **76**, 216; **78**, 380.Cross-section soundings, breakwaters, **03**, 2096.Current observations, **76**, iii, 339.Current observations, San Francisco Harbor, **78**, 1305.Currents, velocity of, **70**, 556; **75**, ii, 301, 304; **78**, 259, 262, 305, 1306, 1308, 1315.Discharge measurements, **01**, 2201; **11**, 1947.Discharge observations, **97**, 3662.**Floating Plant, U. S.** (See p. 2137 of this Index.)**Floats, Double.**Currents, observations of, **93**, 3666.**Floats, Pole.**Current observations, **93**, 1624.**Flood Control.** (See Floods, below.)**00**, 2843.

Banks for, H. D. 81, 62d, 1st.

Bridges, H. D. 81, 62d, 1st.

By-pass system, H. D. 81, 62d, 1st.

California Rivers, **07**, 2262.

Channel enlargement, H. D. 81, 62d, 1st.

Channel rectification, H. D. 81, 62d, 1st.

Diversion for, Puyallup River, H. D. 1107, 60th, 2d.

Drainage systems, H. D. 81, 62d, 1st.

Levees, California Rivers, H. D. 81, 62d, 1st.

Leaves for, **00**, 2845.

Main channel system, H. D. 81, 62d, 1st.

Relief openings, **95**, 3894.Reservoirs as factors, **04**, 2270.Reservoirs for, **98**, 2859.

Reservoir system, H. D. 81, 62d, 1st.

Sacramento and Feather Rivers, maps, H. D. 76, 62d, 1st.

Sacramento and other California rivers, H. D. 81, 62d, 1st.

Spillways, California Rivers, H. D. 81, 62d, 1st.

Studies, California Débris Commission, H. D. 81, 62d, 1st.

Tributary control, H. D. 81, 62d, 1st.

Weirs, diverting, H. D. 81, 62d, 1st.

Floods. (See Canals; Discharge; Forests; Rivers.)

(See pls. 63, 64, 65.)

Abutments destroyed by, locks, **03**, 1421.Arkansas River, **69**, 299, 351; **75**, 634; **76**, 616.Arrest of, reservoirs, **69**, 313, 324; **75**, 540, 616, 669.Bank protection, methods and cost, Mississippi River, **12**, 3887, and each annual report of the Mississippi River Commission. (See pp. 1067 and 1142 of this Index.)Banks, effect on, **79**, 1011.Bars, deposits behind dams forming, **11**, 1581.Bars, effect on, **75**, ii, 477, 507; **79**, 1010.Breaks from, repairing, Mississippi River, **03**, S., 210, 218.Cause and prevention, Mississippi River, **01**, 2343.

Cause, Grand River, Mich., H. D. 72, 60th, 1st.

Cause, real, Mississippi River, **01**, 2352.

Floods—Continued.

- Cause, reservoir system not a, Mississippi River, **06**, 1459.
 Causes, river bed rising, **00**, 4553.
 Claims, tide gauge records of value, **04**, 1647.
 Combining of, rivers and tributaries, **98**, 2853, 2887.
 Connecticut River, **68**, 761; **75**, ii, 364; **78**, 265, 273, 372; **80**, 403.
 Crevasses and flood areas, Mississippi River, **12**, 3977.
 Crevasses, effect of, **00**, 4554.
 Damages from, Muskingum River, **98**, 2109.
 Damages from, repairing, canals, **02**, 1736.
 Dams, dikes, etc., effect, **04**, 1297.
 Dams, effect of, **77**, 742.
 Destruction by, causes increasing, **91**, 1107.
 Discharge, California rivers, H. D. 262, 59th, 1st.
 Discharge of, **93**, 3761.
 Discharge of, Mississippi River, **93**, 3761.
 Discharge, siphonage system to accelerate, **04**, 3612.
 Diversion, canal for, H. D. 262, 59th, 1st.
 Effect of, Chippewa River, **95**, 2184.
 Effect of, Mississippi River, **12**, 3713.
 Effect of, rivers, **04**, 3803.
 Embankment, canal, bad effect on, **11**, 2048.
 Forests and, relation, **98**, 2869.
 Frequency of, and forestation, Merrimac River, H. D. 9, 62d, 1st.
 Heights of, basins on, effect of, **95**, 3661.
 Heights of, changes in, Mississippi River, **00**, 4551.
 Heights of, levees, effect of, **94**, 2967; **95**, 3649.
 Ice dams a cause of, **69**, 108.
 Illinois River, **69**, 350.
 Increase of, due to forest destruction, **75**, ii, 172, 510.
 Jetties, effect upon, **04**, 3188.
 Kanawha River (Great), **76**, ii, 163.
 Kennebec River, **70**, 501.
 Lands, bottom, protection of, California, H. D. 262, 59th, 1st.
 Lands, valley, protection of, California, H. D. 262, 59th, 1st.
 Lessening, diversion to, H. D. 493, 60th, 1st.
 Lessons from, Mississippi River, **03**, S., 51.
 Levees, advantages of, and disadvantages of cut-offs, **01**, 2345, 2346.
 Levees, effect of, Mississippi River, **12**, 3723.
 Levees, effect on, **96**, 3649.
 Levees, effect on, lessons from, Mississippi River, **97**, 3453.
 Levees, improvement needed, locks, **11**, 2048.
 Levees, lessons, **12**, 3724.
 Levees, Mississippi River, **12**, 3721.
 Levees, protecting, methods and cost, Mississippi River, **12**, 3916, and each annual report of the Mississippi River Commission (see pp. 1067 and 1142 of this Index).
 Levees, raising, methods, Mississippi River, **12**, 3724.
 Levees, repairs, Mississippi River, **12**, 3724.
 Locks, damages, **11**, 2107.
 Locks, effect on, **95**, 3572; **97**, 2261.
 Locks, effect on, Yamhill River, **99**, 8237.
 Locks and dams, effect, **00**, 2172, 2985.
 Lock walls, effect on, **95**, 3572.

Floods—Continued.

- Mississippi River, **68**, 471; **69**, 313, 321, 327, 329, 336; **70**, 282; **73**, 472, 474, 521; **74**, 644; **75**, 541, 553, 565, 606, 634, 676; **76**, 602, 616; **79**, 1009; **80**, 1560; **85**, 2551, 2567; **93**, 3759; **99**, 3484; **12**, 3713.
 Missouri River, **69**, 350; **75**, 636; **76**, 616.
 Movement of, **92**, 2905, 2907.
 Nile, **69**, 327; **75**, 556.
 Ohio River, **69**, 348; **71**, 398, 407, 417, 422, 435, 443; **75**, 635; **76**, ii, 301; **77**, 644; **78**, 814.
 Planes, Mississippi River, H. D. 50, 61st, 1st.
 Preventing, and relation of water improvements, Sen. D. 301, 61st, 2d.
 Preventing, reservoirs, expensive, **98**, 2860.
 Property in regions formerly flooded, increase due to U. S. improvements, **04**, S., 25.
 Protection against, **91**, 1109.
 Protection against, Mississippi River, **12**, 3887.
 Pulsations of, **79**, 786.
 Railroad construction, barrier to, **08**, 860.
 Railway traffic, hindrance of, St. Louis, H. D. 772, 59th, 1st.
 Red River, **69**, 351; **73**, 642, 650; **75**, 598, 616, 666; **76**, 616.
 Reduction with storage reservoirs, Ouachita system, H. D. 588, 62d, 2d.
 Refugees by reason of, aiding, views, Mississippi River, **12**, 3724.
 Regulation of, study for, Missouri River, H. D. 1120, 60th, 2d.
 Relief work, by U. S. plant, Mississippi River, **12**, 3975.
 Remarks, Mississippi River, **03**, S., 243.
 Remedies proposed, Grand River, H. D. 72, 60th, 1st.
 Reservoirs a cure instead of a cause, Mississippi River, H. D. 42, 61st, 2d.
 Reservoirs, effect of, **98**, 2864, 2878, 2887, 2893, 2894.
 Reservoir system, effect of, **06**, 475.
 Rivers, **88**, 1026; **90**, 1373, 1487, 1489; **91**, 1105, 3413; **98**, 1658.
 Rivers, bars of, effect on, **75**, ii, 477, 507.
 Rivers, basins of, effect of, **95**, 3661.
 Rivers, beds of, effect on, **98**, 2902.
 Rivers, effect on, **98**, 1658.
 Rivers, revetments, effect on, **98**, 1658.
 Rivers, tributaries and, combination of floods, **98**, 2853, 2887.
 Sand, action on, **68**, 366; **72**, 132; **76**, ii, 5.
 Scour, locks, **03**, 1674.
 Sediment, effect on, **76**, ii, 5.
 Susquehanna River, **79**, 1393.
 Tables, Red River of the North, **04**, 2269.
 Tennessee River, **68**, 579; **78**, 756; **80**, 1670; **97**, 2287.
 Velocity of, **92**, 2905, 2907.
 Warehouses, guarding, H. D. 772, 59th, 1st.
 Waterways, relation to, Sen. D. 301, 61st, 2d.
 Yazoo River, **75**, 637.

Floods, Artificial.

00, 3336.

Floods, Combined.

Rivers, tributaries, **98**, 2853, 2887.

Floods, Excessive.

Heights, controlling, **95**, 3649.

Floods, Notable.

Records, St. Louis, H. D. 772, 59th, 1st.

Floods, Sudden.

Damages expensive, Des Moines Rapids Canal, 05, 1650.

Flood Waters.

Control of, rivers, 95, 3639.

Disposing of, rivers, 95, 3639.

Floors. (See Concrete; Locks.) (See pl. 12.)

Arches of, building, 96, 4011.

Brickwork, 04, 3852.

Buildings, steel, 04, 3837, 3846, 3860.

Ceilings and, Government Printing Office, 01, 3812.

Culverts, locks, 94, 2303.

Drains, forts, 01, 912.

Hemlock lumber in, locks, 98, 2207.

Linings, forts, 03, 2380, 2382, and see page 1797 of this Index.

Log sluices, dams, 96, 1836.

Repairing, locks, 06, 1434.

Settlement of, forts. (See p. 1797 of this Index.)

System of, bridges, 02, 2658.

Wood blocks, 04, 3855.

Floors, Brick.

Smoothing, 07, 2473.

Floors, Concrete.

Buildings, steel, 04, 3838.

Flotation.

Rock removal, 70, 465; 74, ii, 222.

Flow. (See Canals; Channels; Sluice.)

Concentration of, jetties for, rivers, 97, 2016.

Concentration of, temporary, rivers, 97, 2016.

Equation, general, H. D. 779, 61st, 2d.

Formula, water conduits, 93, 4277.

Grass, effect of, canals, 73, 1008; 78, 294.

Irregularity of, rivers, 98, 2845.

Measuring, gauges for, dredges, 03, S., 158.

Measuring, Pitot tubes, 03, S., 158.

Open channels, 73, 896; 76, 296.

Resistance to, measuring; increased slope employed, 95, 3668.

Uniformity of, rivers, 98, 2845, 2846.

Water power, amount required for, H. D. 99, 58th, 3d.

Flowage. (See Canals; Reservoirs; Water; Watersheds.)

Damages from, canals, 93, 2763.

Damages from, reservoirs, 00, 2787.

Diagraming, Tennessee River, H. D. 781, 60th, 1st.

Formula, watersheds, 93, 4280.

Flowage Rights.

Reservoirs, vicinity of, 00, 2790.

Flowers. (See Botany; Plants; Grass; Chrysanthemums.)**Fluids, Unlimited.**

Body moving in, resistance to, formula, 74, 534; 76, 216; 78, 383, 532.

Flume, Adams.

Supposed value of, improving rivers, 80, 177; 81, 238; 82, 1755; 83, 242; 84, 244; 93, 2202.

Flumes.

Reservoir dams, 96, 1837.

Flumes, Drop.

Water-supply system, Yellowstone Park, 02, 3044.

Fluvigraph Station. (See pl. 72.)**Flushboards.** (See Dams.)

Dams, 98, 2344; 99, 2790.

Flushing.

Tidal reservoirs, 91, 1156.

Fogs.

Nantucket coasts, H. D. 536, 62d, 2d.

Pacific coast, 95, 3459; 00, 4504.

Piloting in, harbors, 01, 1013.

Sandy Hook, 93, 1080.

Footing Blocks. (See Concrete.)

Setting, concrete breakwaters, 10, 2058.

Strengthening, Marquette, 10, 2088.

Forage.

Cost per horse, 04, 3736.

Forebay.

Filling locks, St. Marys River, H. D. 716, 61st, 2d.

Forest Fires.

Yellowstone Park, 02, 3042.

Forestry.

River improvement and, Tennessee River, H. D. 360, 62d, 2d.

Forests.

Destruction of, flood increase from, 75, ii, 172; 79, 1211.

Evaporation, effect on, 75, ii, 172; 79, 1211.

Floods and, relation, 98, 2869.

Freshets, effect, nil in case of Connecticut River, H. D. 1294, 61st, 3d.

Greater to-day than 40 years ago, Connecticut River, H. D. 1294, 61st, 3d.

Influence of, Merrimac River basin, H. D. 9, 62d, 1st.

Rainfall, effect on, 75, ii, 172; 79, 1211; 84, 662.

Rivers, effect on, 75, ii, 172; 79, 1373.

Snow, melting of, 03, 2446.

Forests, Buried.

Erie Harbor, 98, 2738.

Formations. (See Geology.)**Forms.** (See Concrete; Locks; Gates; Dams.)

Concrete work, forts. (See p. 1797 of this Index.)

Locks and dams. (See Locks; Dams; Canals.)

Forms, Concrete. (See pls. 14, 16, 26, 29.)**Formulæ.** (See Craters.)**Fortieth Parallel.**

Explorations, 71, 1027.

Fortress Commander.

Duty of, 98, 579.

Forts. (See p. 1797 of this Index.)

Appropriations, allotments of, points kept in view, 96, 9.

Building, contract system, objections to, 97, 9.

Building, cost of, decreasing, cause of, 97, 11.

Casemated forts, admirable type, Penobscot River, 02, 621.

Conditions, 82, 411.

Electric-light plant for, 97, 632.

Land of, selling price, 94, 461.

Number that might be dispensed with, investigation, 82, 411.

Forts—Continued.

- Planning, **95**, 4.
- Repair methods, **02**, 2487.
- Sewage reservoirs, **95**, 514.
- Sewage systems, **93**, 642; **95**, 511; **96**, 498.
- Sewage systems, Fort Monroe, **97**, 663.
- Torpedo and defense, close connection, **82**, 58.
- Wharves for, building, **97**, 700.

Fort Sites.

- Public parks, utilization as, **85**, 423.

Foundations. (See Batteries; Breakwaters;

- Bridges; Cribs; Dams; Grillage; Jetties; Levees; Locks; Mortars; Piers; Revetment; Riprap; Rock; Sand; Stone; Timber.)

Aqueduct bridges, **96**, 2670.

Bedrock, depths to, bridge building, **78**, 918, 1059.

Beds, forts, **02**, 2475. (See Forts, p. 1797 of this Index.)

Borings for, gun batteries, **96**, 503.

Borings for, breakwaters, **97**, 3247, 3289.

Boulé dams, **00**, 3482.

Breakwaters, **73**, 353; **75**, 57, 305, 306, 309; **78**, 1209; **99**, 3058; **00**, 4090.

Bridge pier, **96**, 3887.

Brush in, cribs, **66**, iv, 115; **67**, 106; **68**, 121; **69**, 99.

Brush in, failure of, cribs, **69**, 99.

Building, breakwaters, **98**, 2752.

Building, concrete dams, **96**, 2202.

Building, locks, **94**, 1826; **97**, 2516; **98**, 2208, 3542; **99**, 2483.

Building, loose gravel beneath, **98**, 2093.

Building, mortar batteries, **97**, 676.

Building, movable dams, **96**, 2252.

Building, submarine mining casemates, **96**, 471.

Buildings, steel, **04**, 3818.

Clay under, settlement of foundations on, **74**, 829, 830.

Coal under, locks, **94**, 1993.

Compressible soils, **74**, 829, 830; **75**, ii, 621.

Concrete blocks for, breakwaters, **97**, 2619.

Concrete in, breakwaters, **98**, 2752.

Concrete locks, **98**, 2482.

Concrete placing, breakwaters, **96**, 2369; **98**, 2752.

Concrete placing, locks and dams, **88**, 2167; **96**, 1833.

Crib piers, **96**, 2713.

Cribs, **73**, 211, 353; **74**, 209; **75**, 305, 306, 309, 320; **76**, ii, 571; **78**, 1270; **89**, 2365; **90**, 2814; **93**, 3134.

Cribs, effect on, **71**, 548; **72**, 162, 163; **74**, 234; **75**, 305.

Cribs, failure in, **67**, 222; **69**, 99.

Designing, breakwaters, **93**, 3202.

Displacement of, cribs, effect of ice on, **87**, 2058.

Draining, gun batteries, **96**, 509.

Draining, locks, **94**, 2166.

Draining, mortar platforms, **94**, 451.

Dredging abandoned, locks, **94**, 1826.

Dredging, crib and stone dams, **94**, 2107.

Dredgings for, piers, **95**, 1054.

Economical design, jetties, **99**, 3261.

Excavating, breakwaters, **00**, 4120.

Excavating, cofferdams, locks, **94**, 1292.

Excavating, crib breakwaters, **00**, 4120.

Excavating, Government Printing Office, **01**, 3817.

Foundations—Continued.

Excavating, locks, **94**, 1292, 1956.

Excavating, mortar platforms, **94**, 450.

Excavating, reservoir dams, **96**, 1834.

Excavating, stone locks, **96**, 1938.

Exploring, levees, **00**, 4862.

Failing foundations; cribs, masonry super-structure, **67**, 222.

Forts. (See p. 1797 of this Index.)

Grillage, batteries, **96**, 503; **97**, 729; **98**, 748.

Ground, treacherous, concrete piles for, **04**, 3866.

Gun batteries, **97**, 676, 729; **98**, 747.

Jet borings in, locks, **97**, 2068.

Laying mortar for, **00**, 907.

Leakage, preventing, locks, **94**, 2166.

Leakage, reinforcing to prevent, locks, **09**, 1886.

Levees, **95**, 3812.

Lighthouses, pier ends, **00**, 4078.

Locks, **74**, 830, 873; **75**, 469, 888, ii, 621, 623; **79**, 1365, 1370; **96**, 3857; **00**, 4469; **01**, 2302; **04**, 3753.

Locks, dredging, **94**, 1826.

Locks, mattresses, **94**, 1378.

Locks, testing pits, **95**, 2293.

Masonry dams, **98**, 2208.

Masonry superstructures, **67**, 222; **74**, 151; **76**, ii, 390.

Mats for, jetties, **94**, 1378.

Mattresses, building, **94**, 1597.

Mattresses, dams, **89**, 1093.

Mattresses, discarding of, economy of, jetties, **98**, 2954.

Mattresses in, not necessary, jetties, **01**, 1663.

Mattresses, jetties, **94**, 1378, 2518; **95**, 1509; **00**, 4245, 4438.

Mattresses, necessity for, jetties, **94**, 2518; **00**, 4438.

Mattresses, placing, rock jetties, **00**, 4469.

Mattresses, training walls, **95**, 1491.

Monuments, **01**, 3831.

Mortar batteries, **00**, 907.

Peculiar soil movement, locks, **98**, 1472.

Pile driving, dams, **00**, 5002.

Pile driving from derrick, **01**, 922.

Piles in, cribs, **72**, 166; **78**, 1185, 1188; **79**, 1557, 1558, 1590.

Piles in, locks, **94**, 2166.

Piles, unreliable, gun batteries, **96**, 503.

Piling, concrete, brick buildings, **04**, 3866.

Plans, locks, **95**, 2416.

Preparation of. (See Forts, p. 1797 of this Index.)

Protecting, stone jetties, **93**, 3502.

Pumping out, gun batteries, **96**, 510.

Quicksands, control of, locks, **94**, 1826.

Quicksands, pocket of, effect on sheet-pile dams, **98**, 1487.

Revetments, excessive settlement, **72**, 839; **79**, 1051.

Rock, depth to, Mississippi River, **78**, 918, 1058.

Rock in, jetties, **00**, 4245.

Rock in, mattresses, preferred to, jetties, **95**, 1774; **00**, 4245.

Screw piles, iron piers, **71**, 665; **74**, ii, 133; **75**, ii, 174; **76**, 267; **77**, 256.

Sections, piers, **98**, 2676.

Foundations—Continued.

- Settlement of, cribs, **84**, 1865.
- Settlement of, excessive, dikes, **72**, 839; **79**, 1051.
- Settlement of, gun batteries, **97**, 677.
- Settlement of, dry docks, Helder, Holland, **74**, 830.
- Settlement of, mortar batteries, **97**, 677.
- Settlement of, New Orleans customhouse, **74**, 820.
- Sheet-piling, peculiar overturning, **98**, 1472.
- Soft sites, gun batteries, **98**, 747.
- Spur dams, **92**, 1318.
- Statues, **99**, 3841.
- Stone in, cribs, **72**, 122, 161, 164, 165; **73**, 206, 353; **76**, ii, 436.
- Stone locks, **96**, 1938.
- Subsidence of, jetties, **88**, 1323, 1328; **92**, 1508.
- Testing ground, Government Printing Office, **01**, 3803; **02**, 711.
- Thin mattresses, advantage of, jetties, **94**, 2518.
- Timber breakwaters, **00**, 4090.
- Timber for, locks, **00**, 2771.
- Trenches, crib building, **75**, 305; **76**, ii, 571.
- Undermining of, preventing, **02**, 711.
- Various soils, sustaining power of, **72**, 766.
- Water, in, upon material likely to scour, **75**, ii, 621.
- Water jet borings, locks, **97**, 2068.

Foundations, Brush and Timber.

- Dikes, **76**, 315.

Foundations, Concrete.

- Buildings, **04**, 3828.

Foundations, Portable.

- Tents, survey parties, **98**, 1837.

Foundations, Soft.

- Building on, dams, **94**, 2151.

Fountains. (See Electricity.)

- Irrigation, **02**, 3044.
- Mammoth Hot Springs, **03**, 2476.

Fountains, Artificial.

- 98**, 3732, 3733.
- Electric, **98**, 3733.

Frames. (See Iron; Steel.)

- Boulé dams, **00**, 3482.

Framing. (See Cribs.)

- Cribs, **93**, 3091; **95**, 3119.

Franchises. (See Water Power.)**Freezing.**

- Water below, **75**, ii, 203.

Freight. (See Railways; Rates; Waterways.)

- Barges, shipping by barges cheapest, **04**, 1390.
- Charges, Great Lakes, **12**, 2631.
- Docks for, **97**, 3192.
- Handling, economical, study, Chicago Harbor and vicinity, H. D. 710, 62d, 2d.
- Low-rate freight, railroad capacity for, **74**, 610.
- Movement of, impediments, Chicago territory, H. D. 710, 62d, 2d.
- Movement of, Mississippi River, H. D. 50; 61st, 1st.
- Movement of, railway control of, Chicago and vicinity, H. D. 710, 62d, 2d.
- Quantities of, excessive, rates not raised, St. Johns River, H. D. 1111, 60th, 2d.
- Rates, **00**, 2373, 3624.

Freight—Continued.

- Rates, canals, Buffalo to New York, **00**, 2374.
- Rates, canals, rail and, **96**, 3062.
- Rates, comparison of, railroads, etc., **71**, 630, 644.
- Rates, St. Louis to Liverpool via New Orleans, **00**, 2378.
- Remarks upon transportation, coastal traffic, H. D. 391, 62d, 2d.
- Transfer facilities should be provided by localities, Kansas River, H. D. 94, 62d, 1st.
- Transferring, cost of, Detroit River, **74**, 595.
- United States freight, refusal of Central Pacific to conform to regulations for carrying, **73**, 1117.
- Value, determining, **12**, 2461.
- Vessels, freight; characteristics of, **00**, 2441.

Freight Boats.

- Type, best, Mississippi River, **10**, 2976.

Freight House.

- Details, Kansas City, **12**, 2202.

Freight, Low-rate.

- Capacity of, railroads, **74**, 610.

Freight, Package.

- Handling, **97**, 3179.
- Movement of, Great Lakes (Merchant), Sen. D. 301, 61st, 2d.

Freight Rates. (See Rates.)

- Canalized streams, Little Kanawha, **09**, 1800.
- Channels, improved; beneficial effect, **10**, 738.
- Ohio River points, H. D. 492, 60th, 1st.
- River and land rates, Mississippi River, **10**, 1765.

Freshets.

- Bridge piers, deterioration, **12**, 1310.
- Controlling, proposals for, Merrimac River, H. D. 2, 61st, 1st.
- Dams, effect of, Merrimac River, Mass., H. D. 2, 61st, 1st.
- Dikes, effect of, **04**, 1088.
- Forests, effect of, doubtful, Connecticut River, H. D. 1294, 61st, 3d.
- Propagation of, Altamaha System, H. D. 443, 62d, 2d.
- River bars, cause of, **76**, ii, 541.

Fresh Water. (See Salt Water.)

- Salt water and, cement, effect on, **95**, 2918.
- Salt water and, meeting of, deposits at, **80**, 953.
- Salt water and, quantities, determining, harbors, **96**, 979.

Friction.

- Coefficient, lock gates, **76**, ii, 52.
- Coefficient, various surfaces, **75**, ii, 839.
- Easing, lock gates, **11**, 2096.

Frost.

- Effect of, concrete work, **05**, 1987.
- Green stone, deterioration of, **98**, 1916.

Fuel.

- Cost of, dredges, **05**, 3036.
- Dredges, U. S., **12**, 2154.

Fuel, Oil.

- Dredges, U. S., **12**, 2611.

Fuses. (See Blasting.)

- Blasting, **86**, 687.
- Tests, torpedoes, **89**, 495.

Fuses, Platinum.

- Torpedoes, **84**, 60.

G.**Gablons.** (See Jetties.)Bank protection, **99**, 3720.Brush mats and, combination of, **76**, 574; **79**, 911.Failure of, jetties, **86**, 1295.Jetties, **80**, 1208, 1222.

Missouri River. (See p. 1025 of this Index.)

Sand-filled, jetties, **74**, 732.**Galleries.** (See Cables; Shafts.)Shafts and, rock blasting, Hallets Point, **69**, 391; **75**, ii, 200; **77**, 228, 232; **79**, 61, 378, 384.**Gaps.** (See Drift.)

Closing of, jetties and shore, advantageous effect, Aransas Pass, H. D. 639, 61st, 2d.

Gardening.Propagating Gardens, Washington, D. C., **01**, 3716.Views, Washington, D. C., **05**, 2621.**Gardening, Landscape.**Sample, Washington, D. C., **05**, 2655.**Gases.** (See Tunnels.)**Gas Fields.**Big Sandy River, **00**, 3416.**Gas Formation.**Tunnels, **77**, 693.**Gas Torches.**Welsbach lights, preferred to, **00**, 3145.**Gate House.**

Water supply, drinking, H. D. 342, 61st, 2d.

Gates. (See Culverts; Locks.)**Gates, Automatic.**Dry docks, **98**, 1968.Locks, **99**, 2572.**Gates, Bear-trap.** (See Dams.)Failure of, **03**, 1684.Form, heavy wooden, failure of, **11**, 2139.Form, steel, superior to wooden type, **11**, 2139.Improved, dams, **93**, 2265.Leakage, excessive, causes of, **03**, 1684.Leakage, excessive, interference with operation, **06**, 1610.Lifting device, improved, Allegheny River, **11**, 2121.Operation, improved, **08**, 1799.Raising, air bags for, **96**, 1840.Raising, capstans for, **96**, 1840.Reconstructing, cost of, Ohio River, **11**, 2142.Reconstructing, improvements, **05**, 1842.Reversed head, action under, **96**, 1833.Reversible, **92**, 1820.Stiffening factor, steel skin on lower frame, **11**, 2142.**Gates, Boulé.**Suspension from overhead bridge, **03**, 1922.**Gates, Bear-trap Sluice.**Type, reversed Parker, **03**, 1526.Deposit of silt, and condition of rods, Mississippi River, **07**, 1580.**Gates, Drop.**Framing, locks, frames replaced with concrete-steel, **09**, 1706.**Gates, Guard.**Locks, **00**, 2932.Plans, **98**, 1922.**Gates, Head.**Water-supply system, Yellowstone Park, **02**, 3044.**Gates, Hydraulic.**Comparison of, **75**, 910, 920.Movable dams, **69**, 65, 529; **73**, 540; **75**, ii, 608.rains, calculation of, **75**, 911.**Gates, Intermediate Lock Gates.**Designing, **95**, 3029.**Gates, Iron Lock.****74**, 787.**Gates, Lock.** (See pls. 33, 40.)**00**, 4349; **04**, 3759.Acid in water, effect of, destructive, **09**, 1761.Abutments, designing, **00**, 2975.Anchorages, stripping of turnbuckle threads, **11**, 2109.Anchors for, **00**, 2982.Assembling of, **95**, 2902.Axles and wheels, indication for need of heavier construction, **11**, 2138.Breakages, frequent; indicative of general deterioration, **11**, 2138.Bumots, **74**, 407, 475; **75**, ii, 608.Building, **98**, 2018.Caisson type, action of, **97**, 2356.Calking machine, **96**, 2787.Cascades, **78**, 1334.Chittenden drum weir, **02**, 1667.Concrete locks, **00**, 4349.Design, swift-current streams, **01**, 2514.Designing, **00**, 2978.Designing, calculations, **95**, 3034.Designing, novel, **74**, 787, 819; **77**, 581; **78**, 804.Des Moines Rapids, **70**, 299; **76**, 663; **78**, 736.Erecting of, **95**, 2909.Failure of, **72**, 444, 453, 460; **77**, 618.Forms, **91**, 3343, 3352, 3353.Fox River, **76**, ii, 416.Friction coefficient, **75**, ii, 839; **76**, ii, 52.Friction of gates, easing, **11**, 2096.Hanging of, **76**, ii, 416; **77**, 618.Large, **97**, 2976.Large, distortion, **95**, 3041.Largest, U. S., **72**, 452, 460; **78**, 804.Lateral movement, provision for, **93**, 2482.Leakage, causes, **05**, 1767.

Gates, Lock—Continued.

- Life of, **98**, 2187.
- Louisville and Portland Canal, **72**, 452, 460; **77**, 610; **78**, 780.
- Lower, designing, **95**, 3029.
- Material for, **95**, 3028.
- Miter sill, attaching, **72**, 460; **78**, 736, 743.
- Miter sill, failure of, **72**, 452, 460; **78**, 734, 736, 742.
- Movement of, transverse to lock, **78**, 804.
- Movement, vertical, repairs, **12**, 2624.
- Operating, appliance for, **87**, 1742.
- Operating, chains, undesirable, **98**, 1800.
- Operating, machinery for, **75**, 782; **76**, 664; **77**, 539, 540, 618, 734; **78**, 741, 773, 804; **79**, 1152, 1155, 1284, 1294; **96**, 3272; **97**, 2976; **98**, 1305.
- Operating, obstruction of, sediment, **76**, 759; **77**, 611, 618; **78**, 743, 781, 787; **79**, 1294.
- Operating, obstruction of, weeds, **78**, 741.
- Operating, power for, **98**, 1921.
- Operating, steam for, **80**, 1730; **81**, 1904.
- Paint for, best, **00**, 4331.
- Painting, **00**, 4331.
- Plan, wide locks, **78**, 804.
- Plaquemine Locks, **05**, 1450.
- Pressure, **91**, 3351.
- Raising of, repair, **93**, 2482.
- Ramming, effects of, **11**, 2424.
- Rammed by steamship, Poe Lock, **11**, 2424.
- Rapid decay, **95**, 2361.
- Readjusting, **09**, 1472.
- Recesses for, sheathing of, rapid decay, **95**, 2360.
- Recesses, reducing deposits in, **09**, 1779.
- Repairing, **93**, 2482; **04**, 2107.
- Repairing, draining canal, **99**, 2549.
- Repairing, raising for, **93**, 2482.
- St. Marys Falls Canal, **77**, 922.
- Scour, concealed, under gates, **02**, 1892.
- Sills, designing, calculations, **95**, 3040.
- Starting of, facilitating, device for, **95**, 2359.
- Strains, discussion, **72**, 452, 460; **75**, 910; **78**, 734, 742, 1338.
- Stresses, calculating, **95**, 3037.
- Suspended form, **85**, 1757.
- Tests of, **95**, 3587.
- Timber of, preservation, **78**, 780.
- Types of, **95**, 3029.
- Valve, combination, **76**, ii, 416.
- Valve, safety latch, **93**, 1734.
- Valves, details, **02**, 1948.
- Wheels, cast-iron, replaced with forged steel, **09**, 1780.
- Wide lock, **78**, 804.

Gates, Sea.

- To prevent mingling of salt and fresh water, H. D. 836, 61st, 2d.

Gates, Sluice.

- Improvements in operation, **09**, 2010.
- Steam to clear ice from, **09**, 2010.
- Towers for counterpoising, **09**, 2010.

Gates, Steam-Lock.

- Operating, **80**, 1730; **81**, 1904.

Gates, Steel Lock.

- Building, processes, **95**, 3025.
- Designing, **95**, 3028.

Gates, Steel Lock—Continued.

- Distortion, **95**, 3041.
- Erecting, **95**, 3585.
- Inspection of, **95**, 3025.
- Lock, **95**, 3585.

Gates, Tainter.

- Reservoir dams, **01**, 2314.

Gates, Wooden Bear-trap.

- Wooden type a failure, **11**, 2139.

Gauge Bulletins.

- Forms of, **93**, 4222.
- Iron frames for, **97**, 1940.
- Mississippi River, **93**, 3654.
- Plates for, **97**, 1940.

Gauge Readings. (See Elevations.)

- Big Sandy River, **96**, 2318.
- Bulletins, forms, **93**, 4222.
- Cape Fear River, **93**, 1406, 1418; **95**, 1330, 1334.
- Chicago Harbor, **93**, 2805; **94**, 2137.
- Chicago River, **95**, 2700; **96**, 2579; **97**, 2793; **98**, 2421; **00**, 3784.
- Columbia River, **93**, 3514; **95**, 3542.
- Contentnia Creek, **93**, 1386; **95**, 1314.
- Detroit River, **00**, 4003, 5389, 5394.
- Doboy Bar, **97**, 1542.
- Duwamish River, **98**, 3109.
- Fox and Wisconsin Rivers, **98**, 2397.
- Fox River, **00**, 3724.
- Green River, **97**, 2509.
- Hudson River, **95**, 900; **96**, 826.
- Illinois River, **93**, 2827; **94**, 2156; **95**, 2718; **96**, 2602; **97**, 2819; **98**, 2439; **00**, 3802.
- Kalamazoo River, **98**, 2544.
- Lake Erie, **00**, 5357.
- Lake Superior and Mississippi Canal, **96**, 2395, 2430.
- Licking River, **00**, 3181.
- Little River, **93**, 2088.
- Marquette and Copper Harbors, **00**, 3640.
- Mississippi River (See each annual report.)
- Neuse River, **93**, 1392; **95**, 1320.
- Ocracoke Inlet, **94**, 1001; **95**, 1311.
- Ohio River. (See each annual report.)
- Ogdensburg, N. Y., **93**, 4384.
- Osage River, **93**, 2185.
- Oscillation of, Lake Superior, **87**, 1983.
- Quachita River, **93**, 2093; **94**, 1464.
- Pamlico and Tar Rivers, **93**, 1384; **95**, 1312.
- Red River, **95**, 1861.
- Reducing, **99**, 3478.
- Sacramento and Feather Rivers, **95**, 3306; **97**, 3360.
- St. Clair and Detroit Rivers, **00**, 5394.
- St. Francis River, **93**, 1627.
- St. Johns River, **93**, 1624.
- St. Marys River. (See each annual report, also Miscellaneous Index p. 2041.)
- San Joaquin River, **95**, 3296.
- Tennessee River, **96**, 1921; **00**, 2966.
- Trent River, **93**, 1388; **95**, 1316.
- Warrior River, **00**, 2186.
- White River, **96**, 698; **97**, 2491.
- Winyaw Bay, **95**, 1354.
- Yazoo River, **94**, 1502.

Gauges. (See Bench Marks; Crater; Pumping; Rivers; Water.)

- 90**, 1335, 1340, 1415.

Gauges—Continued.

- Arrangement, dam building, **00**, 2788.
- Atchafalaya River, **96**, 3564.
- Comparison of, lakes, **68**, 981.
- Crevasses, effect of, **95**, 3656.
- Data, physical, reduction of, Mississippi River, **01**, S., 126.
- Data relating to, index to, Mississippi River, **95**, 3707.
- Establishment of, Mississippi River, **72**, 426; **73**, 517; **76**, 600; **77**, 493.
- Establishment of, Western rivers, **73**, 517.
- Flow, measuring, U. S. dredges, **03**, S., 158.
- Laws relating to, Mississippi River, **97**, 1938.
- Mississippi River, **93**, 2058, 2235, 3655; **94**, 2793; **96**, 1636, 3536, 3562; **97**, 1937, 3547; **02**, S., 53.
- Missouri River, **93**, 3931, 4221; **94**, 3114.
- Pumping gauges, mortar pits, **94**, 451.
- Readjustment of, flood tides, determining, **96**, 1469.
- Red River, **93**, 1984.
- Rivers, **93**, 2058.
- Staves for, **97**, 1938.

Gauges, Automatic.

88, 1270.

Gauges, Display.

Stage indicator, **04**, 4063.

Gauges, Illuminated.

90, 2178.

Gauges, Permanent.

Building, **83**, 1313.

Gauges, Pressure.

- Discussion, **75**, ii, 823.
- Mines, explosions of, **95**, 530.
- Submarine, explosives, **89**, 496.

Gauges, Self-recording.

Mississippi River, **97**, 3663.

Gauges, Self-registering.

96, 3572; **00**, 5324.

Gauges, Water.

New self-registering, **03**, 2685.

Gauges, Tide.

- Automatic, Mississippi River, **02**, S., 90.
- Old style Saxton self-registering, correcting maregrams, **01**, 1435.
- Self-registering, **02**, 2514.

Gauges, Well.

Piers, **01**, 2851.

Gauging. (See Harbors.)

- Aqueduct flow, **97**, 4014.
- Brunswick Harbor, **95**, 1495.
- Flood tides, ebb and, Savannah River, **94**, 1138.

- Water levels, curves, **78**, 1412.
- Watershed of, **68**, 961.

Great Lakes—Continued.

Waterway from, to Gulf, H. D. 1374, 61st, 3d.
Wrecks, 10, 2098.

Grillages. (See Cribs; Foundations.)

Bottoms, cribs, 68, 182, 183; 70, 191.
Bottoms, filling, loss of, 69, 146.
Building, cribs, 95, 3119; 97, 3076.
Buildings, 04, 3828, 3860.
Foundations, gun batteries, 96, 503; 97, 729;
98, 747.

Groins. (See Brush; Concrete; Counterforts;
Hurdles; Jetties; Riprap; Spurs; Timber.)

Bank protection, 99, 3717, 3720.
Building, jetties, 94, 2637.
Revetment better than, jetties, 95, 3315.
Shore-line protection, 05, 3010.
Shores, effect upon, St. Augustine, Fla., H. D.
580, 62d, 2d.

Groins, Bur.

99, 2720.

Groins, Timber.

Dikes, 77, 266.
Jetties, 72, 1007; 76, 180, 188.

Grounds.

Reclaiming, methods, Washington, D. C., 08,
1214.
Testing, foundations, 01, 3803.

Grounds, Parking.

Duluth-Superior, 08, 1901.

Grounds, Public. (See p. 2040 of this Index; see
pl. 62.)

Art commission, D. C., 12, 3517.

Grouting.

Anchor bolts, 00, 2782.

Grubbing.

96, 1622.

Guards. (See Ice Guards.)**Gudgeon.**

Setting, concrete work, 02, 2480.

Gulf of Mexico.

Formerly extended up Mississippi River to
Dubuque, 68, 3f2.
Level, 94, 2794.
Level, changes, 96, 3478.
Littoral currents, 74, 738; 75, 940; 77, 433;
81, 1353, 1369.
Shore lines, unstable character, 79, 929.
Waterway to, from the Lakes, H. D. 1374,
61st, 3d.

Gulf Stream.

Velocity, 76, 379.

Gun Batteries. (See Forts, p. 1797 of this Index.)**Gun Blocks.** (See Forts, p. 1797 of this Index.)**Gunboats.**

Wrecks of, removing, Charleston Harbor, 73,
728.

Guncotton.

Dynamite and, comparison, 81, 58.
Explosive energy, 79, 36.
Use of, New Haven, 71, 773.

Gunfire. (See p. 1797 of this Index.)**Gun Lifts.** (See p. 1797 of this Index.)**Gun Platforms.** (See Concrete, and p. 1797 of
this Index.)**Guns.** (See p. 1797 of this Index.)

Magnets, improvised, 88, 354.
Raising, device for, 93, 616.

H.**Hammers.** (See Piles.)

Pile-driving, 93, 4241.

Hammers, Drop.

Pile-driving, 83, 1185.

Harbor Lands.

City should own, Jamaica Bay, N. Y., H. D.
1506, 60th, 2d.

Harbor Lines. (See p. 2137 of this Index.)

Precautionary publicity, 02, 1912.

Harbors. (See Anchorage; Basins; Breakwaters;
Channels; Discharge; Ice; Jetties; Piers;
Rivers.) (See pls. 5, 8, 9, 10.)

Area of, Boston, 71, 882, 884; Cherbourg, 71,
884.

Bars, movement of, 96, 1190.

Bars, tides, effect of, 96, 1190.

Basins, plans, Jamaica Bay, N. Y., H. D. 1506;
60th, 2d.

Breakwaters at, 98, 2725.

Breakwaters (see Breakwaters), auxiliary, 03,
2084.

Harbors—Continued.

Bulkheads, plans, Jamaica Bay, N. Y., H. D.
1506, 60th, 2d.

Capacities, Duluth-Superior, 10, 2061.

Channels, cross sections, Mobile, 97, 1666; 98,
1426; 00, 2166.

Commerce; kinds employing harbors (King-
man), H. D. 634, 61st, 2d.

Contraction works, effect of, Savannah, H. D.
181, 59th, 1st.

Cross sections, Sandusky Harbor, 95, 3090.

Cross sections, Savannah Harbor, 96, 1237.

Currents in, Great Lakes, H. D. 82, 59th, 2d.

Currents, velocity of, determining, 96, 1237.

Deep channels, breakwaters necessary for,
Lakes, 00, 3773.

Deep channels, planning, 97, 1257.

Deepening, intracoastal waterways to take
place of harbors, Florida, H. D. 675, 62d, 2d.

Depths and widths, proper, for modern com-
merce, Mobile Harbor, Ala., H. D. 657,
61st, 2d.

Harbors—Continued.

Depths, increased; source of demand for, Portland, Me., H. D. 489, 62d, 2d.

Depths in; wind, effect of, **67**, 218; **68**, 154, 171; H. D. 62, 59th, 1st.

Depths in, determining, **96**, 1237.

Depths in, great increase of, **00**, 4200.

Depths in, required in lake harbors, **67**, 17, 34, 252, 255; **73**, 343; **74**, 213; **76**, ii, 543; **77**, 113, 947, 953.

Design, Great Lakes, Chicago Harbor, and vicinity, H. D. 710, 62d, 2d.

Destroyed by moving sands, Greytown, Nicaragua, report, Isthmian Comm., 1899-01.

Deterioration of, causes, **97**, 2771, 2779.

Development, Duluth-Superior, H. D. 1506, 60th, 2d.

Dikes for, **89**, 764.

Discharge, Charleston, **96**, 1189.

Discharge, Savannah, **96**, 1222.

Dividing line between U. S. and other authorities, **76**, ii, 556.

Dredges suitable for, Wilmington, Del., H. D. 359, 62d, 2d.

Dumpings, regulation of, Duluth-Superior, **10**, 2061.

Entrance, advisability of private interests reconstructing, Indiana Harbor, Ind., H. D. 690, 62d, 2d.

Entrances, bars, **97**, 2779.

Entrances, breakwaters for protection, proper types, **09**, 1966.

Entrances, covering, breakwaters for, **74**, 235.

Entrances, deepening, methods, Great Lakes, **04**, 3067.

Entrances, forces acting on, **97**, 2777.

Entrances, funnel shape of, correcting, **97**, 2771.

Entrances, navigating through, difficulties, Great Lakes, H. D. 62, 59th, 1st.

Entrances, piers, effect of, **97**, 2775.

Entrances, sand closure of, dikes to prevent, **96**, 3101.

Expansion basins, need of, Great Lakes, H. D. 62, 59th, 1st.

Expansion basins, pier harbors, Great Lakes, **06**, 1821.

Extension, planning, Great Lakes, H. D. 538, 61st, 2d.

Factors of a good harbor, H. D. 1067, 61st, 3d.

Freight handling, economical method, Chicago, Ill., H. D. 710, 62d, 2d.

Gauging in **96**, 1225.

Hawaiian Islands, H. D. 609, 62d, 2d.

Ice in, formation of, **87**, 2353.

Improvement of, effect, H. D. 1067, 61st, 3d.

Improvement should be confined to general area, H. D. 1067, 61st, 3d.

Improving, jetties for, Baltic harbors, **81**, 1060.

Improving, pier extension, economy of, **95**, 3109.

Injury of, artificial deposits, **81**, 1679, 2485; **83**, 1696; **85**, 1820; **86**, 1092; **87**, 724, 1983.

Injury of, city dumping in, **76**, ii, 429; **77**, 928.

Injury of, obstructing and dredging rivers at harbors, **75**, 287.

Injury of, private dredging, **72**, 205; **73**, 291; **74**, 46, 207.

Harbors—Continued.

Injury of, private encroachments, corporate and, **74**, 202, 207; **76**, ii, 535; **77**, 828, 928.

Jetties, effect of, in 20 years, Aransas Pass, H. D. 639, 61st, 2d.

Jetties and breakwaters for forming, H. D. 1067, 61st, 3d, and report of Isthmian Canal Comm., 1899-01.

Jurisdiction over, **73**, 828, 887; **74**, 203; **75**, 512, 826; **76**, 436; **77**, 828, 928, 940; **79**, 498, 1362, 1721; **81**, 742, 766, 2422; **82**, 2045; **83**, 1696; **87**, 724; **88**, 623.

Lack of, retarding development of Hawaiian Islands, H. D. 593, 61st, 2d.

Lines of, locating, **95**, 2423; **96**, 2130.

Locations, bays, Monterey Bay, Cal., H. D. 1084, 61st, 3d.

Locks, at, **99**, 2268.

Navigation through aided by outer breakwater, **03**, 2034.

Patrol, need for in large harbors, **05**, 1976.

Pier extension, economy of, **95**, 3109.

Piers in, plans, Jamaica Bay, N. Y., H. D. 1506, 60th, 2d.

Piers, proper length, Indiana Harbor, H. D. 690, 62d, 2d.

Pilotage rates, effect of, Charleston, H. D. 288, 62d, 2d.

Piloting, fogs, **01**, 1013.

Planning, Hawaiian Islands, H. D. 833, 61st, 2d.

Protection, detached breakwaters for, **99**, 2813, 2816, 2818.

Providing, small lakes, Lake of the Woods, H. D. 1276, 61st, 3d.

Railroad connections, new harbors, Jamaica Bay, N. Y., H. D. 1506, 60th, 2d.

Regulations, Duluth-Superior, **09**, 1909.

Regulations, San Juan, P. R., H. D. 914, 59th, 1st.

Remarkable improvement of, San Pedro, Cal., **00**, 4200.

Rivers and, defense of, planning, **95**, 4.

Salt water, fresh and, quantities determining, **96**, 979.

Sand deposits in sheltered harbors, **03**, 2087.

Sand movement, **96**, 1190.

Selection of, factors, St. Andrews Bay, Fla., H. D. 12, 61st, 1st.

Sewage, settlement of, **98**, 2669.

Shoaling sewage a cause, **97**, 1251.

Swells in, preventing, Duluth, H. D. 82, 59th, 2d.

Terminals, responsibility for, H. D. 288, 62d, 2d.

Tides, range of, **96**, 1189.

Tides, Savannah Harbor, **96**, 1222.

Traffic and dumping, supervision. (See Miscellaneous, p. 2111 of this Index.)

Various countries, bridging, **96**, 3900.

Wave action, controlling, H. D. 62, 59th, 1st.

Wave action, control of, temporary works of doubtful value, Great Lakes, H. D. 46, 61st, 2d.

Wave action, Great Lakes, **05**, 1821.

Wharfage areas, **11**, 2265.

Widths, necessary, Great Lakes, H. D. 82, 59th, 2d.

Harbors—Continued.

Winds, effect of, on ice movement, New York Harbor, H. D. 65, 59th, 1st.

Harbors, Artificial.

Details, Indiana Harbor, Ind., H. D. 721, 59th, 1st.

Entrances, widening, planning, Duluth, H. D. 221, 60th, 1st.

Jetties, design of parallel, New Jersey coast, H. D. 388, 59th, 2d.

Stilling basins, entrance of vessels helped by, Duluth, H. D. 221, 60th, 1st.

"Undeveloped port with large possibilities," Cold Spring Inlet, N. J., H. D. 388, 59th, 2d.

Harbors, Atlantic.

Fœ'ures, H. D. 1067, 61st, 3d.

Harbors, Breakwater.

Designing, entrance channels, Hawaiian Islands, H. D. 593, 61st, 2d.

Sand drift, Hawaiian Islands, H. D. 593, 61st, 2d.

Shore connections to prevent siltage, San Pedro, H. D. 969, 60th, 1st.

Harbors, Deep.

Making, Pacific coast, 00, 4203.

Possible locations, Pacific coast, 93, 3244.

Harbors, Deepened.

Commerce probably not increased by, Charleston, S. C., H. D. 288, 62d, 2d.

Harbors, Deepwater.

Selecting, Texas, H. D. 1094, 61st, 3d.

Harbors, Great Lakes.

Basins, interior; cost of enlarging, Grand Marais, H. D. 939, 60th, 1st.

Concrete piers, details, 05, 1974.

Deepening, methods considered, Two Rivers, H. D. 730, 59th, 1st.

Depths, effect of winds, H. D. 62, 59th, 1st.

Entrance piers, cost of rebuilding, Grand Marais, H. D. 939, 60th, 1st.

Entrances, plan for, Manistee, Mich., H. D. 599, 62d, 2d.

Features, H. D. 1067, 61st, 3d.

Private improvements and U. S. cooperation, H. D. 1067, 61st, 3d.

Shoaling and silting, preventing, Harbor Beach, H. D. 900, 59th, 1st.

Harbors, Gulf.

Breakwaters, value of, 03, 1348.

Features, H. D. 1067, 61st, 3d.

Storms, protecting from, Galveston, 03, 1348.

Harbors, Ice. (See Ice.)

Artificial, details, 01, 2676.

Cost of, Mississippi River, 05, 1637.

Harbors, Improved.

Commerce, effect on new, 09, 1329.

Consents, obtaining from abutting property owners, 06, 2034.

Damages, waiver of right to, Manistee, Mich., H. D. 599, 62d, 2d.

Docks and wharves, ownership of, Sen. D. 301, 61st, 2d.

Great Lakes, H. D. 710, 62d, 2d.

Jetties for, Baltic harbors, 81, 1060.

Parking grounds, Duluth-Superior, 08, 1901.

Harbors, Improved—Continued.

Pier extension, economy of, 95, 3109.

Plan, general; Jamaica Bay, H. D. 1506, 60th, 2d.

Plan, small or probational, Ontonagon, Mich., H. D. 602, 61st, 2d.

Policy relating to, Sen. D. 301, 61st, 2d.

Harbors, Inner.

Waves, preventing, piers, 73, 204.

Harbors of Refuge. (See Piers.)

Advantages from, Neah Bay, H. D. 472, 62d, 2d.

Benefits, national, North Atlantic, H. D. 911, 60th, 1st; H. D. 935, 60th, 1st.

Character of craft requiring, Neah Bay, H. D. 472, 62d, 2d.

Cleveland, 74, 232; 77, 963.

Commerce, character of, employing them, Newport, R. I., H. D. 610, 61st, 2d.

Conditions, calling for, Neah Bay, H. D. 472, 62d, 2d.

Delaware Breakwater, 73, 879, 881.

Dublin, Ireland, 81, 1057.

Enlarging, factors governing, Harbor Beach, H. D. 900, 59th, 1st.

Exterior harbors of refuge, advantages of, 82, 2295.

Facilities, additional, Point Judith, H. D. 911, 60th, 1st.

Holding power, experiments, Lake Huron, 72, 210, 219; 73, 292.

Ice, protecting from, 04, 1222.

Jurisdiction over, 77, 928.

Kurrachee, East Indies, 81, 1062.

Lake Winnebago, 98, 2349.

Landing places, designing, Point Judith, H. D. 911, 60th, 1st.

Life-saving facilities, increasing, Point Judith, H. D. 911, 60th, 1st.

Lighting and other signals, Point Judith, H. D. 911, 60th, 1st.

- Mooring buoys in, 73, 293; 74, 210.

Necessity for, 66, iv, 141; 70, 486, 488.

Necessity for, Lake Huron, 72, 209, 217; 73, 292; 74, 209; 76, ii, 538; 77, 926; 78, 1219; 79, 1645.

Necessity for, Lake Superior, 76, ii, 328.

Necessity for, Pacific coast, 77, 1049, 1055; 79, 1801, 1805.

Need for, factors determining, 04, 1581.

Parallel piers at entrance, dangerous, 80, 2021; 82, 2296.

Piers, building, 97, 2071.

Planning, Keweenaw Canal, H. D. 325, 60th, 1st.

Planning, points to be considered, 93, 8253.

Planning, Point Judith, 96, 656.

Requirements, 72, 211; 77, 1050.

Requisites, essential; North Carolina coasts, H. D. 528, 62d, 2d.

Sand movement in, breakwaters to govern, Point Judith, H. D. 911, 60th, 1st.

Sites, factors governing, Lake Superior, H. D. 450, 60th, 1st.

Site for, North Carolina coasts, selecting, H. D. 528, 62d, 2d.

Sites, selecting, 04, 952.

Harbors of Refuge—Continued.

Size of, increasing; Keweenaw Waterway, H. D. 40, 62d, 1st.
Sturgeon Bay, **76**, ii, 344.
Surveying, **97**, 1432.

Harbors of Refuge, Exterior.

Interior breakwaters, advantages over, **82**, 2295.

Harbors, Outer.

Improving, methods, **97**, 2899.

Harbors, Pacific Coast.

Few, H. D. 1067, 61st, 3d.

Harbors, Privately Built.

Improvement, point where U. S. assumes; Indiana Harbor, Ind., H. D. 1113, 60th, 2d.

Harbors, Small.

Small type of dredge recommended, Absecon Inlet, N. J., H. D. 1395, 61st, 3d.

Harbor Works.

Accidents, vessel owner liable, Agate Bay, **07**, 1825.

Hardpan.

Dredging, **69**, 417; **70**, 212; **74**, 165.
Dredging, blasting and, **95**, 3201.

Harrowing.

Dredging and, **88**, 1042.

Hawaiian Islands. (See p. 1683 of this Index.)

Harbors, study for, H. D. 609, 62d, 2d.

Heads. (See Guard Lock; Jetties.)**Heads, Breakwater.**

Concrete work, **11**, 2259.

Heads, Pier.

Concrete molds, **04**, 3802.

Heads, Solid.

Dikes, repairing, **95**, 4020.

Headwaters.

Reservoirs, Mississippi River, **01**, 444, 2313.
Dams, Mississippi River, **03**, 1534.

Hearting. (See Dredgings; Filling; Jetties; Rubblestone.)**Heat.**

Mortars, materials of, effect on, **94**, 2353; **96**, 2803.

Heat, Artificial.

Batteries, drying, **93**, 656.

Heating.

Buildings, Government Printing Office system, **01**, 3817.
Buildings, steel, **04**, 3847, 3856.

Heliogravure.

Chart production by, **08**, 2517.

Hellotrope.

Surveying, **67**, 564; **78**, 1397.

High Water. (See Elevations; Water Heights.)

Discharge, Mississippi River, **94**, 2948.
Discharge, river channels, improving, **98**, 1748.
Gauge, **97**, 3664.
High-water marks, Mississippi River, **94**, 2787.
Low water and, Atchafalaya River, **96**, 3564.
Low water and, data concerning, index to, Mississippi River, **95**, 3708.

High Water—Continued.

Low water and, Mississippi River, **93**, 2236; **96**, 3562.
Low water and, Missouri River, **93**, 2236.
Low water and, slopes of, **75**, ii, 501.
Mean low and, St. Johns River, **93**, 1624.
Mississippi River, **93**, 2843, 3725; **94**, 1526, 2756; **95**, 3747, 3877; **96**, 3477; **97**, 3667; **00**, 2543.
Red River, **93**, 1978; **94**, 1451; **00**, 2498.
River bars, effect on, **72**, 132.
River beds, rising of, **75**, ii, 477.
White River, **97**, 2491.
Youghiogheny River, **00**, 3299.

Highways. (See Bridges.)**Hills.**

Stripping. (See pl. 50.)

Hire.

Dredges difficult to hire, Ohio River, **01**, 2601.

Holster.

Plans, **95**, 1394.

Holsting Machine.

Levee building, **99**, 3558.

Holsting Plant.

Brush and stone dams, **94**, 2893.

Holsts. (See Cables; Cranes.)

Ammunition handling, **97**, 631; **99**, 795; **00**, 853, 857, 898.

Holes. (See Drills.)

River beds, **97**, 2249.

Horns. (See Crib.)

Objections to, on cribs, **68**, 240; **70**, 204.

Horsepower.

Cost of, water power of navigable streams, H. D. 781, 60th, 1st.

Horses.

Cost of teaming, **04**, 3735.

Horticulture.

See annual reports, Public Buildings and Grounds, page 2040 of this Index.

Hot Air.

Plant. (See Forts, p. 1797 of this Index.)

Hot Water.

Cement, effect on, **94**, 2351.

Hudson River. (See p. 191 of this Index.)

Attitude of State of New York toward U. S. waterway improvements, Sen. D. 887, 62d, 2d.

Hulls.

Hydraulic dredges, **04**, S., 103.

Hulls, Iron.

Wooden and, comparison, snag boats, **74**, 369.

Hulls, Metal.

Economy, snag boats, **97**, 1951.

Hurdles. (See Dikes; Groins; Spurs.) (See pl. 17.)

Bank building, **98**, 1698.
Bank erosion, preventing, **98**, 1704.
Building, **93**, 2153, 2161; **94**, 1596, 1602; **95**, 2059; **96**, 1718; **97**, 2012; **98**, 1698, 1703.
Details, **01**, 2192.
Dikes, **85**, 1657; **87**, 1564; **89**, 1687; **90**, 1975; **91**, 2111; **92**, 1720; **99**, 2058.

Hurdles—Continued.

- Disk anchor, **01**, 2223.
- Drift, utilization of, **94**, 1581.
- Effect of, **95**, 2059.
- Mattresses, **94**, 1602.
- Protection of, pile buttresses for, against ice, **95**, 2078.
- Restoration, method, **02**, 1605.
- River contraction, **94**, 1593.
- Scour at, **94**, 1594.
- Silt, arrest of, **94**, 1577; **96**, 1717; **97**, 2012.

Hurricane.

- Channels, effect on, Charleston, **12**, 1806.
- Features, peculiar, Galveston, **02**, 1396.
- Forts, effect on, Galveston, **01**, 850.
- Jetties, effect on, Brazos River, **01**, 1946.

Hyacinth, Water. (See p. 572 of this Index.)

- Boat for crushing, **01**, 341, 395.
- Chemicals superior to machines, destroying, **01**, 1748.
- Experiments for destroyal, **06**, 1235.
- Obstructions, rivers, **97**, 1754.
- Plans for destroying, **01**, 1746; **06**, 330; **10**, 524.

Hydrants.

- Forts. (See Forts, p. 1797 of this Index.)

Hydraulic Dredging. (See Dredging.)**Hydraulic Mining.** (See Mining.)**Hydraulics.** (See Currents; Discharge; Rivers; Surveys; Waves.)
Formulas, **82**, 2481.**Hydraulics—Continued.**

- Mississippi River, P. P. No. 13, C. E.
- Study of, Red River, **00**, 2489.

Hydraulics, Waterway. (See pl. 72.)**Hydroelectric Power.**

- Muscle Shoals Canal, H. D. 781, 60th, 1st.

Hydrographs. (See Surveys.)

- Mississippi River, **01**, S., 232; H. D. 50, 61st, 1st.

Hydrography. (See Surveys.)

- Camps, **95**, 4248.
- Data concerning, index to, Mississippi River, **95**, 3709.
- Field work, **91**, 3481.
- General instructions, **03**, 1911.
- Methods, **93**, 1974; **94**, 2802; **95**, 3700, 4170; **96**, 3520; **00**, 2555.
- Methods, Lockport to St. Louis, H. D. 263, 59th, 1st.
- Methods, Ouachita and Black Rivers, **98**, 1610.
- Methods, Southwest Pass, **99**, 1886.
- Mississippi River. (See p. 1067 of this Index.)
- Missouri River. (See p. 1025 of this Index.)
- Pacific coast, **93**, 3242.
- Recording, details, **02**, 2818.

Hydrometric Pendulum.

- Current measuring, **97**, 4094.

Hypsometry.

- Methods, Lockport to St. Louis, H. D. 263, 59th, 1st.

I.**I-Beams.**

- Ceilings, batteries, **97**, 630.
- Leveling dredged areas, **05**, 1041.

Ice. (See Anchors; Canals; Channels.) (See pls. 7, 60, 61.)

- Action of, Rock Island Rapids, **67**, 358.
- Action, Wisconsin River, **76**, ii, 419.
- Barriers against, Delaware River, **73**, 874, 877.
- Boring through, alger for, **93**, 2964; **95**, 4240.
- Bridge piers, closing rivers with, **71**, 716.
- Channels, boats for freeing, **73**, 874.
- Cleared from sluice gates with steam, **09**, 2010.
- Concrete breakwaters, effect on, **97**, 2626; **98**, 2256.
- Cribs, destruction of, **75**, 310, 354; **76**, 258, ii, 533.
- Cribs displaced by, **87**, 2058.
- Cribs, effect on, **68**, 231; **69**, 108; **73**, 294, 296; **74**, 210, 220, 228, ii, 135; **75**, 57, 310, 354; **76**, 258, ii, 533; **77**, 251.
- Cribs, impact against, **68**, 231.
- Cribs, protection of, **68**, 231; **73**, 294, 296; **74**, 210, 220, 228, ii, 135; **75**, 310, 354; **76**, 258, ii, 533; **79**, 1481.
- Cribs, stone removed from, **79**, 1735.

Ice—Continued.

- Crushing strength of, **82**, 786, 788.
- Current flow, effect on, **02**, 2809.
- Damages from, vessels, **77**, 111.
- Dams, lowering, **11**, 2136.
- Dikes, protecting, **74**, ii, 155, 159; **77**, 224; **93**, 2943.
- Formation, **88**, 409, 410.
- Formation, Allegheny River, **80**, 1771.
- Formation, Buffalo Harbor, **87**, 2353.
- Formation, Delaware and Chesapeake Canal, **82**, 955.
- Formation, Delaware River, **81**, 822; **82**, 732, 959; **83**, 744.
- Formation, Great Lakes harbor piers, **10**, 2092.
- Formation, Mississippi River (Upper), **84**, 1620.
- Foundations, effect on, cribs, **87**, 2058.
- Hurdles, protection of, **95**, 2078.
- Jetties, effect on, **04**, 3188.
- Mattresses on, weaving, **95**, 3960; **11**, 2008.
- Movement, **91**, 2130.
- Movement, ice piers, effect of, **90**, 921.
- Movement, protecting against, New York, H. D. 65, 59th, 1st.

Ice—Continued.

- Movement, stone superstructures, effect on, **89**, 2073.
- Piers and breakwaters, protecting, **73**, 294, 296; **74**, ii, 135; **75**, 57, 320.
- Piles, lifting of, **81**, 618.
- Pressure, calculating, breakwaters, Marquette, H. D. 573, 61st, 2d.
- Pressure, piers, against, **82**, 785; **87**, 2076.
- Protection against, harbor of refuge, **04**, 1222.
- Protection against, piles for, Mississippi River, **05**, 1637.
- Resistance to, pile dikes, **89**, 851.
- River beds, changes in, **80**, 1771; **82**, 695.
- Rivers, conditions in North American; S. D. 215, 59th, 2d.
- Seasons, Connecticut River, H. D. 1294, 61st, 3d.
- Vessels, protecting, sheer booms, **78**, 828; **79**, 1363.
- Winds, effect of, New York Harbor, H. D. 65, 59th, 1st.

Ice, Anchor.

- 76**, ii, 419.

Ice Boats.

- Baltimore Harbor, **82**, 956.
- Delaware River, **83**, 600.

Ice Borings.

- 94**, 2263; **95**, 4240.
- Machine for, **93**, 2963; **95**, 4240, 4241.

Ice Dams.

- Floods cause of, **69**, 108.
- St. Clair River, **70**, 164.

Ice Dikes.

- Currents, effect on, **93**, 1146.

Ice Gorges.

- 89**, 1811.
- Dikes, effect of; on ice gorges and freshets, **04**, 1088.
- Susquehanna River, **95**, 1170.
- Views, Missouri River, **10**, 1826.

Ice Guards.

- Cribs, **97**, 2809.

Ice Harbors.

- Building, rivers, **95**, 2233; **97**, 2206.
- Chester, Del., **75**, ii, 183; **77**, 262.
- Chester, Pa., **88**, 2690.
- Cost of, Mississippi River, **05**, 1637.
- Delaware River, **71**, 693, 705; **73**, 882; **74**, ii, 134, 151; **78**, 434, 437; **79**, 429.
- Essentials of, Mississippi River, **82**, 1769.
- Floating pontoons for, **86**, 834; **87**, 804.
- Iron barriers for, Delaware Bay, **82**, 786; **85**, 842.
- Marcus Hook, Pa., **88**, 2690; **02**, 1046.
- Mooring posts, **94**, 1771.
- Muskingum River, **96**, 2103.
- New Castle, Del., **94**, 874.
- Ohio River, **78**, 814, 820, 828; **79**, 1355, 1366.
- Pile dikes for, **00**, 4989.
- Planning, rivers, **95**, 2219.
- St. Louis, **77**, 506; **78**, 679.

Ice Piers.

- 88**, 702; **90**, 2166; **92**, 948, 1963.
- Designs, rivers, **93**, 2446.

Ice Piers—Continued.

- Ice, effect on, **90**, 921.
- Ice, movement, effect on, **90**, 921.
- Tests, New Castle, Del., **93**, 1196.

Ice Surveys.

- 94**, 2263; **95**, 4229, 4237.
- Equipment for, **95**, 4245.
- Party organization, **95**, 4236.
- Precautions, **95**, 4229.
- St. Marys River, **95**, 4235, 4240.
- Sounding, precaution, **95**, 4229.

Imports.

- Exports more important, H. D. 545, 59th, 1st.

Improvement.

- Works of, small, informal contracts for, **98**, 2613.
- Works of, inspecting, steamboat for, **98**, 2759.

Improvement of Rivers and Harbors. (See Vol. I, p. 17 of this Index.)**Improvements, Continuous.**

- Imperative necessity for, **03**, 424.
- Necessary and economical, on large rivers, etc., **04**, 453.

Improvements, Detached.

- Defective, Missouri River, H. D. 1120, 60th, 2d.

Improvements, Federal (U. S.).

- Justified by importance of coastwise trade, Nantucket coasts, H. D. 536, 62d, 2d.

Improvements, Harbor.

- Rules, Great Lakes and elsewhere, H. D. 1067, 61st, 3d.

Improvements, Private.

- Aided by U. S., H. D. 781, 60th, 1st.
- Cooperation of U. S., Great Lakes and elsewhere, H. D. 1067, 61st, 3d.
- Repair, by U. S., expensive, Arcadia Harbor, Mich., H. D. 10, 61st, 2d.
- Value, determining, **00**, 4381.

Improvements, Waterway. (See Canals; Harbors; Rivers.)

- Affecting single firms only, propriety of, left to Congress (Gary Harbor, Ind.), H. D. 955, 60th, 1st.
- Appropriations apportioned by States illogical, **01**, 1996.
- Appropriations should be somewhat in proportion to local enterprise, H. D. 1067, 61st, 3d.
- Appropriations, U. S., and private corporations, **04**, 1282.
- Areas, general; should be confined to, H. D. 1067, 61st, 3d.
- Assessments, local, laws to aid, **10**, 983.
- Benefits from, **01**, 2149.
- Claims, U. S. guaranteed against; methods, Bayou Teche, **09**, 1466.
- Commerce, new, attracted by, reasons, **09**, 1329.
- Commerce, relation to improvements, Great Lakes, **09**, 1942.
- Commercial benefits, study of, Arcadia, Mich., H. D. 701, 62d, 2d.
- Commercial factors, to be considered, **03**, 1427.
- Competition, preserving principle of, **12**, 810.

Improvements, Waterway—Continued.

Competition, recommending improvements because of hope of providing, H. D. 231, 58th, 3d.

Cooperation of locality; improvements recommended because of, H. D. 712, 62d, 2d.

Cost and commerce concerned, Great Lakes, **09**, 1942.

Cost, Great Lakes, annually, **09**, 1943.

Cost one-sixth of 1 per cent of freight value, Duluth, **12**, 953.

Cost small compared with benefits, **11**, 795.

Depots, need of U. S. storage, **03**, 2073.

Effect of, favorable to commerce, instances, **08**, 717.

Effect of U. S. work, Mississippi River, **11**, 1913.

Expense, how much of expense should U. S. bear, Arcadia Harbor, H. D. 701, 62d, 2d.

Expenses of, should property owners contiguous contribute, Black Rock Harbor, N. Y., H. D. 913, 59th, 1st.

Expense of U. S., work which should be at, H. D. 700, 59th, 1st.

Harbors privately built, point where U. S. assumes further improvement, H. D. 1113, 60th, 2d.

Hindrance, private rights a, H. D. 818, 61st, 2d.

Hindrance, corporate ownership of water rights, **05**, 910.

Investment, a good, **01**, 1965.

Justification for, factors determining, **01**, 1978.

Manufacturing following, Ohio River, **03**, 1692.

Manufacturing, effect on, **05**, 2497.

Methods. (See Canals; Harbors; Rivers.)

Old works, condition, Cape Fear River, H. D. 287, 62d, 2d.

Permanency, degree of, Missouri River, H. D. 1120, 60th, 2d.

Policy of U. S., H. D. 262, 59th, 1st.

Private interests, improvement should not be to benefit, H. D. 1067, 61st, 3d.

Railroads due to; alluvial valley of Mississippi River, **04**, S., 24.

Rates after improvement, **10**, 562.

Rates depressed by, **11**, 796.

Rates, coal, lowered by, **03**, 1692.

Rates on Great Lakes lower because of, **01**, 3281.

Rates lower through, **09**, 556.

Rates, large saving of, **03**, 1354.

Rates saved by, **10**, 955.

Reasons for, commercial principles governing Connecticut River, H. D. 231, 58th, 3d.

Recommendation for, the benefit of one or a few corporations not good reason, H. D. 139, 59th, 1st.

Save 2.33 mills per ton-mile, Great Lakes, **12**, 954.

States; Michigan constitution prohibits contribution, H. D. 537, 59th, 1st.

State works, interference of, Sen. D. 887, 62d, 2d.

Trade, foreign; growth of, due to improvements, Boston, **08**, 956.

Vessel size, increase of, due to improvements, **08**, 717.

Water power, effect, Willamette Falls, **05**, 2497.

Increasing Depths. (See Jetties.)

Index. (See p. 9, and each annual report, Mississippi River Commission, p. 1142 of this Index.)

Indicators.

Gauges, depths, **04**, 4063.

Water levels, **04**, 4063.

Industries.

Development of, probable, canal, Great Lakes to Mississippi River, H. D. 304, 61st, 2d.

Infiltration. (See Concrete, and Forts, p. 1797 of this Index.)

Wells, **76**, 535.

Inlets.

Bridges, **09**, 2357.

Channels, forming, theories, Jamaica Bay, H. D. 1506, 60th, 2d.

Inlet Wall.

River barriers, Yuba River, **06**, 2078.

Inspection. (See Dredging.)

Dredging, **98**, 2224, 2751.

Rock, removing, **98**, 2751.

Steamboat for, river and harbor improvement, **98**, 2759.

Instruments.

Error, determining, lake survey, **72**, 1048, 1103; **76**, iii, 64.

Magnetic variation observations, **04**, 4133.

Precise leveling, Mississippi River, **01**, S., 69.

Insulation.

Multiple cable, tests, **90**, 419; **93**, 656.

Intakes.

Levees, **02**, 1642.

Integration.

Discharge, observations, **00**, 5385.

Interior Basins. (See Basins.)

Intracoastal Waterways. (See Waterways.)

Inverts.

Rivers, under, California, H. D. 262, 59th, 1st.

Iron. (See Steel.)

Cleaning. (See Forts, p. 1797 of this Index.)

Corrosion of, lake water, **68**, 156.

Deposits of, Cumberland River, **71**, 482; **79**, 1429.

Deposits of, Elk River, **76**, ii, 172.

Deposits of, Green River, Ky., **80**, 1810.

Deposits of, Virginia, **74**, ii, 104.

Salt water, effect of, **79**, 447.

Iron Barriers.

Ice harbors, **82**, 786; **85**, 842.

Iron, Cast.

Forged steel wheels preferred, lock gates, **09**, 1780.

Iron Framework.

Changes, Washington Monument, **98**, 3716.

Iron Industries.

Location, causes for, Coosa Valley, **05**, 1381.

Ohio, **96**, 3081.

Iron Ore.

Big Sandy River, **00**, 3413.

Iron Ore Docks.

Capacity and shipments, **12**, 2488.

Iron Railroad.

Embedded in concrete to prevent cracks, **99**, 995, 1002.

Ironwork. (See Bridges.)

Buildings, **04**, 3855.
Cleaning, buildings, **04**, 3854.
Concrete and stone locks, **94**, 1996.
Strength of, bridges, **72**, 286, 291.

Ironwork, Rusty.

Cleaning, improvised sandblast, **98**, 1926.
Cleaning, sandblast, efficiency, **98**, 1801.

Irrigation. (See Arid Regions.)

Fountain, **02**, 3044.
Navigation interests and, conflict, rivers, **93**, 3292.
Nile, **75**, 556.
Reservoirs, **98**, 2852, 2864, 2878; H. D. 262, 59th, 1st.
San Joaquin Valley, H. E. D. 290, 43d, 1st.
River and harbor improvements, relation to,

Irrigation—Continued.

Sen. D. 301, 61st, 2d.
Works for, **98**, 2871.

Islands.

Artificial islands, for dredgings, **00**, 1619.
Filling in, value increased by, Jamaica Bay, H. D. 1506, 60th, 2d.
Forming of, **75**, ii, 447.
Harbors for, planning, Hawaiian Islands, H. D. 833, 61st, 2d.
Removed, Philadelphia Harbor, **99**, 1330.
Shores, revetment, Jamestown Islands, Va., **02**, 218.
Wearing away of, Boston Harbor, **71**, 885.

Islands, Artificial. (See pl. 53.)

Channel contraction, **02**, 1033.
Dredgings, disposal of, **00**, 1619.

Jams. (See Drifts; Logs.)

Breaking, river drift, **97**, 1885.

J.**Jams, Log.**

Breaking, **04**, 3605.

Jet. (See Water.)**Jetties.** (See Breakwaters; Dikes; Piers; (See pls. 2, 4, 5, 12, 13, 14, 46.)

Absorption, advancing shore line, **94**, 2474.
Advance scour, controlling, **94**, 2517.
Baltic harbors, **81**, 1060.
Bars between, **97**, 2016; **99**, 1595.
Bars between, St. Johns River, **95**, 1601.
Bars, effect on, **94**, 2568; **95**, 1798; **00**, 4470; **01**, 1664; **05**, 802; H. D. 29, 61st, 2d; **11**, 2611; H. D. 349, 62d, 2d.
Bars, movement of, Galveston, H. D. 340, 59th, 2d.
Bars, not successful on, South Atlantic coast, **01**, 1662.
Benefit from, river mouths, **93**, 3459.
Blasting and, channel forming, **98**, 1539.
Breakwaters and, channel deepening, **96**, 574.
Breakwaters and, for harbor formation, H. D. 1067, 61st, 3d.
Brush in, **73**, 444, 448; **74**, 336; **75**, 219; **76**, 189, ii, 403; **79**, 732.
Brush in, delivery of, **00**, 4243.
Brush in, filling of, **93**, 1885.
Brush in, stone and, **80**, 596, 922, 924, 964, 1228, 1271; **81**, 502, 1044, 1052, 1061, 1101, 1114, 1179, 1328; **82**, 1147, 1201, 1445, 1468; **83**, 879, 895, 907, 1048, 1052, 1074, 1440; **84**, 1162, 1163; **85**, 824, 1251, 1423; **86**, 1069.
Building, **00**, 2294.
Building, plant for, **98**, 2964; **99**, 3261; **04**, 1884.
Building, plant for, Galveston Harbor, **96**, 1532.

Jetties—Continued.

Building, scour, preventing, piles omitted, **98**, 2955.
Building, tramway, **94**, 2564.
Building, trestle, extension of, **98**, 2954.
Building, trestle, repairing, **98**, 2952.
Building, Winyah Bay, **95**, 1349.
Canal boats filled with stone used, **66**, ii, 36; **75**, ii, 103.
Caps, concrete, for heavy seas, **12**, 2771.
Careless arrangement, effect of, **74**, 345.
Channels, changes in, **93**, 1507, 1616, 1618, 1802; **96**, 1196, 1310; **97**, 1478, 1534; **00**, 4434.
Channels, deepening of, **93**, 3571; **94**, 1110.
Channels, depths in, fluctuation of, **93**, 1802.
Channels, effect, Galveston, H. D. 340, 59th, 2d.
Channels, effect on, Charleston, **02**, 1170.
Channels, formation of, **00**, 2293.
Channels, forming, theory, Jamaica Bay, H. D. 1506, 60th, 2d.
Channels in vicinity, profiles, St. Johns River, H. D. 611, 61st, 2d.
Channels maintained without, Atchafalaya River, H. D. 17, 61st, 2d.
Channels, multiplication by single jetties, **10**, 2407.
Channels, profiles between jetties, mouth of Mississippi River, **05**, 1432.
Channels, sand movement, **94**, 2468.
Channels, south. (See South Pass, p. 1067 of this Index.)
Channels, unattributable to jetties, St. Johns River, **95**, 1591.
Concrete in, **66**, ii, 36; **68**, 500, 512; **71**, 545; **79**, 806, 926; **80**, 1126; **81**, 1064; **82**, 1480, 1486; **87**, 818; **89**, 1319; **00**, 2294.

Jetties—Continued.

- Concrete, blocks of, **80**, 1126.
- Concrete, caissons filled with, **79**, 926.
- Concrete work, materials, **03**, 2070.
- Construction, Cold Spring Inlet, N. J., **11**, 1382.
- Construction, progress on, method of showing, **06**, 1296.
- Construction, rate of, Grays Harbor, Wash., **04**, 2248.
- Coring, **01**, 1113.
- Cost, **72**, 358; **76**, 677, 685; **78**, 466, 1195.
- Cost, Mississippi River, 1067, 1923.
- Costs, where difficult to estimate, **06**, 758.
- Costs, estimating, **06**, 758.
- Cross section, **89**, 1316, 1318.
- Cumberland Sound, **76**, 459.
- Currents, control over, **93**, 3315.
- Curves of, pile driving in, **94**, 2544.
- Danube, **75**, 219.
- Deepening by, greater than expected, **00**, 4298.
- Deep-water mattresses, **91**, 3187.
- Depth, securing; very effective, Humboldt Harbor, H. D. 950, 60th, 1st.
- Depths obtained by, increasing by dredging, Coos Bay, H. D. 958, 60th, 1st.
- Designs, **00**, 2294.
- Deterioration, Connecticut River, **98**, 950.
- Difficulties, remarkable, Columbia River, **06**, 757.
- Dredges and, effect on channel development, **07**, 1401.
- Dredging and, comparison, **95**, 1636.
- Dredging, preferable, Pensacola Harbor, **95**, 1657.
- Dredging required also, mouths of Columbia River, H. C. D. 2, 59th, 2d.
- Drift, effect of, **94**, 2636.
- Drifts, sand, removal with jetties, Biscayne Bay, Fla., **08**, 1372.
- Dynamite, efficacy of, **01**, 1664.
- Effect of, **93**, 1600; **94**, 2568.
- Effect of, Aransas Pass, **05**, 1512.
- Effect of, channel deepening, **94**, 1110.
- Effect of, Charleston Harbor, **95**, 1424.
- Effect of, Coos Bay and Harbor, **94**, 2562.
- Effect of, Coquille River, **94**, 2556.
- Effect of, Cumberland Sound, **02**, 2502.
- Effect of, deltas, **74**, 785; **75**, 980.
- Effect of, Grays Harbor, Wash., H. D. 29, 61st, 2d.
- Effect of, on movement of material, Savannah, Ga., **03**, 1150.
- Effect of, profiles showing, **06**, 1296.
- Effect of, St. Johns River, **95**, 1592.
- Effect of, sand drift, arrest of, **68**, 830; **70**, 457; **72**, 936.
- Effect of, sand movement, controlling, **75**, 320; **98**, 3011.
- Effect of, shoals, seaward movement of, **98**, 1283.
- Efficiency, remarkable, St. Johns River, **02**, 1202.
- Ends, bar formation at, **94**, 2578.
- Ends, depths at, **95**, 1735.
- Ends, distances apart, **95**, 3531.
- Ends, distance between, Siulaw River, H. D. 648, 61st, 2d.

Jetties—Continued.

- Ends, large stones for, objectionable, **01**, 1431.
- Ends, shoaling, **84**, 1245.
- Ends, shoaling, beyond, method of studying, **98**, 1458.
- Enrockment, planning, **00**, 4450.
- Enrockment, profile, **94**, 2564.
- Enrockment, settlement, **00**, 4474.
- Enrockment work, hindered by trestle destruction, Columbia River, **08**, 2271.
- Erosion, dangerous, Brazos River, H. D. 27, 61st, 2d.
- Erosion, controlling, beaches, Bridgeport, Conn., H. D. 89, 62d, 1st.
- Estimates, Savannah, H. D. 181, 59th, 1st.
- Extension, **94**, 2654; **00**, 2428, 4445.
- Extension of proposed, estimated, Humboldt Harbor, H. D. 950, 60th, 1st.
- Extension of, to deepen channel, Galveston, H. D. 328, 61st, 2d.
- Extension, plant for, **00**, 4449.
- Extension, sand impounded by, **94**, 2562.
- Extension, sand movement, preventing, **98**, 1328.
- Extension, scour, **00**, 4288.
- Extension, two methods, after wreck of trestle, Columbia River, **07**, 2198.
- Failure of, shore protection, **75**, 490; **79**, 997.
- Failure of, Vistula River, **74**, 837, 848.
- Favorable effect of, Sabine Pass, **94**, 1377.
- Filling of, bundles of brush, **93**, 1885.
- Floods and ice, effect of, **04**, 3188.
- Flow concentration, **97**, 2016.
- Forms, various; cost, **80**, 928; **81**, 1067, 1123, 1132, 1356; **83**, 688.
- Foundations, **00**, 4469.
- Foundations, economy in, **90**, 3261.
- Foundations, mats for, **94**, 1378; **95**, 1509; **94**, 1378, 2518.
- Foundations, mattresses, **00**, 4245, 4438.
- Foundations, mattresses, Cumberland Sound, **95**, 1509.
- Foundations, mattresses, discarding, economy in, **98**, 2954.
- Foundations, mattresses, necessity doubtful, **00**, 4438.
- Foundations, mattresses, needful, Pacific coast, **94**, 2518.
- Foundations, mattresses, rock and, mattresses preferable, **95**, 1774.
- Foundations, mattresses, rock and, rock preferable, **00**, 4245.
- Foundations, mattresses in, unnecessary, **01**, 1663.
- Foundations, subsidence of, **88**, 1323, 1328; **92**, 1508.
- Foundations, thin mattresses, advantages of, **94**, 2518.
- Gabions, **80**, 1208, 1222.
- Gabions, Galveston, **86**, 1295.
- Gales, northeast, effect of, Winyah Bay, **03**, 1126.
- Gap between jetties and shore, effect of closing, Aransas Pass, H. D. 639, 61st, 2d.
- Government plant for building, rent of, **98**, 2964.
- Groins, building, **94**, 2637.

Jetties—Continued.

Harbor construction, Nicaraguan coast, report Isthmian Canal Comm, 1899-01.
 Harbor improving, Baltic, **81**, 1060.
 Harbors, effect on, after 20 years, Aransas Pass, H. D. 639, 61st, 2d.
 Harbors, formation, breakwaters an auxiliary, advantages of, **03**, 2084.
 Heads of, designs, **00**, 2296.
 Hearting, oyster shells expensive, **97**, 1328.
 Height, **92**, 1359.
 Height, proper, Columbia River, **03**, 2299.
 Holland rivers, **80**, 1271.
 Hurricanes, effect, Brazos River, **01**, 1947.
 Incomplete jetties, deterioration, **98**, 950.
 Lakes, **75**, 966, 972.
 Large bars, effect on, **93**, 3316.
 Large stone, derrick scows for handling, **94**, 1102.
 Length, determining, **79**, 782.
 Location, factors governing, rivers, **03**, 2232, 2242.
 Locations, Mississippi River mouth, **07**, 1402.
 Maintenance, South Pass, Mississippi River, **02**, 316.
 Materials for, placing, **94**, 1101.
 Materials for, sheet piles, **83**, 437.
 Materials for, storage platform, **00**, 4448.
 Mats, teredo attacks, **82**, 1188; **86**, 1312.
 Mattresses, building, **94**, 2514, 2566.
 Mattresses, deep-water mattresses, **91**, 3187.
 Mattresses, foundation. (See above.)
 Mattresses, necessity for, doubtful, **00**, 4438.
 Mattresses, placing, **00**, 4287, 4469.
 Mattresses, planning, **00**, 4450.
 Mattresses, teredo attacks, **82**, 1188; **86**, 1312.
 Objectionable, tidal rivers, **71**, 749, 751.
 Oblique to current, effect, **79**, 524.
 Obstructions, **99**, 1158.
 Old Haupt jetty, as a nucleus, Aransas Pass, H. C. D. 5, 59th, 2d.
 Oyster-shell hearting, **97**, 1328.
 Piles, concrete substituted, **95**, 509.
 Piles, deterioration, **00**, 4475.
 Piles, drift, injury from, **94**, 2556.
 Piles, pile driving, **94**, 2543.
 Piles, teredo attacks, **00**, 4475.
 Plans, preferable, Pacific coast, H. C. D. 29, 61st, 2d.
 Profile sections and, Aransas Pass, **06**, 1348.
 Profiles, **95**, 3366, 3560.
 Profiles, Aransas Pass, **05**, 1512.
 Profiles, Key West, **93**, 1658; **96**, 1326.
 Profiles, St. Johns River, **96**, 1310.
 Progress, difficult to make, Columbia River, **08**, 823.
 Proper heights, **96**, 1310.
 Proper heights, discussion of, **00**, 4437.
 Proper location, study of, **96**, 1191.
 Protecting cribs for, **93**, 1799.
 Rapid effect of, Charleston Harbor, **94**, 1105.
 Rebuilding, details, **12**, 2770.
 Repairing, **00**, 1730.
 Repairing, mattresses, **93**, 1576.
 Repairing with cement in bags; unsatisfactory, **02**, 2283.

Jetties—Continued.

Revetment of, advantages, **95**, 3315.
 Revetment of, groins better than, **95**, 2217.
 Riprap, handling, **97**, 1799.
 Rivers, effect on, **73**, 232; **74**, 785; **75**, 218; **76**, 459; **79**, 1173.
 Rivers, improving, Holland, **80**, 1271.
 Rivers, mouths of, **74**, 833, 878; **75**, 951, 953, 980.
 Rivers, mouths of, Brazos River, **75**, 938.
 Rivers, mouths of, effects, Columbia River, **03**, 2300.
 Rivers, mouths of, Rhone, **75**, 965.
 Rivers, shallow, improvement of, **72**, 139, **76**, ii, 399.
 Rivers, tidal, effect on, **85**, 681.
 Rock, **95**, 1424.
 Rock, delivery of, **00**, 4242.
 Rock, distribution of, Charleston Harbor, **95**, 1424.
 Rock, dumping, **00**, 4476.
 Rock, dumping, arrangements for, **96**, 3253.
 Rock for, cost of obtaining, Aransas Pass; H. D. 639, 61st, 2d.
 Rock, handling, **94**, 2567.
 Rock, placing, tramway, **94**, 2544.
 Rock, tests, **96**, 3217.
 Rubblemound versus cribs, advantages of former, **04**, 3216.
 Sand deposits between, **99**, 1598.
 Sand drift, arrest of, **68**, 830; **70**, 457; **75**, 320.
 Sand formations near, **95**, 3276.
 Sand movement, control, **98**, 3011.
 Sand movement, effect, **03**, 2287; **10**, 2407; **05**, 1433.
 Sand movement, effect on, **98**, 1127.
 Sand movement near, **00**, 4201.
 Scour, **93**, 1441; **99**, 1553; **00**, 4181, 4288.
 Scour, advance, **94**, 2515.
 Scour, Columbia River, **10**, 2407.
 Scour, control of, **94**, 2545; **03**, 1169, 1175.
 Scour, fill and, **96**, 3286.
 Scour, preventing, mattresses discarded, **98**, 2949.
 Scour produced by, channels, **07**, 1272.
 Settlement of, **97**, 1801.
 Sheet piling in, **83**, 437.
 Shoals, scour through, **97**, 2016.
 Shore ends, small stone for, **02**, 1159.
 Shore line, protection, **05**, 3010.
 Shore line, recession, **04**, 3168.
 Shore protection, **71**, 893; **74**, ii, 325.
 Shore protection, relation to, **73**, 453; **74**, 332; **76**, 629.
 Shore recession, South Pass, **99**, 1819.
 Shores protected by, length, **72**, 139, 357; **74**, 332; **76**, 629, ii, 406.
 Shores, protection, Galveston, H. D. 328, 61st, 2d.
 Shore wall, protection. (See Forts, p. 1797 of this Index.)
 Sides of, scour, **82**, 1196.
 Slopes, revetting, advantages from, **95**, 3315.
 Spurs, **00**, 4451.
 Spurs, effect of, **94**, 2548.
 Stone barges, **97**, 1799.

Jetties—Continued.

- Stone for, breakage of, **98**, 2953.
- Stone for, chips useful, **94**, 1231.
- Stone for, delivery of, **94**, 2503.
- Stone for, deterioration in jetty, **95**, 3314.
- Stone for, dumping, **95**, 3360.
- Stone for, handling, **94**, 1102; **97**, 1799.
- Stone for, placing, **96**, 1194.
- Stone for, placing, trestlework, **94**, 2517.
- Stone for, sizes of, **98**, 2964.
- Stone for, sizes of, as quarried, **98**, 2959.
- Stone for, three classes, **93**, 1615.
- Stone for, weighing, **94**, 1392.
- Stonework, Charleston Harbor, **94**, 1108.
- Storage platforms, **00**, 4448.
- Storms, effect of, **97**, 1796; **00**, 1277.
- Storms, effect of, Galveston, **01**, 403.
- Storms, withstanding of most terrific, Galveston, **01**, 1926.
- Subsidence, **99**, 1597.
- Subsidence, mouth, Mississippi River, **07**, 1401.
- Subsidence, Sabine Pass, **94**, 1377.
- Substructure, core of sand for, **04**, 3216.

Removing, expensive, Aransas Pass, H. C. D. 5, 59th, 2d.
- Jetties, Parallel.**
Artificial harbor; design, New Jersey coast H. D. 388, 59th, 2d.
Wave action between, disastrous in storms to vessels, H. D. 221, 60th, 1st.
- Jetties, Pile.**
78, 458, 464, 466.
Building, **94**, 1404.
Concrete substituted, **95**, 509.
- Jetties, Pile and Brush.**
Economical, **97**, 1393.
- Jetties, Pile and Stone.**
83, 437, 584.
- Jetties, Portable.**
96, 1738; **98**, 1706.
Advantages of, **95**, 2062.
Bars, effect on, **97**, 2016.
Building, **96**, 1738; **97**, 2016.
Channel contraction, **95**, 2062.
Rivers, effect on, **97**, 2016.
Scour from, **95**, 2077.
Shoals, scour through, **97**, 2016.
- Jetties, Random Stone.**
78, 1284; **79**, 807.

Jetties, Reverse Curve.

- Design, **98**, 1537.
- Effect of, **98**, 1540.
- Supposed effect of, Aransas Pass, **98**, 1536.

Jetties, Rock.

- Building, **95**, 1424; **01**, 1663.
- Building, methods, **96**, 3211; **00**, 4452.
- Building, rock placing, Humboldt Bay and Harbor, **99**, 3185.
- Foundations of, mattresses, omission of, **96**, 3216.
- Foundations of, mattresses, placing, **00**, 4469.
- Spurs for, **00**, 4451.
- Trestles of, repairing, **97**, 3370.
- Trestles of, strengthening, **96**, 3212; **97**, 3373.
- Vicinity of, scour and fill, **93**, 3493.

Jetties, Seacoast.

- Effect of, **98**, 1126.

Jetties, Sheet-pile.

- 73**, 814; **79**, 705, 707; **83**, 437.
- Building, **96**, 1129.
- Sand filling, **79**, 465.

Jetties, Single.

- Double and, advantages of each, **95**, 3529.

Jetties, Stone.

- Brush mattresses, making, **93**, 3339.
- Building, **95**, 3556; **96**, 1192; **98**, 2949; **00** 4278.
- Building, plant for, **93**, 3350; **96**, 1194.
- Building, tidal currents, effect on, **93**, 3501.
- Dimensions and form of, proper, **93**, 3502.
- Effect of, **93**, 3500.
- Flattening of, preventing, **95**, 3360.
- Foundations, protecting, **93**, 3502.
- Great Salt Pond, **96**, 621.
- Natural slopes, **93**, 3490.
- Pile and, **83**, 437, 584.
- Planning, **95**, 3521.
- Profiles, **00**, 4476.
- Profiles, Charleston Harbor, **96**, 1204.

Jetties, Stone—Continued.

- Profiles, Columbia River, mouth, **93**, 3496.
- Quarry chips, usefulness of, **94**, 1231.
- Scour, **00**, 4181.
- Settlement, **91**, 1834.
- Sizes, **98**, 2953, 2959, 2964.
- Spreading, preventing, **95**, 3360.
- Subsidence, **96**, 1535.
- Tramways for, **00**, 4278.
- Tramways for, building, **93**, 3352.
- Tramways for, extending, **93**, 3334.
- Tramways for, strengthening, **93**, 3492.
- Undermining of, protecting against, **93**, 3490.
- Vicinity of, accretions, **93**, 3494.

Jetties, Submerged.

- 76**, 477; **78**, 569.

Jetties, Temporary.

- Disk anchor, **01**, 2221.

Jetties, Timber Crib.

- Superstructure, concrete shell, **04**, 3818.

Jetties, Transverse.

- Distances between, **72**, 139, 357; **74**, 332; **76**, 629, ii, 406.
- Longitudinal and, comparison, **77**, 508.
- River improvement, **76**, ii, 406.

Jetties, Twin.

- Bars, effect, **01**, 1664.

Jetties, Wattled Pile.

- 79**, 709, 710, 1023, 1039.

Jet, Water.

- Pile driving, **05**, 2591.

Jointer.

- Torpedo wires, **89**, 494.

Joints.

- Asphalt for, concrete work, **02**, 2494. (See Forts, p. 1797 of this Index.)
- Brickwork, **04**, 3866.
- Vertical joints necessary in concrete walls, **05**, 1987.

K.**Kidwells Meadows.**

- Potomac River, **95**, 1207.

L.**Labor.**

- Contract, hired and, comparison, **66**, 14; **67**, 97, 470; **70**, 182; **71**, 174; **75**, 243, 460, 685; **76**, 657, 659, 661, 671, ii, 524, 557; **77**, 514, 544; **78**, 508, 709, 758, 770, 1139, 1164, 1191; **79**, 1520; **92**, 2591.

Labor—Continued.

- Eight-hour day, increases costs, **08**, 2271.
- Scarce because of circus, Southern levees, **05**, S., 215.

Labor, Hired.

- Contract system and, comparison, **92**, 735.

Lake Champlain. (See pp. 201, 2041 of this Index.) Stages, H. D. 759, 61st, 2d.

Lake Erie. (See p. 2041 of this Index.)

Regulation, International Waterways Commission, 1910, H. D. 779, 61st, 2d.

Lakes. (See Channels; Discharge; Great Lakes.)
Bed, character of, Lake Michigan, 89, 2035, 2162.

Breezes, land and lake, Great Lakes, 67, 600.

Connecting different levels with locks, Puget Sound, H. D. 953, 60th, 1st.

Depth of, Lake Erie, 68, 966.

Discharge, rainfall and, ratio, Great Lakes, 68, 962.

Elevation of, Lake Winnipeg, 68, 309.

Forming of, Mississippi River, 78, 912; 79, 1010.

Geographical positions, Great Lakes, 76, iii, 55, 96.

Harbor extension, planning, Great Lakes, H. D. 538, 61st, 2d.

Harbors, jetties, Great Lakes, 75, 966, 972.

Harbors, piers, proper width between, 66, 26, 27.

Height of, variation of, investigation, 98, 3774.

Latitude, determining, 75, ii, 864.

Latitude, determining, probable error, Great Lakes, 73, 1178.

Longitude, determining, 71, 1014; 72, 1054, 1118; 76, iii, 92.

Natural reservoir sites, 98, 2821, 2846.

Origin of, coasts, Gulf and Atlantic, 76, 393.

Outlets of, current velocity, Great Lakes, 68, 961; 70, 556.

Outlets of, deepening, Great Lakes, 82, 2470.

Physical characteristics of, 75, 389.

Precise levels, Great Lakes, 76, iii, 70; 77, 1106, 1189; 78, 1408.

Reservoir sites, 98, 2821, 2846.

Rivers, effect on, 98, 2849.

Rivers, generally shallower than, 78, 912.

Shores of, surveys, 93, 4372.

Steamboats, earliest, Great Lakes, 67, 225.

Surfaces, range of, Lake Champlain, 71, 1019.

Surfaces, winds, effects of, 97, 2777.

Tonnage, Great Lakes, 74, 590.

Vessels, dimensions, Great Lakes, 67, 227, 257; 72, 220; 74, 592, 614; 76, ii, 431.

Vessels, tonnage, Great Lakes, 74, 590.

Water of, iron, corrosion of, Great Lakes, 68, 156.

Lakes, Great. (See p. 2041 of this Index; Channels.)

Lakes, Natural.

Reservoir sites, 98, 2821, 2846.

Lakes, Small.

Harbors, providing, Zippel Bay and Lake of the Woods, H. D. 1276, 61st, 3d.

Lampblack.

Removing glare of concrete work, 04, 3727.

Land. (See Sites.)

Acquirement for canals, etc., 11, 2282.

Breezes, lake and land, 67, 600.

Condemnation, levees, 03, 1387.

Cost of, canals, 96, 2416, 2447.

Land—Continued.

Damages, excessive, needed lands, Mississippi River levees, 04, S., 149.

Floods, protection against, California, H. D. 262, 59th, 1st.

Leases of, canals, 96, 3046.

Leases of, Green and Barren Rivers, 96, 2274.

Leases of, Muskingum River. (See Vol. I, p. 974.)

Locating, canals, 98, 2483.

Locks, Muskingum River, 97, 2371; 00, 3309.

Occupation of, canal construction, 05, 1764.

Reclaiming, 96, 1027.

Reclaiming, dredgings for, 95, 1206, 3419.

Reclamation of, levees, Altamaha system, H. D. 443, 62d, 2d.

Sale of, forts, 94, 461.

Southern, richer than Holland's, 00, 1898.

Surveys, 01, 1833.

Water and, evaporation on, 69, 603; 70, 570.

Land Sheet.

Lock and dam sites, 00, 2786.

Lands, Arid.

Projects for reclamation, examination by special board of engineer officers, H. D. 1262, 61st, 3d.

Lands, Bottom.

Reclamation, California, H. D. 262, 59th, 1st.

Drainage, pumping plant, California rivers, H. D. 262, 59th, 1st.

Protection of, against floods, California, H. D. 262, 59th, 1st.

Lands, Overflowed.

Drainage of, Altamaha system, H. D. 443, 62d, 2d.

Lands, Public.

Reservoirs, effect of, 98, 2870.

Landings.

Designing, Point Judith Harbor of Refuge H. D. 911, 60th, 1st.

Types, Altamaha system, H. D. 443, 62d, 2d.

Landowners.

Objection of, to near-by reservoirs, Mississippi River, 03, 1530.

Lands, Reclaimed.

Parks, utilized as, 97, 1319; 99, 1416; 00, 1702.

Potomac Park, D. C., 03, 1036.

Potomac River, 95, 1207; 96, 1021.

Title to, 96, 1023.

Title to, District Columbia, H. D. 194, 59th, 1st.

Lands, Swamp.

Drainage of, 77, 392.

Draining, Altamaha system, H. D. 443, 62d, 2d.

Reservoirs, 98, 2895.

Reservoirs, Mississippi River, 98, 2904.

Lands, U. S.

Railroads in, controlling, 93, 4233.

Lands, Waste.

City refuse for reclaiming, 09, 2234.

Landscapes.

Small parks, District Columbia, 12, 3492.

Latch, Safety.

Valves, locks, 93, 1734.

Lateral Canals. (See Canals, Lateral.)

Lateral Movement.

Locks, gates, **93**, 2482.

Latitude. (See Astronomical Observations; Longitude.)

Determining, P. P. No. 11, C. E.

Determining, Colorado, **73**, 1224.

Determining, Dakota, points in, **74**, ii, 609.

Determining, probable error, surveys, **73**, 1178.

Determining, surveys, **75**, ii, 864.

Magnetic variations, and, **04**, 4133.

Observations, **94**, 3329.

Stars, **94**, 3391.

Latrines.

Batteries, **99**, 798; **00**, 898.

Launching. (See Cribbs.)

Lava.

Stone for breakwater, Hawaii, H. D. 407, 59th, 2d.

Laws. (See Act of Congress, and p. 2137 of this Index.)

Bridges, **82**, 2008.

Contracts, unfavorable effect on, **67**, 56, 97, 156, 168, 183, 268, 377, 394, 416, 423, 431.

Mississippi River Commission, **97**, 3572; **99**, 3351.

Riparian rights, **00**, 4414.

Lead Sheets.

Stone, placed between, effect of, **75**, ii, 826.

Leakage. (See Bins; Dams; Foundations; Reservoirs; Locks; Seepage; Sills; Water Supply.)

Bear-trap gates, excessive leakage at, **03**, 1684.

Cofferdams, preventing at, **01**, 2318; **02**, 1663; **09**, 2157; **11**, 2030.

Concrete laying, **05**, 3004.

Concrete platforms, stopping. (See Forts, p. 1797 of this Index.)

Galleries, shot. (See Forts, p. 1797 of this Index.)

Levees, Mississippi River, **03**, S., 315.

Lockage, operation of, interfered with by leakage, **06**, 1610.

Lock gates, causes, **05**, 1767.

Preventing, forts. (See Forts, p. 1797 of this Index.)

Prevention, locks, **04**, 2381; **09**, 1886.

Stopping, cofferdams, **11**, 3049.

Stopping, lock walls, **09**, 1706.

Leaks. (See Cofferdams; Embankments; Levees; Seepage.)

Batteries, **00**, 898.

Cofferdams, **93**, 1726; **94**, 1956; **98**, 2093.

Cofferdams, countercoffers in, **98**, 2125.

Concrete surfaces, **00**, 1025.

Dams, **92**, 2075.

Dredge bins, **93**, 1498.

Embankments, **93**, 2433.

Foundations, locks, **94**, 2166.

Levees, **97**, 3821.

Locks, **73**, 287; **98**, 1886.

Miter sills, locks, **98**, 1432; **99**, 1704.

Needle dams, **98**, 2146.

Reservoirs, **96**, 3965.

Leases. (See Water Power.)

Land and water. (See Muskingum River, p. 974 of this Index.)

Water from waterways, H. D. 719, 61st, 2d.

Water power, **11**, 2184.

Water power, Green and Barren Rivers, **96**, 2274.

Water power rights, Puget Sound, reducing cost of canal works, H. D. 953, 60th, 1st.

Water power, St. Marys River, H. D. 261, 59th, 2d.

Legal Proceedings. (See Vol. I, p. 21 of this Index.)

Legislation. (See Bridges; also Vol. I, p. 21 of this Index.)

Levees. (See Banks; Capping; Concrete; Crevasses; Dikes; Embankments; Revetment; Sloughing.) (See pls. 63, 64, 65.)

91, 3409.

Abandoned levees, list of, **04**, S., 295; **05**, S., 297.

Abandonment, losses through, Mississippi River, **05**, S., 20.

Advantages of, **01**, 2345.

Aid of U. S., Mississippi River, **04**, S., 25.

Banquettes, **99**, 3575.

Best cross section, **91**, 3648.

Best designs of, **98**, 3353.

Best grades, **93**, 1913.

Board work, local, Mississippi River, **06**, 2569.

Breaks in, details of emergency repairs, **03**, S., 205.

Breaks in, due to city sewage, Mississippi River, **05**, S., 212.

Breaks in, movement of water through, Mississippi River, **12**, 3725.

- Repairing, **90**, 3289, 3317; **91**, 3704; **92**, 3241, 3246.
- Repairing, during floods, views, Mississippi River, **12**, 3724.
- Repairing, methods, **97**, 3827; **98**, 3449.
- Repairing, methods, general, **97**, 3812.
- Repairing, methods, improved, **95**, 3900.
- Repairing, Mississippi River, **96**, 3721.
- Responsibility, division of, Mississippi River, **11**, 3185.
- Revetment, **93**, 3854.
- Revetments for protection of, **07**, 2622.

Levees—Continued.

- Revetments, importance of, **08**, 2654.
- Right of way, method of gaining, **02**, 1633.
- Riparian rights should be recognized, **01**, S., 299.
- River beds, effect on, **90**, 3093, 3105.
- River beds, levees do not raise them progressively, Mississippi River, **12**, 3715.
- Sand boils, **99**, 3571.
- Sand boils, views of, Mississippi River, **12**, 3724.
- Sections, Mississippi River, **93**, 3850.
- Seepage, **99**, 3563.
- Seepage, preventing, **98**, 3353.
- Settlement of, **97**, 3747.
- Sinking, cross section, Mississippi River, **97**, 3820.
- Sinking of, **99**, 3642.
- Slopes of, **95**, 3808.
- Slopes of, Mississippi River, **78**, 1384.
- Sloughing, **99**, 3642.
- Sloughing, treatment of, **97**, 3820.
- Sloughing, wave wash, leaks, etc., causes, **03**, S., 315.
- Specifications, California, H. D. 262, 59th, 1st.
- Spur levees, desirable, Mississippi River, **05**, S., 235.
- Spur levees, recommendations, Mississippi River, **05**, S., 247.
- Standard sections, Mississippi River, **03**, S. 46; **04**, S., 234.
- Strengthening of, methods, **95**, 3808, 3812.
- Successful, Mississippi River, **95**, 3625.
- Surveys, **97**, 2127.
- Surveys, Mississippi River, **96**, 2721.
- Systems, effect of floods on, Mississippi River, **12**, 3723.
- Systems, errors, Mississippi River, **75**, 550.
- Systems, extension of, and effect on commerce of Mississippi River, **04**, S., 23.
- Taxation for, **02**, S., 17.
- Training walls, plan, Mississippi River, **04**, S., 244.
- U. S. and non-U. S. work, Mississippi River, **12**, 3932; and see p. 1067 of this Index.
- Use of, roads, **00**, 4862.
- Value of, rivers, improvement of, **83**, 2143.
- Valves, outflow, **02**, 1642.
- Wave wash, protection from, **04**, 2056.

Levees, Old.

- Insufficient cross section, Mississippi River, **74**, 391.
- Treatment of, **97**, 3750.

Levees, Side.

- Improvements, locks, **11**, 2048.

Leveling. (See Base Lines; Cribs; Surveys.)

- Base rings, gun carriage, **00**, 977.
- Cribs, **00**, 4127.
- I-beams, dredged areas, **05**, 1041.

Leveling, Precise. (See Levels, below.)

- Birmingham Canal, Ala., **99**, 1765.
- Methods, **80**, 2426; **83**, 1335, 2175, 2269; **84**, 2007, 2441, 2454, 2547, 2581; **85**, 2650; **86**, 1268; **87**, 2945, 2949, 2981; **99**, 3405.
- Methods, Altamaha system surveys, H. D. 443, 62d, 2d.

Leveling, Precise—Continued.

- Methods, improved, **00**, 2552.
- Methods, Lockport to St. Louis, H. D. 263, 59th, 1st.
- Methods, observing, **03**, 2783.
- Mississippi River, **93**, 3620, 3624.
- Missouri River, **94**, 1751.
- Results, **80**, 2426; **83**, 1335, 2175, 2269; **84**, 2007, 2441, 2454, 2547, 2581; **85**, 2650; **86**, 1268; **87**, 2945, 2949, 2981; **99**, 3420.
- Vials, inefficient, **93**, 4136.

Leveling, Reciprocal.

- Platforms, **91**, 1896.

Level Line.

- Lockage, equation, **74**, 536, 556, 558; **78**, 738.

Level Party.

- Organization, **01**, 2533.

Levels. (See Bench Marks; Surveys.)

- Adjustment of, Louisiana, **95**, 1903.
- Changes, Gulf of Mexico, **96**, 3478.
- Data, index to, Mississippi River, **95**, 3704.
- Fluctuation, Great Lakes, **98**, 2847.
- Gulf of Mexico, **94**, 2794.
- Mississippi River, **78**, 1387; **79**, 1892, 1942; **96**, 3534; **00**, 4606.
- Missouri River, **94**, 3114.
- Ouachita and Black Rivers, **98**, 1607.
- Running, instructions for, **00**, 3405.
- Variation in, Lakes Huron and Erie, **02**, 2779.
- Washington Monument, **00**, 5236; **02**, 2752.

Levels, Great Lakes. (See p. 2041 of this Index.)

- Discharge of Detroit River, effect, H. D. 676, 61st, 2d.
- Investigations, **01**, 3770.
- Lowering, objections to, H. D. 263, 59th, 1st.
- Observations, **12**, 3546.
- Regulation, **07**, 849.
- Rights, vested, H. D. 263, 59th, 1st.
- Stage indicator, **04**, 4063.
- Variation in, Lakes Huron and Erie, **02**, 2779.
- Water-power privileges, leases for, St. Marys River, H. D. 261, 59th, 2d.

Levels, Precise. (See Leveling, above.)

- 90**, 1334; **91**, 3476; **92**, 1334, 2947, 3074.
- Adjustments of, Louisiana, **95**, 1903.
- Charlotte River to Detour, **97**, 4118.
- Cypress Bayou, **93**, 2078.
- Data relating to, index to, Mississippi River, **95**, 3703.
- Error allowable, **87**, 2981.
- Field-work methods, **93**, 3955, 4135.
- Inefficient vials, **93**, 4136.
- Instructions for making, **99**, 3469.
- Instruments, **96**, 1950.
- Instruments and methods, details, Mississippi River, **01**, S., 69.
- Lake survey, **76**, iii, 70; **77**, 1106, 1189; **78**, 1408.
- Level vials, **93**, 4136.
- Mississippi River, **93**, 3603; **98**, 3244; **99**, 3405; **00**, 3963, 4138, 4622.
- Missouri River, **93**, 4218; **94**, 3095.
- Notes, specimens of, Altamaha surveys, H. D. 443, 62d, 2d.
- Ouachita and Black Rivers, **98**, 1670.

Levels, Precise—Continued.

- Red River, **93**, 1944.
- Rods, lengths of, **93**, 3961; **96**, 1955.
- St. Marys River, **96**, 4058.
- South Pass, **94**, 2750.
- Systems, characteristics, **96**, 1950.
- Tennessee River, **96**, 1920, 1949, 1950, 1971.
- Various places, U. S.; index, **96**, 1959.
- Wye levels, value of, **87**, 2981.
- Yazoo River, **94**, 1493.

Levels, Summit.

- Water supply, canals, **80**, 871; **81**, 1152, 1890, 2402, 2410; **86**, 1252.

Levels, Transalluvial.

- Mississippi River, **95**, 3690.

Levels, Wye.

- Value, precise levels, **87**, 2981.

Lewis Holes.

- Stone, **93**, 3007.
- Stiles, stone, **94**, 2608.

Life Saving.

- Facilities for, harbors of refuge, Point Judith, H. D. 911, 60th, 1st.

Lifter.

- Bear-trap gates, **11**, 2121.

Lifts. (See Guns; Locks.)

- Ammunition. (See Forts, p. 1797 of this Index.)
- Ten-foot most advantageous, locks, **76**, ii, 131.

Lifts, Hydraulic.

- Locks, **90**, 3032, 3042, 3046.

Lighthouses. (See pl. 71.)

- Foundations, of, pier ends, **00**, 4078.
- Site marking, Chicago Harbor, **94**, 2133; **95**, 2699.
- Site marking, surveys, **94**, 2133.

Lighting. (See Batteries; Breakwaters; Electricity; Locks.)

- Electric plant, dredges, **04**, S., 124.
- Harbors of refuge, improvements in, Point Judith, H. D. 911, 60th, 1st.

Lightning.

- Effect of, Washington Monument, **92**, 3387; **00**, 5234.

Light Projectors. (See Projectors.)**Lightship.**

- Breakwaters, marking of, **99**, 2768.

Lights. (See Electricity.)

- Mains, forts. (See Forts, p. 1797 of this Index.)

Lights, Ornamental.

- Piers, Duluth-Superior, **05**, 1974.

Lights, Welsbach.

- Gas torches preferred, lock works, **00**, 3145.

Lim. (See Quicklime.)

- Cement, effect in, **96**, 2803.
- Slacking of, vessels fired by, **74**, ii, 286.

Limestone Screenings.

- Mortars, **96**, 2803.
- Tests, **94**, 2325.

Lines.

- Expansion of, defective soundings, **74**, 687.

Lining. (See Banks; Iron; Lead; Sluices; Steel.)

- Magazines. (See Forts, p. 1797 of this Index.)
- Buildings, concrete, **01**, 922.

Lining-over.

- Booms for, rapids, **96**, 3381.

Littoral. (See Currents; Shores.)**Loading Room.**

- Submarine mines, **98**, 759.

Loads.

- Measuring, hydraulic dredges, **05**, 2343.

Locations. (See Sites.)**Lockages.** (Reported in river and harbor reports annually in reports on operation and care of canals.)

- Boat larger than lock, **98**, 2184.
- Delays, causes of, Poe Locks, St. Marys River, **11**, 2425.
- Equation of, to level line, **74**, 536, 556, 558; **78**, 738.
- Factors determining number of, **04**, 1407.
- Governing conditions, Warrior and Tombigbee Rivers, **10**, 1562.
- Lake Superior to Mississippi River, **96**, 2415.
- Ohio River, **06**, 1585.
- Steamboat swept over dam, Monongahela River, **08**, 1767.
- Time required, **74**, 495, 505, 535, 538; **78**, 738; **96**, 1821.
- Water needed, estimating, Willamette River, H. D. 99, 58th, 3d.
- Water supply for, **73**, 1008; **76**, 519, 526, 529; **77**, 704, 707, 724, 756, 770; **78**, 293.

Lockers.

- Forts. (See Forts, p. 1797 of this Index.)

Locks. (See Bricks; Canals; Cement; Concrete; Gates; Lifts; Masonry; Missouri River, p. 1025 of this Index; Sills, Draft; Slackwater Navigation; Stone.) (See pls. 20-28, 30-32, 34-41, and 70.)

- 90**, 2590; **91**, 1745, 3333, 3350; **92**, Atlas, 940, 1997; **94**, 99.
- Abutments, **98**, 2482; **04**, 3763.
- Abutments, building, **00**, 3507.
- Abutments, concrete, **01**, 2115.
- Abutments, deterioration of, checking, **93**, 2493.
- Abutments, eroded and destroyed by floods, **03**, 1421.
- Abutments, grading, **00**, 3511.
- Abutments, protecting, **00**, 3511.
- Abutments, quicksand flow, preventing, **98**, 2125.
- Abutments, repair of, **98**, 2143, 2149.
- Accidents, Great Lakes, **09**, 2069.
- Approaches of, building, **97**, 2968.
- Approaches of, excavating, methods, **00**, 2926.
- Back filling, **00**, 2926.
- Bayou Manchac, **68**, 489.
- Bishop's, **69**, 65, 529.
- Borings for, **00**, 2179.
- Brick in, use of, **81**, 1312.
- Bricks for, **95**, 2932.
- Building of, **98**, 2120; **00**, 2169, 2182, 3726.
- Building of, Allegheny River, **99**, 2404.
- Building of, bank movement, checking, **99**, 3237.
- Building of, cableways, **99**, 2176; **00**, 2768.
- Building of, cofferdam, building, **94**, 1919, 1956, 1970, 1995; **95**, 2500; **96**, 2291.
- Building of, company for, **93**, 2097.
- Building of, concrete plant, **94**, 1293.
- Building of, devices, special, concrete work, **11**, 2029.

Locks-Continued.

Building of, estimating for, **00**, 2977.
 Building of, excavating methods, **98**, 1914.
 Building of, expense, items of, **97**, 2260; **00**, 3515.
 Building of, improvements, **87**, 1304.
 Building of, materials, handling crane for, **94**, 1873.
 Building of, methods, **98**, 1886.
 Building of, plant, **94**, 1956; **99**, 2174; **00**, 2775.
 Building of, pumping plant, **96**, 1936.
 Building of, traveling crane, **94**, 1873.
 Building of, Yamhill River, **99**, 3236.
 Canal width at, proper, **11**, 2049.
 Capacity, increasing, St. Marys River, H. D. 64, 62d, 1st.
 Cements for, **97**, 2975.
 Central Transportation Route, **77**, 733, 739.
 Chambers, scoured by floods, **03**, 1674.
 Cofferdams, excavating in, **94**, 1292.
 Cofferdams, sills for, placing, **00**, 3533.
 Columbia River Cascades, **78**, 1334, 1338.
 Conduits, flushing, **95**, 2366.
 Connecticut River, **73**, 1009; **78**, 294.
 Construction of, considerations governing, **01**, 2767.
 Construction plant, arrangement, **02**, 1881.
 Construction plant, St. Marys River, **11**, 2418.
 Crib abutments, building, **98**, 2125.
 Culverts and valves, **04**, 3758.
 Culverts, designing, **00**, 2976.
 Culverts, dimensions, determining, Lockport to St. Louis, H. D. 263, 59th, 1st.
 Culverts, floors, **94**, 2303.
 Culverts, plan of, **95**, 2906.
 Culverts, repairing, **98**, 1800, 2983.
 Culverts, valves, details of, **96**, 3271.
 Deepening, St. Marys River, H. D. 64, 62d, 1st.
 Defense of, provisions, Puget Sound, H. D. 953, 60th, 1st.
 Delays, causes, **12**, 2636.
 Deposits, removal of, a cause of delay, **09**, 1830.
 Design, and appurtenances, Puget Sound, H. D. 953, 60th, 1st.
 Design, connecting lakes of differing levels, Puget Sound, H. D. 953, 60th, 1st.
 Design, factors determining proper "guard," Cumberland River, **11**, 2034.
 Design, 14-foot, Mississippi River, H. D. 50, 61st, 1st.
 Design, sizes, Lockport to St. Louis, H. D. 263, 59th, 1st.
 Designing, **00**, 2972.
 Designs, **00**, 3617.
 Des Moines Rapids, **68**, 399, 420; **69**, 225; **70**, 297, 299; **71**, 267, 284; **72**, 315; **73**, 418, 420; **77**, 537.
 Details, Big Sandy River, **02**, 1948.
 Details, Great Kanawha River, **99**, 2484.
 Dimensions, factors, **04**, 3753.
 Dimensions increased, Panama, because of larger ships, H. D. 267, 62d, 2d.
 Dimensions, movable dams, **78**, 804.
 Dimensions, various canals, **68**, 273; **69**, 535; **72**, 452, 460; **73**, 221; **78**, 804.
 Donaldsonville, **75**, 887.

Locks-Continued.

Draft pipes, **94**, 2303.
 Draining, pumping, **98**, 1886.
 Drift, accumulations a hindrance, **08**, 1796.
 Drift chutes, **95**, 2366.
 Drift, removing from chambers, **08**, 1799.
 Eight-hundred foot, building of, **95**, 2898.
 Eight-hundred foot, floor, St. Marys Falls, **94**, 2303.
 Eight-hundred foot, plan, St. Marys Falls, **94**, 2303.
 Elk River, **76**, ii, 169.
 Emptying, formula, tests for, **95**, 2294.
 Emptying, time required, **97**, 3936.
 Enlarging, benefits from, **97**, 3263.
 Enlarging, cost, items of, **97**, 3260.
 Enlargement, proper cost, **03**, 1503.
 Enlargement, when necessary, **03**, 1503.
 Entrances to, designing, **97**, 2261.
 Entrances to, excavating, **96**, 2270.
 Entrances to, plans for, **97**, 2286.
 Entrance walls, designing, **00**, 2975.
 Erie, **75**, ii, 536.
 Excavating for, **95**, 3583; **96**, 3269; **97**, 3420; **98**, 3542.
 Excavating for, costly methods, **97**, 2260.
 Filling, **75**, 735, 742.
 Filling, formula, tests for, **95**, 2294.
 Filling, from forebay, St. Marys River, H. D. 715, 61st, 2d.
 Filling, time required, **97**, 3936.
 Filling, valves for, operating, easy, **98**, 2019.
 Floods, bad effects from, on embankment, Tennessee River, **11**, 2048.
 Floods, effect of, **95**, 3572; **97**, 2261; **99**, 3237; **00**, 2172, 2985.
 Floors of, building, **95**, 2899.
 Floors of, concrete beneath, **75**, ii, 623.
 Floors of, 800-foot lock, St. Marys Falls, **94**, 2303.
 Floors of, hemlock lumber, **98**, 2207.
 Floors of, plan, **95**, 2906.
 Floors of, repairing, **06**, 1434.
 Floors of, thickness of, **86**, 1258; **87**, 1830.
 Foundations, **74**, 830, 873; **75**, 469, 888, ii, 621, 623; **79**, 1365, 1370; **04**, 3753.
 Foundations, building, **94**, 1826; **97**, 2516; **98**, 2208, 3542; **99**, 2483.
 Foundations, coal under, **94**, 1993.
 Foundations, concrete in, **75**, 469, ii, 621, 623.
 Foundations, concrete in, placing, **88**, 2167.
 Foundations, draining, **94**, 2166.
 Foundations, dredging, **94**, 1826.
 Foundations, dredging, abandoned, **94**, 1826.
 Foundations, excavating, **94**, 1292, 1956; **00**, 2769.
 Foundations, excavating, cofferdam, Coosa River, **94**, 1292.
 Foundations, jet borings, **97**, 2068.
 Foundations, leakage, preventing, **94**, 2166.
 Foundations, Mississippi River, mouth of, **74**, 830, 873; **01**, 2302.
 Foundations, Osage River, **96**, 3857.
 Foundations, peculiar soil movement, **98**, 1472.
 Foundations, piling, **94**, 2166.
 Foundations, plans, **95**, 2416.
 Foundations, quicksands, controlling, **94**, 1826.

Locks—Continued.

- Foundations, sheet piling, peculiar overturning of, **98**, 1472.
- Foundations, testing pits, **95**, 2293.
- Foundations, timber for, **00**, 2771.
- Foundations, water-jet borings, **97**, 2068.
- Fox and Wisconsin Rivers, **68**, 355; **73**, 221, 224; **75**, 220.
- Gates. (See Gates.)
- Granite sills, laying, **00**, 2256.
- Guard gates, designing, **00**, 2982.
- Guard lock, plans, Colbert Shoals Canal, **98**, 1922.
- Guide cribs, **96**, 2269; **04**, 3761.
- Harbor at, Tennessee River, **99**, 2268.
- Head of, movable dam, necessity for, **78**, 804.
- Hourglass, shape, Muskingum River, **95**, 2369.
- Hydraulic lifts, **90**, 3032, 3042, 3046.
- Illinois River, **68**, 390, 440; **69**, 218; **75**, 488; **81**, 2177; **85**, 2054.
- Inclined planes and, comparison of, **74**, 498, 550, 552, 555; **75**, 770, 879; **76**, ii, 82, 100; **77**, 682.
- Injury of, cement, expansion of, **87**, 1814.
- Inlet pipes, **94**, 2303.
- Ironwork, placing, **94**, 1996.
- Kanawha River, **73**, 509; **75**, ii, 91, 95; **76**, ii, 155, 158, 164; **77**, 298, 299, 302, 687, 698, 746; **79**, 547.
- Land walls, design of, **00**, 2973.
- Large, building, **95**, 2898.
- Large, 800-foot, plan of, St. Marys Falls, **94**, 2403.
- Large, machinery for, large locks, **97**, 2975.
- Large, operating, machinery for, designing, **97**, 2978.
- Large, planning for, **97**, 3156.
- Large, pumping, engines for, tests, **97**, 2994.
- Large, pumping plant, **97**, 2992.
- Large, pumps for, **97**, 2987.
- Leakage at, canals, **74**, ii, 95; **76**, 528; **77**, 339, 704, 707, 756; **78**, 293; **79**, 1540.
- Leakage at, preventing, **95**, 2306; **98**, 1886.
- Leakage at, preventing, canvas for, **73**, 287.
- Leakage, reinforcing foundations to prevent, **09**, 1886.
- Leaks in, stopping, **04**, 2381.
- Levees, side, improvements desirable on account of floods, Tennessee River, **11**, 2048.
- Lifts of, 10-foot most advantageous, **76**, ii, 131;
- Lifts of, walls, designing, **00**, 2976.
- Lighting, gas torches and Welsbach lights, first preferred, **00**, 1345.
- Location, points determining, **69**, 252.

 Improvements, **93**, 3714.
 Jetties, **94**, 2518.
 Jetties, foundations of, **94**, 1378; **95**, 1509; **00**,
 4245.
 Jetties, repairing, **93**, 1578.
 Jetty foundations, not necessary in, **01**, 1663.
 Lost mattresses, cause of, Mississippi River,
05, S., 214.
 Making, machine for, **79**, 876, 1112.
 Mattress boat, **80**, 1419; **81**, 1507, 1508.
 Necessity of, doubtful, foundations, jetties, **00**,
 4438.
 Needful, foundations, jetties, Pacific coast, **94**,
 2518.

Mattresses—Continued.

Omission of, foundations, jetties, **96**, 3216.
 Pile dikes, **95**, 2231.
 Placing; crevasses, closing, **95**, 1738.
 Placing, dams, **98**, 3030.
 Placing, dams, repair, **95**, 3781.
 Placing, dikes, **00**, 4350.
 Placing, foundations, rock jetties, **00**, 4469.
 Placing, jetties, **00**, 4287, 4469.
 Placing, scour, preventing, dams, building,
98, 3030.
 Plain mats better than woven mats, **12**, 2148.
 Plan of, jetties, **00**, 4450.
 Rivers, contraction of, Mississippi River, **94**,
 1594.
 Rock foundations preferable to, jetties, **95**,
 1774; **00**, 4245.
 Scour, preventing, **98**, 2949, 3030.
 Scour, piles, **98**, 1698.
 Settlement, Mississippi River, **05**, 1434.
 Shores, protecting, **89**, 770; **93**, 1699; **94**, 1597.
 Sinking, **90**, 3230; **94**, 2514, 2546; 2900; **95**, 3363;
00, 4469.
 Sinking, bags of sand, **94**, 2600.
 Sinking, ballasting and, **03**, 2442.
 Sinking, concrete for, making, **00**, 4921.
 Sinking, difficulties, **00**, 4912.
 Sinking, difficulties, Mississippi River, **03**,
 S., 308.
 Sinking, methods, **01**, 1880.
 Sinking, scour, **93**, 1441.
 Sinking, sills, **01**, 1880.
 Sinking, stone for, concrete substituted, **00**,
 4879.
 Specifications, **93**, 1622.
 Teredo, action, jetties, **82**, 1188; **86**, 1312.
 Teredo, effect of, jetties, **82**, 1188; **86**, 1312.
 Thin mattresses, advantages of, foundation,
94, 2518.
 Weaving of, **99**, 3690; **03**, 2441.
 Weaving of, on ice, **95**, 3960.
 Weaving of, strands better than cable, **99**,
 3690.
 Weighting, bronze weights for, Mississippi
 River, H. D.: 50, 61st, 1st.
 Wire-netting machine, **81**, 1625, 1628, 1632.
 Wire strands, **94**, 2900.
 Woven on ice, Missouri River, **01**, S., 39C; **11**,
 2008.

Mattresses, Board.

Revetments, **01**, S., 341, 347.

Mattresses, Brush.

Objectionable, Gulf dikes, **02**, 1401.

Mattresses, Cane.

78, 616; **79**, 827, 876, 931, 932.
 Buoyancy, **80**, 1211.
 Cost, **80**, 1146, 1210; **82**, 1362.
 Teredo proof, **79**, 932, 937.

Mattresses, Connecting.

Building, **93**, 3729; **95**, 3774.

Mattresses, Crib.

Brush and stone dam, **94**, 2892.

Mattresses, Fascine.

94, 2867.
 Bank protection, **94**, 2904.
 Building, **94**, 2878, 2905.

Mattresses, Fascine—Continued.

- Improved form, **95**, 3818.
- Revetments, **99**, 3513.
- Standard type, **99**, 3513.

Mattresses, Flexible.

- 96**, 3419.

Mattresses, Foot.

- 89**, 2779.
- Brush and stone dams, **94**, 2892.
- Building, **98**, 3359.
- Revetments, protecting, **98**, 3359.

Mattresses, Framed.

- Advantages of, **97**, 3799.
- Bank protection, **97**, 3799.
- Tests of, **00**, 4916.

Mattresses, Head.

- 94**, 2900.

Mattresses, Log.

- Building of, **96**, 1192.
- Placing, **96**, 1192.

Mattresses, Lumber.

- Bank protection, Mississippi River, **01**, 2212.

Mattresses, Reinforced.

- Extension of, revetments, **96**, 3827.

Mattresses, Sill.

- Dike's, **94**, 2599.

Mattresses, Submarine. (See Torpedoes.)

- 90**, 3213.

Mattresses, Willow-Woven.

- Standard form, bank revetment, Missouri River, H. D. 62d, 1st.

Mattresses, Winged.

- 80**, 1380; **87**, 789.

Mats.

- Dredges, anchoring, **01**, 2263.

Maumee Basin.

- Exceptionally favored for satisfying human needs, H. D. 769, 62d, 2d.

Measurements. (See Discharge.)

- Bridges, **93**, 3944.
- Flow, measuring, Niagara Falls, **08**, 2539.
- Prism and scow, relation between, rock, **75**, 326; **77**, 239; **78**, 1136.
- Scow displacements, rocks, **68**, 424.
- Standards, surveys, **68**, 937; **72**, 1046; **77**, 1110.
- Standards, lake surveys, **75**, ii, 854, 904; **76**, iii, 6, 79.

Measurements, Foot.

- Metric equivalents, conversion to, table, **93**, 1995.

Measurements, Metric.

- Foot and metric equivalent, tables, **93**, 1995.

Measurements, Prism.

- Scow and, relations, **71**, 181, 191, 200, 719; **75**, 275; **77**, 239, 246; **78**, 520, 1136; **79**, 507.

Measuring, Place.

- Dredging, **94**, 2502.

Memorials.

- Competition in designing, program, etc. "Grant," "McClellan," **01**, 3756.
- Statues for, District Columbia, **12**, 3510.

Meridian.

- Are of, length of, **70**, 544; **73**, 1174.
- Are of, degrees of, length, **70**, 544; **73**, 1174.

Meridian Stone.

- Surveys, **94**, 3085.

Metals.

- Coast defense, **69**, 4.
- Defensive purposes, experiment, **69**, 4.

Meteorological Records.

- Columbia River, **93**, 3514; **94**, 2653; **96**, 3279; **97**, 3422.
- Northern and Northwestern Lakes, **67**, 586, 602, 684, 721; **68**, 967, 993; **72**, 1068; **73**, 1197; **74**, ii, 472; **76**, iii, 103.
- Pacific coast, **93**, 3242.
- Portland channel, Alaska, **97**, 3498.
- Willet's Point, **80**, 312; **81**, 449; **82**, 477; **84**, 448; **85**, 454.
- Yaquina Bay, **96**, 3309.

Meteorology. (See Rainfall; Run-off; Winds.) (See pl. 72.)**Meters.** (See Currents.)

- Water supply, District Columbia, **01**, 3659.
- Water supply, cities, **02**, 2698; **11**, 2945.

Meters, Blast.

- 04**, 3739.

Meters, Current.

- 80**, 1219; **81**, 1709; **90**, 2104; **00**, 5324.
- Aqueduct flow, gauging, **97**, 4014.
- Catamarans for, **00**, 5325.
- Coefficients of, determining, **69**, 566; **78**, 1306.
- Computing methods, river gauging, H. D. 231, 58th, 3d.
- Currents, velocities of, determining, **78**, 259, 262, 305, 380, 392.
- Gauging and rating, **02**, 2791.
- Outfit, **02**, 2869.
- Rating, **81**, 1709; **85**, 2695; **87**, 1227, 2822, 2836, 2841, 2848, 2856; **90**, 2104; **94**, 1137; **97**, 4094; **98**, 1611; **00**, 4759, 5327, 5334, 5366; **02**, 2796, 2828; **11**, 1947.
- Rating, details, **02**, 2818, 2868.
- Rating, discharge measurements, **05**, 940.
- Rating, frequent, desirable, **01**, 3774.
- Rating, Haskell meter, **97**, 4094; **99**, 1907; **00**, 4759.
- Rating, methods, Connecticut River, H. D. 231, 58th, 3d.
- Rating, Mississippi River surveys, **05**, S., 126.
- Rating, Price meter, **91**, 3490; **93**, 3700; **00**, 4759.
- Reduction tables, **93**, 2458.
- Stackpole propeller, **91**, 1584.
- Use, Mississippi River, **80**, 1518, 1528; **81**, 1709; **83**, 2226.
- Wheel, gauging and rating, **02**, 2791.
- Woltman's, description of, **78**, 1305.

Mica.

- Excess of, granite, effect on, **72**, 529.

Mileage.

- Railroads, Ohio, 1839, **96**, 3043.

Millia.

- Army and, functions, seacoast defense, **81**, 402.

Mill Edgings.

Shore protecting, use in, **80**, 1580.

Mine, Comstock.

Description of, **72**, 1129.

Drainage of, **72**, 1153.

Geology of, **72**, 1129, 1140.

Ore of, raising, cost, **72**, 1158.

Silver from, amount of, **72**, 1139, 1156, 1161.

Ventilation of, **72**, 1131.

Mineral Products.

Ohio, **96**, 3000.

Wealth of, Big Sandy River, **00**, 3413.

Mines. (See Copper; Submarine.)

Drift in, cost of, Ophir mines, **72**, 1154.

Exploding, electric batteries, arrangement of, **77**, 237.

Fissure veins, cause of, Comstock mine, **72**, 1143.

Shafts in, cost of, Ophir mines, **72**, 1154.

Sutro tunnels, **72**, 1126.

Tunnels, cost of, Chollar Potosi, **72**, 1165.

Mines, Salted.

Diamonds, Ruby Gulch, **73**, 1208.

Mines, Submarine. (See Forts, p. 1797.)

Cable gallery, **97**, 705.

Casemate, **97**, 705; **98**, 759.

Concrete walls, **96**, 471.

Draining, **96**, 471.

Foundations, **96**, 471.

Damages, repairs, **98**, 691, 758.

Deterioration of, **98**, 657.

Dynamite, experiment with, **76**, 31; **79**, 35.

Explosions, pressure gauges, **95**, 530.

Explosions, snag boat, wreck of, **99**, 2009.

Firing of, methods, **98**, 616.

General system, **98**, 12.

Improvised material, **98**, 618, 756.

Investigations, **87**, 9.

Judgment firing stations, **98**, 744.

Loading room, **98**, 759.

Material, emergency, New London, **98**, 618.

Necessity of, **95**, 4.

Plan, **98**, 744.

Planted, damages, **98**, 599.

Planting, **98**, 598, 599, 656, 756, 769.

Planting, tests, **88**, 364.

Planting, vessel for, **86**, 51.

Repairs, **98**, 599, 691.

Tests of, **98**, 616, 761.

Tests of, resistance in ohms, winter tests, **88**, 367.

Vessels, passage, regulations for, **98**, 636.

Mining. (See Sluices.)

Débris of, barrier system on waterways to protect against, **07**, 2265.

Débris of, in State waterways, relation of U. S. to, H. D. 262, 59th, 1st.

Operations of, rivers, injury of, **76**, ii, 620; **77**, 993; **78**, 1297; **79**, 1857.

Mining Casemate. (See Batteries; Torpedoes.)

Concrete walls, **96**, 471.

Draining, **96**, 472.

Foundations, building, **96**, 472.

Improving waterways affected by mine washings, **05**, 2590.

Mining, Coal.

Philippines, **04**, 3870.

Mining Débris. (See Mining.)

Causes of, and effect, California, H. D. 262, 59th, 1st.

Control of, laws for, **00**, 5068.

Control of, waterway improvements effective in, **07**, 2262.

Impounding dams, plans, **00**, 5040.

Impounding of, **00**, 5031.

Influx of, into rivers, investigation, **07**, 2264.

Laws, **00**, 5032.

Retention, **95**, 4054.

Reworking of, **94**, 3173.

Settling basin for, **00**, 5059.

Mining, Gold. (See Mines, and Mining, here-with.)

Hydraulic work, views, California, **05**, 2602.

"Washing," deleterious effect of, on streams, **05**, 2585.

Mining, Hydraulic.

Cavities of, availability for reservoir sites, California, **94**, 3172.

Detritus, **82**, 2556, 2620; **91**, 2996.

Effect of, rivers, **81**, 2485, 2494; **82**, 2543, 2548; **87**, 1933.

Judicial decisions, California, **94**, 3180.

Methods, **82**, 2546, 2551; **91**, 2996.

Regulation of, California, **06**, 2069.

Restraining dams, specifications, **04**, 3698.

Rivers, effect on, **91**, 2996.

Rules, California, **94**, 3176.

Water used, volume, **82**, 2611; **91**, 2996.

Mining, Illegal.

Prevention, California, **01**, 3626.

Mining, Sluice.

78, 1296.

Mining, Submarine. (See mines, above.)

Equipment, **01**, 961.

Mirage.

Signaling, effect on, lakes, **67**, 575.

Mississippi River. (See p. 1067 of this Index.)

Channels, adequate; methods and cost, **05**, 1590.

Commerce, not less than 8 feet helpful to, **05**, 1591.

Description, H. D. 50, 61st, 1st.

Maintenance, uninterrupted; absolutely needful to commerce growth, **05**, S., 10.

Map of districts, **97**, 3836.

Miter Sills. (See Sills.)

Fitting, Plaquemine Locks, **05**, 1451.

Locks, **04**, 3761.

Mixer.

Building, fort construction. (See Forts, p. 1797 of this Index.)

Mixer, Concrete.

Improved type, **04**, 3802.

Materials, handling, **02**, 2494.

Methods, **04**, 3785.

Plant, **01**, 702.

Mixer, Gravity.

Concrete mixing, **00**, 821.

Moat.

Sewer across, laying, **96**, 500.

Moisture.

Cement, effect on, **94**, 2348.

Prevention, lining for, tunnels, **96**, 472.

Molding.

- Concrete blocks, **04**, 3781.
- Blocks, on barges, **01**, S., 358.
- Cutwaters, piers, **01**, 2832; **04**, 3802.
- Piers, concrete, **04**, 3802.
- Walls, sea, **05**, 3027.

Molds, Concrete.

- Filling, breakwaters, **10**, 2058.

Molds, Subaqueous.

- Piers, concrete, **04**, 3802.

Molds, Timber.

- Templates, concrete piers, **04**, 3802.

Monolith. (See Concrete.)

Monopoly, Private.

- Where fostered by waterway improvement, latter should cease, **09**, 1683.

Monument, Geodetic.

- Surveys, **94**, 3005.

Monuments. (See Washington, D. C., p. 2040

- of this Index.) (See pls. 68, 69.)
- Building of, factors governing, **01**, 3823.
- Foundations, concrete mixed by large force in one day, advantages, **01**, 3831.
- Levels, Washington Monument, **02**, 2725.
- Trees as, Washington, D. C., **04**, 4046.

Mooring. (See Barges.)

Mooring Buoys.

- Harbors of refuge, **73**, 293; **74**, 210.
- Screws, attached to, **73**, 294.

Mooring Posts. (See Steel.)

- Cement for, tests, **96**, 1885.
- Ice harbors, **94**, 1771.

Mooring Rings.

- Breakwater, **73**, 294; **74**, 210.

Mooring Rope.

- Torpedoes, **89**, 491.

Mooring Sites.

- Piles driven for, Mississippi River, **05**, 1637.

Mortar. (See Cement; Concrete.)

- Brickwork, **04**, 3831.
- Materials of, heating, effect, **96**, 2803.
- Sand for, different varieties, values, **94**, 2319.
- Screenings, limestone, **96**, 2803.

Mortars, Cement. (See Forts, p. 1797 of this Index.)

- Strength, tensile, of various mortars, **02**, 2456.

Mortars, Military. (See Forts, p. 1797 of this Index.)

Motors. (See Electricity.)

- Sims torpedo, **89**, 481.

Mounds. (See Rubble.)

Mountainous Country.

- Prairie and, run-off, **96**, 3013.

Mountains.

- Bridges for, Mount Rainier, **09**, 2514.
- Lower levels and, rainfall, differences, **74**, ii, 375.
- Roads, traffic factors, **03**, 2466.
- Viaducts, **03**, 2470.
- Walls, retaining, **03**, 2454.

Mud Lumps.

- Formation of, **70**, 330, 372; **75**, 626; **77**, 431.
- Formation of, rivers, mouths of, **77**, 431.
- Removing, blasting, **70**, 330, 334.

Mud, Soft.

- Hydraulic dredging in, **10**, 1258.

Municipalities.

- Reservoirs for, **98**, 2852.

Municipal Work. (See pl. 68.)

N.

National Harbors of Refuge. (See Harbors.)

National Parks.

- Roads, wagon, Yellowstone Park, H. D. 502, 60th, 1st.

National Waterways Commission.

- Report, Sen. D. 301, 61st, 2d.

Naval Equipment.

- Submergence of, effect, "Maine," **11**, 3048.

Naval Stores.

- Traffic in, center of, Savannah, H. D. 181, 59th, 1st.

Navigable Streams. (See Streams; Waterways.)

- Limit of navigation, final, a question, Chicago River, H. D. 700, 59th, 1st.

- Mining débris, protecting from, **07**, 2264. (See Mining.)

- Water-power development, one company better than many, H. D. 781, 60th, 1st.

- Water power on, cost, per horsepower, H. D. 781, 60th, 1st.

Navigable Waters.

- Protecting, laws proposed, **97**, 4137.

Navigation. (See Canals; Slackwater.)

- Breakwater, aided by outer, **03**, 2084.

- Bridges, height required, **69**, 395, 401; **74**, 603, 627, 641, 648, 654; **75**, ii, 681; **76**, ii, 302; **78**, 907, 928, 934, 1054.

- Canal and slackwater system, abandonment of former justified, Muscle Shoals Canal, H. D. 781, 60th, 1st.

- Dams, when an aid, **03**, 1501.

- Dangers to, Nantucket Sound, H. D. 536, 62d, 2d.

- Impediments to, internal streams, H. D. 540, 62d, 2d.

- Improvement with storage reservoirs, Ouachita system, H. D. 588, 62d, 2d.

- Limit of, a question, Chicago River, H. D. 700, 59th, 1st.

- Navigation interests and water-power rights, conflict, canals, **96**, 2535.

Navigation—Continued.

Navigation interests and water-power rights, irrigation and conflict, rivers, **93**, 3292.

Obstructions, bridges, **68**, 717, 822; **69**, 306; **71**, 407, 411, 414, 429, 713; **76**, ii, 306; **77**, 646; **78**, 1038, 1054.

Obstructions, logs, **75**, 374; **79**, 843, 1173, 1177, 1182, 1196.

Power interests and navigation interests opposed, reservoir construction, Minnesota River, H. D. 700, 62d, 2d.

Regulations, Green and Barren Rivers, **01**, 2809.

Reservoir system a benefit, waterways, **06**, 475.

Rivers, experience of foreign countries, H. D. 1374, 61st, 3d.

Rules, canals, **95**, 2661; **98**, 2226.

Rules, narrow channels, **00**, 4028.

Season of, Great Lakes, determination of, **11**, 2281; **12**, 2462, 2469.

Season of, Ohio River, **11**, 2087.

Summer, in, reduction of rail rates due to, **12**, 809.

Waterway development combined with, Connecticut River, H. D. 818, 61st, 2d.

Navy.

Key West, Fla., recommended for needs of Navy in war, H. D. 706, 62d, 2d.

Navy, Army and.

Value of Delaware & Chesapeake Canal, S. D. 215, 59th, 2d.

Needles. (See Vicat.)**Negatives.** (See Celluloid.)

Drawings, **93**, 2074.

Printing from, drawings, **93**, 2073.

Negatives, Celluloid.

Drawings, reproduction of, **93**, 2073.

Netting, Wire.

Dikes, **95**, 3964, 4015.

Machine for making, **81**, 1625, 1628, 1632.

New York Harbor. (See p. 233 of this Index.)

Forty-foot channel, difficulties of making, **08**, 1075.

Operating U. S. dredges, expense of, **08**, 1076.

Niagara Falls Reservation. (See p. 2041 of this Index.)

Preservation of, **08**, 893; **10**, 1050, 2722; **11**, 3022.

Niagara River.

Other streams and, comparison, **98**, 2846.

Nicaragua Canal. (See p. 2357 of this Index.)**Night Work.**

Rock removing, **94**, 1932.

Nitroglycerin.

Action of, **66**, iv, 335; **68**, 91, 738.

Black powder and, comparison, **68**, 423, 738.

Charges, large; adjacent objects unaffected by explosion of, **76**, 241.

Composition, **77**, 355.

Cost, **77**, 355.

Dynamite and, comparison, **79**, 1507.

Experiments with, **76**, 238.

Explosions, discussion, **66**, iv, 335; **75**, 523.

Explosions, rock, various; effect, **68**, 91; **73**, 776; **77**, 355.

Explosions, rock waves, destruction from, **77**, 233.

Explosive energy, **79**, 36.

Manufacture of, details, **77**, 355.

Mica powder and, blasting, **91**, 2796.

Natural rafts, removing, **74**, 702, 708.

Use of, Blossom Rock, **71**, 927.

Use of, Detroit River, **76**, ii, 545; **77**, 936.

Use of, Eagle Harbor, **69**, 76; **76**, ii, 326.

Use of, Hallets Point, **73**, 935; **75**, ii, 204.

Use of, Hell Gate, **68**, 727, 737; **71**, 725; **72**, 804; **74**, ii, 160, 163; **75**, ii, 209.

Use of, James River, **73**, 776; **74**, ii, 39, 42; **75**, ii, 82.

Use of, Noonday Rock, **75**, ii, 720.

Nitroglycerin, Frozen.

Explosion of, **76**, 31.

Nomenclature. (See Surveys.)**North Atlantic.** (See Harbors.)**Northers.**

Damages from, channels, H. D. 328, 61st, 2d.

Notes. (See Surveys; Leveling; Levels.)**O.****Oaks.**

Shore protection, **79**, 931.

Obelisks.

Core of concrete, **01**, 3833.

Comparison of, American obelisks, **01**, 3833.

Curves of height and base, **01**, 3833.

Obstructions. (See Navigation; Rivers; Snags; Yankee catchers.) (See p. 21 of this Index.)

Bridges, rivers, **97**, 2796.

Chicago River, **93**, 2795.

Harbors, obstructing and dredging rivers at, **75**, 287.

Incomplete jetties, **99**, 1158.

Locating under water, **03**, 2763.

Obstructions—Continued.

Removal, special legislation needed for removing obstructions under water, **01**, 2613.

Removing, rivers, **98**, 1945.

Rivers, Civil War, **75**, 874; **76**, 330.

Sweep for, **04**, 4064.

Tunnels, obstruction in rivers, **97**, 2796.

Water hyacinths, rivers, **97**, 1754; **00**, 1985.

Obstructions, Submarine.

Locating, methods, **03**, 2763.

Offices. (See pls. 70, 71.)**Oil.**

Concrete, percolation, treatment, **03**, 2406.

Creosoted timber, **81**, 815, 818.

Oil—Continued.

Oil fields, Big Sandy River, **00**, 3416.
Roads, **02**, 2564; **03**, 2463; **11**, 2974.
Transportation of, pipes, **76**, ii, 151; **79**, 1375.

Oil, Linseed.

Cracks, in concrete, filling with, **99**, 1003. (See Forts, p. 1797 of this Index.)

Operations. (See p. 22 of this Index.)**Ordinance.**

Handling. (See Forts, p. 1797 of this Index.)

Ore Traffic.

Great Lakes, **10**, 2097.

Ores. (See Copper; Iron; Silver.)

Freight, handling, **97**, 3189.
Reducing, copper, **75**, ii, 135.

Ornaments.

Buildings, steel, **04**, 3849.

Oscillations. (See Seiches.)

Lakes, **66**, iv, 93; **67**, 100, 599; **68**, 86, 983;
69, 600; **72**, 116, 1033, 1040; **73**, 1193; **76**, ii, 341.

Outlets. (See Lakes; Rivers.)

Current velocity at, lakes, **68**, 961; **70**, 556.
Data concerning, index to, Mississippi River, **95**, 3710.
Deepening, Great Lakes, **85**, 681.
Lakes, **82**, 2470.

Outlets—Continued.

Levees, **02**, 1642.
Restricting, rivers, **95**, 3640.

Overflow. (See Floods; Rivers.)

Causes, levees, Mississippi River, **95**, 3644.
Comparison of, Mississippi River, **97**, 3710.
Lawsuits arising from, **94**, 2713; **95**, 3644.
Preventing, levees, Mississippi River, **95**, 3625.

Overflowage.

Claims, canalization, **11**, 2031.
Reservoirs, extension of, a remedy, Mississippi River, H. D. 42, 61st, 2d.
Reservoirs, headwaters of Mississippi River, not responsible, H. D. 42, 61st, 2d.
Tide gauge records valuable, **04**, 1647.

Overhead Structures.

Canals, providing for overhead structures, Puget Sound, H. D. 953, 60th, 1st.

Oyster Beds.

Deposits from dredgings over, destructive effect, Biloxi Harbor, H. D. 1088, 60th, 2d.
Dredging, **00**, 1721.
Injury of, lawsuits favorable to U. S., **00**, 1721.
Irregularity of depths over, **73**, 818.

Oyster Industry.

Fostering of, Maryland, **93**, 1312.

Oyster Shells.

Hearting of, jetties, **97**, 1328.

P.**Package Freight.** (See Freight.)**Paint.** (See Lock Gates.)

Best paint, lock gates, **00**, 4331.

Painting.

Concrete, **03**, 2386.
Forts. (See p. 1797 of this Index.)
Hydraulic dredges, **04**, S., 129.
Lock gates, **00**, 4331.
Paints and washes, concrete work, **02**, 2494.
Piers, to retard decay, **98**, 2658.
Signal towers, canals, **09**, 1861.
Steelwork, **99**, 2290.

Panama Canal. (See p. 2357 of this Index.)

Effect of, on canalization of Ohio River, H. D. 492, 60th, 1st.

Panels.

Pile sinking, **75**, ii, 621.

Pantograph, Suspended.

Coradi's, **93**, 2036.
Mapping with, **93**, 2036.

Paper. (See Blue Prints.)**Paper, Tarred.**

Waterproofing concrete work, **02**, 2469. (See Forts, p. 1797 of this Index.)

Paraffin.

Eflorescence, cure for, brickwork, **04**, 3831.
Waterproofing, brickwork, **04**, 3832.

Parallel Jetties. (See Jetties.)**Parapets.** (See Batteries; Piers.)

Concrete work, forts. (See Forts, p. 1797 of this Index.)
Pumped up, forts, **04**, 3030. (See Forts, p. 1797 of this Index.)
Sand movement on, checking, gun batteries, **97**, 679.
Superstructures, piers, **84**, 2144; **85**, 2279, 2307.

Parks. (See pl. 69.)

00, 5236.
Bridges, Yellowstone Park, **02**, 3034.
Celebrated parks, dimensions, **67**, 535.
Copings, concrete, **04**, 3918.
Entrances, ornamental, **03**, 2469.
Grounds, parking of, Duluth-Superior, **08**, 1901.
Harbors, reclamation should be for, Chicago, H. D. 700, 59th, 1st.
Improvements, Washington, D. C., **10**, 2669.
Improvements and maintenance, District of Columbia, **12**, 3488.
Layouts, Washington, D. C. (See p. 2040 of this Index.)
Parking, plans for, Yellowstone Park, **03**, 2894.
Proposed parks, Washington, **67**, 523, 542, 547.
Public Grounds and Buildings, Washington, D. C. (See p. 2040 of this Index.)

Parks—Continued.

- Reclaimed land for, **97**, 1319.
- Roads, **03**, 2444; **04**, 4207.
- Roads, Mount Rainier, **09**, 2514.
- Roads, Yellowstone Park, **03**, 3034.
- System, cities, District of Columbia, **06**, 2238.
- Use of, regulating, **97**, 4062.
- Water-supply system, Yellowstone, **02**, 3043.

Parks, City.

- Details, U. S., **01**, 3711.

Parks, Natural.

- Great natural parks, Colorado, **75**, ii, 937.

Parks, Public.

- Fort sites; utilization, **85**, 423.
- Reclaimed land for, **00**, 1702.

Parks, Small.

- Landscape possibilities, District of Columbia, **12**, 3492.

Parks, U. S.

- Roads in, **08**, 2554.

Parties.

- Ice surveys, organization for, **95**, 4236.
- Surveys, **94**, 1749.

Passes. (See Dams.)

- Building, movable dams, **97**, 2546.
- Closure, discussion, St. Andrews Bay, Fla., H. D. 12, 61st, 1st.
- Substructures, movable dams, **97**, 2546.
- Tidal currents at, velocity of, **74**, 790.

Passes, Navigable.

- Bear-trap gates, dams, **96**, 1838.
- Dams, **93**, 2269.
- Designing, dams, **93**, 2269.
- Movable dams, **96**, 2311.

Passing Places. (See Canals.)

- Canal, **93**, 2716.

Pass System.

- River regulation, California, H. D. 262, 59th, 1st.

Patrol.

- Necessary, harbors, **05**, 1976.

Pavements. (See Batteries; Concrete.)

- Banks, **93**, 3729.
- Waterproofing, concrete batteries, **05**, 3006.
- (See Forts, p. 1797 of this Index.)
- Wing dams, **94**, 1664.

Paving. (See Banks; Locks; Stone; Wing Dams.)

- (See pls. 57, 58, 59, 60.)
- Bank protection, **93**, 3729; **94**, 2902.
- Banks, **03**, 2443.
- Brush and stone dams, **94**, 2893.
- Concrete in situ, details, **02**, S., 159.
- Cost details, banks, **02**, S., 160.
- Cost of, banks, Mississippi River, **12**, 3870.
- (See p. 1067 of this Index.)
- Specifications, locks, **00**, 2925.
- Wing dams, Rock Island Rapids, **94**, 1664.

Paving, Concrete. (See Paving, above; and Concrete Banks, 11, 2003.)**Peat.**

- Analysis, **76**, 396.
- Origin of, Atlantic coast, **76**, 393.

Pendulum. (See Hydrometers.)**Percolation. (See Damp-proofing.) (See Forts, p. 1797 of this Index.)**

- Asphaltum for, concrete work, **03**, 2412.
- Experiments, concrete work, **03**, 2374.
- Locks, **12**, 1777.
- Tunnel, water supply, District of Columbia, **01**, 3666.
- Water tunnels, **96**, 3937; **00**, 5208.

Percussion.

- Rock removal, **94**, 812.

Phosphates.

- Development of industry, improved channels and, St. Johns River, H. D. 281, 62d, 2d.
- Enormous deposits of, contiguous to Charlotte Harbor, Fla., H. D. 699, 62d, 2d.

Photogrammetry.

- 95**, 4170, 4225; **96**, 4061.

Photographic Reproduction.

- Drawings, **93**, 2074.

Photography. (See Maps.)

- Explosions, Flood Rock, **86**, 691, 716.
- Map reproduction, **05**, 2126.
- Outfit, Company of Corps of Engineers, **03**, 692.
- Valuable, torpedo trials, **82**, 448.

Photolithographing.

- Chart reproduction, "Great Lakes Surveys," **08**, 2516.

Phototopography.

- 96**, 4061.

Physical Characteristics. (See p. 22 of this Index.)**Physics. (See Rivers.)****Pierheads. (See Cribs.)**

- Duluth, **01**, 2859.
- Elevations, concrete, **04**, 3802.
- Molds, concrete work, **04**, 3802.

Pierheads, Concrete.

- Cross sections, **04**, 3802.

Piers. (See Breakwaters; Bridges; Canals; Concrete; Cribs; Dams; Dikes; Docks; Harbors, Ice; Jetties; Locks; Masonry; Piles; Revetments; Wharves.) (See pls. 6, 7, 8, 9, 10, 11; 12, 13, 37.)

- 88**, 2201, 2552; **89**, 2082.
- Bar formation, **93**, 3098; **95**, 3139.
- Bar formation, retarding, triangular cribs for, **95**, 3118.
- Bars, unusual shape, **93**, 3082.
- Blocks, concrete; alternate monolithic, **01**, 2832.
- Blocks, concrete, Great Lakes, **06**, 1842.
- Blocks, concrete, making, **07**, 1995.
- Blocks, footing, concrete, **01**, 2832.
- Bolting, patch, submarine work, **01**, 2851.
- Bolts, patch, special form, **01**, 2850.
- Boulé dams, **00**, 3482.
- Breaches in, repairing with boxes, **95**, 2793, 2800.
- Building, harbors of refuge, **97**, 2071.
- Building, movable dams, **97**, 2548.
- Building, regulations, Philadelphia Harbor, **93**, 1156.
- Canals, Duluth, **98**, 2226.

Piers—Continued.

- Careening, Marcus Hook, Pa., **83**, 616.
 Collision of steamer, effect of, **08**, 1902.
 Concrete, apron, **00**, 4110.
 Concrete, apron, cracked by severe storms, **99**, 3097, 3100.
 Concrete, apron, repairing, **00**, 4110.
 Concrete, covering, disintegration from frost, **99**, 2774.
 Concrete, footing blocks, molding, **98**, 2226.
 Concrete for, mixing, **04**, 3784.
 Concrete molds, Duluth-Superior, **05**, 1986.
 Concrete superstructure, **98**, 2226; **00**, 4062.
 Concrete superstructure, building, **00**, 4102.
 Concrete superstructure, Duluth, **99**, 2644.
 Concrete work, Duluth, **01**, 2832.
 Connection plates, **01**, 2855.
 Corners, strengthening, **98**, 2429.
 Costs, **01**, 2853.
 Crib connections, **01**, 2850.
 Cribs, building, **99**, 2633.
 Cribs, cross sections, Chicago Harbor, **94**, 2134.
 Cribs, details, Kenosha, **01**, 2948.
 Cribs, dredging, affected by, **01**, 2833.
 Cribs, moving, **01**, 2948.
 Cribs, repair of, **98**, 2752.
 Cribs, storms, effect of, **95**, 2778.
 Cribs, substitutes for, gravel and rock cheaper, **98**, 1761.
 Cross sections, Harbor Beach, H. D. 900, 59th, 1st.
 Currents between, velocity, **98**, 2740.
 Cutwater block, molds, **01**, 2832.
 Damages of, causes, **95**, 2797.
 Decayed parts, removing, **98**, 2752.
 Decay of, retarding, painting for, **98**, 2658.
 Deep water, extending to, necessity for, **76**, ii, 506.
 Eccentric footing blocks, Duluth, **98**, 2226.
 Extension, economy of, harbors, **95**, 3109.
 Extension, lighting, difficulties, **76**, ii, 427.
 Extension, methods, **98**, 2676.
 Extension, Philadelphia Harbor, **93**, 1156; **00**, 1567.
 Extensions, rights of riparian owners, Chicago, H. D. 710, 62d, 2d.
 Faulty design, cause of bar forming, **98**, 2246; **99**, 2709.
 Foundations, dredgings for, Philadelphia Harbor, **95**, 1054.
 Foundations, section, **98**, 2676.
 Gauge well, **01**, 2851.
 Harbor entrances, effect, **97**, 2775.
 Ice formations, Great Lakes, **10**, 2092.
 Ice, pressure of, **82**, 785; **87**, 2076.
 Ice, protection against, **73**, 294, 296; **75**, 57, 320.
 Injury of, attached vessels, **69**, 85, 141; **77**, 965; **78**, 452.
 Injury of, colliding vessels, **78**, 1183.
 Injury of, gales, **77**, 967.
 Injury of, ice action, **75**, 310.
 Injury of, river currents, **76**, ii, 532.
 Legislation required, **77**, 940.
 Length, proper, Great Lakes harbors, H. D. 690, 62d, 2d.
 Lighthouses, foundations, **00**, 4078.

Piers—Continued.

- Lights, ornamental, Duluth, **05**, 1974.
 Maintenance, rafting, **00**, 3346.
 Masonry superstructure, **66**, iv, 157, 163; **76**, ii, 390; **78**, 1166; **79**, 1524.
 Masonry superstructure, disadvantages of, **66**, iv, 157, 163; **67**, 137, 222, 226, 228.
 Materials, Great Lakes, best materials, H. D. 62, 59th, 1st.
 Mattresses for, **00**, 4186.
 Modification of, waves in inner harbor, to prevent, **73**, 204.
 Occupation of, disreputable characters, control over, **95**, 2696.
 Occupation of, private persons, **80**, 2195; **85**, 2255, 2257.
 Parallel system, breakwaters, modification, **01**, 3265.
 Parapets, form of, **84**, 2144; **85**, 2279, 2307.
 Pier ends, bars at, checking, **95**, 3118; **96**, 2933.
 Pier ends, improved form, **94**, 2131.
 Pier ends, protecting, triangular cribs for, **95**, 3118.
 Pier ends, sand drift around, **74**, 223, 230.
 Pier ends, scour, **84**, 1966.
 Pier ends, strengthening, **93**, 2803.
 Pierheads, designs, **00**, 4078.
 Pierheads, lighthouse foundations on, **00**, 4078.
 Pipe wells, **01**, 2857.
 Plans for, new harborage, Jamaica Bay, N. Y. H. D. 1506, 60th, 2d.
 Promenade, **01**, 2832.
 Proper width between, lake harbors, **66**, 26, 27.
 Protecting, mattresses for, **70**, 187.
 Protection piles, **01**, 2851.
 Reconstruction, etc., costs of, **05**, 2353.
 Relocation of, bar formation, to check, **96**, 2933.
 Repairs, **99**, 2913, 2936.
 Repairs, methods, **98**, 2752; **99**, 2901; **00**, 3913.
 Sand-tightening, **92**, 2332.
 Sand-tightening, brush for, **80**, 1906.
 Sand-tightening, brush mats, **78**, 1211.
 Sand-tightening, sheet piling for, **80**, 1906, 1914, 1916; **81**, 2078; **82**, 2138; **99**, 2907.
 Scour above and below, bear-trap dams, **05**, 1844.
 Sections, Duluth, **01**, 2858.
 Settlement, **94**, 2216.
 Settlement, Duluth, **01**, 2858; **08**, 1902.
 Sheathing, **00**, 4062.
 Shoaling between, **96**, 3134; **98**, 2331.
 Shoaling between, checking, **97**, 2779.
 Shore connection, Great Lakes, **04**, 3172.
 Shore drift at, accumulation of, **82**, 582.
 Sloping superstructure, **71**, 215.
 Snubbing posts, introduction of, **66**, iv, 70; **69**, 141; **71**, 193, 194; **77**, 965.
 Stones, large, economy of, Great Lakes, **06**, 1821.
 Substructure, concrete, Great Lakes, **04**, 3802.
 Substructure, subaqueous concrete, placing, **09**, 1905.
 Superstructure, concrete, **01**, 2832; **03**, 1888; **04**, 3333.
 Superstructure, concrete, reconstructing, **06**, 1842.

Piers—Continued.

- Superstructure, concrete, views, **01**, 2832.
- Superstructure, permanent, proposed, Harbor Beach, harbor of refuge, H. D. 900, 59th, 1st.
- Superstructure, removing, Great Lakes, **06**, 1841.
- Superstructure, removing, methods, Great Lakes, **07**, 1995.
- Superstructure, unique cross sections, Great Lakes, **06**, 1841.
- Superstructures, parapet, form of, **84**, 2144; **85**, 2279, 2307.
- Superstructures, stone in, deterioration of, Milwaukee, **99**, 2772.
- Timber cribs, **98**, 2660.
- Timbers, securing, **97**, 3069.
- Triangular cribs, advantages of, **95**, 3118.
- United States piers, docks for private persons, **66**, 15, 22, ii, 37, iii, 5; **67**, 29, 141; **69**, 85; **76**, ii, 559, 561, 571; **79**, 1721.
- Vicinity of, accretions, **97**, 2779.
- Vicinity of, bars, growth of, **95**, 3139.
- Vicinity of, bars, rapid growth, **96**, 3100.
- Vicinity of, shore lines, advancement of, **95**, 2772.
- Weakening of, channel deepening a cause of, **98**, 2654.

Piers, Bear-Trap.

- Settlement, checking, **08**, 1798.

Piers, Bridge.

- Deterioration of, underwater parts, helped by freshets, **12**, 1310.
- Examining, method of, **01**, 3643.
- Reconstruction, **08**, 2346.
- Repairs, concrete work, **01**, 3639.

Piers, Catchment.

- Sand for, **74**, 52.

Piers, Concrete.

- Aprons, **00**, 4110.
- Aqueducts, **98**, 2482.
- Blocks, arrangement of, **04**, 3802.
- Bucket, special, **04**, 3302.
- Building, details, Duluth Harbor, **99**, 2644.
- Building, Great Lakes, **04**, 3192.
- Building, important details, **04**, 2775.
- Building, plant and methods, **04**, 3779.
- Construction, details, Duluth-Superior, **05**, 1974.
- Cross sections, **04**, 3802.
- Curves, blocks on, **04**, 3802.
- Curves in, Duluth-Superior, **05**, 1986.
- Cutwater molds, **04**, 3802.
- Derricks, building plant, **04**, 3802.
- Details, Great Lakes, **05**, 1974.
- Holes, tie-rod, **05**, 1987.
- Locking device, castings, etc., **04**, 3802.
- Materials, **04**, 3783.
- Metal details, **04**, 3802.
- Molds, **04**, 3802.
- Molds, assembling frames, etc., **04**, 3802.
- Molds, pierhead, **04**, 3802.
- Molds, subaqueous, **04**, 3802.
- Molds, timber, templates, **04**, 3802.
- Plant, **04**, 3802.
- Plant, Duluth-Superior, **05**, 1986.
- Plant, special details, Duluth-Superior, **06**, 1699.

Piers, Concrete—Continued.

- Pressures, unit, **01**, 2359.
- Rods, locking, **04**, 3802.
- Sections, **98**, 2226.
- Settlement, **01**, 2860.
- Superstructure, **04**, 2776.
- Timber foundations, sections of, **98**, 2226.
- Travelers, concrete, **04**, 3802.
- Trenches, trestles, and cross sections, **04**, 3802.
- Weights, **01**, 2859.
- Weights, ballast, **04**, 3802.

Piers, Crib.

- Breaches in, preventing, triangular cribs for, **96**, 2966.
- Building, **97**, 2071.
- Building, methods, improved, **96**, 2967; **97**, 2809.
- Caps under, **96**, 1836.
- Collisions, repairing damages from, **08**, 1902.
- Cost, items of, **96**, 2967.
- Damaged, rebuilding, methods, **96**, 2678.
- Decay of, **96**, 2935.
- Design, **95**, 3112; **00**, 4062.
- Design, improved, **96**, 2952.
- Fastenings of, improved, **93**, 3091.
- Foundations of, **96**, 2713.
- Framing, improved methods, **93**, 3091.
- Iron to strengthen corners, **97**, 2809.
- Pile piers and, compared, **68**, 156; **69**, 102, 133, 135.
- Piling, repairing, methods, **96**, 2691.
- Repairing, **93**, 2216, 2391, 2399; **95**, 2796.
- Sand tightening, **96**, 2674; **97**, 2924.
- Stone and concrete superstructure, **97**, 3075.
- Stone, replacing of, provisions for, **96**, 2945.
- Superstructure of, building, improved methods, **96**, 2966.

Piers, Crib and Masonry.

- Building, methods, **97**, 3075.

Piers, Crib and Stone.

- Sections of, **95**, 3106.

Piers, Detached.

- Dangers from, **95**, 2799.

Piers, Divergent.

- Objections to, **66**, 21, 22, iv, 11, 17, 18, 142, 145, 148; **67**, 141, 218; **72**, 230, 240; **77**, 171; **79**, 1698, 1700.

Piers, Entrance.

- Rebuilding, cost, Great Lakes, H. D. 939, 60th, 1st.

Piers, Ice.

- Costs, Ohio River, **04**, 2422.
- Value demonstrated, Ohio River, **01**, 2676.

Piers, Iron.

- Description of, **71**, 668; **76**, 267; **78**, 431.
- Foundations of, screw piles, **71**, 665; **74**, ii, 133; **75**, ii, 174; **76**, ii, 267; **77**, 256.
- Lewes, Del., **82**, 782; **86**, 838.
- Magnetic variations, **04**, 4133.
- Proposed for Delaware Bay, **82**, 781; **85**, 842.

Piers, Landing.

- Forts. (See p. 1797 of this Index.)

Piers, Masonry.

- Marcus Hook, Pa., **70**, 424; **71**, 657.
- Newcastle, Del., **71**, 689.
- Portland, Me., **74**, ii, 305.

Piers, Mooring.

Plan, Keweenaw Canal, H. D. 325, 60th, 1st.

Piers, Old.

Condition of, Lake Pepin, **01**, 2250.

Cost of repairing, **05**, 1633.

Reconstructing, **98**, 2527.

Piers, Old Crib.

Rebuilding, **98**, 2660.

Piers, Parallel.

Dangerous at harbor entrances, **80**, 2021; **82**, 2296.

Disadvantages of, **80**, 2021; **82**, 2296.

Piers, Pile.

66, iv, 69, 88; **67**, 70, 219; **68**, 154, 155, 215;

69, 102, 104; **73**, 998; **75**, 237; **00**, 3708.

Advantages of, **66**, iv, 17, 20, 69, 71.

Blunder, considered a, **69**, 136.

Brush in, **66**, iv, 105; **73**, 201.

Building, **00**, 4068.

Crib piers and, comparison, **68**, 156; **69**, 102, 133, 135.

Iron-tie roads, necessity for, **68**, 156.

Modifications proposed, **68**, 156; **75**, 236.

Objections to, **68**, 156; **69**, 133; **75**, 236, 237, 255, 258.

Proposed, Duluth, H. D. 82, 59th, 2d.

Sand drift through, **75**, 255, 258.

Sand tightening, timber beams for, **75**, 243; **78**, 1213; **79**, 1659.

Sand tightening, brush for, **73**, 201; **75**, 193, **78**, 1211.

Sand tightening, planks for, **75**, 243; **79**, 1512, 1514.

Sand tightening, shavings for, **79**, 1622.

Piers, Reconstruction of.

Costs, Great Lakes, **03**, 2090.

Concrete work, plant, **04**, 3779.

Piers, Slab.

66, iv, 141; **73**, 250; **75**, 193; **76**, ii, 505; **79**, 1659.

Sand tightening, **75**, 193; **76**, ii, 505.

Piers, Timber.

Changing to concrete form, **04**, 2743.

Designs, **98**, 2665.

Factors to be considered, **01**, 2903.

Sheathing, **00**, 4062.

Piers, Timber Crib.

Oswego, N. Y., **04**, 3818.

Stone superstructure, **04**, 3818.

Piers, U. S.

Use of, regulations, **96**, 921.

Pile Drivers. (See pl. 13.)

90, 3013, 3021; **91**, 3191.

Bank grading, used for, **99**, 2156.

Dikes, for training, **01**, 1662.

Mississippi River, **82**, 1719; **83**, 1251.

Operation of, **00**, 2789.

Two rows of piles, **73**, 993.

Pile Driving. (See Brooming; Hammers; Water Jet.)

68, 515; **72**, 1008; **75**, 469; **82**, 1716; **83**, 1185, 1249; **88**, 2561; **94**, 1699, 2153; **95**, 2413, 4003, 4047; **96**, 1835; **98**, 748, 1992, 2952.

Brooming, **82**, 2164.

Butts down, **81**, 1555.

Pile Driving—Continued.

Derrick, from, **01**, 922.

Dikes, **98**, 3506.

Drop hammers, **83**, 1185.

Followers, **79**, 1591.

Foundations, dams, **00**, 5002.

Hammers, **93**, 4241.

Jet, by, **05**, 2591.

Jetties, **94**, 2543.

Jetties, curves of, **94**, 2544.

Methods, **03**, 1573.

Powder used, **75**, ii, 82.

Records, Mississippi River, **84**, 1505, 1519.

Resistance to, **98**, 748.

Resistance to, curves of, **98**, 749.

Sandy soils, **68**, 515; **83**, 1249.

Steam power, **73**, 216; **83**, 1185, 1270, 1272.

Troops, engineer, **02**, 816.

Water jet, **75**, 869; **77**, 449, 450; **80**, 1912; **81**, 1508, 1554, 1621; **82**, 1607, 1677, 1711, 1719, 1723; **83**, 1185, 1250, 1270, 1289, 1292; **84**, 2770, 2832; **85**, 2384; **86**, 1981; **87**, 3100.

Pile Heads.

Protecting, tar and sand for, **92**, 1541.

Piles. (See Bulkheads; Cribbs; Dikes; Jetties; Shoring.)

Brush and, bank protection, **96**, 1400.

Bulkheads of, building, **94**, 1670.

Buttresses of, hurdles, **95**, 2078.

Caps, fastening, **95**, 3314.

Concrete substituted for, **95**, 509.

Crib angles, **67**, 149; **68**, 169, 174, 181, 209; **69**, 107, 122, 126; **76**, ii, 533; **78**, 1201, 1204, 1207.

Crib careening, failure to prevent, **69**, 126.

Crib foundations, **88**, 2347.

Crib sinking, **72**, 166; **78**, 1185, 1188; **79**, 1557, 1558, 1590.

Cutting, floating saw plant for, **96**, 2517.

Cutting under water, special machine for, Duluth-Superior, **09**, 1906.

Deterioration of, jetties, **00**, 4475.

Distances between, measuring apparatus, **98**, 3505.

Extracting, **74**, ii, 239; **79**, 447, 651.

Fascines and, spur dams, **93**, 1562.

Foundations, cribs, **72**, 166; **78**, 1185, 1188;

79, 1557, 1558, 1590; **82**, 2321; **84**, 1968, 1985; **00**, 3878.

Horizontal timbers and, wing dams, **71**, 359.

Ice, lifted by, **81**, 618.

Ice protection, Mississippi River, **05**, 1637.

Omission of, scour prevention, **98**, 2955.

Penetration, diagram, **98**, 748.

Penetration, Fort Brown, Tex., **78**, 620.

Preserving, carbolization, **74**, 787; **79**, 393.

Protecting against teredo, **06**, 758.

Protection of, **01**, 2851.

Protection of, Gallinowsky process, **97**, 700.

Scour at, preventing, **98**, 2955.

Scour at, preventing, mattresses for, **98**, 1698.

Securing, rocky bottoms, **82**, 2137.

Sheathing and, revetments, **96**, 2966.

Shodding of, **97**, 3367.

Shore protection, **77**, 475.

Shoring with, **96**, 2414.

Sinking, panels, **75**, ii, 621.

Sinking, nozzles and hooks, **89**, 2794.

Piles—Continued.

- Sinking, sinking boats, **98**, 3181.
 Sinking, two nozzles used, **94**, 3133.
 Sinking, water jet, **91**, 2683.
 Sustaining power, P. P. No. 5, C. E.; **72**, 761;
77, 256; **78**, 432; **86**, 1982; **87**, 970; **98**, 750.
 Tereido attacks, jetties, **00**, 4475.
 Tereido attacks, preventing, **80**, 1212.
 Tereido, destruction by, **92**, 2658.
 Tereido, unexpected absence of, Columbia
 River, **08**, 2271.
 Training walls, **93**, 1562.
 Two rows, driver for, **73**, 998.
 Ungreased pile dikes, decay of, **97**, 1115.
 Unreliable for foundations of batteries, **96**, 503.
 Various kinds, tereido effect, **68**, 508, 512; **71**,
 531, 536, 548; **79**, 937.
 Watling, **94**, 2614.

Piles, Anchor.

- Disk anchor substituted for, **01**, 2195.

Piles, Bearing.

- Pierhead cribs, **11**, 2276.

Piles, Concrete.

- Dikes, **11**, 1992.
 Dikes, Missouri River, **09**, 1661.
 Economy, **04**, 3869.
 Foundations, treacherous ground, **04**, 3866.

Piles, Cypress.

- Durability of, **83**, 1132.

Piles, Hollow Cast-Iron.

- 80**, 612; **85**, 843.

Piles, Palmetto and Mangrove.

- Tereido proof, **68**, 512; **71**, 548.

Piles, Screw.

- 71**, 666; **75**, ii, 174.
 Delaware River, **73**, 876.
 Dimensions, **79**, 448.
 Flanges, proper form for, **72**, 762.
 Foundations, iron piers, **71**, 665; **74**, ii, 133;
75, ii, 174; **76**, 267; **77**, 256.
 Gloucester Point, **72**, 789.
 Lewes, Del., **71**, 665, 667; **72**, 759; **73**, 860; **74**,
 ii, 131; **76**, 267; **77**, 256; **78**, 431; **79**, 448.
 Penetration of, **72**, 761.
 Removing, water jet for, **79**, 447.
 Salt water, effect of, **79**, 447.
 Sinking, **72**, 769; **73**, 861; **75**, ii, 174; **79**, 448.
 Sinking, facilitation of, water jet for, **73**, 860.
 Sinking, water jet for, **72**, 759, 770; **73**, 860,
 861; **78**, 432; **79**, 447.
 Sustaining power, **72**, 763, 765; **77**, 256; **78**,
 432.

Piles, Sheet.

- Driving, **94**, 1700.
 Sinking, method, Holland, **75**, ii, 621.

Piles, Square-ended.

- 80**, 2261.

Piles, Wattled.

- Shore protection, **76**, 497.

Piling. (See Breakwater; Dikes; Fenders; Jetties;

- Locks; Piers.) (See pls. 13, 32.)
 Caisson preferred at lock sites, **12**, 1777.
 Foundations, locks, **94**, 2166.
 Injury of, drift, jetties, **94**, 2556.

Piling—Continued.

- Plan of, soft bottoms, **87**, 970.
 Protecting from tereido, Pacific coast, **06**, 2014.
 Ravages of tereido despite Gallinowski process,
01, 823.
 Resistance of, **98**, 745.
 Sea walls, **05**, 3025.
 Slabs and, breakwaters of, expensive to main-
 tain, **94**, 2024.

Piling, Close.

- Piers of, **69**, 101; **75**, 237.

Piling, Concrete.

- Foundations, brick buildings, **04**, 3866.

Piling, Creosoted.

- Advantages of, **93**, 921.

Piling, Fender.

- 97**, 2666.
 Building, **97**, 2661.

Piling, Sheet. (See pls. 31, 37.)

- Driving, **96**, 1835.
 Peculiar overturning, foundations, locks, **98**,
 1472.
 Piers, sand tightening of, **80**, 1906, 1914, 1916;
81, 2078; **82**, 2138.
 Reservoir dams, **96**, 1835.
 Sand movement, checking, **94**, 2462.
 Sand tightening, piers, **80**, 1906, 1914, 1916; **81**,
 2078; **82**, 2138; **99**, 2907.
 Sea walls, **05**, 3025, 3028.
 Wing dams of, **94**, 1335.

Plotage.

- Harbors, in, methods during fog, **01**, 1013.
 Rates for, uncontrolled, and harm from,
 Charleston Harbor, H. D. 288, 62d, 2d.

Pine, White.

- Weight of, **68**, 230.

Pinnacles, Rock.

- Blasting under water, **01**, 3483.

Pins, Wooden.

- Cribs, **67**, 138, 216.

Pipe Lines. (See pls. 51, 52, 53, 55.)

- Dredges, hydraulic, **02**, S., 43.
 Dredges, hydraulic; measuring efficiency,
 methods, **03**, S., 143.
 Dredging, pontoons, **04**, S., 127.

Pipes. (See Borings; Culverts; Discharge; Draft;

- Dredges; Inlets; Steam.)
 Borings, used in, **94**, 1493.
 Dredges, **93**, 1498.
 Laying across canals, **94**, 1939.
 Recovering, borings, **01**, 1834.
 Triangulation stations, **03**, 2685.

Pipes, Discharge.

- Barges, supporting, dredges, **01**, 1883.
 Hydraulic dredges, **95**, 3630.
 Lengthening with sacking, dredging, **01**, 1884.
 Loss of head from friction, dredges, **03**, S., 149.
 Swivel joints, hydraulic dredges, **98**, 1707.
 Wide pontoons, effects of, hydraulic dredging,
98, 1707.

Pipes, Gas.

- Triangulation stations, **04**, 4064.

Pipes, Inlet.

- Locks, **94**, 2303.

Pipes, Steam.

Borings, 99, 1709.

Pipes, Suction.

Choked with gravel, etc., dredging, 11, 2080.
Dredges, economical arrangement, 94, 1407.
Strengthening of, 93, 1498.

Pipe Wells.

Piers, 01, 2857.

Piping.

Plans, U. S. dredges, 03, S., 158.
Dredges, hydraulic, 03, S., 115.

Pitot Tubes.

Flow, measuring, U. S. dredges, 03, S., 158.

Pits. (See Mortars.)

Mortar pits, 94, 451.

Pits, Testing.

Foundations, locks, 95, 2203.

Plains.

Mountains and, rainfall differences, 74, ii, 375.

Planer. (See Stones.)**Planes. (See Flood Planes; Low Water; River.)**

Change of, Mississippi River, 93, 3564.
Planes of rest, stone breakwaters, 93, 3261.
Study of planes and slopes, Mississippi River,
H. D. 50, 61st, 1st.

Planes, Datum.

Fixing reliable datum planes, Altamaha system, H. D. 443, 62d, 2d.

Planes, Inclined.

Canals, 74, 498, 550, 552, 555; 75, 770, 879; 76, ii, 82, 100; 77, 682.
Locks and, comparison of, 74, 498, 550, 552, 555; 75, 770, 879; 76, ii, 82, 100; 77, 682.

Planimeter.

Discharge observations, measuring, 93, 1991.

Planimeters, Polar.

Rolling planimeters preferred, 93, 1991.

Planimeters, Rolling.

Advantages of, 93, 1991.
Polar planimeters preferable to, 93, 1991.
Tests of, 93, 1991.

Planks.

Sand tightening with, pile piers, 75, 243; 79, 1512, 1514.

Plans. (See p. 22 of this Index.)**Plant. (See Canals; Concrete; Dams; Dredging; Electricity; Jetties; Locks; Piers; Steam.)****Plant, Central Power.**

Advantages, dams, building, 93, 2485.

Plant, Construction.

Layout, forts, 02, 2494. (See Forts, p. 1797 of this Index.)

Plant, Dredge. (See pl. 57.)**Plant, Floating. (See Boats; Dredges; Tugs.)**

Rivers, long; required for, 05, 1772.
U. S. (See p. 2137 of this Index.)

Plant, Rattlesnake.

Description of, 68, 649.

Plant, U. S. (See Plant, Floating, above.)

Dredging, 11, 1905.
Shipyards for, 11, 2057.

Plant, U. S.—Continued.

Storage facilities, wharf, Cleveland, H. D. 270, 59th, 2d.

Repairs, waterways, costs, 01, S., 278.

Plants, Ornamental.

03, 2669.

Plants, Tropical and Other.

List of, Washington, D. C., 00, 5312.

Plaster of Paris.

Cement, effect in, 95, 2917; 96, 2803.

Plates.

Gauge bulletins, 97, 1940.

Plates, Protection.

Cribs, repair through ice, 01, 2830.

Platforms. (See Drilling; Guns; Mortars; Storage.)

Building, target practice, 96, 474.

Forts. (See Forts, p. 1297 of this Index.)

Reciprocal leveling, 91, 1896.

Platting. (See Plotting; Surveys.)

Surveys, 68, 430, 431; 94, 1753.

Plotting. (See Platting.)

Discharge, Tennessee River, H. D. 360, 62d, 2d.

Surveys, hydrographic, 02, 2512.

Playgrounds, Public.

Details, various places, 03, 2666.

Washington, D. C., 01, 3702; 11, 2973.

Plumbing.

Buildings, 04, 3855, 3860.

Dredges, hydraulic, 04, S., 112.

Poles, Loaded.

Currents, measuring, 96, 1204.

Policies.

River and harbor improvements, Sen. D. 301, 61st, 2d.

Pontoons. (See pls. 52, 66.)

Engineer troops, 02, 816.

Ice harbors, forming, 86, 834; 87, 804.

Remodeling, dredging, 01, S., 219.

Train, 01, 959.

Train equipment, 01, 959.

Train, improvement, 02, 801.

Wide, advantages of, hydraulic dredging, 98, 1707.

Wrecks, lighting, 99, 1277.

Pools. (See Canals.)

Canalized rivers, 98, 2147.

Canal pools, water supply of, 69, 535.

Pools, Dead.

Rivers, effect on, 98, 3168.

Population.

Growth of, New York, H. D. 1506, 60th, 2d.

Ports. (See Seaports.)

Rail and water rates, Texas, H. D. 1290, 61st, 3d.

Ports, Foreign.

Commerce of, facilities for, H. D. 1506, 60th, 2d.

Posts, Snubbing.

Introduction of, piers, 66, iv, 70; 69, 141; 71, 193, 194; 77, 965.

Posts, Vertical.

Cribs, strengthening, 79, 1588, 1590.

Powder.

Depth of hole and, relation, blasting, **68**, 425.
Various powders, rock blasting, **69**, 424.

Powder, Mica.

Nitroglycerin and, blasting, **91**, 2796.
Use of, Detroit River, **77**, 936.

Powder, Orange.

New River, used at, **78**, 496.

Powder, Smokeless.

Peace storage magazine, **05**, 3007. (See Forts,
p. 1797 of this Index.)

Powder, White.

Composition, **69**, 429.

Power. (See Air; Electricity; Mules; Steam;
Turbines; Water Power.)

Companies, supervision of, Great Lakes, **11**, 3028.
Dams for, right to use surplus water, Hudson
River, Sen. D. 887, 62d, 2d.

Development of, combination of channel im-
provement with, Connecticut River, H. D.
818, 61st, 2d.

Explosives, **90**, 417.

Hydraulic power replaced by hand power,
Tennessee River, **05**, 1766.

Navigation interests opposed to interests of,
Minnesota River, H. D. 700, 62d, 2d.

Pile driving, used for, **75**, ii, 82.

State, rights of, and of U. S., water power,
Hudson River, Sen. D. 887, 62d, 2d.

Power, Hand.

Hydraulic power replaced by, locks, Tennessee
River, **05**, 1766.

Power Houses.

Design of, water-power system, Ouachita
River, H. D. 588, 62d, 2d.

Electricity, **04**, 3710.

Locks, operation of, **95**, 2908.

Plans, locks, **98**, 1921.

Power, Hydraulic.

Hand power displacing, locks, Tennessee
River, **05**, 1766.

Power Plants.

Compressed air, **00**, 2769.

Operating, provisions, gun batteries, **98**, 11;
99, 12.

Transmission of power, compressed air best,
98, 1810.

Power Stations. (See pl. 71.)**Prairie.**

Mountainous country and, run-off, **96**, 3013.

Precipitation.

Arid regions, reservoirs, effect of, **98**, 2865.

Data relating to, index to, Mississippi River,
95, 3712.

Forests and stream flow, Merrimac River,
H. D. 9, 62d, 1st.

Muskingum River, **96**, 3014.

Red River, **00**, 2843.

Reservoirs, effect of, arid regions, **98**, 2865.

Pressure, Barometric.

Scour and, **01**, 575.

Pressures.

Concrete, piers, **01**, 2869.

Price, Selling.

Water power, navigable streams, H. D. 781,
60th, 1st.

Prices, Unit.

01, 3599.

Private Work. (See p. 22 of this Index.)**Profiles.** (See Rivers; Canals; Channels; Jetties)
Channels in vicinity of jetties, St. Johns River,
Fla., H. D. 611, 61st, 2d.

Making, survey, Lockport to St. Louis, H. D.
263, 59th, 1st.

Mississippi River, **01**, S., 232.

St. Johns River, Fla., H. D. 611, 61st, 2d.

Projectors.

Notes on, by Lieut. E. H. Schulz, Corps of
Engineers, U. S. Army, **03**, 2425.

Two 36" projectors probably better than one
60", **03**, 2425.

Projects. (See p. 22 of this Index.) (See titles
of various kinds of waterway improvements.)

Adoption of, river and harbor improvements,
steps to be taken before adopting, H. D. 301,
61st, 2d.

Slackwatering, Mississippi River, H. D. 50,
61st, 1st.

Promenade.

Piers, **01**, 2832.

Property. (See p. 2040 of this Index, for White
House list.)

Owners, consent of, waterway improvements,
obtaining, **06**, 2034.

Saved by breakwaters, Great Lakes, **06**, 969.

Property, Riparian.

Protection of, river and harbor works (Bixby),
Sen. D. 301, 61st, 2d.

Protection Works. (See Banks; Bends.)**Public.**

Wharves, access of public to, Hawaiian Islands,
H. D. 593, 61st, 2d.

Public Grounds and Buildings. (See p. 2040 of
this Index.)

Designing, Washington, D. C., **05**, 2772.

Public Opinion.

Favorable to improved waterways, H. D. 781,
60th, 1st.

Puddle.

Puddle walls, cofferdams, **68**, 426.

Remarks on, **84**, 2331.

Pulsations. (See Floods; Seiches.)Floods, **79**, 786.Running streams, **69**, 594; **71**, 989; **72**, 1033, 1040.**Pump, Chinese.**Lock, pumping out, **99**, 3236.**Pumpage.** (See Canals.)Water supply, canals, **76**, 406.**Pumping.** (See Cofferdams; Locks.)Canals, water supply for, **81**, 1152.Chinese pump, locks, **99**, 3236.Cofferdams, **93**, 2485; **98**, 3541, 3571.Cofferdams, within, **68**, 422; **71**, 164; **77**, 299.

Cost of, drinking water, H. D. 342, 61st, 2d.

Engines, tests, large locks, **97**, 2994.Foundations, batteries, **96**, 510.Gauges, mortar pits, **94**, 451.Gun batteries, **93**, 613; **98**, 645.Locks, **98**, 1886, 2981.Locks, building, **96**, 1936.Locks, permanent cofferdam sills for, **00**, 3533.Large locks, **97**, 2992.Turbines, **98**, 2981.**Pumps.** (See Canals; Dredges.)Discharge of, Rock Island Rapids, **69**, 242.large locks, **97**, 2987.Requirements, city water supply, **76**, ii, 697.Rock Island Rapids, **68**, 422.Sprinkling wagon, Yellowstone Park, **02**, 3044.

Station, emergency, H. D. 342, 61st, 2d.

Various pumps, duty of, **75**, ii, 204.Water jet, operating, **79**, 1514.Wear of, dredges, **00**, 4567.**Pumps, Canal.**Delaware & Chesapeake Canal, **76**, 406.**Pumps, Centrifugal.** (See Dredges.)**00**, 4567.Cofferdams, pumping in, **68**, 422; **71**, 164; **77**, 299.Dredges, **70**, 316; **72**, 666, 669; **73**, 750; **74**, ii, 11, 71; **75**, ii, 38, 40, 69; **76**, 445; **79**, 560, 1542; **89**, 1097; **90**, 736; **91**, 1472.Dredging, **85**, 2331.Dredging, cost, **72**, 669; **74**, ii, 12; **75**, ii, 40; **76**, 445.Dredging plants, **01**, S., 52.Dredges, **02**, S., 44.Efficiency of, on hydraulic dredges, **04**, S., 98.Holly's and, comparison, **71**, 164.Sand and water raised by, percentage of, **72**, 666, 668; **73**, 750; **74**, ii, 11, 71; **75**, ii, 38, 40, 69; **76**, 445.**Pumps, Dredge.**Capacity, measuring, methods, **03**, S., 143.Discharge velocity, measuring, **03**, S., 142.Efficiencies of, **03**, S., 165.Hydraulic dredges, **04**, S., 123.Pitot tubes to measure velocity, **03**, S., 139.Plans, **03**, S., 158.Testing data, **03**, S., 155; **04**, S., 130.Work of, total, computing, **03**, S., 163.**Pumps, Force.**Boring with, **75**, 235.Borings, **01**, 1719.**Pumps, Jet.**Dredges, hydraulic; efficiency, **03**, S., 148.**Pumping, Rapid.**Cofferdams, **68**, 426.**Pumps, Suction.**Dredges, **89**, 1097; **90**, 736; **91**, 1472.**Q.****Quarrying.** (See Rock.) (See pl. 46.)Cost of, Mississippi River, **05**, 216.Economical methods, **00**, 2916.Rock, **96**, 1876.**Quicklime.**Cement, effect on, **95**, 2917, 2924.**Quicksand.**Bank, effect on, **00**, 2845.Building on, **94**, 1826.Controlling, **01**, 913.Controlling, foundations, locks, **94**, 1826.**Quicksand—Continued.**Dikes, settlement of, **95**, 1666.Flow, preventing, lock abutments, **98**, 2125.

Forts. (See p. 1797 of this Index.)

Pocket, foundations, effect on, sheet-pile dams, **98**, 1487.**Quoin Posts.**Plates for, bending, device for, **95**, 3048.**Quoins, Hollow.**Lining, locks, **09**, 1706.

R.**Rack-a-Rock.** (See Explosives.)

Constitution of, **85**, 724; **86**, 682.

Use of, Hell Gate, **85**, 716, 721, 724; **86**, 680, 682, 683.

Racks.

Sponges and rammers, forts. (See Forts, p. 1797 of this Index.)

Rafting. (See Canals.)

Piers for, maintaining, rules, **00**, 3346.

Regulations, canals, **93**, 2682.

Rafts. (See Drilling.)

Building, Engineer troops, **02**, 816.

Passage of, bridges, spans, dimensions required, **77**, 820; **78**, 931.

Rafts and Logs.

Floating of, regulations, **01**, 2330.

Rafts, Natural.

Red River, **72**, 569; **73**, 613, 640; **76**, 598; **79**, 955.

Removing, nitroglycerin employed, **74**, 702, 708.

Rice plantation, removal of rafts opposed by pumpers to, Colorado River, H. D. 1211, 60th, 2d.

Raft-Towing.

Restrictions, Great Lakes, **94**, 2378.

Rules, canals, **95**, 2536.

Rail and Water Rates. (See Rates.)**Railings.**

Forts. (See p. 1797 of this Index.)

Railroads. (See Rates.)

Accidents on, investigation of, **77**, 831.

Aided by U. S., H. D. 781, 60th, 1st.

Bridges, rail and wagon traffic, **70**, 244, 261.

Bridges used by, conditions governing, **02**, 2654.

Canals and, capacity, comparison of N. Y. C. R. R. & Erie Canal, **71**, 647.

Canals and, comparison, **00**, 3622.

Canals and, New York State, **96**, 3063.

Charges, canal tolls and; comparison, **82**, 2497; **86**, 1944.

Control over, Government lands, **93**, 4288.

Cost of, average per mile, U. S., **75**, ii, 629.

Cost of, operating, canals, **05**, 1770.

Connections, new harborage, Jamaica Bay, N. Y., H. D. 1506, 60th, 2d.

Construction of, floods a bar, **08**, 860.

Due to U. S. waterway improvements, alluvial valley of the Mississippi, **04**, S., 24.

Engineer troops, work of, **02**, 816.

Extensions due to breakwaters, Hawaiian Islands, H. D. 417, 62d, 2d.

Railroads—Continued.

Free waterways, influence of, **96**, 3090.

Freight movement by, control of, Chicago Harbor, H. D. 710, 62d, 2d.

Freight rates, canal and, **96**, 3062.

Industries, factor in locating, H. D. 1506, 60th, 2d.

Influence of, waterway traffic, Missouri River, H. D. 1120, 60th, 2d.

Maintaining, difficulties, **03**, 1610.

Mileage of, Ohio, 1839—, **96**, 3043.

Operation and maintenance, cost, **04**, 2385.

Other methods of transportation and, freight rates, comparison, **71**, 630, 644.

Prosperity of, waterways, effect of, **96**, 3090.

Rates by, and by water, **12**, 2367.

Rates by, higher than on Great Lakes, **01**, 3281.

Sand fences on, **99**, 3218.

Tracks, forts. (See Forts, p. 1797 of this Index.)

U. S. freight, refusal of Central Pacific R. R. to conform to regulations in carrying, **73**, 1117.

Water routes should be cooperative with railroads, H. D. 769, 62d, 2d.

Waterways and, changing relations, H. D. 781, 60th, 1st.

Waterways and, competition, H. D. 710, 62d, 2d.

Waterways and, functions of, **10**, 2976.

Waterways and, relation, Sen. D. 301, 61st, 2d.

Waterways and, transportation by, relations, H. D. 301, 61st, 2d.

Rail Routes.

Canal and, comparison, **00**, 3622.

Rail Transportation.

Water and, comparison, **71**, 630, 644; **72**, 518; **74**, ii, 106, 116, 123; **77**, 399, 640, 645, 654.

Water and, rates, **82**, 2497; **87**, 2129, 2130.

Railway, Portage.

Columbia River, **94**, 2668.

Rail vs. Water.

Cotton shipments, routes, study, H. D. 12, 61st, 1st.

Railways. (See Rates.)

Aided by U. S., H. D. 781, 60th, 1st.

Bridges used by, conditions governing, **02**, 2654.

Maintenance of canals, **00**, 2941.

Waterways and, cost of building or making, H. D. 391, 62d, 2d.

Railways, Boat.

Defects, **01**, 3524.

Rainfall. (See Meteorology; Watersheds.)

Allegheny watersheds, **79**, 1391.
 California, **76**, ii, 624.
 Canals, **76**, 533.
 Colbert Shoals, canal, **98**, 1923.
 Columbia River, **79**, 1844; **80**, 2302.
 Charts of, **75**, 676.
 Cumberland Sound, **76**, 457, 458.
 Dakota, **74**, 296; **79**, 1225, 1243.
 Dismal Swamp Canal, **96**, 1090.
 Drainage and, ratio, **79**, 1391; **81**, 1778.
 Evaporation and, ratio, **70**, 287.
 Florida, coast of, **76**, 457.
 Forests, effect of, **75**, ii, 172; **79**, 1211; **84**, 662.
 Fox River, **00**, 3724.
 French Broad River, **00**, 3027.
 Great Lakes, **03**, 2855.
 Great rainfall, Neah Bay, **98**, 3084.
 Greenville, Mississippi River, **99**, 3565.
 Hudson River, **94**, 726; **95**, 900; **96**, 826.
 James River, headwaters of, **77**, 759.
 Lake discharge and, ratio, **68**, 962.
 Lake region, **67**, 684; **68**, 961, 971, 980; **69**, 601.
 Minnesota, **79**, 1224, 1243.
 Mississippi Basin, **84**, 1615, 1622.
 Mississippi River, lower, **75**, 571.
 Mississippi River, upper, **70**, 287; **74**, 296; **75**, ii, 438, 440; **79**, 1197, 1199, 1213, 1226; **80**, 1591, 1599, 1612; **81**, 1778, 1801; **83**, 1453; **84**, 1622.
 Mississippi River, watershed, **96**, 1862.
 Mountains and lower levels, differences, **74**, ii, 375.
 Ohio River, **95**, 2351; **97**, 2338; **98**, 2053.
 Ohio River, valley of, **74**, 507, 520, 523, 532; **76**, ii, 100.
 Pacific coast, **95**, 3459.
 Punta Rosa, Fla., **82**, 1207, 1228.
 Reservoir discharge and, relation, Mississippi River, **94**, 1709.
 Reservoirs, Mississippi River, **94**, 1705; **96**, 1843.
 River and, comparison, Ohio River, **96**, 2074; **00**, 3105.
 Run-off and, Mississippi River watershed, **96**, 1862.
 Run-off and, relation, **96**, 3013.
 Run-off and, relation, above Pokegama Falls, **05**, 1678.
 Run-off and, relation, Mississippi River, **97**, 2169.
 Run-off and, relation, Mississippi River, reservoirs, **96**, 1843.
 St. Johns River, **93**, 1627.
 St. Louis, **84**, 1615.
 San Diego, **74**, ii, 374, 375; **80**, 2247.
 Sault Ste. Marie, curves, **82**, 2344.
 South Atlantic States, **76**, 532; **77**, 390; **79**, 780.
 Washington, D. C., **93**, 4280.
 Watershed and, ratio, **70**, 287; **73**, 499; **74**, 507, 532, 538; **75**, ii, 438; **76**, 532, ii, 100; **77**, 756; **79**, 1197, 1199, 1219, 1221, 1227, 1236, 1241.
 Water supply, canals, **76**, 533.
 Wind, effect of, **67**, 598.
 Wisconsin, **79**, 1225, 1245.

Rain Storms.

Washington, D. C., **93**, 4307.

Rain Water.

Forts. (See p. 1797 of this Index.)

Rake.

Bar channels, scraping of, **98**, 2977.

Raking.

Shoals, best for gravel, **06**, 1985.

Rammers.

Cement-testing, **96**, 2678.

Racks for, batteries. (See Forts, p. 1797 of this Index.)

Ramming. (See Dams.)

Gates, lock, effect on, **11**, 2424.

Ramming, Stock.

Dams, **91**, 2714; **92**, 2405 (Atlas 110).

Ramous. (See Brush.)

Dams, effect, **76**, 375; **79**, 1201.

Range Finders.

Datum beacons, construction of, **01**, 892.

Position of, batteries, **99**, 13.

Towers, **97**, 661.

Ranges. (See Borings.) (See pls. 70, 71.)

Discharge measurements, **01**, 2203.

Locating, dredging, **04**, S., 244.

Rapids.

Large number, Colorado River, **01**, 3407.

Lining over, boom for, **96**, 3381.

Passage of, methods, **94**, 2668.

Rivers, origin in, indications of, **68**, 308; **78**, 916.

Rates.

Canalization, effect of, H. D. 785, 59th, 1st.

Coal rates lower by water, Ohio River, **03**, 1692.

Comparative rates, Kanawha River, **11**, 2169.

Control over, Texas, H. D. 1290, 61st, 3d.

Cotton, cost of transporting, by rail or water, **01**, 1899.

Deep water, effect of, H. D. 287, 62d, 2d.

Effect of intracoastal waterways on, Texas and Louisiana, H. D. 640, 59th, 2d.

Forty-foot channel, effect problematical. H. D. 340, 59th, 2d.

Great Lakes, **12**, 2638.

Harbor improvements, instances of favorable effect, **08**, 633.

Improvements, waterway, lowered by, H. D. 510, 61st, 2d.

Influence of navigable waterways, limitation of, **01**, 1993.

Kept down by maintained channels, **11**, 670.

Logs and lumber cheaper by water, **11**, 670.

Lower on Great Lakes than by rail, **01**, 3281.

Mississippi River, **01**, S., 39; **10**, 624.

Navigable waterways, reduced by, **12**, 809.

Ohio River, points, H. D. 492, 60th, 1st.

Reduction due to waterway improvements, H. D. 231, 58th, 3d; H. D. 705, 59th, 1st.

Regulation by Texas beneficial, H. D. 1290, 61st, 3d.

River improvement, favorable effect from, on rates, **08**, 525.

Saved by intracoastal waterways, H. D. 391, 62d, 2d.

Rates—Continued.

- Saved by water improvement, **03**, 1354; **10**, 378, 955; **12**, 2487.
- Slackwater systems affect greatly, **09**, 617.
- Slackwater systems beneficial to, **11**, 743.
- Ton-mileage data, Great Lakes, **09**, 1943.
- Water rates, controlled by, Cape Fear River, H. D. 287, 62d, 2d.
- Waterway improvements, effect of, **09**, 587.

Rates, Barge.

- Rail and, intracoastal canals, H. D. 391, 62d, 2d.

Rates, Freight. (See Freight; Improvements; Rail and Water.)

- Before and after waterway improvement, **10**, 562.

Rates, Rail.

- Kept down by U. S. improvements, **11**, 796.

Rates, Rail and Water.

- Comparison, **04**, 2225; H. D. 219, 58th, 3d; H. D. 440, 59th, 2d; **12**, 2367; H. D. 645, 59th, 1st.
- Difference due probably to U. S. improvements, **09**, 556; **12**, 809.
- Mississippi River, **11**, 669; H. D. 50, 61st, 1st.
- Summer navigation, effect, **12**, 809.
- Texas ports, H. D. 1290, 61st, 3d.
- Water rates cheaper, **10**, 690.
- Water rates, effect on rail rates, **01**, 2085.

Rates, Transportation.

- Land and water, Europe and U. S., Sen. D. 301, 61st, 2d.

Rates, Water.

- Rail rates, control of, Cape Fear River, H. D. 287, 62d, 2d.

Readings. (See Gauges.)**Recesses.** (See Gates; Locks.)

- Deposits in, reducing, locks, **09**, 1779.
- Sheathing of, rapid decay, lock gates, **95**, 2360.

Recessions.

- Falls, Minnesota River, **78**, 915.

Reclamation. (See Land.)

- Areas, reclaimed, Washington, D. C., methods, **08**, 1214; **09**, 1218.
- Bottom lands, California, H. D. 262, 59th, 1st.
- Harbor lands, Jamaica Bay, N. Y., H. D. 1605, 60th, 2d.
- Methods proposed, Altamaha system, H. D. 443, 62d, 2d.
- Projects for, examined by special board of officers of C. E., H. D. 1262, 61st, 3d.
- Sandy areas reclaimed with Holland grass, **08**, 803.
- Should be for harbors, not for parks, Chicago. H. D. 700, 59th, 1st.
- Title to, Anacostia River, H. D. 194, 59th, 1st.

Reconnoissance.

- Black Hills, **74**, ii, 628.

Records. (See Meteorology; Pile Driving; Stone.)

- Concrete, mixing, **98**, 2454.
- Dredging, **00**, 3577.
- Pile-driving, **84**, 1505, 1519.
- Rock-blasting, **00**, 1731.

Records, Tide Gauge.

- Important in claim for overflowage, **04**, 1647.

Bedredging.

- Dredgings, **98**, 2670.

Reefs, Barrier.

- Atlantic coast, **76**, 379.

Reels. (See Soundings; Wire.)

- Currents, measuring, **00**, 5327.
- Ripley-Haskell, **95**, 4240.
- Soundings, **95**, 4170.

 - Type of works, Missouri River, H. D. 1120, 60th, 2d.
 - Weirs for, rivers, H. D. 262, 59th, 1st.
- Regulations.** (See Bridges; Harbors; Rafts and Logs; Timber; Rates; Rivers; Waterways.)
- Canal operation, **04**, 2769.

Regulations, Harbor. (See Harbors.)

Need for, San Juan, P. R., H. D. 914, 59th, 1st.

Rentals.

Water power, Muskingum River, **01**, 2719.

Water power, Tennessee River, H. D. 360, 62d, 2d.

Repairs. (See Dredging.)

Dams, Ohio River, **01**, 2627.

Embankments, Ohio River, **01**, 2634.

Dredges, U. S., **06**, 975.

Reports.

Map, progress; examples, **04**, 1338.

Reservations. (See pls. 22, 25.)

State cession for; road control retained, **02**, 653.

Washington, **94**, 3295.

Reservoirs. (See Arid Lands; Irrigation; Locks; Rivers; Sediment.) (See pls. 18, 19, 69.)

Alluvial rivers, regimen of, effect on, **98**, 2893.

Artificial lakes, **98**, 2849.

Bever, Germany, **98**, 2854.

Building of, Colorado, **98**, 2918.

Building of, corporations for, **98**, 2866.

Canals, water supply of, **96**, 3026.

Canals and, evaporation, **71**, 639; **72**, 515, 521; **74**, 505, 523, ii, 95; **75**, ii, 547, 566; **76**, 756; **78**, 293.

Cities, **98**, 2852.

Complaints against, Mississippi River, **06**, 1449.

Cost, **04**, 2236.

Dam, Lake Winnibigoshish, **01**, 2314.

Dams, Mississippi River, **06**, 1438.

Definition, **98**, 2846.

Deposits in, **93**, 4297; **98**, 2823.

Details, Mississippi River, **06**, 1443.

Development, arid regions, **98**, 2875.

Discharge, measuring, Mississippi River, **06**, 1473.

Discharge, Mississippi River, **94**, 1705.

Discharge, rainfall and, relation, **94**, 1709.

Discharge, regulation of, **85**, 1747.

Effect of, Mississippi River, **06**, 1467.

Floods, arrest of, **69**, 313, 324; **75**, 540, 616, 669.

Floods, control of, **98**, 2859; **04**, 2270.

Floods, control of, California, H. D. 81, 62d, 1st.

Floods, cure for, Mississippi River, H. C. D. 42, 61st, 2d.

Floods, effect of, **98**, 2864, 2878, 2887, 2893, 2894.

Floods, preventing, expensive, **98**, 2860.

Flowage, damages from, **00**, 2787.

Flowage, rights, **00**, 2790.

Forts. (See Forts, p. 1797 of this Index.)

Function of, **98**, 2845, 2878.

Gates, bear-trap; Lake Winnibigoshish, **01**, 2314.

Gates, Tainter; Lake Winnibigoshish, **01**, 2314.

Headwaters, Mississippi River, **01**, 2313.

Improvement, river; relation to, Mississippi River, H. D. 50, 61st, 1st.

Industrial purposes, **98**, 2852.

Irrigation, California, H. D. 262, 59th, 1st.

Irrigation for, **98**, 2852, 2864, 2878.

Leakage, **96**, 3965.

Locks at, **76**, 407.

Maintaining, cost, **98**, 2845.

Reservoirs—Continued.

Maintenance, factors affecting, **03**, 1530.

Mammoth Hot Springs, **02**, 3044.

Masonry dams, **98**, 2824.

Mississippi River, **94**, 1704; **98**, 2851.

Msta River, **98**, 2822, 2850.

Navigation and power interests opposed,

Minnesota River, H. C. D. 700, 62d, 2d.

Objections to, from adjacent land owners, **03**, 1530.

Ohio River, **98**, 2862.

Operation, Mississippi River, **06**, 1448.

Overflows, reservoirs not responsible for,

Mississippi River, H. C. D. 42, 61st, 2d.

Policy for future, headwaters of Mississippi River, **01**, 444.

Potomac River, **84**, 2321; **85**, 2469, 2478, 2496.

Precipitation, effect on arid regions, **98**, 2865.

Public lands, effect on, **98**, 2870.

Rainfall, Mississippi River, **94**, 1705; **96**, 1843.

Rights of U. S., and citizens or corporations, Mississippi River, **06**, 1455.

River improvement and, Tennessee River, H. D. 360, 62d, 2d.

River regulation, **07**, 2284.

Rivers, effect on, **97**, 2142; **98**, 2849.

Rivers, height of, augmenting, **00**, 3336.

Rivers, improvement of, **66**, iv, 263, 315; **69**, 323; **70**, 282; **73**, 499; **75**, 540, 564, 616, ii, 436; **76**, ii, 288; **79**, 1193, Ex. Doc. 39, 46th, 2d; **80**, 1590, 1601, 1659, 1952; **81**, 1761, 1765,

1770, 1809, 2742, 2747; **83**, 1455, 1463, 1472, 1475; **85**, 1747; **86**, 1502; **87**, 1667, 1675, 1686.

Rivers, sediment-bearing, effect on, Mississippi River, H. D. 50, 61st, 1st.

Rules and regulations, Mississippi River, **06**, 1447.

Russian, **98**, 2822, 2850.

Sediment deposits, **98**, 2823.

Sites (see Natural), **98**, 2822.

Sites, arid regions, **98**, 2819, 2821, 2842, 2869, 2872, 2877, 2878.

Sites, cavities, hydraulic mines, **94**, 3172.

Sites, depressions, **98**, 2822.

Sites, jurisdiction over, **98**, 2872, 2878.

Sites, lakes as, **98**, 2821, 2846.

Sites, open valleys, **98**, 2821.

Sites, streams, diversion, **96**, 3963.

Sites, surveys, methods, **98**, 2879.

Sites, title to, **98**, 2872, 2878.

Sites, Wyoming and Colorado, **98**, 2815.

Study of, arid regions, **98**, 2815.

Systems, development, arid regions, **98**, 2875.

Ternay, France, **98**, 2854.

Valleys, **98**, 2821.

Volga River, **98**, 2822, 2850.

Water storage, Mississippi River, **00**, 2798.

Water, stored; utilization of, Missouri River, **01**, 2400.

Water supply, District of Columbia, **96**, 3908.

Water supply, drinking, H. D. 342, 61st, 2d; **12**, 3466.

Water supply, locks, **76**, 407.

Reservoirs, Artificial.

98, 2849, 2852.

Rivers, **98**, 2849.

Reservoirs, Permanent.Character of, **98**, 2872.**Reservoirs, Storage.** (See Dams; Reservoirs, above; Rivers; Waterways.)

Cost and dimensions, of large storage reservoirs, H. D. 588, 62d, 2d.

Dams for, Ouachita system, H. D. 588, 62d, 2d.

Effect of, river depths, Ouachita system, H. D. 588, 62d, 2d.

Floods reduced by, Ouachita system, H. D. 588, 62d, 2d.

Navigation, improvement of, Ouachita system, H. D. 588, 62d, 2d.

Size, determining, Ouachita system, H. D. 588, 62d, 2d.

Spillways, Ouachita system, H. D. 588, 62d, 2d.

Revetments—Continued.

Building, **97**, 2703.
Muskegon Harbor, **99**, 2928.
Toledo, **78**, 1249.

Revetments, Standard.

Cost, Missouri River, **03**, 2440; **04**, 2318.

Revetment, Stone.

Stone replaced by concrete blocks, **02**, 1107.

Revetments, Timber.

Life short, Calcasieu River, **94**, 1373.

Rhine River.

Improvement, H. D. 1120, 60th, 2d.

Rice.

Cultivation of, pumping plant, Colorado River, H. D. 1211, 60th, 2d.
Rafts, removal of, opposed by rice planters, H. D. 1211, 60th, 2d.
Salt water from improved channels destroys rice plantations, H. D. 836, 61st, 2d.

Right of Way. (See Canals; Sites.) (See pl. 45.)

Deeds, **02**, 1638.
Describing and locating, canals, **98**, 2483.
Gaining, levees, **02**, 1638.
Procuring, method of, **02**, 1638.

Rights, Private.

Barrier to waterway improvement, Connecticut River, H. D. 818, 61st, 2d.

Rights, Water-Power. (See Rivers; Water Power; Waterways.)

Rental, Tennessee River, H. D. 360, 62d, 2d.

Rings. (See Mooring.)**Riparian Owners.**

Should construct sand-tight docks. (See Docks.)
Wharfage, interference with adequate, San Juan, P. R., H. D. 914, 59th, 1st.

Riparian Property.

Relation to waterway improvement (Bixby), Sen. D. 301, 61st, 2d.

Riparian Rights.

00, 4414.
Levees and, **01**, S., 299.
U. S. and State; Brief and Memo., Sen. D. 351, 61st, 2d.
Water power, in connection with, navigable streams, H. D. 781, 60th, 1st.

Riprap. (See Jetties; Revetments.)

Bank protection, Missouri River, **10**, 1826.
Breakwaters of, **93**, 932.
Breakwaters of, superiority of, **87**, 578.
Bridge piers, **75**, ii, 687.
Bulkheads, Jamaica Bay, N. Y., H. D. 1506, 60th, 2d.
Cribs, protecting, **69**, 108, 137, 142; **70**, 151; **76**, ii, 445.
Dams, sections, Allegheny River, **98**, 2206.
Dikes of, settlement, **88**, 539.
Foundations of, shell for, **88**, 1082.
Groins, **93**, 1654.
Handling, jetties, **97**, 1799.
Illinois and Mississippi Canal, **08**, 2020.
Jetties, deep-water, **91**, 3187.
Jetties, expense, items of, **92**, 1221.
Placing, plant for, **95**, 2227.

Riprap—Sheet-Pile.

Rock, vicinity of Duluth, **01**, 2883.
Sandstone, failure of, **01**, 2886.
Sea walls, Jamaica Bay, N. Y., H. D. 1506, 60th, 2d.
Sea walls, protection of, **05**, 3027.
Slopes of, breakwaters, **92**, 933, 934.
Steel sheathing not drivable through, **11**, 2363.
Structures, waves, effect of, **90**, 2320.

River and Harbor Improvements.

Appropriations, Federal and non-Federal, division, Sen. D. 301, 61st, 2d.
Appropriations, steps to be taken before making, Sen. D. 301, 61st, 2d.
Bank protection and, relation, Sen. D. 301, 61st, 2d.
Board of Engineers, increase of powers of, desirable, **11**, 35.
Commerce, favorable effect, **08**, 717.
Droughts, relation, Sen. D. 301, 61st, 2d.
Drainage, relation of, Sen. D. 301, 61st, 2d.
Dock ownership, relation of, Sen. D. 301, 61st, 2d.
Flood prevention, relation, Sen. D. 301, 61st, 2d.
Irrigation and, relation, Sen. D. 301, 61st, 2d.
Projects, adoption of, steps to be taken before, Sen. D. 301, 61st, 2d.
Protection and banks, Sen. D. 301, 61st, 2d.
Rates, freight, favorable effect on, **08**, 633, 525.
Riparian property and, Sen. D. 301, 61st, 2d.
Wharf ownership and, relation, Sen. D. 301, 61st, 2d.

Rivers. (See Banks; Bars; Channels; Contraction; Dams; Dikes; Discharge; Erosion; Floods; Freshets; Harbors; Niagara; Revetment; Streams; Walls; Water Power; Waterways.)

Affluent, effect of, **78**, 911.
Alignment and limit lines, controlling, Mississippi River, H. D. 50, 61st, 1st.
Alignment, Mississippi River, H. D. 50, 61st, 1st.
Bank heads, Missouri River, H. D. 1120, 60th, 2d.
Barge traffic on, **96**, 3060.
Barriers, spillway, Yuba River, **06**, 2078.
Barriers, use of, **05**, 2602.
Bars, Artificial; Brownlow weed for, **78**, 640, 654, **79**, 1014, 1054, 1058, 1061, 1077, 1080, 1088, — reservoirs for, **98**, 2849.
Basins, floods, Mississippi River, **95**, 3661.
Bluffs, course between, Missouri River, H. D. 1120, 60th, 2d.
Bodily movement, **79**, 1011.
Bridges, **80**, 1849; **81**, 2009; **82**, 1979; **83**, 1591; **84**, 1769; **85**, 1917; **86**, 2111; **87**, 2613.
Bridges, collisions with, losses from (see Ohio River, River and Harbor Index), **97**, 2333.
Canalizing, plans for, **00**, 3164.
Changes, surveys compared, Connecticut River, H. D. 231, 58th, 3d.
Check dams, advantages, **93**, 2355.
Closing of, logs, **79**, 896.
Conditions, North America rivers, S. D. 215, 59th, 2d.

Rivers—Continued.

 Yellow banks in, protection of, **95**, 2184.

Rivers, Alluvial.

Regimen; reservoirs, effect of, **98**, 2893.

Rivers, Banks of.

Abrasion of, **75**, ii, 498.

Caving of, **75**, ii, 519.

Caving of, falling stages, **72**, 436; **78**, 615.

Caving of, Mississippi River, **75**, 558, 608; **78**, 841; **79**, 976, 979.

Cultivation, changes due to, **78**, 846.

Dams and, **68**, 448.

Dams, effect of, **73**, 232.

Erosion, preventing, **96**, 1777.

Height of, difference in, **79**, 1009.

Peculiar caving of, Red River of the North, **78**, 730.

Protecting, piles and brush for, **96**, 1400.

Protection, Mississippi River, H. D. 50, 61st, 1st.

Rectifying, **72**, 839; **76**, ii, 279, 285; **78**, 255.

Rectifying, effect of, **76**, ii, 408.

Rectifying, Garonne River, **72**, 839; **76**, ii, 279.

Saving, by regulating private dredging, **12**, 2340.

Slopes, improvement, consistency with, **76**, 374, ii, 284.

Rivers, Bars of.

Blasting of, **70**, 334.

Causes, freshets, **76**, ii, 541.

Causes, storms, **68**, iii; **77**, 967.

Floods, effect of, **75**, ii, 477, 507; **79**, 1010.

Forming of, **72**, 108, 132, 139, 142; **74**, 804, 863, 865; **75**, 959, ii, 457, 474, 476, 477, 484, 502, 504; **76**, 449.

Forming of, Connecticut River, **78**, 267.

Forming of, Mississippi River, **74**, 804, 863, 865; **75**, 959, 967, 979; **76**, ii, 179; **78**, 842; **79**, 1010, 1892, 1967.

Forming of, opposing tides, confluence of, **74**, ii, 35.

High water, effect of, **72**, 132.

Length, Mississippi River, **78**, 841.

Motion of, wavelike, **75**, ii, 502, 504, 507; **76**, 449; **79**, 1751, 1757, 1759, 1892, 1967.

Origin, Mississippi River, **83**, 2373.

Progressive motion, **75**, ii, 477, 484; **76**, ii, 179, 256, 402.

Removing, water jet for, **68**, 671; **69**, 310; **79**, 383, 384.

Sparring boats over, **68**, 628.

Rivers, Basins of.

Draining, California, H. D. 262, 59th, 1st.

Rivers, Beds of.

Ancient beds, Great Lakes, H. D. 769, 62d, 2d

Ancient, Mississippi River, **75**, ii, 497.

Changes, **68**, 307, 760; **75**, 542, 549.

Changes, Connecticut River, **68**, 760.

Changes, ice, due to, **80**, 1771; **82**, 695.

Characteristics, Christiana River, **96**, 986.

Controlling elements and, relation between, **00**, 2489.

Crevasses, effect of, **91**, 3465.

Elevation of, no progressive elevation, Mississippi River, **12**, 3715.

Erosions, **96**, 3484.

Excessive depth, Potomac River, **83**, 781.

Rivers, Beds of—Continued.

Explosives on, placing, **93**, 1119.

Exposure of, **98**, 1952.

Filling of, causes, **68**, 307.

Floods, effect of, **98**, 2902.

Holes in, Tennessee River, **97**, 2249.

Levees, effect of, **90**, 3093, 3105.

Levees, effect, Mississippi River, **12**, 3715.

Mississippi River, **75**, 549.

Profile, Mississippi River, H. D. 50, 61st, 1st.

Protecting, mat carpet for, **79**, 876.

Rising of, Big Sandy, **95**, 2499.

Rising of, floods, causes of, **00**, 4553.

Rising of, high water, **75**, ii, 477.

Rising of, Mississippi River, **00**, 4553.

Rising of, movable dams, effect of, **96**, 2312.

Sand movement of, **69**, 601; **75**, ii, 502, 504; **79**, 1751, 1757, 1759, 1760, 1892, 1967.

Waves, **81**, 1579, 1653; **83**, 2195, 2197, 2210, 2216, 2224, 2230 **85**, 569 **87**, 1351.

Rivers, Bends.

Convex sides, deep water, effect of, Red River of the North, **79**, 1192.

Current velocity, effect, **75**, 575; **76**, ii, 265.

Depths, effect on, **79**, 1008.

Protecting, methods proposed, Savannah River, H. D. 962, 60th, 1st.

Regimen, effect on, **75**, 575, ii, 488; **76**, 296, ii, 265.

Revetment advisable, Mississippi River, **07**, 2624.

Rivers, Bottoms.

Changes, mouth region, Mississippi River, **05**, S., 42.

Mississippi River, H. D. 50, 61st, 1st.

Profile, St. Johns River, H. D. 611, 61st, 2d.

Protection, mat carpet, **78**, 616; **79**, 876.

Rising of, ground sills suggested, **98**, 1411.

Stability, Hudson River, H. D. 719, 62d, 2d.

Tester, **88**, 931.

Rivers, Canalized.

01, 2504, 2764.

Black and Ouachita Rivers, **00**, 2560.

Cost, etc., abroad and in U. S., **02**, 1753.

Improvement of rivers, **01**, 2568.

Lock and dam, additional, cost, Cumberland River, H. D. 1481, 60th, 2d.

Locks and dams, reducing number proposed, Cumberland River, H. D. 758, 60th, 1st.

Methods of making, Cumberland River, H. D. 758, 60th, 1st.

Mississippi River, H. D. 50, 61st, 1st.

Overflowage, claims for, Cumberland River, **11**, 2031.

Plans, **00**, 3164.

Plans, waterway, Lockport to St. Louis, H. D. 263, 59th, 1st.

Plant, floating, required, **05**, 1772.

Problems, **11**, 1831.

Progress, increasing, **11**, 1831.

Rights of U. S., Connecticut River, canalized by company, H. D. 1311, 60th, 2d.

Value of, Connecticut River, H. D. 231, 58th, 3d.

Rivers, Central.

Commercial history, H. D. 510, 61st, 2d.

Rivers, Channels.

Comparison, New Orleans, 1874-1894, **95**, 3669.
 Contraction, **00**, 4272.
 Deepening of, **96**, 975; **00**, 4434.
 Development, California, H. D. 262, 59th, 1st.
 Dredged, **68**, 60, 669; **69**, 460.
 Filling of, sewage, **95**, 2707.
 Maintenance of, **98**, 2697.
 Maintenance of, suitable type of hydraulic dredge, Savannah, H. D. 962, 60th, 1st.
 Movement, **03**, 2278, 2305.
 Permanent channels, securing, Missouri River, H. D. 1287, 61st, 3d.
 Rectification of, **72**, 839; **76**, ii, 279, 285, 408; **78**, 255.
 Thirty-foot, maintaining, Delaware River, **98**, 1111.
 Width, mathematical computation of, **00**, 3034.
 Wing dams for securing, cheaper than canalization, Mississippi River, H. D. 341, 59th, 2d.

Rivers, Chutes.

Closing dams, **93**, 3523; **96**, 1870.
 Closing dams, settlement, **96**, 1887.
 Use of, **81**, 1935, 1943, 1980.

Rivers, Commerce.

Decline of, helped by neglect of terminals, Missouri River, H. D. 1120, 60th, 2d.
 Future, probable, study, Ohio River, H. D. 492, 60th, 1st.
 Growth, Cumberland River, H. D. 758, 60th, 1st.
 Hudson River (Merchant), Sen. D. 301, 61st, 2d.
 Improvement, waterway, benefited by, Missouri River, H. D. 1287, 61st, 3d.
 Railroads, influence of, Missouri River, H. D. 1120, 60th, 2d.
 Various rivers, H. D. 492, 60th, 1st.

 Velocities of, sediment, effect of, **75**, ii, 477.
 Velocities of, Tennessee River, **93**, 2366.

Rivers, Cut-offs.

Danger from, **71**, 381; **75**, 540.
 Dutch Gap, **76**, 292.
 Effect of, injurious, **72**, 435; **73**, 645; **75**, 540, **79**, 899.
 Forming of, **70**, 376; **75**, ii, 499, 507.
 Inadvisability of, **96**, 1578.
 Shortening by, estimates, Leipsic River, H. D. 574, 61st, 2d.

Rivers, Deposits in.

Backwater, effect of, **97**, 1967.
 Rate of, **98**, 2623.

Rivers, Depths.

Crevasses, effect on, **91**, 3473.
 Forests, destruction, effect of, **75**, ii, 172; **79**, 1211.
 Maintenance, Savannah, **09**, 1323.
 Reduction of, sediment, deposition of, **75**, 548, ii, 171.
 Restriction by, tunnels, **97**, 2796.
 Surface indications, **98**, 3168.
 Velocity and, relations, **76**, 451.

Rivers, Discharge of.

76, ii, 268.
 Formula for, **68**, 966; **76**, ii, 274, 277; **77**, 745, **78**, 531, 562.
 Formula for, Humphrey's and Abbot's, **76**, ii, 246, 275.
 Measuring, St. Marys River, **97**, 4092.
 Minimum and maximum, relation of, **98**, 2847, 2849.
 Mississippi River, **97**, 3652; H. D. 50, 61st, 1st.
 Missouri River, **94**, 1743.
 Observations, Mississippi River, **12**, 3844.
 Section, effect of, **69**, 589.
 Sluices, through, **75**, ii, 610; **77**, 745.
 Stage and, effect of, **00**, 5383.
 Study, Great Lakes watershed, H. D. 779, 61st, 2d.
 Wind, effect of, **00**, 5383.
 Winter, **02**, 2822.
 Wyoming, **98**, 2911.

Rivers, Diversion of.

Maintenance of channels and cost, Appomattox River, H. D. 952, 60th, 1st.

Rivers, Entrances of.

Sand movement, **03**, 2284.

Rivers, European.

Improvement of, large benefit from, H. D. 1120, 60th, 2d.

Rivers, Floods of.

88, 1026; **90**, 1373, 1487, 1489; **91**, 1105, 3413.
 Causes, river bed, raising of, **00**, 4553.
 Combinations of, **98**, 2853, 2887.
 Control of, Puyallup River, H. D. 1107, 60th, 2d.
 Control of, relief, opening, Mississippi River, **95**, 3894.

Rivers, Floods of—Continued.

- Control of, reservoirs for, Loire River, **98**, 2859.
- Crevasse, effect of, **00**, 4554.
- Discharge, California, H. D. 262, 59th, 1st.
- Diversion, canal for, California, H. D. 262, 59th, 1st.
- Effect of, **95**, 2183; **98**, 1653.
- Effect, Mississippi River, **12**, 3714.
- Excessive, relief from, plans, Mississippi River, **95**, 3649.
- Heights of, basins, effect of, **95**, 3661.
- Lessening by diversion, Minnesota, H. D. 493, 60th, 1st.
- Locks and dams, effect of, **00**, 2985.
- Flood waters, controlling, **95**, 3639.

Rivers, Flow of.

- Concentration of, jetties for, **97**, 2016.
- Concentration of, temporary, **97**, 2016.
- Diagramming, Tennessee River, H. D. 781, 60th, 1st.
- Irregularities, **98**, 2845.
- Resistance to, measure of, increased slope used, **95**, 3663.
- Uniformity of, **98**, 2845, 2846.

Rivers, Great Lakes.

- Regimen, study of, **04**, 3803.

Rivers, Improvement of.

- Adam's flume, doubtful value of, **93**, 2202.
- Barriers for, **04**, 3700.
- Bridges, where there are many, Hackensack River, H. D. 643, 61st, 2d.
- Brownlow weed for, **77**, 500; **78**, 640, 654; **79**, 1014, 1054, 1058, 1062, 1070, 1077, 1088.
- Brush mats, **72**, 144; **76**, 574, 641, 653, 678-ii, 404, 619; **77**, 484; **78**, 624, 640, 654; **79**, 737, 977, 1030, 1052, 1061, 1074, 1080.
- California Débris Commission, improving and protecting rivers, **04**, 3700.
- Canals, lateral, **97**, 2251.
- Canals, lateral, improving rivers with, Mississippi River, H. D. 50, 61st, 1st.
- Commercial factors, Coosa River, **05**, 1388.
- Contraction, limitation of, **96**, 1699.
- Cost per mile, Missouri River, H. D. 1120, 60th, 2d.
- Cut-offs, great advantages from, Mississippian River, H. D. 678, 62d, 2d.
- Dams, check and longitudinal, advantages of the former, **93**, 2355.
- Deposits, rate of, Savannah, **09**, 1324.
- Detached operations, defects of, Missouri River, H. D. 1120, 60th, 2d.
- Deterioration of improvement, Ohio River, **00**, 3096.
- Dikes, structures to displace, **98**, 3473.
- Engineering methods, **98**, 2845.
- Greatest slopes consistent with, **76**, 374, ii, 284.
- Ground sills, **98**, 1411.
- High-water discharge, **98**, 1748.
- Jetties for, Holland, **80**, 1271.
- Levees, value of, **83**, 2148.
- Locks and dams, **00**, 2349.
- Locks and dams, improvement by, **01**, 2568.
- Low-water discharge, **98**, 1748.
- Material, cost. (See Mississippi River, p. 1067 of this Index.)

Rivers, Improvement of—Continued.

- Methods, **93**, 2476; **00**, 2349; **01**, 2763; H. D. 301, 61st, 2d.
- Methods Sen. D. 301, 61st, 2d.
- Methods, Connecticut River, H. D. 1294, 61st, 3d.
- Methods, crooked and narrow streams, **01**, 1660.
- Methods, engineering, **98**, 2845.
- Methods, incompatible, **98**, 1748.
- Methods, streams filled with mining debris, Sacramento River, H. D. 1123, 60th, 2d.
- Movable dams for, **75**, 688, ii, 613, 630; **76**, 624, ii, 25.
- Permanent dams for, **74**, 285, 286, 287, 288, 289; **75**, ii, 612; **76**, 624; **77**, 746.
- Plant, cost of repairs in detail, **01**, S., 278.
- Private work, aid from U. S., H. D. 781, 60th, 1st.
- Reservoirs, **66**, v, 263, 315; **69**, 323; **70**, 282; **73**, 499; **75**, 540, 584, 616, ii, 436; **76**, ii, 288; **79**, 1193; Ex. D. 39, 46th, 2d; **80**, 1590, 1601, 1659, 1952; **81**, 1761, 1765, 1770, 1809, 2742, 2747; **83**, 1455, 1463, 1472, 1475; **85**, 1747; **86**, 1502; **87**, 1667, 1675, 1687.
- Reservoir system recommended for Minnesota River, H. D. 700, 62d, 2d.
- Rights of the U. S., Fox and Wisconsin Rivers, **98**, 2353.
- Slopes, consistency of, **76**, 374, ii, 284.
- Trailing dams, favorable results, **98**, 1788.
- Transportation, effect on, **87**, 1921, 2116.
- Transverse jetties for, **76**, ii, 406.
- Water power an interference, Merrimac River, H. D. 2, 61st, 1st.
- Works, condition after years, Missouri River, H. D. 1120, 60th, 2d.
- Works, location of, considerations governing, **01**, 2765.

Rivers, Inland.

- Navigability of Ohio River, for 10 years, **12**, 2223.

Rivers, Long.

- Dredging plant needed for, **05**, 1803.
- List of, H. D. 91, 62d, 1st.

Rivers, Mouths of.

- Bars, advance of, Mississippi River, **68**, 483; **70**, 322; **74**, 835, 855; **75**, ii, 477, 484; **77**, 429, 430.
- Changes in, Pacific coast, **93**, 3354.
- Channels, maintaining, **03**, 2298.
- Channels, movement, **03**, 2230.
- Closure of, discussion, St. Andrews Bay, H. D. 12, 61st, 1st.
- Dredges and jetties, combination required, Columbia River, H. C. D. 2, 59th, 2d.
- Forming of, **68**, 111; **72**, 242, 244; **73**, 335; **75**, 311, 967; **77**, 967.
- Forming of, Mississippi River, **66**, iv, 236; **67**, 376; **70**, 330; **74**, 835, 855; **75**, 959; **77**, 431.
- Forming of, St. Johns River, **78**, 582, 585.
- Growth of, **00**, 2290.
- Movement, control of, dikes for, **96**, 1907.
- Deepening, methods, **97**, 1840.
- Dikes, effect of, **75**, 949.

Rivers, Mouths of—Continued.

- Improvement, jetties, **75**, 980.
- Improving, jetties, Brazos River, **75**, 938.
- Jetties, **03**, 2300.
- Jetties at, benefit of, **93**, 3489.
- Jetties at, Rhone River, **75**, 965.
- Mississippi River, mouth, **74**, 833, 878; **75**, 951, 953, 980.
- Mud lumps, forming of, Mississippi River, **77**, 431.
- Shoaling, **80**, 1138; **81**, 1263; **82**, 1329; **83**, 1041; **84**, 1243; **85**, 1386; **86**, 1235; **87**, 1355.
- Shoals, causes, **97**, 3310.

Rivers, Narrow.

- Obstructed by bridge piers, Chicago River, **11**, 2352.

Rivers, Nontidal.

- Improving, **00**, 3022, 3028.

Rivers, Obstructions of.

- Bridges, **97**, 2796.
- Civil War, **75**, 874; **76**, 330.
- Dredging and, injury to harbors, **75**, 287.
- Hyacinths, **97**, 1754.
- Logging, **99**, 1604.
- Numerous, Chicago River, **93**, 2795.
- Removing, methods, **98**, 1945.
- Tides, effect, **74**, ii, 50, 156.
- Tunnels underneath rivers, **97**, 2796.

Rivers, Outlets of.

- Data, index to, Mississippi River, **95**, 3710.
- Restricting, **95**, 3640.

Rivers, Overflow of.

- Causes, levees, Mississippi River, **95**, 3644.
- Comparison of, Mississippi River, **97**, 3710.
- Lawsuits, **95**, 3644.
- Preventing, successful, Mississippi River, **95**, 3625.

Rivers, Planes of.

- Correction, proposed; Mississippi River, **09**, 1603.
- Details, Mississippi River, **09**, 1608.
- Raising, Mississippi River, **09**, 1609.
- Slopes and low-water plane, study of, Mississippi River, H. D. 50, 61st, 1st.

Rivers, Regimen of.

- Changes, Missouri River, **96**, 3823.
- Elements, Southwest Pass, **99**, 1887.
- Observing, methods, **04**, 3176.

Rivers, Regulation of.

- 01**, 2504.
- Canals, by drainage, H. D. 262, 59th, 1st.
- Channel design, mathematical computation of, **02**, 1750.
- Cost of, Missouri River, **11**, 2004.
- Cost of, U. S. and foreign, **02**, 1753.
- Dams as a factor, **03**, 1501.
- Dredging, training walls and, experimental work, Savannah, **08**, 1328.
- Experiments, from ocean bar upward, Savannah, **08**, 1328.
- Means, **00**, 3036.
- Methods, **01**, 2557.
- Mississippi River, H. D. 50, 61st, 1st.
- Pass system, California; H. D. 262, 59th, 1st.
- Reservoir system, investigation, **07**, 2264.

Rivers, Regulation of—Continued.

- Storage dams for, **07**, 2265.
- Storage study, Red River of the North, H. D. 616, 62d, 2d.
- Systems of, **00**, 3036.
- Works, types of, Missouri River history, H. D. 1120, 60th, 2d.

Rivers, Sand-Bearing.

- Dikes, proper arrangement, **72**, 139.
- Improving, discussion, **75**, ii, 511; **79**, 1008, 1051, 1173.

Rivers, Scour of.

- Hurdles for, Mississippi River, **94**, 1594.
- Logs cause of, **74**, 202.

Rivers, Sediment in.

- Arrest of, Brownlow weeds for, **78**, 640, 654.
- Channels, obtaining, locks and dams of doubtful value, Mississippi River, H. D. 50, 61st, 1st.
- Christiana River, **96**, 988.
- Deposits, large, Missouri River, **96**, 1723.
- Impounding of, **95**, 3337.
- Missouri River, H. D. 1120, 60th, 2d.
- Observations, **96**, 1241.

Rivers, Shallow.

- Improvement of, dissatisfaction with, overloaded boats true cause, **99**, 3037.
- Improvement of, jetties for, **72**, 139; **76**, ii, 399.
- Improvement of, planning for, **93**, 2334.
- Steamboats, proper loads, **95**, 2282.
- Traffic on, profit from, how obtained, **95**, 2282.

Rivers, Silting.

- 04**, 3803.
- Missouri River, greatest silt-bearing river, H. D. 1120, 60th, 2d.
- Problem (Stabler), Kaw River, H. D. 94, 62d, 1st.

Rivers, Slopes of.

- 94**, 1582.
- Changes, Mississippi River, **96**, 1724.
- Columbia River, **93**, 3383.
- Data, index to, Mississippi River, **95**, 3712.
- Determining, Mississippi River, **79**, 1928.
- Mississippi River, **98**, 3217; **00**, 4742, 4752.
- Missouri River, H. D. 1120, 60th, 2d.
- Surface slopes, St. Johns River, H. D. 611, 61st, 2d.
- Tombigbee River, **96**, 1440.

Rivers, Tidal.

- Bar formation, **67**, 421.
- Bridges, requirements of, **96**, 987.
- Dredging difficult, **72**, 875; **78**, 407.
- Improvement of, **66**, iv, 207.
- Jetties, effect of, **71**, 749, 750, 751; **72**, 830; **76**, 477; **78**, 551, 558; **85**, 681.

Rivers, Western.

- Dams and construction details, **01**, 2768.

Roads. (See pl. 67.)

- Bridges over, Yellowstone Park, **02**, 3034.
- Bridges, types, **03**, 2456.
- Building, forts. (See p. 1797 of this Index.)
- Building, Mount Rainier Park, **04**, 4207; **09**, 2514.
- Building, Yellowstone Park, **03**, 2444.

Roads—Continued.

- Care, details, **04**, 3735.
- Chipmunks, cleaned by aid of, **03**, 2466.
- Construction and maintenance, costs of, Dis-
trict of Columbia, **12**, 3459.
- Construction, details, **03**, 2456.
- Control of, forts, **02**, 653.
- Cross sections, **04**, 3734.
- Culverts, **03**, 2458.
- Details, costs, **11**, 2937.
- Gradients, **03**, 2453.
- Levees, use of, **00**, 4862.
- Machinery for, Philippines, **01**, 966.
- Maintenance, **03**, 2461.
- Oil as a builder, **02**, 2561.
- Oiling, methods, **02**, 2564; **03**, 2463.
- Oil treatment, etc., cost, District of Columbia,
11, 2974.
- Parks, National, **08**, 2554.
- Parks, National; proper types for, **05**, 2816.
- Parks, Washington, D. C., **10**, 2671.
- Philippines, **03**, 2478.
- Plans, Yellowstone National Park, **00**, 5441.
- Roller for, **04**, 3733, 3738.
- Sprinkling, **03**, 2462; **02**, 3037.
- Surfaces, best style, **05**, 2814.
- Surfacing, **03**, 2459.
- Surveys, methods, Alaska, H. D. 192, 58th, 3d.
- Types, Yellowstone Park, **03**, 3034.
- Walls, retaining, **03**, 2454.

Roads, Mountain.

- 03**, 2466.
- Estimates, etc., Mount Rainier Park, H. D.
283, 58th, 3d.

Roads, Wagon.

- Aided by U. S., H. D. 781, 60th, 1st.
- Estimates, Alaska, H. D. 192, 58th, 3d.
- Parks, National, Yellowstone, H. D. 502,
60th, 1st.
- Surveying, **05**, 2839.

Rock. (See Beds; Breakwaters; Drilling; Em-
bankment; Enrockment; Excavation; Jet-
ties; Riprap.) (See plates.)

- Accounts, keeping, **93**, 1500.
- Ballast, cribs, **99**, 2634.
- Borings in, methods, jet drill, **00**, 2769.
- Breaking, chisel boats, **67**, 267; **68**, 422, 434,
436; **69**, 237; **71**, 164, 269; **72**, 330, 331; **74**,
314; **76**, 661; **77**, 544; **78**, 708.
- Brush and, river regulation, **12**, 2158.
- Chiseling, machine for, **94**, 812.
- Cleaning, water jet for, **81**, 657, 2507.
- Cubical blocks, resistance to overturning, **01**,
2884.
- Dredging, **71**, 164; **72**, 804; **73**, 776; **74**, 33,
ii, 41; **77**, 229; **78**, 800, 1136.
- Dredging, cost of, **72**, 804; **77**, 229; **78**, 800,
1136; **04**, 2183.
- Débris, dredging, difficult, **95**, 925.
- Delivery of, jetties, **00**, 4242.
- Depth to, Mississippi River, **78**, 918, 1058.
- Distribution, jetties, Charleston Harbor, **95**,
1424.
- Drilling, Arch Rock, San Francisco Bay, **01**,
3412.
- Dumping, jetties, **96**, 3253.

Rock—Continued.

- Excavated, measurement, scow displacement,
68, 424.
- Excavating, channels, **96**, 2224.
- Excavating, concrete batteries, **99**, 697, 701.
- Excavation, cost and methods, Rock Island
Rapids, **05**, 1633.
- Excavation, Mississippi River, **99**, 2137.
- Foundations of, Falls of St. Anthony, **79**, 1161.
- Foundations of, jetties, **00**, 4245.
- Gravel and, crib better than, piers, **98**, 1761.
- Hand drilling, **76**, ii, 663.
- Hand drilling, Detroit River, **77**, 935.
- Hand drilling, rate by, **68**, 425.
- Handling, jetties, **94**, 2567.
- Jetties. (See Jetties.)
- Large, San Francisco Harbor, **98**, 2924.
- Measurements, prism and scow, relation be-
tween, **75**, 326; **77**, 239; **78**, 1136.
- Obtaining, cost of, Aransas Pass, H. D. 639,
61st, 2d.
- Placing, rock jetties, **99**, 3185.
- Placing, tramway for jetties, **94**, 2544.
- Quarrying, **96**, 1876; **99**, 2129.
- Small rock preferable to mattresses, jetties,
00, 4245.
- Softening of, cause of, air exposure, **99**, 1426.
- Soundings, over, **72**, 867.
- Stability, in different forms, **01**, 2884.
- Test of, jetties, **96**, 3217.
- Unloading, with scrapers, **02**, 2494.
- Various explosions, effect on, **68**, 91; **73**, 776
77, 355.
- Various sizes, wave resistance of, **93**, 3502.
- Weight of, tests, Duluth Harbor, **99**, 2634.
- Wood instead of, advantages, breakwaters,
93, 3202.

Rock, Bed.

- Depths to, bridge foundations, **78**, 918, 1059.
- Mississippi River, H. D. 50, 61st, 1st.

Rock Bottom.

- Piles, securing, **82**, 2137.

Rock, Broken.

- Dredging, **94**, 1847.
- Explosives and, ratio, blasting, **68**, 423, 425;
69, 19, 248; **71**, 733; **72**, 877; **73**, 935; **74**;
ii, 39, 160; **75**, ii, 82; **76**, ii, 326, 545; **77**, 352,
79, 61, 62, 379, 533, 535, 1135, 1508.

Rock, Pinnacle.

- Underwater, method of blasting, **01**, 3483.

Rock, Removal of. (See Blasting; Chisel Boats;
Chiseling; Drilling.)

- 88**, 604, 764; **89**, 2547; **90**, 2051; **92**, 882, 1746,
1788, 1804, 2021.
- Ahnapee, **76**, ii, 346, 356, 360; **79**, 1507; **80**,
1912; **83**, 1680, 1681.
- Appomattox River, **78**, 465.
- Ashtabula River, **70**, 179.
- Bath, Me., **71**, 845.
- Blast hole, depth of; and effect, **01**, 1433.
- Blasting and drilling methods, **01**, 1427.
- Blasts, surface, effect of, **71**, 924.
- Blossom Rock, **68**, 883; **69**, 485, 488, 491, 493;
70, 510; **71**, 905, 923.
- Broken, solid and, ratio, **86**, 685.
- Bulkhead, used ore in bags, **99**, 3279.

Rock, Removal of—Continued.

Canals, cofferdam, **94**, 1932.
 Chisel boats, **68**, 422, 434, 436.
 Chiseling machine, **94**, 812.
 Cofferdams for, **85**, 1753; **86**, 1450, 1461.
 Cofferdams for, Des Moines Rapids, **69**, 225; **76**, 657, 660.
 Cofferdams for, Hell Gate, **70**, 434.
 Cofferdams for, Kanawha River, **77**, 299, 301; **78**, 468.
 Cofferdams for, Rock Island Rapids, **67**, 295; **68**, 421, 437; **69**, 238, 243, 249; **74**, 312; **77**, 543.
 Cofferdams for, use of, **69**, 491; **71**, 926.
 Columbia River, **72**, 997; **76**, ii, 663; **80**, 2293, 2295; **83**, 2051; **84**, 2255; **85**, 2436; **87**, 2482.
 Cost, **91**, 2796; **92**, 801, 1999, 2271.
 Cost, Appomattox River, **78**, 466.
 Cost, Ashtabula, Ohio, **70**, 180; **76**, ii, 563.
 Cost, Blossom Rock, Cal., **71**, 905, 924.
 Cost, Boston Harbor, **77**, 184; **78**, 217.
 Cost, Detroit River, **76**, ii, 544; **77**, 936.
 Cost, Dunkirk, N. Y., **74**, 226.
 Cost, Eagle Harbor, Mich., **69**, 72, 76; **70**, 91; **78**, 1133, 1138.
 Cost, East River, **69**, 55.
 Cost, Falls of the Ohio, **70**, 386; **78**, 770.
 Cost, Georgetown Harbor, D. C., **78**, 508.
 Cost, Hallets Point, **77**, 227, 239.
 Cost, Harlem River, **76**, 55, 245.
 Cost, Hell Gate, N. Y., **68**, 728; **69**, 55, 391; **76**, 238, 241.
 Cost, James River, **76**, 292; **77**, 286.
 Cost, Kennebunk River, **72**, 930.
 Cost, Muscle Shoals, **72**, 494; **78**, 757.
 Cost, New Haven, Conn., **71**, 770, 774.
 Cost, New River, Va., **78**, 499.
 Cost, Oak Orchard, Ohio, **75**, 328.
 Cost, Rock Island Rapids, **69**, 247; **71**, 264; **290**; **72**, 332; **74**, 312, 315; **76**, 661, 668; **78**, 709; **79**, 1132.
 Cost, St. Marys Canal, **71**, 163.
 Cost, Sullivan River, Me., **71**, 835.
 Cost, Umpqua River, Oreg., **72**, 986.
 Cost, various years, **00**, 2702.
 Cost, Vermilion Harbor, Ohio, **75**, 299.
 Daily amount, chisel boats, **74**, 314; **78**, 709; **79**, 1134.
 Delaware River, **81**, 753; **83**, 608.
 Des Moines Rapids, **67**, 280; **69**, 220; **76**, 658; **80**, 1556, 1557; **82**, 1780.
 Detroit River, **76**, ii, 543; **77**, 935; **80**, 2081, **81**, 2277; **82**, 2374; **85**, 2166; **86**, 1343; **87**, 2267.
 Diamond drills, **69**, 388; **71**, 725; **72**, 803; **73**, 776, 935; **74**, ii, 39, 42.
 Diamond drills, steel and, comparison, **72**, 803.
 Dredging without drilling, **71**, 164.
 Drilling, blasting, and chiseling, comparison, **79**, 1134.
 Drilling, cost, small when compared with other items, **68**, 738.
 Drill scow, **94**, 1846.
 Drills, arrangement of, Rock Island Rapids; **79**, 1135.

Rock, Removal of—Continued.

Drills, comparison, **72**, 803, 877; **73**, 777, 935; **75**, ii, 252.
 Drills, experiments, Hallets Point, **75**, ii, 204.
 Drills, experiments, Hell Gate, **76**, 238.
 Drills, steel for, experiments, **75**, ii, 204.
 Eagle Harbor, Mich., **76**, ii, 323; **77**, 845; **78**, 1133.
 East River, N. Y., **67**, 499; **69**, 55; **72**, 802, **73**, 934; **78**, 413.
 Even bottom, obtaining, Rock Island Rapids **76**, 668.
 Explosives, small charges, **95**, 925.
 Falls of the Ohio, **70**, 386; **78**, 770.
 Flotation, Boston Harbor, **70**, 465.
 Flotation, Taunton River, **74**, ii, 222.
 Georgetown Harbor, D. C., **77**, 351; **78**, 508; **84**, 967.
 Handwork, **00**, 4496.
 Hell Gate, **68**, 728, 732; **69**, 388; **70**, 433; **71**, 723; **74**, ii, 160; **75**, ii, 209; **76**, 238; **80**, 499-504; **81**, 621-628; **82**, 651, 653; **83**, 533-540; **85**, 715-723; **86**, 676-690; **87**, 691.
 Inspection of, methods, **98**, 2751.
 James River, **73**, 776; **80**, 650; **81**, 863; **85**, 951.
 Kanawha River, **77**, 299, 301; **78**, 468.
 Lime Point, Cal., **68**, 20; **69**, 19.
 Methods, **93**, 1013, 2378; **98**, 1914, 2751; **99**, 3529; **00**, 1997, 3677.
 Methods, Kootenai River, **99**, 3279.
 Methods, novel, Boston Harbor, **70**, 465.
 Methods, percussion, **94**, 812.
 Mines, exploding, batteries, arrangement of, **77**, 237.
 Narragansett Bay, **81**, 558.
 New Haven, Conn., **68**, 751; **70**, 445; **72**, 876; **74**, ii, 260.
 New River, Va., **78**, 496, 499.
 New River, W. Va., **80**, 681; **81**, 908.
 Night work, **94**, 1932.
 Noonday Rock, Cal., **75**, ii, 719.
 Oak Orchard, Ohio, **74**, 245.
 Ohio River, **99**, 2549.
 Percussion, **94**, 812.
 Plane, definite, working to, difficulty of, **69**, 246.
 Portsmouth, N. H., **81**, 501; **82**, 505.
 Providence River, R. I., **71**, 733.
 Red River, **85**, 1484.
 Rincon Rock, San Francisco Harbor, **73**, 1137; **74**, ii, 371; **75**, ii, 694.
 Rock Island Rapids, **80**, 1536; **86**, 1452-1461.
 St. Marys River, Mich., **85**, 2103; **87**, 2240.
 Shafts and galleries, Hallets Point, **69**, 391; **75**, ii, 200; **77**, 228, 232; **79**, 61, 378, 384.
 Site, sweeping, **96**, 4063.
 Steam drills, Gardiner's patent, failure, **68**, 422.
 Tennessee River, **72**, 494; **76**, 711; **78**, 757.
 Tower Rock, Mass., **68**, 811.
 Willamette, Oreg., **80**, 2276-2288.

Rocks.
 Western Lake Superior, **01**, 2887.

Rocks, Submerged.
 Surveying, method of, **01**, 1017.

Rock, Trap.Specific gravity, **78**, 1136.**Rock Waves.**Nitroglycerin, explosion from, **77**, 233.**Rockwork.** (See Breakwater; Canals; Jetties;
Quarries.) (See pls. 46, 49, 50, 51, 55, 57.)**Rods.** (See Levels.)Bear-trap sluice gates, **07**, 1580.Lengths of, precise levels, **93**, 3961; **96**, 1955.**Rods, Locking.**Concrete piers, **04**, 3802.**Rods, Tie.**Holes for, concrete piers, **05**, 1987.**Roller Paths.**Setting gun carriages, **95**, 515.**Rollers.**Roads, **04**, 3733.**Roofing.**Buildings, steel, **04**, 3843.

Forts. (See p. 1797 of this Index.)

Rope, Wire.Tests, **92**, 491.**Routes.** (See Rail.)Commerce, factors governing, Nantucket
Sound, H. D. 536, 62d, 2d.Surveys, Atlantic coast canals, H. D. 391,
62d, 2d.**Routes, Inside.**Waterways, coastal; economic value of, H. D.
1236, 60th, 2d.**Routes, Rail and Water.**

Cooperative necessity, H. D. 769, 62d, 2d.

Routes, Traffic.

Great Lakes, H. D. 769, 62d, 2d.

Routes, Transportation.

World routes, map, H. D. 492, 60th, 1st.

Rubble Mounds. (See Breakwaters; Dikes;
Jetties.)Building, breakwaters, **98**, 2767.Jetties, **04**, 3216.Sandstone as finish, breakwaters, **12**, 2466.**Rubblestone Heating.**Breakwaters, concrete superstructure, **99**, 3098.**Rubblework.** (See pl. 59.)**Run-off.** (See Meteorology.)Arid regions, **98**, 2875.Calculating, method of, **02**, 1765.Forests and stream flow, Merrimac River,
H. D. 9, 62d, 1st.Minnesota River, **00**, 2835.Mississippi River, **97**, 2169.Mountainous and prairie country, difference,

voirs, **96**, 1843; **97**, 2169.Red Lake River, **00**, 2828.Rivers, watersheds of, **97**, 2169.Weststone River, **00**, 2835.**S.****Salt.**Concrete, effect on, **82**, 2348.Deposits of, West Virginia, **77**, 320.Formation of, Corpus Christi, **79**, 936.Hydraulic cement, effect on, **82**, 2350.**Salt Water.** (See Water.)Cement, effect on, **95**, 2955.Fresh and, cement, effect on, **95**, 2918.Fresh and, quantities, determining, harbors,
96, 979.Iron, effect on, **79**, 447.Rivers, ascending, **75**, ii, 34.Screw piles, effect on, **79**, 447.Sediment, effect on, **75**, ii, 36.**Sand.** (See Quicksand; Railroads.)Accumulations of, **95**, 3142.Accumulations of, movable dams, effect on,
98, 2146.**Sand—Continued.**Accumulations of, teredo proofing, **73**, 800,
1131; **74**, 757; **75**, ii, 692.Arrest of, Brownlow weed for, **77**, 500; **78**,
640, 654; **79**, 1014, 1054, 1058, 1061, 1070, 1077,
1088.Banks, sand movement, checking, **97**, 679.Bars, forming of, causes, **97**, 2753.Bars, Mississippi River, **76**, ii, 179.Bars, removing, water jet for, **68**, 671; **69**, 310;
70, 340.Bars, removing, use of, **95**, 2062.Belt, along coasts, **76**, 378.Catchment piers, **74**, 52.Cement, effect on, **95**, 2924.Centrifugal pump, raised by, dredges, **72**, 668;
75, ii, 40.Channels, excluding from, revetment for, **80**,
1906, 1914, 1916; **81**, 2078.

Sand—Continued.

Concrete, for, character, **02**, 2470.
 Concrete, sea walls, **05**, 3025.
 Constitution of, Mississippi River mouth, **74**, 886.
 Core of, for jetties, **04**, 3216.
 Covering of, for forts. (See Forts, p. 1797 of this Index.)
 Dams of, brush and rock and, comparison, **98**, 1758.
 Depth at which it is disturbed, **76**, 380.
 Deposits of, Dunkirk Harbor, **87**, 2345.
 Deposits of, fresh water, salt and, meeting of, **80**, 953.
 Deposits of, jetties between, **99**, 1598.
 Different varieties, values, mortar, **94**, 2319.
 Dimensions of, Mississippi River, **78**, 1383, 1924, 1927, 1933.
 Dimensions of, various localities, **76**, ii, 259.
 Disturbance, bottom velocities, effect of, **70**, 563, 629.
 Dredging, methods, **00**, 1997.
 Dredging, side-wheel dredges suggested, **06**, 1300.
 Dust, crusher, superior to sand, for concrete, **02**, 2457.
 Embankments, placing, forts. (See p. 1797 of this Index.)
 Excavating, methods, **93**, 603.
 Floods, action of, **68**, 366; **72**, 132; **76**, ii, 5.
 Formations of, jetties, vicinity of, **95**, 3276.
 Forms assumed, Lake Erie, **95**, 3109.
 Foundations, dams, **74**, 414.
 Foundations, excessive settlement on, dikes, **72**, 839; **76**, 629; **79**, 1051.
 Gabion jetties filled with, **74**, 732, 733, 757; **75**, 846, 859; **76**, 564, 574, 582; **77**, 446, 447, 450, 470; **78**, 426, 603; **79**, 911.
 Gabion jetties filled with, settlement of, **79**, 911.
 Gravel and, comparison, concrete, **00**, 978.
 Heaviest in upper part of river, **72**, 149.
 Impounded, jetty extension, **94**, 2562.
 Levees of sand, clay placing, **76**, ii, 626.
 Mortar, tests of, **96**, 2634.
 Movement, Nicaragua coasts; Isthmian Canal Reports, 1899, page 92.
 Piles, driving in, **68**, 515.
 Placing of, gun batteries, **00**, 970.
 Pressure-bearing ability, **72**, 766.
 Revetment filled with, **68**, 154.
 Silt and, tidal currents, effect of, **71**, 525; **73**, 994.
 Specific gravity, **80**, 1504.
 Stone and, sharp and smooth, advantages, concrete, **98**, 2280.
 Stratas of, banks caving, causes of, **00**, 3189.
 Tar and, pile heads, protecting, **92**, 1541.
 Tests of, **93**, 3013; **94**, 2311; **95**, 2935; **96**, 506, 2804; **97**, 2627; **00**, 2257.
 Tests of, cement, **96**, 506.
 Tidal currents, effect of, **71**, 525.
 Water and, ratio, centrifugal pumping, **72**, 666, 668; **73**, 750; **74**, ii, 11, 71; **75**, ii, 38, 40, 69; **76**, 445.
 Water held by, amount of, **79**, 1241.
 Water slope in, natural, **76**, 393.

Sand—Continued.

Water velocity required to move, **69**, 436; **75**, ii, 40; **78**, 1296; **79**, 406.
 Weight of, **72**, 147, 149; **74**, 268; **76**, ii, 259.

Sandbags. (See pl. 65.)

Leakage, cofferdams, **11**, 2030.
 Levees, protecting, **12**, 3724.
 Mattresses, sinking, **94**, 2600.

Sand Blast.

Apparatus, plans, **03**, 2420.
 Improvised, cleaning rusty ironwork, **98**, 1926.
 Improvised, rusty steelwork, cleaning, **00**, 2788.
 Machine, **00**, 4330.
 Rusty ironwork, cleaning, **98**, 1801, 1926.
 Rusty steel, cleaning, **00**, 4330.

Sand Bolls.

Levees, **99**, 3571.
 Levees, Mississippi River, **12**, 3724.

Sand Catches.

Light structures, ineffectual, **12**, 101.
 Movement, checking, **88**, 462.
 Shore protection, **77**, 115, 116; **88**, 462; **02**, 1209.

Sand Closure.

Preventing, harbor entrances, **96**, 3101.

Sand Covering.

Teredo attacks, checking, **73**, 800.

Sand Deposits.

Harbors sheltered by jetties, etc., Great Lakes, **03**, 2087.

Sand Drift.

Breakwater harbors, Hawaiian Islands, H. D. 593, 61st, 2d.
 Canals, effect on, **74**, 796.
 Canals, into, avoiding, **01**, 3515.
 Forts. (See p. 1797 of this Index.)
 Removal, by jetties, Biscayne Bay, **08**, 1372.

Sand Dunes.

Movement of, **76**, 380.
 Reclamation, **90**, 2954.
 Reclamation, Holland grass promising, **94**, 2567.

Sand Fences. (See Sheet Pile.)

Old, effective but not durable, **93**, 3142.
 Restricted value of, **93**, 2879.
 Sand drift, checking, **67**, 457; **75**, 314, 316, 338; **77**, 116, 966, 969.
 Sand movement, checking, **80**, 2016; **81**, 2211, 2236; **83**, 475.
 Sand movement, preventing, **94**, 2581.

Sand Fences, Rigid.

Superiority of, **01**, 1495.

Sand Fence, Sheet Pile.

93, 3138.

Sand Movement. (See Accretion.)

76, 380, ii, 569; **98**, 2285, 2719.
 Atlantic coast, **95**, 1601; **97**, 1236.
 Beaches, effect on Atlantic City, H. D. 747, 61st, 2d.
 Catches for, **88**, 462.
 Checking, battery parapets, **97**, 679.
 Checking, brush for, **00**, 989.
 Checking, embankments, **97**, 690.

Sand Movement—Continued.

- Checking, experiments, **00**, 4278.
Checking, fences, **98**, 2681.
Checking, grass for, **98**, 2964; **00**, 993, 4278.
Checking, parapets of batteries, **97**, 679.
Checking, sand embankments, **97**, 679, 690.
Checking, sheet piling, **94**, 2462.
Controlling, **89**, 1071, **90**, 2949; **91**, 2692; **92**, 1358.
Controlling, dikes, **95**, 2577.
Controlling, fences, **80**, 2016; **81**, 2211, 2236; **83**, 475.
Controlling forces, St. Andrews Bay, H. D. 12, 61st, 1st.
Controlling, jetties for, **98**, 3011.
Control of, by pile dike, Grand Marais, Mich., **05**, 2008.
Control of, works for, Grand Marais, Mich., **08**, 1936.
Dredging, channels, **96**, 3140.
Dredging, obliteration of, bar channels, **98**, 2691.
Governing, breakwater for, Point Judith, H. D. 911, 60th, 1st.
Great, **00**, 4436, 4443.
Great Lakes, **97**, 2777.
Harbors, **96**, 1190.
Destruction of harbors, Greytown, Nicaragua, Isthman Canal Reports, 1899, page 91.
Heavy, South Pass, **99**, 1824.
Jetties, at, mouth of Mississippi River, **05**, 1433.
Jetties, effect of, **98**, 1127; **03**, 2287.
Jetties, effect of, Columbia River, **10**, 2407.
Jetties, channels, **94**, 2468.
Jetties, vicinity, **94**, 2637; **00**, 4201.
Lake Erie, **95**, 3109.
Lake shores, **96**, 2970.
Measuring, **02**, 2502.
Measuring, bars, **02**, 2502.
Mississippi River, **93**, 1800.
Observations, Jamaica Bay, H. D. 1506, 60th, 2d.
Observations on, **74**, ii, 372.
Ocracoke Inlet, **94**, 1001, 1013.
Pacific coast, **00**, 4200.
Passes, outside of, St. Andrews Bay, Fla., H. D. 12, 61st, 1st.
Preventing, **93**, 2879; **96**, 574; **98**, 2714.
Preventing, embankments, **00**, 972.
Preventing, fences, **81**, 2211, 2236; **83**, 475; **94**, 2581.
Preventing, grass for, **98**, 2964.
Preventing, jetty extension, **98**, 1328.
River entrances, Columbia River, **03**, 2284.
Rivers, **93**, 1800; **98**, 1680.
Rivers, beds of, **69**, 601; **75**, ii, 502, 504; **79**, 1751, 1757, 1759, 1892, 1967.
St. Francis River, **98**, 1680.
Sandy Hook, **82**, 404.
Shoaling and, **03**, 2092.
Study of, Great Lakes, **03**, 2086.
Surveys compared, Mississippi River, H. D. 577, 59th, 1st.
Unforeseen, Hudson River, **98**, 1054.
Water in, **02**, 2506.

Sand Splts.

- Bars, effect on, **93**, 3451.

Sandstone.

- Breakwaters, rubble mounds, finishing, **12**, 2466.
Crushing strength of, **75**, ii, 849.
Crushing strength of, Great Kanawha, tests, **89**, 1950; **90**, 421.
Failure of, as riprap, **01**, 2886.

Sand Surfaces.

- Shifting, grass to prevent, **02**, 2465.

Sand-Tightening. (See Piles, Piers; Revetment.)

- Beams for, pile piers, **75**, 243; **78**, 1213; **79**, 1659.
Beams for, revetments, **75**, 243; **78**, 1213; **79**, 1659.
Brush for, piers, **80**, 1906.
Brush for, pile piers, **73**, 201; **75**, 195; **78**, 1211.
Brush mats and, piers, **78**, 1211.
Crib piers, **96**, 2674; **97**, 2924.
Piers, **92**, 2332.
Piers, sheet piling in, **80**, 1906, 1914, 1916; **81**, 2078; **82**, 2138.
Planks for, pile piers, **75**, 243; **79**, 1512, 1514.
Shavings, pile piers, **79**, 1622.
Sheet-piling for, piers, **80**, 1906, 1914, 1916; **81**, 2078; **82**, 2138; **99**, 2907.
Slab piers, **75**, 193; **76**, ii, 505.

Sand Waves.

- Action of, **74**, 804.
Columbia River, **79**, 1757.
Mississippi River, **79**, 1892, 1967.
Movement, rivers, **83**, 2195, 2197, 2210, 2216, 2224, 2230; **85**, 569; **87**, 1351.
Ohio River, **74**, 404, 411, 414; **76**, ii, 5.
Rivers, **75**, ii, 502, 504, 507; **76**, ii, 402; **79**, 1757, 1892, 1967.
Rivers, beds of, **81**, 1579, 1653; **83**, 2195, 2197, 2210, 2216, 2224, 2230; **85**, 569; **87**, 1351.
Sacramento River, **79**, 1760.
Wisconsin River, **76**, ii, 256, 402.

Sandy Areas.

- Reclamation, with Holland grass, **08**, 803.

Sandy Peninsulas.

- Preserving, methods, **93**, 3101; **96**, 3104; **97**, 3243.
Preserving, trees for, **97**, 3100.
Preserving, trees for, successful, **96**, 3105.

Sawdust.

- Accumulations of, effect of, in streams, **01**, 994.
Bars of, dredging of, permanent value, **00**, 1107.
Cement mortar, effect in, **96**, 2803.
Injury to rivers and harbors from, **68**, 858; **70**, 500; **71**, 249, 622, 840; **72**, 203, 924, 930; **73**, 379, 382, 389, **74**, 104, ii, 291; **75**, 111, 112, ii, 68, 382; **76**, 289; ii, 152; **77**, 34, 154; **78**, 190, 452; **79**, 43, 245, 502.

Sawmill Waste.

- Waterways choked with, might be improved conditionally, H. D. 748, 61st, 2d.

Saw Plant, Floating.

- Pile cutting, **96**, 2517.

School, Engineer.

- Advantages of Fort Totten as site for, **01**, 930.
- Course, **01**, 937; **02**, 799.
- Requirements, **01**, 929.
- Transfer to Washington, **02**, 802.

Schoolhouses. (See pl. 71.)**School, Trade.**

- Engineer troops, **02**, 801.

Schooners.

- Barges and, cost of building, H. D. 391, 62d, 2d.

Scour. (See Breakwaters; Channels; Fill; Hurdles; Jetties; Piles; Power Houses; Rivers; Shoals.)

- Advance, jetties, **94**, 2515.
- Augmenting, with flashboards, **01**, 2626.
- Breakwater, **99**, 1345.
- Bear-trap dams, above and below, **05**, 1844.
- Bear-trap gates, produced by eddies of, **11**, 2141.
- Causes, study of, **00**, 4201.
- Causes, dikes, **00**, 4336.
- Cessation, curved jetties, **96**, 628.
- Channels, action on, **98**, 2621.
- Conditions governing, St. Johns River, **95**, 1599.
- Control of, jetties, **94**, 2545; **03**, 1169, 1175.
- Currents, wind, and barometric pressure; effect of, Sandusky Harbor, **01**, 575.
- Dikes, due to, **94**, 1023.
- Dikes, effect, **94**, 1023; **00**, 4336.
- Dredged channels, **97**, 1548.
- Fill and, dredged channels, **93**, 3050; **94**, 2390; **97**, 3041, 3055.
- Fill and, jetties, **96**, 3286.
- Fill and, jetties, vicinity, **96**, 1536.
- Fill and, rock jetties, **93**, 3493.
- Foundations under water on, material likely to scour, **75**, ii, 621.
- Hindrance, dikes, **95**, 2323.
- Hurdles, at, **94**, 1594.
- Jetties, **93**, 1441; **99**, 1553; **00**, 4181, 4288.
- Jetties, effect of, shoals, **97**, 2016.
- Jetties extending, **00**, 4288.
- Jetties, produced by, Columbia River, **10**, 2407.
- Jetties, sides of, **82**, 1196.
- Lock chambers, floods, **03**, 1674.
- Lock gates, concealed scour under, **02**, 1892.
- Logs causes of, rivers, **74**, 202.
- Mattress sill, dam, **96**, 3827.
- Mattress, sinking of, **93**, 1441.
- Pensacola Harbor, **95**, 1647.
- Pier ends, **84**, 1966.
- Piles, preventing at, **98**, 2955.
- Platting scour and fill, **01**, S., 232.
- Portable jetties, effect of, **95**, 2077.
- Preventing, dams, **00**, 3258.
- Preventing, jetties, **98**, 2949.
- Preventing, jetties, building, **98**, 2955.
- Preventing, mattresses for, **98**, 2949, 3030.
- Preventing, mattresses for, dams, building, **98**, 3030.
- Preventing, mattresses for, discarding, jetties, **98**, 2949.
- Preventing, piles, at, **98**, 1698, 2955.
- Preventing, piles, omitting, jetties, **98**, 2955.
- Principles of, determining, difficult, **99**, 3022.

Scour—Continued.

- Protection against, bowlders, natural deposit, **71**, 884; **72**, 896; **74**, ii, 276.
- Stone jetties, **00**, 4181.
- Survey methods, scour and fill, Mississippi River, **01**, S., 44, 128.

Scouring Bolls.

- Rivers, **98**, 3168.

Scows. (See Barges; Cribs; Derricks; Drilling.)

- Crib, scows used as, **93**, 626.
- Currents, moving across, **97**, 3459.
- Doors of, closing, apparatus, **92**, 1505.
- Railroad track on, stone, handling, **96**, 2788.
- Rock drilling, **73**, 937, 1135, 1154; **00**, 3677.
- Soundings from, **98**, 2758.
- Steel trusses of, **91**, 2333.
- Storage of, **01**, 3225.

Scows, Derrick.

- 00**, 4117.
- Large stones handled with, **94**, 1102.

Scows, Displacement of.

- Dredging, **79**, 917.

Scows, Measurements of.

- Prism and, relation, rock, **75**, 326; **77**, 239; **78**, 1136.

Scows, Self-Dumping.

- Description of, **85**, 498.

Scrapers.

- Dredging, **67**, 370; **68**, 320, 480, 669; **70**, 324, 329, 340, 447; **71**, 65, 508; **72**, 138, 552.

Scrapers, Road.

- Bank grading, **01**, 2225.

Screening. (See Limestone.)**Screens.** (See Dikes; Poles.)**Screens, Pole.**

- Dikes, **95**, 2236.

Sea-Level Canal. (See The Panama Canal, p. 2357 of this Index.) (See Canal.)**Seaports.**

- New seaports, establishing, St. Andrews Bay, H. D. 670, 61st, 2d.
- Development of seaports and internal waterways (Sperry), Sen. D. 301, 61st, 2d.

Searchlights. (See Projectors.)

- Portable searchlights, details, **01**, 942.

Seas. (See Breakwaters.)

- Breakwater, control of, **98**, 2720.
- Breakwater, slopes, effect of, **98**, 2665.

Seas, Heavy.

- Jetties, concrete caps for, **12**, 2771.

Section. (See Cross Sections; Jetties; Levees; Rivers.)

- River, discharge, effect on, **69**, 589.

Sediment. (See Deposits; Fill; Locks; Rivers; Silt.)

- Accumulations of, **00**, 2290.
- Action of, Mississippi River, **77**, 433.
- Amount of, determining, **72**, 1000, 1004.
- Amount of, determining, St. Johns River, **89**, 1302.
- Amount of, determining, various depths, **79**, 1757, 1964.

Sediment—Continued.

- Amount of, velocity not proportionate to, **74**, 863; **75**, 966; **77**, 433.
Arrest of, Brownlow weeds for, **78**, 640, 654.
Danube River, **74**, 847.
Deposits, **00**, 4032, 4050.
Deposits, causes of, **98**, 2313.
Deposits, large, rivers, **96**, 1728.
Deposits, Missouri River, H. D. 1120, 60th, 2d.
Deposits, reservoirs, **98**, 2823.
Deposits, study of, **00**, 4032, 4050.
Depths, at various, **79**, 1758, 1927, 1964.
Experiments, boxes placed on bottoms, **74**, ii, 372.
Floods, effect of, **76**, ii, 5.
Impounding, rivers, **95**, 3337.
James River, **76**, 300.
Locks, **76**, 759; **77**, 611, 618; **78**, 743, 781, 787; **79**, 1294.
Locks, Louisville and Portland Canal, **78**, 781, 789.
Mississippi River, **67**, 321; **69**, 325; **72**, 439; **74**, 804, 855, 863, 882; **75**, 541, 954, 966; **77**, 433; **79**, 1009, 1927, 1964.
Missouri River, **87**, 3090.
Movement, cribs, decay of, **94**, 2406.
Movement, Ocracoke Inlet, **94**, 1001.
Movement, South Pass, **94**, 1345.
Nile, **74**, 804.
Observations, **87**, 3090, 3121, 3123; **98**, 1612; **00**, 2557.
Observations, Cypress Bayou, **93**, 2081.
Observations, data, index to, Mississippi River, **95**, 3706.
Observations, Missouri River, **87**, 3121.
Observations, rivers, **96**, 1241.
Obstructions, lock gates, operating, **76**, 759; **77**, 611, 618; **78**, 743, 781, 787; **79**, 1294.
Ohio River, **77**, 616; **79**, 1360.
Red River, **93**, 1977; **94**, 1440, 1449.
Reservoirs, deposits, **98**, 2823.
Reservoirs, effect of, on sediment-bearing rivers, H. D. 50, 61st, 1st.
Rivers, **96**, 988.
Rivers, depth of, reductions of, **75**, 548, ii, 171.
Rivers, filling up, **95**, 3860.
Running water, effect of, **76**, ii, 5.
Sacramento River, **79**, 1752, 1759.
Salt water, effect of, **75**, ii, 36.
Suspension of, **81**, 1653; **82**, 2762; **83**, 781; **86**, 1299.
Transportation of, amount, **75**, ii, 481.
Velocity of rivers, effect on, **75**, ii, 477.
Wisconsin River, **79**, 1535.

Seepage. (See Leakage; Leaks; Levees.)

- Levees, **99**, 3563.
Preventing, levees, **98**, 3353.

Selches. (See Oscillations; Pulsations.)

- Connecticut River, **73**, 988, 1001.
Investigations of, **71**, 989.
Observation on, **66**, iv, 93; **67**, 599; **68**, 983; **69**, 600; **72**, 1033, 1040; **73**, 1193.

Settlement. (See Cribs; Locks.)

- Checking, bear-trap piers, **08**, 1798.
Floor slopes reversed by, **01**, 923.
Mattresses, mouth of Mississippi River, **05**, 1434.

Settlement—Continued.

- Unequal settlement, avoiding, forts. (See p. 1797 of this Index.)

Sewage.

- Deposits, channels, **98**, 2422.
Dredging, hindrances to, **95**, 2707.
Dredging, increased by, **99**, 2827.
Discharge, regulations of, Calumet River, **93**, 2816.
Disposal of, Chicago, **93**, 2797.
Harbors, shoaling of, **97**, 1251.
Levees, breaks in, due to, **05**, S., 212.
Navigable waters, discharge into; ineffectual attempts to prevent, H. D. 913, 59th, 1st.
Reservoirs, Fort Monroe, **95**, 514.
River channels, filling, **95**, 2707.
River, effect on, **93**, 2796.
Settlement of, harbors, **98**, 2669.
Shoaling from, Chicago Harbor, **11**, 2351; **12**, 2541.

Sewage Tank.

- Building, **96**, 499.

Sewers.

- Forts. (See p. 1797 of this Index.)
Laying, across moat, **96**, 500.

Sewerage.

- Systems of, Fort Monroe, **93**, 642; **95**, 511; **96**, 498; **97**, 663.

Shackles.

- Torpedoes, **89**, 491.

Shafts. (See Mines; Tunnels.)

- Lock valves, **95**, 2359.
Tunnels, **72**, 1154, 1161; **76**, ii, 126; **77**, 697, 707, 708.

Shafts and Galleries.

- Rock drilling and blasting, Hallets Point, **69**, 391; **75**, ii, 200; **77**, 228, 232; **79**, 61, 378, 384.

Shale.

- Breaking of, dredge bucket used, **95**, 979.

Shavings.

- Sand tightening, pile piers, **79**, 1622.

Sheathing. (See Breakwaters; Piers; Revetments.)

- Breakwaters, **97**, 3080; **00**, 4068, 4075, 4092.
Breakwaters, deterioration, preventing, **00**, 4075, 4092.
Piers, **00**, 4062.
Piles and, revetments, **96**, 2966.
Rapid decay, recesses, lock gates, **95**, 2360.
Timber breakwaters, decay, preventing, **00**, 4092.
Timber piers, **00**, 4062.

Sheathing, Iron.

- Breakwaters, ice protection from, **74**, 210, ii, 135, 228; **75**, 320.

Sheathing, Oak.

- Cribs, protecting, **71**, 107.

Sheathing, Steel.

- Impracticable to drive through riprap, **11**, 2263.

Sheeting.

- Wave action broken by, bulkheads, **04**, 3620.

Shell. (See Oysters.)

- Use of, for hearting, and for riprap foundations, **88**, 1082.

Ship Basins.

Details, Stamford, **08**, 1024.

Shipping.

Barges cheapest, **04**, 1390.

Character of shipping seeking harbors of refuge, H. D. 472, 62d, 2d.

Great Lakes, boats of; unsuitable for Mississippi River, H. D. 50, 61st, 1st.

Swash dangerous, Monterey Bay, H. D. 557, 59th, 1st.

Ships. (See Boats; Lightship; Vessels.)

Conversion to dredges, **04**, 3545.

Dimensions, increasing, effect on Panama Canal, locks enlarged, H. D. 267, 62d, 2d.

Draft, Atlantic coast trade, H. D. 551, 61st, 2d.

Drafts, Great Lakes, **12**, 2633.

Lock gates, ramming of, **11**, 2424.

Sizes increasing, Great Lakes, H. D. 266, 59th, 2d.

Ships, Modern.

Canals, cross section, Chesapeake & Delaware, S. D. 215, 59th, 2d.

Shipyards.

Advantages of, for U. S. plant, **11**, 2057.

Shoaling. (See Breakwaters; Channels; Harbors; Piers.)

Breakwaters, **99**, 1353.

Causes of, **00**, 2121, 4436.

Causes of, canal entrances, **97**, 2671.

Causes of, channels, **00**, 4436.

Causes of, due to lack of logging, Ontonagon Harbor, H. D. 444, 60th, 1st.

Causes of, propeller agitation of grounded steamer, **99**, 3037.

Causes of, wharves, protection beyond, bulkhead line, **88**, 1046.

Checking, piers, between, **97**, 2779.

Jetties, ends beyond, **98**, 1458.

Jetties, vicinity of, **94**, 2633.

Jetty ends, **84**, 1245.

Mouth of Mississippi River, **80**, 1138; **81**, 1263; **82**, 1329; **83**, 1041; **84**, 1243; **85**, 1386; **86**, 1235; **87**, 1355.

Piers, between, **96**, 3134; **98**, 2331.

Preventing, Great Lakes, H. D. 900, 59th, 1st.

Sand movement, Great Lakes, **03**, 2092.

Sewage a cause, Chicago River, **11**, 2351; **12**, 2541.

Sewage and, causes of, harbors, **97**, 1251.

Snow a cause of, Chicago River, **11**, 2351.

Shoaling, Excessive.

Causes, Elk and Little Elk Rivers, H. D. 770, 62d, 2d.

Causes, rivers, **95**, 2273.

Shoals. (See Bars; Jetties; Rivers.) (See pls. 55, 65.)

Advancement of, **97**, 1548.

Causes, agitation of, propellers, **99**, 3077.

Causes, rivers, mouths of, **97**, 3310.

Channels, rivers, **93**, 3404.

Dangerous character of, Great Lakes, **07**, 847.

Dangerous, Saginaw Bay, **96**, 4062.

Examination, sweeping method, **96**, 4062.

Finding, with wire sweep, Great Lakes, **07**, 847.

Shoals—Continued.

Improvement of, **96**, 3801.

Lake Erie, **97**, 4123.

Movement of, St. Andrews Bay, H. D. 12, 61st, 1st.

Portable jetties, effect of, **97**, 2016.

Raking better than dredging for gravel shoals, **06**, 1985.

Rapid increase, causes, **97**, 3310.

Scour through, portable jetties for, **97**, 2016.

Seaward movement, jetties, effect, **98**, 1283.

Work required at, H. D. 360, 62d, 2d.

Shoals, Persistent.

Probable causes of, **12**, 1806.

Shore Lines.

Channel sections and, Mississippi River, **05**, S., 196.

Protection of, forts. (See Forts, p. 1794 of this Index.)

Protected with groins and jetties, **05**, 3010.

Revetment and, Mississippi River, **05**, S., 196.

Shore Protection.

89, 2577; **91**, 3601; **92**, 162, 163, 2225 (atlas), 3145, 3153, 3291, 3294.

Abattis and fascine works, Missouri River, **01**, S., 398, 401.

Alabama River, **95**, 1666.

Beach grass, **67**, 46; **73**, 1098, 1101; **76**, 179, 189; **78**, 220; **79**, 271, 936, 1746.

Brush, efficiency of, **75**, 316.

Brush and sand bags, **79**, 410.

Brush groins for, **74**, ii, 323.

Brush mats for, **76**, ii, 408; **77**, 492; **79**, 976, 979, 1030, 1032, 1052, 1057, 1061, 1063, 1068, 1078; **93**, 1699.

Brush mats for, woven in place, **79**, 1080.

Brush wattling, **88**, 842.

Cane carpets, **78**, 616; **79**, 876, 931.

Cribwork for, **89**, 770.

Dikes, length of, relation to, **73**, 453; **74**, 332; **76**, 629.

Duxbury, Mass., **66**, ii, 36.

Economical methods, **82**, 1366, 1602, 1732.

Great Brewster Island, **68**, 837.

Importance of, **72**, 435; **76**, ii, 566; **79**, 1173, 1176.

Jetties for, **71**, 893; **74**, ii, 325.

Jetties for, failures of, **75**, 490; **79**, 997.

Length of, jetties, vicinity of, **72**, 139, 357; **74**, 332; **76**, 629; ii, 406.

Length of dike or jetty, relation to, **73**, 453; **74**, 332; **76**, 629.

Length of, wing dams, **75**, ii, 460.

Mattresses for, **89**, 770; **93**, 1699; **94**, 1597.

Mattresses for, building, **94**, 1597.

Methods, mill edgings, use of, **80**, 1580.

Methods, Sandy Hook, **96**, 864.

Mississippi River (upper), **72**, 435; **78**, 681.

Missouri River, **78**, 667, 673.

Oaks and cedars, **79**, 931.

Pile and plank revetment, **75**, 57.

Piles for, **77**, 475.

Plymouth, **71**, 893; **74**, 323.

Poplar trees, **71**, 205, 208.

Provincetown Harbor, Mass., **67**, 457; **74**, ii, 325.

Shore Protection—Continued.

- Revetment, **71**, 202; **72**, 233; **76**, 708.
Sand catches, **77**, 115, 116; **88**, 462.
Sandy Hook, **95**, 954.
Stone paving, **69**, 439.
Storms, effect of, **72**, 107.
Timber for, **89**, 770.
Training dikes effective, **01**, 1661.
Wattled piles, **76**, 497.
Willows for, **73**, 342; **74**, 51, 225; **75**, 52, 280;
76, 105, 237; **79**, 1468, 1618, 1621, 1628; **82**,
1595.
Willows for, failure, **75**, 316; **76**, ii, 564.
Willows for, planting, **81**, 1556; **82**, 1595; **86**,
1009.

Shore Protection, Natural.

- Afforded by loose stone, **71**, 884; **72**, 896; **74**,
ii, 276.

Shores. (See Currents; Lakes; Littoral.) (See
pl. 60.)

- Breakwaters and, gaps between, closing, **97**,
2690.
Breakwaters, should be connected with, to
prevent silting, H. D. 969, 60th, 1st.
Changes in, various periods, Jamaica Bay,
H. D. 1506, 60th, 2d.
Drift of, accumulation of, piers, at, **82**, 582.
Ends, shore; small stone for, jetties, **02**, 1159.
Erosion, considerable, Erie Harbor, **98**, 2738.
Erosion, preventing, methods, **96**, 1559.
Erosion, rapid, causes, **96**, 1559.
Extension, remarkable, Cranes Creek, Va.,
95, 1273.
Gap between shores and jetties, advantageous
effect from closing, Aransas Pass, H. D. 639,
61st, 2d.
Groins, effect of, St. Augustine, H. D. 580,
62d, 2d.
Islands, revetment, **02**, 218.
Jetties for protecting, **05**, 3010.
Jetties, effect of, Galveston, H. D. 328, 61st, 2d.
Lake survey, **93**, 4372.
Lines, advancement of, piers, vicinity of, **95**,
2772.
Lines, breakwaters, effect of, **94**, 2474.
Lines, lakes, **75**, ii, 857.
Lines, survey methods, **92**, 3428.
Lines, surveys, **95**, 4040.
Lines, surveys, substitutes for tertiary flags,
94, 2799.
Lines, unstable character, Gulf of Mexico,
79, 929.
Pier connections, **04**, 3172.
Recession, jetties and, **04**, 3168.
Recession, jetties, South Pass, **99**, 1819.
Recession, rate of, Erie Harbor, H. D. 83, 60th,
1st.
Reclamation should be for harbors, not parks,
H. D. 700, 59th, 1st.
Revetment of, jetties, vicinity of, **96**, 3255.
Sand drift, **71**, 131; **72**, 896; **74**, ii, 188; **76**,
ii, 472, 480, 569.
Storms, effect of; protections against, H. D.
328, 61st, 2d.
Surveys, lakes, **93**, 4372.
Wave action, **72**, 107.

Shoring.

- Buildings, **04**, 3826, 3860.
Underpinning and, buildings, **04**, 3860.

Shoring Piles.

- 95**, 2416.

Shovels. (See pl. 50.)**Shrubs.**

- List of, Executive Mansion, **00**, 5245.
List of, Washington, D. C., **90**, 3556; **00**, 5286.

Side Dams. (See Dams.)**Side Wheels.**

- Proposed for dredges operating in sand, **06**, 1300

Signaling.

- Mirage effect, lake, **67**, 575.

Signals. (See Bridges; Triangulation.)

- Lighting and other signals, improvements,
Point Judith Harbor of Refuge, H. D. 911,
60th, 1st.

Signals, Fog.

- Hearing, difficulty, Nantucket coasts, H. D.
536, 62d, 2d.

Signal Towers.

- Paint for, canals, **09**, 1861.

Signs.

- Device for printing, maps, **85**, 2898.

Sill Dams. (See Dams.)**Sills.** (See Cofferdams; Gates; Locks; Mattresses.)

- Bridges, under, **11**, 1582.
Dams, **04**, 2107. (See Dams.)
Designing, lock gates, **95**, 3040.
Locks, **04**, 3775. (See Locks.)
Locks and dams, **01**, 2766. (See Dams;
Locks.)
Mattresses, method of sinking, **01**, 1880.
Placing cofferdams, locks, **00**, 3533.

Sills, Ground.

- River bottoms, rising of, sills to prevent, **98**,
1411.

Sills, Mattress.

- Building of, **95**, 3409.
Scour of, dam, **96**, 3827.

Sills, Miter.

- Bolting, locks, **00**, 2926.
Failure, lock gates, **72**, 452, 460; **78**, 734, 736,
742.
Fitting, Plaquemine, **05**, 1451.
Leakage, preventing, lead lining for, locks, **98**,
1432.
Lock gates, effect on, **72**, 460; **78**, 736, 743.
Locks, **04**, 3761.
Locks, repair of, **99**, 1704.
Repairing, cofferdam for, **05**, 1942.

Sills, Pass.

- Lakes, **94**, 1987.
Movable dams, **96**, 2313.

Sills, Permanent Cofferdam.

- Locks, pumping out of, **00**, 3533.

Sills, Protection.

- Building, **95**, 3409.

Silt. (See Rivers; Sediment.)

- Arrest of, hurdles for, **94**, 1577; **96**, 1717; **97**,
2012.

Silt—Continued.

- Deposits of, bear-trap sluice gates, **07**, 1580.
- Movement, unforeseen, Hudson River, **98**, 1054.
- Problem of, Kaw River, H. D. 94, 61st, 1st.
- Rivers, Missouri River greatest silt-bearing river, H. D. 1120, 60th, 2d.
- Sand and, tidal currents, effect on, **71**, 525; **73**, 994.

Silting.

- Breakwaters should be connected with shore to avoid, San Pedro, H. D. 969, 60th, 1st.
- Causes, various, Mare Island, H. D. 1103, 60th, 2d.
- Deposit, average annual rates of, **03**, 2060.
- Docks, silt-tight, should be insisted on, **08**, 734.
- Study of, rivers, Great Lakes, **04**, 3803.
- Tunnel, water supply, District of Columbia, **01**, 3667.

Silver.

- Amounts mined, Comstock mines, **72**, 1139, 1156, 1161.

Silver Ore.

- Raising, cost of, Comstock mines, **72**, 1158.

Siphonage.

- Discharge acceleration by, flood waters, **04**, 3612.

Siphons.

- Waterways, intracoastal, H. D. 391, 62d, 2d.

Sites. (See Breakwaters; Bridges; Dams; Harbors of Refuge; Lands; Lighthouses; Locks; Reservoirs.) (See pls. 41, 46.)

- Land sheet, lock and dams, **00**, 2786.
- Locks and dams, surveys, **05**, 945.
- Marking, lighthouse, Chicago Harbor, **94**, 2133.
- Public works; sites should not be disclosed, **01**, 2758.
- Reference marks, Chicago Harbor, **94**, 2133.
- Surveys, **01**, 1833.

Sites, Soft.

- Foundation, batteries, **98**, 747.

Slabs.

- Piling and, breakwaters, maintenance in, expensive, **94**, 2024.

Slack Water. (See Navigation.)

- Abandonment of Muscle Shoals Canal in favor of slack-water navigation, H. D. 781, 60th, 1st.

Slack-Water Channels. (See Channels.)**Slack-Watering.**

- Backwater, determining curve of, Mississippi River, H. D. 50th, 61st, 1st.
- Coal industry helped, Allegheny River, H. D. 540, 62d, 2d.
- Details, construction, Tennessee River, H. D. 360, 62d, 2d.
- Estimates, detailed; Tennessee River, H. D. 360, 62d, 2d.
- Interests favoring, Allegheny River, H. D. 540, 62d, 2d.
- Justification, grounds for, Tennessee River, H. D. 360, 62d, 2d.
- Project for, Mississippi River, H. D. 50, 61st 1st.

Slack-Watering—Continued.

- System, modification, Little Kanawha, H. D. 480, 62d, 2d.

Slack-Water Navigation. (See Canals; Dams; Locks; Rivers.)

- Canals, comparison, **74**, ii, 97, 119; **75**, 365.
- Guard locks, height of, **00**, 2960.
- Lock and dam work, details, **02**, 1437.
- Plans, Kanawha River, **71**, 626, 641.
- Plans, Youghiogheny River, **76**, ii, 86.
- Private systems, value of, determining, Monongahela River, **96**, 2144.
- Systems of, Monongahela Navigation Co., **97**, 2412.
- Systems of, planning, **00**, 2959.
- Various places, cost, **96**, 2144.

Slack-Water Systems.

- Beneficial effect on rates, **11**, 743.
- Coal freights saved, **10**, 690.
- Effect of, on rates, very great, **09**, 617.

Slack-Water Works.

- Proposed, Coosa River, **05**, 1372.

Slag, Furnace.

- Crib filling, **77**, 626.

Slides. (See pl. 48. See Panama Canal Index, p. 2357 of this Index.)**Slopes.** (See Banks; Batteries; Breakwaters; Channels; Concrete; Cribbs; Embankments; Jetties; Levees; Riprap; Rivers; Sluices; Water.)

- Best, breakwater, **98**, 2284.
- Brazos River, **97**, 1838.
- Breakwaters, **66**, 40; **67**, 518; **70**, 488; **71**, 827; **72**, 168; **73**, 884, 1124; **74**, ii, 180, 181, 242; **76**, ii, 596, 598; **79**, 295, 1767; **92**, 933, 934; **96**, 2365.
- Canals, bottom of, **67**, 234; **68**, 444; **69**, 537; **72**, 326.

 Rivers, **94**, 1582.
 Rivers, banks of, **76**, 374, ii, 284.
 Rivers, improvements, consistency with, **76**, 374, ii, 284.
 Rivers, surfaces of, Mississippi River, **00**, 4607.
 Sand to hold, forts. (See Forts, p. 1797 of this Index.)
 Seas, effect on, breakwaters, **98**, 2665.
 Sill dams, **98**, 2447.
 Sluices, **75**, ii, 609; **79**, 537.
 Stone breakwaters, **93**, 3261.
 Study of, Altamaha system, H. D. 443, 62d, 2d.
 Surfaces, St. Johns River, H. D. 611, 61st, 2d.
 Tennessee River, **68**, 584; **72**, 495; **75**, ii, 660; **77**, 579.
 Water in sand, **76**, 393.
 Wave movement over, breakwaters, **98**, 2284.
 Waves, effect on, breakwaters, **96**, 2375.
 Wisconsin River, **68**, 363; **76**, ii, 263, 276.
 Yellowstone River, **79**, 1102.
 Youghiogheny River, **74**, 561; **76**, ii, 86, 114, 123.

Slopes, Calculated Water.

- Measured and compared, **76**, 298.

Slopes, Maximum.

- Dams, **76**, 374; ii, 284.

Slopes, Measured Water.

- Calculated and, comparison, **76**, 298. -

Slopes, Natural.

- Breakwaters, **99**, 1350.
 Stone jetties, **93**, 3490.
 Water slopes, sand in, **76**, 393.

Slopes, Seasonal.

- Discharge, Niagara River, **00**, 5380.

Sloughing.

- Levees, Mississippi River, **03**, S., 315.

Sloughs. (See Levees.) (See pl. 17.)

- Treatment of, levees, **97**, 3820.

Sluice Gates. (See Gates.)**Sluices.** (See Culverts; Dams; Logs.)

- Disadvantages of, **75**, ii, 610.
 Flow through, **69**, 589; **74**, 346; **75**, ii, 610; **77**, 745.
 Grade of, **83**, 1701.
 Lining, locks, **00**, 2772.
 Objections to, dams, **75**, ii, 609.
 Plans for, Falls of Alexandria, **75**, 905.
 Plans for, Kanawha River, **77**, 745.
 Plans for, New River, **73**, 78, 843, 848, 852; **77**, 62, 331.
 River discharge through, **75**, ii, 610; **77**, 745.
 Slopes required, **75**, ii, 609; **79**, 537.
 St. Anthony's Falls, **80**, 1565.
 Water in, flow of, **80**, 1621, 1623.

Sluices, Log.

- 96**, 1838.
 Flooring, dams, **96**, 1836.

Sluices, Navigable.

- Rivers, **75**, ii, 610.

Sluiceway. (See Guard lock.)

- Guard lock, **94**, 2176.

Sluicing.

- Deposits removed, canal, **88**, 2166.

Smoke.

- Pacific coast, **95**, 3459.
 Prevalence of, Pacific coast, **00**, 4505.

Snag Boats. (See pls. 54, 56.)

- 95**, 1394, 2054.
 "Arkansas," details, **01**, 2102.
 Construction and operating details, **05**, 3034.
 Cost of, **89**, 1350.
 Cost of, western rivers, **67**, 377, 382; **68**, 329.
 Description of, **66**, 9; **68**, 58, 590, 599, 603, 609, 632; **69**, 201, 295, 363; **73**, 613; **75**, 519; **76**, ii, 7; **77**, 628; **80**, 1838, 2234, 2284; **85**, 1596; **87**, 1555; **89**, 1644.
 Dimensions of, **68**, 632; **72**, 403; **77**, 530, 534.
 Dredging and, proposed combination, **00**, 1844.
 Equipment of, **99**, 3217.
 Hauling out of, inclined ways for, building, **98**, 1853.
 Improvements in, **96**, 3347; **97**, 2351.
 Improvements of, proposed, **08**, 2290.
 Iron and wooden hulls of, comparison, **74**, 369.
 Ironwork for, **05**, 3034.
 Metal hulls, economy of, **97**, 1951.
 Repairing, docking for, small side dock, **98**, 1619.
 Requirements of, **67**, 390; **71**, 310, 382.
 Western rivers, **70**, 391; **71**, 307; **73**, 486; **74**, 368.
 Wrecking hook for, **95**, 2058.
 Wreck of, submarine mine explosion, **99**, 2009.
Snagging. (See Logging; Snag Boat; Water Jet.) (See pl. 56.)
 Appropriations, liberal, desirable, in view of gasoline-boat traffic, **11**, 34.
 Barge for, **97**, 2267.
 Boats for, **95**, 2044.
 Cost of, **79**, 1188.
 Dynamite for, **73**, 616, 618; **74**, ii, 358; **78**, 538, 539; **79**, 626, 651, 1187.
 Methods, **94**, 2805; **95**, 2044; **00**, 3513.

Snagging—Continued.

- Obstructions removed, Mississippi River, 1871-1911, **11**, 1900.
- Photographs, Yamhill River, **99**, 3238.
- Plant for, **93**, 1826, 1828, 1836; **96**, 3625.
- Plant for, Mermentau River, **94**, 1372.
- Profitable, markedly, **04**, 2127.
- Water jet for, Red River, **73**, 614, 616.
- Western rivers, **72**, 337; **73**, 488; **76**, 618; **77**, 495; **78**, 649.

Snags. (See Obstructions; Stumps.)

- Dimensions of, **68**, 610; **80**, 1743; **85**, 1793; **86**, 1534.
- Dynamite, removing with, **73**, 616, 618; **74**, ii, 358; **78**, 538; **79**, 626, 651, 1187.
- Origin of, **68**, 624.
- Peculiar, Perquimans River, N. C., **78**, 538.
- Removing, methods, **93**, 1908.
- Weight of, average, Ohio River, **77**, 628.

Snow.

- Channel shoaling from, Chicago River, **11**, 2351.
- Melting of, effect of forests on, **03**, 2446.

Soils.

- Bearing power, testing, **04**, 3821.
- Buildings, **04**, 3821.
- Filtration, rate of, **76**, ii, 67; **79**, 1239.
- Foundations, locks, **98**, 1472.
- Sustaining power, foundations, **72**, 766.

Soils, Compressible.

- Foundations, **74**, 829, 830; **75**, ii, 621.

Soils, Sandy.

- Pile driving, **83**, 1249.

Soils, Soft.

- Triangulation stations, buildings, **00**, 2073.

Solids, Suspended.

- Running water, effect of, **76**, ii, 5.

Soundings. (See Breakwaters; Catamarans;

- Reels; Rock.) (See pl. 72.)
- 67**, 217; **68**, 143; **71**, 177; **78**, 546.
- Catamaran, breakwaters, **00**, 4134.
- Catamaran for, **02**, 2774; **03**, 2764.
- Cross sections, float to obtain, breakwaters, **03**, 2096.
- Currents, rapid, **93**, 3162.
- Defective, lines, expansion of, **74**, 687.
- Discharge measuring, **00**, 5327.
- Discharge observations, methods, Mississippi River, **11**, 1947.
- Drifting method, **96**, 3669.
- Irregularity of, oyster beds, over, **73**, 818.
- Lake survey, **85**, 2103.
- Lead line for, sinking rate, **83**, 2268.
- Lines for, requirements of, **74**, 685.
- Machine for, **68**, 423, 429; **70**, 319; **71**, 278; **72**, 315, 334; **75**, 454, 466; **03**, 2686.
- Making, methods, **00**, 3052.
- Methods, **88**, 423, 642, 1110, 1145; **89**, 1409; **90**, 4013; **91**, 2154; **92**, 1333; **95**, 4231, 4240; **97**, 1543; **00**, 5331.
- Methods, Arkansas River, **85**, 1609.
- Methods, Exeter River, **97**, 820.
- Methods, inshore, details, **02**, 2818, 2866.
- Methods, lakes, **71**, 997; **72**, 1088.
- Methods, rocks, over, **72**, 867.

Soundings—Continued.

- Methods, various, **01**, 2532; **02**, 1805, 2866; H. D. 231, 58th, 3d.
- Mississippi River, **80**, 1517; **93**, 3786.
- Observations of, error, reduced, **99**, 3637.
- Reduction of, **97**, 1543.
- Reduction of, Altamaha surveys, H. D. 443, 62d, 2d.
- Reduction of, low-tide, to, methods, **75**, ii, 77
- Reels, **95**, 4170, 4240.
- Reels, Ripley-Haskell, **95**, 4170.
- St. Marys River, **80**, 2072; **86**, 1803; **95**, 4230.
- Sandusky Harbor, **95**, 3090.
- Scow for, **98**, 2758.
- Sill dams, **99**, 3637.
- Static methods, **00**, 5327.
- Sweep apparatus for, **96**, 4066.
- Sweeping, **92**, 3418; **94**, 3428.
- Tagged cord, **93**, 1415.
- Wire reel, **00**, 5331.

Soundings, Deep-Sea.

- Northern and Northwestern Lakes, **71**, 997.

Soundings, Static.

- 00**, 5327, 5330.

Spall Bed. (See pl. 14.)**Spalls, Quarry.**

- Handling of, clam-shell dipper, **99**, 2156.

Spawling. (See Revetment; Riprap; Stone.)

- Banks, **03**, 2443.

Speaking Tubes.

- Fort. (See p. 1797 of this Index.)

Specifications.

- Bridges, **02**, 2666, 2674.
- Canal, Maryland and Delaware ship canal, S. D. 215, 59th, 2d.
- Dikes, Missouri River, **96**, 3841.
- Dredges, hydraulic, **04**, S., 103.
- Levees, California rivers, H. D. 262, 59th, 1st.
- Sea wall, concrete, **05**, 3024.

Speed.

- Canals, various, H. D. 391, 62d, 2d.

Spillway. (See pl. 19.)

- Barriers, Yuba River, **06**, 2078.
- Flood control, California rivers, H. D. 81, 62d, 1st.

Spillways.

- Reservoirs, storage, Ouachita system, H. D. 588, 62d, 2d.

Sponge Racks.

- Fort. (See p. 1797 of this Index.)

Sprinkling.

- Roads, parks, **02**, 3037; **03**, 2462.

Spuds.

- Cribs, sinking of, **76**, ii, 538.

Spur Dams. (See Dams.)**Spurs.** (See Breakwaters; Dikes; Groins; Hurdles; Jetties; Levees.)

- Bank erosion, preventing, **97**, 3818.
- Bank protection, **99**, 3590.
- Breakwaters, effect on, **96**, 3154.
- Building, dikes, **98**, 3442.
- Building, stone dikes, **93**, 2447.
- Erosion, preventing, bank angles, **97**, 3818.
- Jetties, **00**, 4451.

Spurs—Continued.

- Jetties, effect on, **94**, 2548.
- Jetties, building, Winyah Bay, **95**, 1352.
- Pile dams, **93**, 1562.
- Rock jetties, **00**, 4451.
- Undermining of jetties, preventing, **94**, 2548.

Spur Systems.

- Mississippi River, **02**, S., 139.

Squat.

- Steamships under way, study of, **04**, 3748.

Stadia.

- Distance measuring, surveys, **72**, 1107.
- Use of, excellent result, **73**, 638.

Stages.

- Discharge and, rivers, effect on, **00**, 5383.
- Indicator, water levels, **04**, 4063.

Stairways.

- Cheap forms. (See Forts, p. 1797 of this Index.)

Stanchions.

- Railings and. (See Forts, p. 1797 of this Index.)

Standpipes.

- Fire protection, buildings, **04**, 3850.

Stars.

- Latitude, **94**, 3391.
- Longitude work, **94**, 3338.

States.

- Canalization, assessment districts created for, **08**, 841; **09**, 883.
- Cooperation with, in waterway improvement, H. D. 1374, 61st, 3d.
- Rights of, in waterways, interference with, New York, H. D. 887, 62d, 2d.
- Riparian rights, etc., brief, etc., Sen. D. 351, 61st, 2d.
- U. S. and, rights of, waterways, Connecticut River, H. D. 818, 61st, 2d; H. D. 953, 61st, 2d.

State Work. (See Private Work, Vol. I, p. 22.)**Stations.** (See Triangulation.)

- Index, U. S. lakes surveys, **03**, 2745.
- Judgment firing, submarine mines, **98**, 744.
- Secondary triangulation, Mississippi River, **96**, 3515.
- Twist of, lake survey, **72**, 1103; **73**, 1184; **75**, ii, 913.

Stations, Triangulation.

- Galveston, **02**, 1358.

Statistics. (See Commerce; Dams.)**Statues.** (See Washington, D. C., p. 2040 of this Index.) (See pls. 68, 69.)

- Driveways, treatment of, District of Columbia, **05**, 2646.
- Foundations, **99**, 3841.
- Memorial work, District of Columbia, details, **12**, 3510.
- Stonework details, **04**, 3948, 3949.
- Views, District of Columbia. (See p. 2073 of this Index.)

Staves.

- Gauges, **97**, 1938.

Steam.

- Ice, clearing from sluice gates, **09**, 2010.

Steamboating.

- Logging and, regulation, difficult, **00**, 2809.

Steamboats. (See Canals; Lakes.)

- Chimneys of, height of, **75**, ii, 681; **78**, 908, 928, 934.
- Earliest, introduction of, Lake Champlain, **73**, 405.
- Lake Champlain, **73**, 408.
- Proper loads, shallow rivers, **95**, 2282.
- Swept over dam, Monongahela River, **08**, 1767.
- Western rivers, **68**, 440, 487; **71**, 448; **72**, 423 **78**, 927, 1030; **79**, 1315.
- Wrecks of, Mississippi River, **67**, 387, 391.

Steamer.

- Torpedoes, planting, **90**, 399.

Steam Plant.

- Details of, hydraulic dredges, **04**, S., 113.
- Pile driving, **83**, 1185, 1270, 1272.

Steam Power.

- Compressed air preferable, rock drilling, **98**, 1952.
- Stone handling, locks, **74**, 164; **76**, 661.
- Water and, compared, **78**, 753.

Steamships.

- Dimensions, growth, H. D. 1506, 60th, 2d.
- Squat, **04**, 3743.
- Tonnage, increasing, H. D. 1506, 60th, 2d.

Steamships, Ocean.

- Draft, New York Harbor, **99**, 1280.

Steam Tenders.

- Hydraulic dredges, **98**, 3306.

Steel. (See Drills; Gates; Iron; Sheathing.)

- Bear-trap gates of, superiority of steel, **11**, 2139.
- Bridges, plans, **98**, 3606.
- Buildings of, failure to withstand fires, **04**, 3830.
- Chains, use of, experience against, locks, **98**, 2127.
- Concrete and, breakwater, Algoma, **08**, 1954. (See Concrete.)
- Concrete and, bridges, **03**, 2474. (See Concrete.)
- Concrete and, telephone booths, forts. (See p. 1797 of this Index.)
- Drills, best steel for, rock removing, **75**, ii, 204.
- Drills, diamond and, comparison, rock removing, **72**, 803.
- Frames, weirs, **00**, 5003.
- Lining of, concrete forms, **98**, 2254.
- Mooring posts, setting of, **97**, 2206.
- Properties of, for buildings, **04**, 3833.
- Shipments by water, special barges, Ohio River, H. D. 492, 60th, 1st.
- Skin of, bear-trap gates, **11**, 2142.
- Tapes of, base-line measuring, **87**, 2943, 2952, 3124.
- Tapes of, 500-foot, **95**, 4230.
- Tapes of, tests of, **93**, 1926.
- Trusses, scows, **91**, 2333.

Steel Buildings. (See Buildings.)**Steel, Forged.**

- Preferred for lock gate wheels, **09**, 1780.

Steel, Rusty.

- Cleaning, sandblast, **00**, 4330.
- Sand blast, improvised, **00**, 2788.

Steelwork.

- Careful work, economy of, **04**, 3834.
- Columns of, designing factors, **04**, 3834.
- Connections, easily made, **04**, 3834.
- Government Printing Office, **01**, 3808.
- Paint, red lead and special dryer best, **99**, 2290.

Stiffeners.

- Steel used for, bear-trap gates, **11**, 2142.

Stone. (See Breakwaters; Buildings; Dams;

- Dikes; Enrockment; Jetties; Locks; Piers; Quarries; Revetment; Rock; Sand.)
- Absorption, various stones, **94**, 2310.
- Arches of, bridges, **98**, 3606.
- Artificial, failure, Cherbourg Breakwater, **67**, 516.
- Barges for, **97**, 1799.
- Barges for, 1,500-ton, **99**, 3262.
- Barges for, jetties, **97**, 1799.
- Barges for, side-dumping, 800-ton, **99**, 3156.
- Beach erosion, to prevent, **72**, 897.
- Bed of, resistance, effect, **75**, ii, 843.
- Bins for, building, **96**, 513.
- Bins for, materials, **96**, 513.
- Blocks, concrete, replaced by, revetments, **01**, 1107.

- Breakage of, **98**, 2953.

Breakwaters, stone.

- cross sections of, **00**, 4090.
- cross sections, best, **00**, 1831.
- designing, **93**, 3259.
- end of, **00**, 4134.
- extending, plans for, **95**, 3153.
- planes of rest, **93**, 3261.
- sections of, **00**, 4062.
- sections of, Sandy Bay, **00**, 1186.
- settlement of, **00**, 4118.
- slopes, designing, **93**, 3261.
- specifications for, **00**, 4076.
- stability of, **00**, 4065.
- substructure, designing, **93**, 3261.
- superstructures, designing, **93**, 3262.

- Brush and, crevasses, closing, **71**, 207.
- Brush and, dams, building, **95**, 2230.
- Capping of, breakwaters, **00**, 4116.
- Chips, usefulness of, jetties, **94**, 1231.
- Classes of, jetties, for, 1615.
- Coping, **99**, 3826.
- Concrete, in, **00**, 978.
- Concrete, locks, **94**, 1996.
- Cost of, Great Lakes, **95**, 3157.
- Crib dams, stone in, plans of, **96**, 1434.
- Cribs, amount in, **96**, 2578.
- Cribs, foundations of, **72**, 122, 161, 164, 165; **73**, 206, 353; **76**, ii, 436.
- Cribs, removed from, storms, **75**, 276; **77**, 896, 903.
- Crushing, crushers, **95**, 2899.
- Crushing, machine, **96**, 514.
- Crushing, plant, **94**, 2176; **95**, 1678; **00**, 757.
- Crushing, strength, **80**, 689.
- Cubes and slabs, pressure on, effect of, **75**, ii, 841.
- Cutting, **94**, 2307; **00**, 2930.
- Cutting, Des Moines Rapids, **70**, 298.
- Cutting, locks, **93**, 3001, 3006; **96**, 1939; **97**, 2281.
- Cutting, locks, St. Marys Falls, **94**, 2304.

Stone—Continued.

- Cutting, specifications for, **98**, 1918.
- Delivery of, jetty, **94**, 2503.
- Deterioration of, jetties, **95**, 3314.
- Deterioration of, pier superstructure, **99**, 2772.
- Dikes, cost, **88**, 666.
- Dikes of, stabler than cribwork, Great Lakes, **06**, 1699.
- Dikes, spur, building, **93**, 2447.
- Dumping, device to clear stone from track, **02**, 2131.
- Dumping, jetties, **95**, 3360.
- Excessive weight, Port Jefferson Harbor, **74**, ii, 271.
- Filling, weight of, cribs, **68**, 230.
- Foundations, crib, **72**, 122, 161, 164, 165; **73**, 206, 353; **76**, ii, 436.
- Foundations, economy of, cribs, **82**, 2321; **87**, 2407.
- Foundations, sections, cribs, **00**, 3878.
- Fracture of, discussion, **75**, ii, 824.
- Gravel and, comparison of, concrete in, **00**, 978.
- Green stone, deterioration of, causes, frost, etc., **98**, 1916.
- Handling, cable hoists, **96**, 1794.
- Handling, jetties for, **94**, 1102; **97**, 1799.
- Handling, large, derrick scows, **94**, 1102.
- Handling, locks, **94**, 2305.
- Handling, locks, steam power at, **74**, 164; **76**, 661.
- Handling, plant, **98**, 1885.
- Handling, scows with railroad track on them, **96**, 2788.
- Joints, asphalted, **02**, 2494. (See Forts, p. 1797 of this Index.)
- Lead sheets, interposition of, effect of, **75**, ii, 826.
- Lewis-holes, **93**, 3007.
- Lewis-holes, styles, **94**, 2308.
- Masonry, Colbert Shoals Canal, **99**, 2271.
- Mattress and stone, dams, building, **95**, 2228.
- Mattress and stone, jetties, building, **00**, 4243.
- Mattress and stone, jetties, section, **94**, 1378, **00**, 4243.
- Movement of, wave force, **78**, 242.
- Paving, shore-protecting, **69**, 439.
- Pile and stone, jetties, storm, effect of, **94**, 2547.
- Piling, method, **94**, 2308.
- Placing, breakwaters, **93**, 3260.
- Placing, jetties, **96**, 1194.
- Placing, jetties, undermining of, preventing, **95**, 3312.
- Placing, trestle, breakwaters, **93**, 3227.
- Placing, trestlework, jetties, **94**, 2517.
- Planer, **94**, 1826, 2306.
- Protective action, beaches, **71**, 884; **72**, 896; **74**, ii, 276.
- Quarries, California coast, **00**, 4189.
- Quarries, great waste, California coast, **00**, 4189.
- Quarrying, methods, **93**, 3353; **94**, 2363; **95**, 2295; **96**, 1746, 1942; **97**, 2259; **98**, 1766, 1885, 1887, 2032, 2772; **00**, 2170, 2713, 2916, 2928, 3514, 4124, 4476, 4837.
- Quarrying, expense, items of, **97**, 2277.

Stone—Continued.

- Quarrying, plant, **96**, 514; **98**, 2772.
Records, locks, **93**, 3008.
Replacing, crib piers, **96**, 2945.
Reservoirs, dams, **98**, 2824.
Sand and, sharp and smooth, advantages, concrete, **98**, 2280.
Setting of, breakwaters, **00**, 4134.
Situation of, Great Lakes, vicinity of, **95**, 3159.
Size of, breakwaters, **67**, 516; **70**, 452; **71**, 741; **72**, 166, 918; **73**, 884, 948; **79**, 1767.
Size of, jetties, **98**, 2864.
Size, man size preferable, revetments, **11**, 1431.
Specific gravity, **80**, 2264.
Specific gravity, determining, **75**, ii, 822.
Stability of rock of different density, **01**, 2384.
Statuary, details, District of Columbia, **04**, 3948.
Steam handling of, locks, **74**, 164; **76**, 661.
Storage of, costly, Harlem River, N. Y., **99**, 1237.
Superstructure, cribs, **67**, 222; **74**, 151; **76**, ii, 390.
Superstructure, ice movement, effect of, **89**, 2073.
Superstructure of, replacing timber superstructure, breakwaters, H. D. 240, 59th, 1st.
Superstructure, piers, **04**, 3818.
Superstructure, sections, breakwaters, **97**, 3298.
Surfaces of pressure, various, rupture, effect on, **75**, ii, 824, 843.
Tests, **75**, ii, 819; **92**, 490; **94**, 2308.
Timber and stone, breakwaters, **91**, 2933.
Towing of, cost of, Mississippi River, **11**, 3292.
Transfer from cars to barge, cheap method, **01**, S., 253.
Undermining, preventing, jetties, **95**, 3312.
Varieties of, character and strength, **75**, ii, 819.
Various, absorption, **94**, 2310.
Various, specific gravity, **94**, 2310.
Volume of, space filled, ratio, **86**, 840.
Walls, sea, concrete for, **05**, 3025.
Wall, training dike, cheaper than, **99**, 1507.
Wave action on, **76**, ii, 596.
Weighing, displacement method, not satisfactory, **94**, 1392.
Weighing, jetties, **94**, 1392.
Wooden cushions, effect of, **75**, ii, 845.
Work, cost, locks, **87**, 2484.
Work, jetties, **84**, 1108.
Yard, St. Marys Falls, **94**, 2299.

Stone, Artificial.

- Breakwaters, use in, **67**, 516; **70**, 457; **73**, 1125.
Canals, **94**, 2164.

Stone Barges.

- Measurement of displacement, **02**, 2511.

Stone, Broken.

- Voids in, ratio, **74**, ii, 377; **78**, 1136.

Stone, Building.

- Ohio, **96**, 3083.

Stone, Cut.

- Storing, **00**, 2922.

Stone, Large.

- Breakwaters, **93**, 3260.
Economical, Great Lakes piers, **06**, 1821.

Stone, Large—Continued.

- Handling, derrick scows for, **94**, 1102.
Handling, plant, **00**, 4117.
Jetties, placing in, **94**, 1102.
Jetty ends, objectionable at, **01**, 1431.
Not removable by hydraulic dredges, **07**, 1029.
Omitted, concrete masonry, **94**, 2166.

Stone, Lava.

- Breakwaters, Hawaii, H. D. 407, 59th, 2d.

Stone, Loose.

- Natural shore protection, **71**, 884; **72**, 896; **74**, ii, 276.

Stone, Small.

- Shore ends of jetties, **02**, 1159.

Stone, Submarine.

- Setting, water telescope, usefulness of, **00**, 4134.

Stonework. (See pl. 58.)

- Breakwaters, during construction, **01**, 3318.
Buildings, **04**, 3854.

Storage. (See Dams; Water Supply.)

- Scows, **01**, 3225.
Plant, U. S., wharf, Cleveland, H. D. 270, 59th, 2d.
River regulation, Red River of the North, H. D. 616, 62d, 2d.
Water, drinking, H. D. 342, 61st, 2d.

Storage Depot.

- Need for, U. S. works, **03**, 2136.

Storage Platforms.

- Jetties, **00**, 4448.

Storage Shed.

- Torpedoes, **98**, 649.

Storage, Water.

- Utilization of, Mississippi River, **01**, 2400.

Storehouses.

- Building, Alaska, **97**, 3494.
Various types, **02**, 2734.

Storms. (See Hurricanes; Rain.)

- Beaches, effect on; St. Andrews Bay, H. D. 12, 61st, 1st.
Breakwaters, concrete, effect, **01**, 3318; **09**, 53.
Channels, effect on, Pacific coast, H. D. 961, 60th, 1st.
Effect of, Fort Caswell, **00**, 900.
Effect of, St. Andrews Bay, Cal., H. D. 12, 61st, 1st.
Force of, Great Lakes, **06**, 1700.
Great Lakes, character of storms, H. D. 900, 59th, 1st.
Jetties, effect on, **01**, 403; **03**, 1126.
Jetties, withstanding terrific storms, Galveston, **01**, 1926.
Protection from, Gulf coasts, **03**, 1348.
River bars, cause of, **68**, 111; **77**, 967.
River currents, effect on, **97**, 2777.
Shores, effect of storms on, H. D. 328, 61st, 2d.
Vessel damage, entrance to harbors, Great Lakes, H. D. 82, 59th, 2d.
Waves, effect on, jetties, **94**, 1105.

Strains. (See Dams; Gates; Locks; Stresses.)

- Calculations, hydraulic gates, **75**, 911.
Discussion, lock gates, **72**, 452, 460; **75**, 910; **78**, 734, 742, 1338.
Discussion, movable dams, **97**, 3956.

Strains—Continued.

Movable dams, **75**, 690, 910; **76**, ii, 42.
Tubular arch bridges, **75**, ii, 680; **77**, 1099, 1102.

Strata. (See Borings; Land.)

Artesian well, S. C., **96**, 504.

Streams. (See Rivers; Waterways.)

Bear-trap dams, utility, **96**, 1641.
Bottom tester, **88**, 931.
Corporations, rights of, **05**, 910.
Diversion of, reservoir sites, **96**, 3963.
Flow of, diagramming, Tennessee River, H. D. 781, 60th, 1st.
Flow of, general equation, H. D. 779, 61st, 2d.
Pulsations in, **69**, 594; **71**, 989; **72**, 1033, 1040.

Streams, Navigable.

Definition of, U. S. and State, Grand and Green Rivers, H. D. 953, 61st, 2d.
Water power, riparian rights, H. D. 781, 60th, 1st.
Water-power works, cost of, Muscle Shoals, H. D. 781, 60th, 1st.

Streets.

Paving, ancient Roman cities, **67**, 527.

Stresses. (See Gates; Locks; Strains.)

Calculating, lock gates, **95**, 3037.

Stumps. (See Snags.)

Blasting, methods, parties, **96**, 1622.
Removing, economical methods, **96**, 1622.

Substructures. (See Breakwaters; Jetties; Piers; Superstructures.)

Breakwater, **99**, 1350, 1351.
Designing, stone breakwaters, **93**, 3261.
Passes, movable dams, **97**, 2546.
Walls of, parting, breakwater, **99**, 3140.

Suction Dredges. (See Dredges.)

Altering from end to side, Mississippi River, **05**, 1652.

Suction Head.

Forms of, hydraulic dredges, and effect of various forms, **03**, S., 146.

Sugar.

Cultivation of, a principal industry of the Hawaiian Islands, H. D. 609, 62d, 2d.

Sulphur.

Cement briquettes, for repair of, **01**, 922.

Superstructures. (See Breakwaters; Concrete; Cribs; Masonry; Piers; Stones; Substructures.)

Average durability, cribs, **84**, 2020; **87**, 2111.
Breakwaters, **94**, 2412; **95**, 2770; **99**, 1350, 1351; **00**, 4068.
Building, improved methods, crib piers, **96**, 2966.
Cast-iron facing, cribs, **87**, 2060.
Concrete and stone, crib piers, **97**, 3075.
Crib breakwaters, placing in, **00**, 4134.
Cribs, **71**, 216; **78**, 1188; **89**, 2365; **90**, 2814; **96**, 2952.
Modified form, cribs, **83**, 1808.
Parapet, form of, cribs, **84**, 2144; **85**, 2279, 2307; **87**, 2382.
Parapet, piers, **84**, 2144; **85**, 2279, 2307.
Sheathing of, breakwaters, **00**, 4068.
Stone breakwaters, **93**, 3261.

Superstructures, Concrete in. (See Breakwaters.)

Advantages, breakwaters, **95**, 3138.
Breakwaters, **82**, 793, 2270; **86**, 119; **87**, 483, 504, 2060, 2069, 2111, 2353, 2363; **98**, 2676; **00**, 4125.
Breakwaters, building, **96**, 2365, 2367, 2385; **97**, 3080; **98**, 2753; **99**, 3057; **00**, 4125.
Building, **90**, 1629.
Building, piers, **00**, 4102.
Cribs, **87**, 2060, 2111, 2353, 2363; **96**, 2945.
Failure of, breakwaters, **81**, 2674.
Piers, **98**, 2226; **99**, 2644; **00**, 4062.
Piers, over, **03**, 1888.
Repairing, breakwaters, **00**, 4102.
Rubblestone hearting, breakwaters, **99**, 3098.
Sections of, breakwaters, **98**, 2676.

Superstructure, Masonry.

Disadvantages, piers, **66**, iv, 157, 163; **67**, 137, 222, 226, 228.
Foundations, cribs, **67**, 222; **74**, 151; **76**, ii, 390.
Foundations, failing, **67**, 222.
Piers, **66**, iv, 157, 163; **76**, ii, 390; **78**, 1166; **79**, 1524.

Superstructure, Old.

Removing, breakwaters, **00**, 4127.

Superstructures, Sloping.

Piers, **71**, 215.

Surfaces. (See Canals; Rivers.)

Slopes of, St. Johns River, Fla., H. D. 611, 61st, 2d.

Surfaces, Sloping.

Wave action on, **70**, 196.

Surfacing.

Roads, **03**, 2459.

Surveys. (See Bases; Battlefields; Bench Marks; Borings; Bridges; Canals; Dams; Dikes; Dredging; Examinations; Harbors of Refuge; Ice; Lakes; Levees; Leveling; Locks; Meters; Plotting; Soundings; Topography; Triangulation; also Vol. I, p. 22.) (See also pl. 72.)

Astronomical observations, **97**, 4076.
Austrian, **76**, iii, 158, 166.
Barometer, use of, P. P. No. 15, C. E.
Bars, **97**, 1638.
Base lines, coast survey, **68**, 939.
Base lines, Mackinac, **97**, 4077.
Base lines, measurements, Mackinac, **98**, 3747.
Base lines, measuring, **93**, 4360.
Base lines, measuring, Galveston, **98**, 1497.
Base lines, measuring, Soo, **93**, 4360.
Bases, measuring, Red River, **93**, 1926.
Battlefields, **74**, ii, 476.
Belgian, **76**, iii, 214.
Bench marks, Great Lakes, **03**, 2693.
Black Hills, **74**, ii, 628.
Borings, **96**, 3901.
Bottom tester, **88**, 931.
Brass tapes, tests of, **93**, 1926.
Bridges, **96**, 3890; **98**, 3576.
Bulletins, methods of issue, Great Lakes, **08**, 2533.
Camps, **95**, 4248.

Surveys—Continued.

- Canals, **95**, 3424; **96**, 1088, 2390; **97**, 2870; **99**, 1735.
- Canals, Atlantic coast, H. D. 391, 62d, 2d.
- Canals, methods, Puget Sound waters, **96**, 3365.
- Chart reproduction, special methods, **08**, 2516.
- Commercial necessity for, great; Great Lakes, **07**, 849.
- Comparison of recent with other surveys, Mississippi River, **05**, S., 43.
- Comparisons, unreliability of, when made short time apart, **11**, 1592.
- Comparator, use of, lake surveys, **68**, 944.
- Computing, Missouri River, **94**, 1753.
- Conducting, instructions of Gen. Warren, **68**, 303.
- Cost, Mississippi River, **11**, 1928, 3281.
- Cross-section work, Illinois and Mississippi Canal, **94**, 2178.
- Data, index to, Mississippi River, **95**, 3705.
- Dikes, **97**, 3927.
- Dredging, **94**, 2615; **95**, 3695.

- Elevation monument, setting, Jefferson City, Mo., **94**, 3085.
- English, **76**, iii, 132.
- European, organization, **76**, iii, 127.
- European, government, **76**, iii, 128.
- Expense, reducing, Mississippi River, **10**, 3041.
- Feeder lines, canals, **96**, 2656.
- Field organization, survey, Mississippi River. 14-foot channel, H. D. 50, 61st, 1st.
- Field work, instructions, Lockport to St. Louis, H. D. 263, 59th, 1st.
- Geodetic monument, setting, Jefferson City, Mo., **94**, 3085.
- Great Lakes ship channel, **94**, 2263.
- Gurley's transit, inferiority of, **73**, 639; **74**, 726.
- Harbor of refuge, methods, Cape Lookout, **97**, 1432.
- Heliotrope, use of, **67**, 564; **78**, 1397.
- Instructions, general, **03**, 1910.
- Instruments, data, index to, Mississippi River, **95**, 3709.
- Instruments, lake survey, **70**, 552.
- Irish, **76**, iii, 138.
- Italian, **76**, iii, 168, 180.
- Lakes, instruments, errors, determining, **72**, 1048, 1103; **76**, iii, 64.
- Lake shores, methods, **93**, 4372.
- Land office and other, connecting, difficulties of, **68**, 302.
- Levees, **96**, 3721; **97**, 2127.
- Levees, connecting, **00**, 2500.
- Lighthouse, site, Chicago Harbor, **94**, 2133.
- Locks and dams, **11**, 1851.
- Locks and dams, for, methods, Allegheny River, **96**, 2214.
- Magnetic dip, lakes, **98**, 3769.
- Magnetic declination, lakes, **98**, 3769.
- Magnetic work, **97**, 4076.
- Meridian stone, setting, Jefferson City, Mo., **94**, 3085.
- Metallic tapes, comparison of, **93**, 1933.
- Methods, **88**, 1095; **90**, 1333, 1375, 1674; **91**, 1622; **92**, 547; **95**, 4221, 4228; **00**, 2071.

Surveys—Continued.

- Methods, Alabama River, **96**, 1402.
- Methods, Allegheny River, **99**, 2420.
- Methods, Aransas Pass, **00**, 2338.
- Methods, Bayou Teche, La., H. D. 527, 59th, 1st.
- Methods, best, Red River, **00**, 2491.
- Methods, Big Sandy River, **00**, 3403.
- Methods, Biscayne Bay, **97**, 1594.
- Methods, Black and Ouachita Rivers, **00**, 2512, 2549.
- Methods, Boston, **98**, 890.
- Methods, Brazos River, **97**, 1836; **00**, 2436.
- Methods, Cape Lookout, **00**, 1835.
- Methods, Cleveland Harbor, **98**, 2732.
- Methods, Columbia River, **68**, 877; **93**, 3391, **95**, 3538.
- Methods, Congaree River, **00**, 1866.
- Methods, Connecticut River, **68**, 757; **78**, 288, 304; H. D. 231, 58th, 3d; H. D. 1294, 61st, 3d.
- Methods, Coosa River, **98**, 1420; **05**, 1370; H. D. 219, 58th, 3d.
- Methods, Crystal River, **00**, 2030.
- Methods, details, Great Lakes surveys, **02**, 2839.
- Methods, Dismal Swamp Canal, **96**, 1088.
- Methods, Doboy Bar, **97**, 1542.
- Methods, Exeter River, **97**, 818.
- Methods, exploration, 40th parallel, **71**, 1028.
- Methods, final survey Arch Rock, San Francisco Bay, **01**, 3412.
- Methods, Forked Deer River, **95**, 2270; **97**, 2237.
- Methods, Fox River, **97**, 2730.
- Methods, French Broad River, **00**, 3021, 3052.
- Methods, Gasconade River, **96**, 3800.
- Methods, Grand River, La., **01**, 1897.
- Methods, Grays Harbor, **98**, 3063.
- Methods, Kalamazoo River, **98**, 2539.
- Methods, lake survey, **68**, 931; **72**, 1081; **76**, iii, 9, 70, 120; **92**, 3417.
- Methods, Licking River, **00**, 3164.
- Methods, Merrimac River, **96**, 618.
- Methods, Mississippi River, **72**, 334; **77**, 1106, 1196; **78**, 1095; **94**, 2767; **96**, 3721; **99**, 2149, 3372; **04**, S., 241; **05**, S., 78.
- Methods, Missouri River, **93**, 2315; **94**, 1749; **96**, 3797.
- Methods, Ohio River, **93**, 2459; **97**, 2338; **98**, 2059; **00**, 3199, 3203, 3223.
- Methods, Olympia Harbor, **93**, 3417.
- Methods, Orange River, **00**, 2037.
- Methods, Ouachita and Black Rivers, **96**, 1595; **98**, 1604.
- Methods, Puget Sound waters, **93**, 3421; **95**, 3424.
- Methods, Punta Rosa to Charlotte, **00**, 2046.
- Methods, Red River, **93**, 1925; **94**, 1339.
- Methods, reservoir sites, **98**, 2879.
- Methods, Rock Island Rapids, **72**, 334.
- Methods, Rockland Harbor, **96**, 582.
- Methods, St. Johns River, **00**, 1976.
- Methods, Sabine Lake, **97**, 1789.
- Methods, Sandusky Harbor, **98**, 2716.
- Methods, Sarasota Bay to Lemon Bay, **00**, 2062.
- Methods, shore lines, **92**, 3428.

Surveys—Continued.

- Methods, Southwest Pass, **99**, 1871.
 Methods, Starve Island Reef, Lake Erie, **98**, 2707.
 Methods, Tampa Bay, **97**, 1598.
 Methods, Tennessee River, **93**, 2335; **96**, 1946, 2035.
 Methods, upper Illinois and Des Plaines Rivers, **00**, 3862.
 Methods, upper White River, **00**, 2600.
 Methods, Warrior River, and Five Mile Creek, **99**, 1735.
 Methods, Wellfleet Harbor, Mass., **72**, 969.
 Methods, White River, **97**, 2487.
 Methods, Willamette River, **96**, 3318.
 Methods, Yazoo River, **96**, 1615.
 Military trail, Alaska, H. D. 192, 58th, 3d.
 Mississippi River, **97**, 3620; **98**, 3214.
 Missouri River, index to, **94**, 3113.
 Movable dams, **95**, 1899.
 Moving camps, methods, **98**, 1837.
 Nomenclature, Lockport to St. Louis; H. D. 263, 59th, 1st.
 Northern and northwestern lakes, **70**, 535; **71**, 982; **72**, 1031; **73**, 1170; **74**, ii, 402; **76**, iii, 3; **77**, 1105.
 Observations, lake surveys, **73**, 1195; **74**, ii, 440; **77**, 1181.
 Ohio Canals, **96**, 3005.
 One hundred meter tapes, tests, **00**, 2323.
 Organization, Mississippi River, H. D. 50, 61st, 1st.
 Organization, parties, **01**, 2532; **05**, 1369.
 Parties, Missouri River, **94**, 1749.
 Parties, organization, ice surveys, **95**, 4236.
 Plan, St. Marys River, **95**, 4228.
 Platting, abscissas and ordinates, by, **68**, 430, 431.
 Platting, Missouri River, **94**, 1753.
 Property required, **01**, 1833.
 Prussian, **76**, iii, 140, 156.
 Quarter boats, **97**, 2338.
 Refraction, **91**, 1899.
 Reservoir sites, **98**, 2878, 2879.
 River dams, **00**, 3203.
 Roads, Alaska, H. D. 192, 58th, 3d.
 Roads, wagon, **05**, 2839.
 Rocks, submerged, **01**, 1017.
 Russian, **76**, iii, 214.
 Scotch, **76**, iii, 138.
 Shore lines, methods, **95**, 4040.
 Shore-line work, substitutes for tertiary flags, **94**, 2799.
 Shores, lakes, **93**, 4372.
 Signals, lake surveys, **72**, 1103.
 Sites, locks and dams, **05**, 945.
 Spanish, **76**, iii, 181.
 Stadia, use of, distances, measuring, **72**, 1107.
 Standard measurements of, comparison, **68**, 940; **71**, 987, 991; **74**, ii, 444, 446.
 Standard measurements of, correction, **71**, 983, 986, 991; **74**, ii, 405, 410.
 Standard measurements of, determination of, **68**, 937; **72**, 1046; **77**, 1110.
 Standard measurements of, lake survey, **75**, ii, 854, 904; **76**, iii, 6, 79.

Surveys—Continued.

- Standard measurements of, length of, **68**, 931, 937, 947.
 Stations, index to, Great Lakes, U. S. standard datum, **03**, 2745.
 Stations, twist of, **72**, 1103; **73**, 1184; **75**, ii, 913.
 Steel tapes for, tests of, **93**, 1926.
 Swede, **76**, iii, 193, 212.
 Sweep, wire, economy of, **09**, 2496.
 Swiss, **76**, iii, 139, 192.
 Tapes, measure of, formula for, **93**, 1928.
 Targets, **95**, 4248.
 Targets, St. Marys River, **95**, 4248.
 Transit for, **72**, 1048, 1103.
 Traverse line, methods by, **98**, 1606.
 Tents, portable foundations, **98**, 1837.
 Water-power values, determining, **05**, 919.
 West of 100th meridian, **75**, ii, 923.
 Without instruments, methods, **94**, 2572.

Surveys, Geological.

- Fortieth parallel, **76**, iii, 217.

Surveys, Hydrographic.

- Methods, novel, **02**, 2773.
 Platting methods, novel, **02**, 2512.

Surveys, Topographical.

- Missouri River, **94**, 3113.

Surveys, Re-

- Astronomical work, **94**, 3322.
 Details, Lake Superior, **02**, 2840.
 Details, St. Clair River, etc., **02**, 2314.
 Methods, St. Marys River, **93**, 4358; **94**, 3422; **97**, 4074.
 St. Marys River, **93**, 4358; **94**, 3317; **95**, 4160; **97**, 4070.

Suspension Bridges.

- 69**, 398; **71**, 218, 405, 425, 432, 446; **78**, 1075.
 Niagara, **71**, 218; **78**, 1075.
 Ohio River, **71**, 405, 425; **79**, 1463.
 Wheeling, **71**, 405, 425.

Swamps. (See Lands.)**"Swash."**

- Underwater movement dangerous to shipping, Monterey Bay, H. D. 557, 59th, 1st.

Sweeping. (See Examinations.)

- Apparatus, soundings, **96**, 4066.
 Obstructions, finding, **04**, 4064. (See Surveys.)
 Rock removing, **96**, 4063.
 Shoals, examination of, **96**, 4062.
 Soundings, **92**, 3418; **94**, 3428.

Sweep, Wire. (See Surveys.)

- Great Lakes surveys, **09**, 2496; **08**, 2527.
 Shoals, finding, **07**, 847.

Swell.

- Formula, dams, **87**, 1306.
 Preventing, Duluth, H. D. 82, 59th, 2d.

Switchboard.

- Electric plant, gun batteries, **00**, 850.

Switches. (See Forts, p. 1797 of this Index.)

- Torpedoes, **89**, 493.

T.

Tamper.

Concrete work, **03**, 2424.

Tamping.

Blasting rock, **69**, 433.

Tanks. (See Cables.)

Dredges, hydraulic, **04**, S., 123.

Tape Lines.

Base lines, measuring, **05**, 3016.

Tapes. (See Brass; Surveys.)

Base-line measuring, **87**, 3124; **89**, 2759; **94**, 2729.

Correction of, base-line measuring, **94**, 2729.

Measuring, formula, **93**, 1928.

Measuring, tension balance for, **93**, 1926

Measuring, vernier for, **93**, 1926.

Tapes, Metallic.

Comparison, surveys, **93**, 1933.

Target Practice.

Platforms, building, **96**, 474.

Willets Point, **85**, 446.

Targets. (See Surveys.)

Targets, Phaseless.

Triangulation, **01**, S., 58.

Tar. (See Coal.)

Sand and, pile-head protecting, **92**, 1541.

Tarred Paper.

Concrete, adhesion of, preventing, **98**, 776.

Taxation.

Levees, **02**, S., 17. (See Levees.)

Teaming.

Cost, **04**, 3735.

Telaotographs. (See Forts, p. 1797 of this Index.)

Telegraph.

Longitude, determining, **73**, 1224; **74**, ii, 425, 434; **79**, 1895.

Transmission by, velocity, S. Ex. D. 42, 35th, 1st.

Telephones. (See Forts, p. 1797 of this Index.)

Lines, cost and maintenance, etc., **03**, 1612.

Telescopic Speaking Tube.

Forts, see p. 1797 of this Index.)

Telescopes, Water.

Breakwater construction, use in, **01**, 3318.

Temperature.

Barometers, effect on, **75**, ii, 971.

Concrete mortars, effect on, **94**, 2335.

Lakes, **71**, 1021.

Temperature, Minimum.

Depth of, lakes, **71**, 1021.

Templets.

Anchor bolts set without, gun platforms, **96**, 536.

Concrete pier construction, **04**, 3802.

Tenders.

Hydraulic dredges, **98**, 3181.

Tents. (See Surveys.)

Portable foundations, survey parties, **98**, 1837.

Teredo.

Absence from piles, unexpected, Columbia River, **08**, 2271.

Brush mats, destruction of, **76**, 316; **86**, 1312.

Cane proof against, **79**, 932, 937.

Chestnut timber proof against, **73**, 999.

Croosoted timber, effect on, **81**, 818, 819; **82**, 782.

Cribs, destruction of, **75**, ii, 99.

Mattresses, jetties, **82**, 1188; **86**, 1312.

Palmetto proof against, **68**, 512; **71**, 548.

Pile jetties, **00**, 4475.

Piles, destruction of, **92**, 2858.

Piles, different kinds of, effect on, **68**, 508, 512, **71**, 531, 536, 548; **79**, 937.

Piles attacked, tests to discover, **97**, 3373.

Pilework, protection, **06**, 758, 2014.

Protection against, hydraulic cement for, **76**, 570.

Protection against, hydrocarbon processes a failure, **73**, 1131.

Protection against, piles, **80**, 1212.

Protection against, sand accumulations, **73**, 800, 1131; **74**, 757; **75**, ii, 692.

Protection against, timber, special treatment of, **71**, 942.

Ravages of, cypress stumps, **76**, 327.

Ravages of, Galveston Bay, **68**, 512; **76**, 570.

Ravages of, Lewes, Del., **71**, 667.

Ravages of, Wilmington Harbor, Cal., **78**, 1292.

Sand-embedded timbers proof against, **73**, 800; **74**, 757.

Scarcity of, Humboldt Bay, **94**, 2550.

Timber, Aransas Pass, **88**, 1314.

Trestle work, depredations in, Columbia River, **07**, 2199.

Terminals.

Commerce, decline of, neglect of terminals a cause, Missouri River, H. D. 1120, 60th, 2d.

Congestion, New York, H. D. 1506, 60th, 2d.

Facilities at, important, waterway improvement, **10**, 2976.

Harborage, new, plans for terminals, Jamaica Bay, H. D. 1506, 60th, 2d.

Inadequacy, responsibility for, Charleston, S. C., H. D. 288, 62d, 2d.

River traffic, notable modern features, terminals, **12**, 2202.

Value, Tennessee River, H. D. 360, 62d, 2d.

Waterways, intracoastal, H. D. 391, 62d, 2d.

Terra Cotta.

Buildings, **96**, 4011; **04**, 3844, 3852.

Cement mortar, effect on, **96**, 2803.

Tertiary Triangulation. (See Triangulation.)**Tests.**

100-meter tapes, surveys, **00**, 2323.

T-heads. (See Dikes.)

Strengthening dikes, **98**, 1863.

Thermometers.

Errors, correction of, **79**, 1952.

Tests of, Lake Survey, **74**, ii, 456.

Tidal Action.

76, 380.

Tidal Basins.

Views, Washington, D. C., **10**, 2670.

Tidal Computing.

St. Johns River, **93**, 1634.

Tidal Data.

Brunswick Harbor, **95**, 1495.

Tidal Observations.

Alabama River, **79**, 829.

Annapolis Harbor, **81**, 872, 874.

Atlantic City, **81**, 833; **87**, 815.

Baltimore, **83**, 685.

Brazos River, **97**, 1839.

Buzzards Bay, **74**, ii, 283.

Calais, Me., **87**, 478.

Cape Fear River, **76**, 318; **77**, 339; **80**, 699, 706,

712; **81**, 927, 940; **86**, 997.

Charleston Harbor, **76**, 430; **78**, 544, 546, 549.

Columbia River, **81**, 2539, 2550.

Connecticut River, **68**, 764, 765; **78**, 378; **86**, 626.

Delaware River and Bay, **79**, 240; **80**, 715, 730, 733; **81**, 822.

Exeter Harbor, N. H., **81**, 496; **82**, 504.

Galveston Bay, **68**, 502; **74**, 732; **77**, 463; **80**, 1219; **86**, 1300, 1316.

Galveston Harbor, **95**, 1801; **96**, 1529.

Gulf of Mexico, **74**, 782, 791; **77**, 461.

Hartford, Conn., **80**, 404.

Housatonic River, **71**, 779, 785; **73**, 1013.

Hudson River, **66**, iv, 207, 209, 214; **68**, 716;

75, ii, 234; **85**, 679; **94**, 726.

Jacksonville, Fla., **87**, 1229.

James River, **73**, 778; **74**, ii, 43; **75**, ii, 75, 81; **76**, 294; **77**, 288; **78**, 456, 460; **80**, 650, 651;

81, 896; **83**, 685; **94**, 916.

Jonesport, Me., **80**, 361; **81**, 461.

Kennebec River, **88**, 422.

Lake Michigan, **66**, iv, 93; **72**, 1035.

Long Island, **72**, 913.

Mississippi River, **76**, 550; **00**, 4757.

Nanticoke River, Md., **80**, 731.

Nantucket Harbor, **80**, 429; **85**, 565.

Narragansett Bay, **81**, 561.

Newburyport Harbor, **81**, 501.

New Haven Harbor, **72**, 879.

New York Harbor, **80**, 532; **85**, 777.

Ocracoke Inlet, **94**, 999.

Pawtucket River, **71**, 736, 738; **74**, ii, 230, 237.

Pensacola Harbor, **91**, 1725.

Penobscot River, **88**, 429.

Portland Harbor, Oreg., **87**, 2507.

Potomac River, **76**, 357; **83**, 781.

Providence Harbor, **73**, 971; **80**, 379, 387.

Rancocas River, N. J., **81**, 798.

Tidal Observations—Continued.

St. Augustine, **88**, 1131.

St. Croix River, **67**, 503.

Sabine Pass, **82**, 1431; **86**, 1280.

Savannah Harbor, **73**, 738; **79**, 748; **82**, 1167; **94**, 1137.

Savannah River and Harbor, **88**, 1067; **89**, 1303; **90**, 1267; **91**, 1576; **92**, 1305, 1333.

Stonington Harbor, **72**, 919; **74**, ii, 246; **79**, 326.

Taunton River, **73**, 959.

Thames River, **72**, 830.

Woods Hole, Mass., **81**, 546.

Tidal Range.

Boston, **88**, 445.

Connecticut River, **88**, 530.

Jetties, various, **95**, 3531.

Manchester, Mass., **88**, 467.

Raritan Bay, N. J., **88**, 634.

Wellfleet Harbor, **88**, 480.

Tidal System.

North Atlantic coast, **74**, ii, 189, 190.

Tidal Volumes.

Savannah Harbor, various years, **96**, 1235.

Tidal Waves.

Action of, **68**, 766.

California, **77**, 990.

Height, ratio of decrease, Savannah River, **94**, 1137.

Rate of movement, **73**, 993.

Shape of, **68**, 766.

Tides. (See Floods; Gauges; Harbors; Records; Tidal Observations.)

Bars, effect on, harbors, **96**, 1190.

Bottom during ebb and flood, **92**, 1341.

Bridges, flow by, **74**, ii, 234.

Bridges, piers of, effect of, **74**, ii, 156, 234.

Changes in, Harlem River, **96**, 848.

Channel bottoms, effect on, **92**, 1341.

Complicated, Pacific coast, **75**, ii, 756.

Discharge, Charleston Harbor, **95**, 1422.

Diversion, Savannah, **76**, 435.

Estuaries, action in, **66**, iv, 66, 214; **68**, 919; **74**, ii, 379; **75**, ii, 196; **76**, 460.

Galveston Harbor, **98**, 1505.

Gauges, self-reading, **02**, 2514.

Gauging, **94**, 1138.

Harbors, exclusion from, effect, **76**, 471.

Harbors, Harlem River, **96**, 841.

Harbors, Savannah Harbor, **96**, 1222.

Heights of, Christiana River, **96**, 975.

Heights of, Hudson River, **96**, 826.

Hudson River, **95**, 901.

Influence of, reach of, Ocracoke Inlet, **94**, 1012.

Jetties, effect of, **71**, 750; **72**, 830; **78**, 558.

Jetties, effect upon, Biscayne Bay, Fla., H. D. 554, 62d, 2d.

Lakes, **66**, iv, 93; **72**, 1035; **73**, 1172.

Locks, tidal, factors governing choice, **04**, 1408.

Locks, tidal, intracoastal waterways, H. D. 391, 62d, 2d.

Northern and northwestern lakes, **73**, 1172.

Observations, improvement in methods, St.

Johns River, H. D. 611, 61st, 2d.

Tides—Continued.

- Obstructions, bridge piers, **68**, 717; **69**, 383; **74**, ii, 156, 234.
- Obstructions, rivers, effect, **74**, ii, 50, 156.
- Oscillation of, **73**, 988, 1001.
- Oscillation of, Ocracoke Inlet, **94**, 999.
- Peculiar action of, Boston, **98**, 888.
- Retardation, Staten Island, **73**, 943.
- Rivers, effect on, **68**, 919; **78**, 583.
- Shallow water, effect of, **75**, ii, 272.
- Strong currents, **95**, 1422.
- Theory of, **72**, 1036.
- Tidal curves, St. Johns River, H. D. 611, 61st, 2d.

- Tide range, Charleston Harbor, **96**, 1189.
- Tide range, jetties, various, **95**, 3531.
- Torrential velocity of, Swinomish Slough, **98**, 3077.
- Velocity of, Galveston Bay, **68**, 510.
- Velocity of, Long Island Sound, **73**, 993.
- Velocity of, Mississippi River, Breton Island Pass, **74**, 790.
- Velocity of, Ocracoke Inlet, **94**, 999.
- Velocity of, tidal basins, **73**, 993; **74**, ii, 276, 279; **78**, 558.
- Volumes, changes in, Savannah Harbor, **96**, 1222.
- Wind, effect of, **73**, 988, 1001.

Tides, Ebb.

- Flood tides and, bottom during, **92**, 1341.
- Flood tides and, computations, **90**, 1277.
- Flood tides and, gauging, Savannah River, **94**, 1138.

Tides, Flood.

- Determining, gauge readjustments, **96**, 1469.
- Ebb tides and, bottom during, **92**, 1341.
- Ebb tides and, computations, **90**, 1277.
- Ebb tides and, gauging, Savannah River, **94**, 1138.
- Planes of, changes of, South Pass, **96**, 1482.

Tides, Low.

- Current observations at low tide unsatisfactory, Mobile Harbor, H. D. 657, 61st, 2d.
- Soundings, reducing, **75**, ii, 77.

Tides, Opposing.

- Confluence of, bars at, **74**, ii, 35.

Tie-rods. (See Iron.)

- Buckling, correcting, **99**, 3818.

Tie-rods, Iron.

- Cribs, strengthening of, **98**, 1044.
- Pile piers, **68**, 156.

Ties.

- Strand ties, dikes, **03**, 2439.

Tile, Hollow.

- Walls of, forts. (See p. 1797 of this Index.)

Tiles, Sized.

- Water gauges of, **99**, 2504.

Tiling. (See Batteries.)

- Brick better than, fireproofing, **04**, 3837.
- Flooring, **04**, 3838.
- Gun batteries, **00**, 898, 982.
- Gun batteries, ceilings of, **99**, 786; **00**, 849.
- Gun batteries, walls, **99**, 786; **00**, 849.

Timber. (See Cribs; Gates; Locks; Lumber; Piers.)

- Absorption of water, **99**, 2638.
- Artificial preservation, **71**, 942.
- Chestnut timber, teredo-proof, **73**, 999.
- Compressive strength, **76**, 341.
- Concrete to replace, dam abutments, **11**, 2106.
- Creosoting, effect of, **68**, 144; **74**, 211, 212.
- Decay, preventing, **00**, 4092.
- Dikes of concrete and, **87**, 970.
- Dovetails, holding power, **84**, 2069.
- Driftbolts, holding power, **84**, 2051.
- Factors governing use of, piers, **01**, 2903.
- Floating of timber and logs, regulations, **01**, 2330.
- Foundations of, concrete piers, **96**, 2226.
- Foundations of, dams, **00**, 2771.
- Foundations of, locks, **00**, 2771.
- Old timber in breakwaters, **01**, 1072.
- Preserving, hydrocarbon processes, **69**, 28; **72**, 1006; **79**, 392.
- Preserving, hydrocarbon processes, failure, **79**, 1653.
- Preserving, lock gates, **78**, 780.
- Preserving, processes, Seely's, **68**, 38, 144.
- Protection of, coal tar, cribs, **69**, 28.
- Protection of, hydrocarbon process a failure against teredo, **73**, 1131.
- Rafts of, bridge piers, effect of; **77**, 820; **78**, 931.
- Securing, piers, **97**, 3069.
- Shore protection, **79**, 931; **89**, 770.
- Superstructures, decay of, **66**, iv, 71.
- Superstructures of, replaced by concrete, breakwaters, **01**, 3314.
- Structures of, life of, Great Lakes, **95**, 4187.
- Teredo-proofing, **71**, 942.
- Teredo-proofing, sand covering, **74**, 757.

Timber, Chestnut.

- Teredo proof, **73**, 999.

Timber, Creosoted.

- 81**, 815, 818; **84**, 2145; **85**, 2278.
- Cost, **81**, 690; **84**, 2145.
- Durability, breakwaters, **99**, 3142.
- Economy, breakwaters, **93**, 3213.
- Effect, **68**, 144; **74**, 211, 212; **81**, 818.
- Oil used, **81**, 815, 818.
- Teredo and, **81**, 818, 819; **82**, 782.

Timber Heads.

- Protecting, cribs, **96**, 2937.

Timber, Kyanized.

- 82**, 2456.
- Cost, **82**, 2457.
- Strength, **82**, 2459.

Timber, Sand-Embedded.

- Teredo proof, **73**, 800; **74**, 757.

Time.

- Determination, formula, **94**, 3339.

Tinning.

- Dredges, hydraulic, **04**, S., 112.

Titles.

- Forming in concrete, **05**, 3033. (See Forts, p. 1797 of this Index.)
- Lands, reclaimed, Anacostia River, H. D. 194, 59th, 1st.
- Reservoir sites, **98**, 2872, 2878.

Tollets.Buildings, steel, **04**, 3848.**Tolls.** (See Canals; Rates.)Canals, **78**, 274.Canals, Louisville and Portland, **72**, 449. (See p. 942 of this index.)

Canals, ship, H. D. 391, 62d, 2d.

Canals, Monongahela River, **96**, 2160.Green River, **80**, 1800.

Private channels, right of owner to collect, Grant Pass, H. D. 967, 60th, 1st.

Private companies, right of, Connecticut River, H. D. 818, 61st, 2d.

Rail charges and, comparison, **82**, 2497; **86**, 1944.Suez Canal, **80**, 985.Waterways, value of waterways determinable by, probably, **01**, 1564.**Ton Mileage.** (See Rates.)**Tonnage.** (See Commerce; Freight; Waterways.)

Barges, Sault Ste. Marie Canal, H. D. 263, 59th, 1st.

Great Lakes, H. D. 263, 59th, 1st.

Lakes, **74**, 590.

River and rail, by, Mississippi River, H. D. 50, 61st, 1st.

Tool Handles.Attacks of teredos, guarding against, **10**, 1080.
Engineer tool box, **10**, 1080.**Topographical Work.**Data, index to, Mississippi River, **95**, 3705.Instructions, general, **03**, 1910.Methods, **91**, 3481; **93**, 1974; **94**, 1751, 2800, 3325, 3420; **95**, 3699, 3701, 4169; **96**, 3520; **98**, 1610; **00**, 2555.

Methods, Lockport to St. Louis, H. D. 263, 59th, 1st.

Recording, details, **02**, 2817.Sketching, improving, **93**, 3601.**Topography.** (See Photo; Surveys.)

Observing, Altamaha surveys, H. D. 443, 62d, 2d.

Torches. (See Gas.)**Torpedo Cable.**Clamp, **05**, 3008.**Torpedo Defense.** (See Forts, p. 1793 of this Index.)**72**, 25; **74**, 30; **75**, 29; **76**, 30; **79**, 35.Current observations, **78**, 34.Forts and, close connection, **82**, 58.**Torpedoes.** (See Mines.)Automatic switches, **89**, 493.Bronze case, **89**, 492.Charge, **80**, 57.Coast defense, value of, **70**, 5; **84**, 5.Cut-off boxes, **89**, 492.Defensive purpose, **79**, 35.Dynamite for, experiments, **76**, 31.Electric motors, **83**, 54.Experiments, **83**, 54; **87**, 10, 418; **01**, 966.Explosives, tests, **84**, 59; **85**, 51; **86**, 51.Firing, **89**, 493.Formulae, **79**, 36; **80**, 57.**Torpedoes—Continued.**Fuses, tests, **89**, 495.Handling, trained force required, **81**, 13; **82**, 58.Mooring rope, **89**, 491.Materials, tests of new devices, **89**, 489.Planting, steamer for, **90**, 399.Platinum fuses, **84**, 60.Removing, Mobile Harbor, **66**, 54.Shackles, **89**, 491.Sims-Edison, trials, **93**, 657.Sympathetic explosions, **80**, 57.Tests, **88**, 352.Torpedo shed, **93**, 617; **94**, 456; **98**, 649.Trials, **77**, 25; **78**, 30; **79**, 36; **82**, 59.Trials, photography, value of, **82**, 448.Wire fuses, **84**, 59.Wires, McIntire jointer, **89**, 494.**Torpedoes, Fish.**Patrick, tests of, **89**, 497.Secondary importance, **84**, 60.Sims, **89**, 496.Tests, **89**, 481.**Torpedo, Sims.**Motors, **89**, 481.**Torpedo System.** (See Forts, p. 1797 of this Index.)**Torsion.**Preventing injurious torsion, locks, valves, **01**, 2659.**Tourist Routes.**Map of, Yellowstone National Park, **02**, 3048.**Towboats.** (See pl. 56.)Details, **01**, 2726.

Economical, barge transportation, Mississippi River, H. D. 50, 61st, 1st.

Towers. (See pl. 70.)Counterpoising, sluice gates, **09**, 2010.Range finders, **97**, 661.**Towing.** (See Canals; Rafts; Steam; Tunnels.)Belgium canals, **77**, 595.Cables for, **80**, 788.Canal tunnels, **77**, 695.Coal tows, size of, **84**, 1685.Experiments, canals, **77**, 690, 695, 700.Experiments, canal tunnels, **74**, 513, ii, 90; **77**, 686, 692, 694, 700.Horses, effective power of, **77**, 688, 690, 692.Kanawha, **75**, ii, 96.Locomotives, canal towing, **79**, 1251.Ohio tows, **79**, 1315; **82**, 1990.Rafts, rules, **95**, 2536.Rate, canals, **74**, 535; **75**, ii, 537.Small sections, effect of, canals, **76**, ii, 79.Steam power, canals, **69**, 536; **73**, 833; **74**, 498; ii, 90, 101; **75**, ii, 537; **77**, 688, 690, 694, 703; **79**, 1251.Stone, Mississippi River, **11**, 3292.Submerged cable, canals, **77**, 691, 695, 700.System of, coal barges, etc., Ohio River, **84**, 1685; **04**, 2434.**Towing, Steam.****77**, 695.

Towns, New.

Channels to, Smiths Creek, N. C., H. D. 774,
61st, 2d.

Tows. (See Coal.) (See pl. 35.)

Track.

Trestle and, economy of, dikes, 02, 1401.

Tracks, Elevated.

Concrete placing, 98, 620.

Tracks, Floating.

Dredgings, conveyance of, 99, 2921.

Dump cars on, 00, 3900.

Trackage.

Ports. (See p. 1797 of this Index.)

Traction.

Canal tunnels, 74, ii, 90; 76, ii, 79; 77, 686,
689, 700.

Trade, Coastwise.

Importance justifies Federal improvement,
Nantucket Sound, H. D. 536, 62d, 2d.

Trade, Foreign.

Growth, Boston, due to improvements, 08,
956.

Traffic. (See Commerce.)

Locks, Monongahela River, 11, 2114.

Mississippi River, 01, S., 33.

Profit from, shallow rivers, 95, 2282.

Roads, mountain, 03, 2466.

Supervision of, harbors, New York Harbor,
12, 3441.

Traffic, Coal.

Special advantages from canalization, 11, 743.

Traffic, Commercial.

St. Marys River, 01, 566.

Traffic, Inland.

Decline of (B. E. R. H.), Sen. D. 301, 61st, 2d.

Traffic, River.

Character and volume, Mississippi River, 01,
S., 33.

Diagrams, phases, Mississippi River, 01, S.,
40.

Factors of success, 10, 2976.

Shipping of Great Lakes unsuitable for, H. D.
50, 61st, 1st.

Steel shipped by special barges, Ohio River,
H. D. 492, 60th, 1st.

Trall, Military.

Surveying, Alaska, H. D. 192, 58th, 3d.

Training Walls. (See Walls.)

Trains. (See Wagons.)

Tramways. (See Jetties; Trestles.)

Building, stone jetties, 93, 3352; 94, 2566.

Extension, jetties, 93, 3334; 94, 2564; 95,
3362.

Jetties, 00, 4278.

Repair of, jetties, 94, 2635.

Rock placing, jetties, 94, 2544.

Stone jetties, 60, 4278.

Strengthening, stone jetties, 93, 3492.

Sway braces, omission of, 94, 2564.

Systems, dikes, 94, 2893.

Transfers, Freight.

Should be provided by local interests, Kansas
River, H. D. 94, 62d, 1st.

Transit.

Surveys, 72, 1048, 1103; 73, 639; 74, 726.

Translake Ferries.

93, 2905.

Transportation. (See Canals; Coal; Rail; Sedi-
ment; Water.)

Capacity for, canals, 71, 646; 74, 512, ii, 110,
118, 123; 76, 424.

Coal, 77, 639, 648, 654.

Competition between rail and water lines of
transportation, Chicago Harbor and vicinity,
H. D. 710, 62d, 2d.

Competition, effect of, 74, 599.

Cost of, canals, 69, 541; 71, 630, 639, 644, 646;
73, 221, 833; 74, ii, 111; 75, ii, 555; 78, 784.

Cost of, ship canals, 97, 3207.

Economical, 04, 1422.

Efficiency, high, coal shipments, Ohio River,
H. D. 492, 60th, 1st.

Freight and insurance rates, decline in, con-
sequent upon river and harbor improve-
ments, 88, 974, 1011.

Harbor design and, Great Lakes, H. D. 710,
62d, 2d.

Methods and facilities, Tennessee River, H. D.
360, 62d, 2d.

Methods of, growth of various, Maumee Val-
ley, H. D. 769, 62d, 2d.

Methods, various, by railroads and, compari-
son, 71, 630, 644.

Methods, various, relative advantages, vicinity
of St. Andrews Bay, Fla., H. D. 12, 61st, 1st.
Novel methods of, 68, 493.

Principles applicable in a study of transpor-
tation, rail and water way transportation
H. D. 769, 62d, 2d.

Rail rates, control through water rates, Cape
Fear River, H. D. 287, 62d, 2d.

Rates, comparison, U. S. and foreign countries,
Sen. D. 301, 61st, 2d.

River improvement, effect of, 87, 1921, 2116.

Routes, maps of, Great Lakes-Seaboard-Ohio
River territory, H. D. 769, 62d, 2d.

Traffics, coastal, H. D. 391, 62d, 2d.

Waterway and railway, relation, Sen. D. 301,
61st, 2d.

Transportation, Great Lakes.

Advantages over river transportation, through
absence of currents, etc., H. D. 492, 60th, 1st.

Transportation, Inland.

Decline of, on waterways, Sen. D. 301, 61st, 2d.

Transportation, Intensive.

Development of, by conditions, Great Lakes-
Seaboard-Ohio River territory, H. D. 769,
62d, 2d.

Transportation, Local.

Study of, in systematic improvement of Chi-
cago Harbor and vicinity, H. D. 710, 62d, 2d.

Transportation, Rail and Water.

Chicago Harbor and vicinity, H. D. 710, 62d,
2d.

Transportation Routes.

World routes, map, H. D. 492, 60th, 1st.

Transportation System.

Great Lakes to be considered as, 07, 849.

Transportation, Water.

- Revival of commercial interest, Mississippi River, **10**, 2976.
- Control over, none, Texas, H. D. 1290, 61st, 3d.
- Cost, Great Lakes, **09**, 1943.
- Decrease due to unreliability of streams, H. D. 492, 60th, 1st.
- Disadvantages from lack of, **04**, 2208.
- Rates lower by, Great Lakes, **10**, 2096.

Trap Gates. (See Gates.)**Travelers, Concrete.**

- Concrete pier construction, **04**, 3802.

Traverse Lines. (See Triangulation.)

- Methods, **99**, 1736.
- Running, **98**, 1606.
- Triangulation, substitute for, **00**, 2550.

Traverses. (See Forts, p. 1797 of this Index.)**Trees.**

- List of, Executive Mansion, **00**, 5245.
- List of, Washington, D. C., **90**, 3556; **00**, 5286.
- Monuments, as, **04**, 4046.
- Planting, erosion preventing, **98**, 2739.
- Sandy peninsulas, preserving, **96**, 3105; **97**, 3100.

Trees and Shrubs.

- List of, Washington, D. C., **05**, 2757.

Trees, Historic.

- Washington, D. C., **04**, 4046.

Trees, Locust.

- Erosions, preventing, **98**, 2739.

Trees, Poplar.

- Shore protection, **71**, 205, 208.

Trenches.

- Excavating, **98**, 2769.
- Foundations, cribs, **75**, 305; **76**, ii, 571.
- Trestles, concrete pier construction, **04**, 3802.

Trenching.

- Sea walls, **05**, 3024.

Trestles. (See Dams; Tramways.)

- Breakwater, stone; depositing, **93**, 3227.
- Calculations, movable dams, **97**, 2558.
- Concrete pier construction, **04**, 3802.
- Construction, considerations governing, jetties, **08**, 823.
- Destruction of, a hindrance to rockwork, Columbia River jetties, **08**, 2271.
- Engineer troop, **02**, 816.
- Jetties, building of, **98**, 2954.
- Maneuvering, movable dams, **96**, 2315.
- Movable dams, **96**, 2313.
- Repairing, jetties, **98**, 2952.
- Repairing, rock jetties, **97**, 3370.
- Strengthening, rock jetties, **97**, 3373.
- Teredo attacks, Columbia River; **07**, 2199.
- Track and economy of, dikes, **02**, 1401.

Trestlework.

- Stone placing, jetties, **94**, 2517.
- Strengthening, rock jetties, **96**, 3212.

Triangles.

- Length of triangulation, **67**, 564, 573; **70**, 544.

Triangulation. (See Base Lines; Bench Marks; Surveys; Traverse Lines.)**Triangulation—Continued.**

- 88**, 1144; **90**, 1413, 1845, 2759; **91**, 3474; **92**, 1332; **93**, 1935; **94**, 3410; **95**, 4179; **96**, 4023.
- Accuracy, insuring, **01**, S., 58.
- Adjustment and adaptation, Great Lakes surveys, to U. S. C. and G. datum, **02**, 2883, 2903.
- Adjustment, St. Marys River, **96**, 4033.
- Angles, measuring, **94**, 3325; **95**, 4167, 4216.
- Angles, reading, **94**, 3409.
- Astronomical observations, **96**, 4025.
- Astronomical work for, methods, **93**, 4348.
- Base lines, measuring, 500-foot steel tape, **95**, 4230; **05**, 3016.
- Connecting, Great Lakes, **97**, 4104.
- Data, index to, Mississippi River, **95**, 3703.
- Detroit River, **96**, 2756.
- Field work, **96**, 4029.
- Forts. (See p. 1793 of this Index.)
- Geographical positions, Mississippi River, **94**, 2733.
- Geographical positions, Missouri River, **93**, 3942.
- Great Lakes, **97**, 4108; **02**, 1243; **10**, 2716.
- Great Lakes ship channel, **94**, 2263.
- Methods, Missouri River, **83**, 1334.
- Methods, lakes, **93**, 3422.
- Mississippi River, **92**, 3576.
- Missouri River, **96**, 3797.
- Missouri River Commission and U. S. C. G. S., connection, Kansas City, **94**, 3085.
- Mortar projectile, location of, **91**, 550.
- Observed angles, possible errors, **73**, 1178.
- Planning, **94**, 3323.
- Planning, St. Marys River, **96**, 4028.
- Red River, **93**, 1935.
- Reference points, milestones for, **96**, 1402.
- Refraction coefficient, **73**, 1189.
- Refraction, effect of, **67**, 575.
- Refraction, Lake Superior, **96**, 4037.
- St. Marys River, **95**, 4166; **96**, 4058.
- Secondary, instructions, **91**, 3474.
- Signals, **87**, 1228.
- Signals, northern and northwestern lakes, **67**, 573, 575.
- Signals, remarks on, **78**, 1397.
- Southwest Pass, **99**, 1872.
- Stations, **95**, 4174, 4233; **96**, 4029.
- Stations, building, **93**, 4355.
- Stations, building, soft soil, **00**, 2073.
- Stations, concrete, **94**, 1378.
- Stations, form of, Coosa River, **98**, 1420.
- Stations, Galveston Bay, **02**, 1358.
- Stations, gas pipe for, **03**, 2685; **04**, 4064.
- Stations, St. Marys River, **95**, 4174, 4233; **00**, 3954.
- Substitutes, traverse line, **00**, 2550.
- Targets, phaseless, **01**, S., 58.
- Triangles, sides of, length, **67**, 564, 573; **70**, 544.

Triangulation, Primary.

- Planning, **93**, 4352.
- St. Marys River, **94**, 3396, 3403, 3404, 3409; **95**, 4185; **96**, 4023, 4038.

Triangulation, Secondary.

- Base line, Missouri River, **94**, 3113.
- Base lines, tape measurements, **94**, 2729.

Triangulation, Secondary—Continued.

- Geographical positions, Missouri River, **93**, 3942.
- Methods, **99**, 3339.
- Mississippi River, **93**, 3589; **95**, 3688; **96**, 3501.
- Missouri River, **94**, 3113.
- Potagannissing Bay, **97**, 4084.
- Stations, Mississippi River, **93**, 3596 (upper); **94**, 2746; **95**, 3735; **96**, 3515; **99**, 3385.

Triangulation, Tertiary.

- Cypress Bayou, **93**, 2077.
- Detour passage, **97**, 4091.
- Methods, Lockport to St. Louis, H. D. 263, 59th, 1st.
- Mississippi River, **93**, 3603; **96**, 3510.
- Missouri River, **94**, 1750.
- Potagannissing Bay, **97**, 4087.
- Red River, **93**, 1937.
- St. Marys River, **95**, 4192; **96**, 4046.

Tributaries.

- Control of, floods of main streams, H. D. 81, 62d, 1st.

Tributaries and Rivers.

- Floods of, combining of, **98**, 2853, 2887.

Tripods.

- Dams, **96**, 1931.
- Drilling platform, rock drilling, **74**, ii, 260; **76**, 670; ii, 323.

Tripping.

- Apparatus for, movable dams, Big Sandy River, **07**, 1777.

Tripping Device.

- Movable dams, **91**, 2353.

Troops. (See Engineers.)**Tropical Plants.**

- Rare tropical plants, list of, Washington, D. C., **05**, 2756.

Trusses. (See Bridges.)

- Arch bridges, disadvantages of, **74**, 641, 652, 661; **75**, ii, 680; **76**, 334; **77**, 1102.
- Bridges, **69**, 195; **70**, 245, 251, 262, 263; **72**, 286, 291; **90**, 3596.
- Roads on, **69**, 195; **70**, 251, 263; **72**, 286, 291.

Trusses, Arched.

- Bridges, **75**, ii, 680.

Tunneling.

- Explosive work, fine record, **94**, 3199.

Tunnels. (See Batteries; Blasting; Canals; Mines; Railroads; Rivers; Water Supply.)

- 76**, ii, 124.
- Arch experiments, **99**, 3806.
- Backing, filling voids, **99**, 3803.
- Batteries, **00**, 898.
- Blasting, **76**, ii, 124.
- Blossom Rock, **71**, 926.
- Boats in, velocity, **77**, 685, 700.
- Bridges and, comparison, **74**, 603, 620.
- Building, Falls of St. Anthony, under, **70**, 283; **71**, 294; **72**, 304.
- Canal boats, effect on, **76**, ii, 80.
- Canals, **76**, ii, 79, 124; **77**, 685.
- Canals, objections to, **77**, 690.
- Conduits, Washington Aqueduct, **96**, 3929.

Tunnels—Continued.

- Cost of, **72**, 1165; **74**, 496, 497, 549, ii, 100; **76**, ii, 103, 124; **77**, 696.
- Detroit River, **74**, 598, 608, 619, 631; **90**, 3462.
- Digging. (See pl. 50.)
- Drilling, **76**, ii, 124.
- Dry rubble backing, **99**, 3803.
- Gas, effect of, **77**, 692.
- Gas, gathering of, **77**, 693.
- Hell Gate, **71**, 724; **72**, 803; **73**, 934; **74**, ii, 161.
- Hudson River, **70**, 440.
- Lime Rock, **68**, 20.
- Lining, iron, **99**, 3802.
- Lowering, opposition to, city streams, Chicago, **06**, 1774.
- Moisture in, preventing, lining, **96**, 472.
- Obstructions, across navigable waters, Chicago, **05**, 2073.
- Percolation, water supply, District of Columbia, **01**, 3666.
- Progress on, **76**, ii, 124; **77**, 697, 707, 708.
- Removal difficult, under city streams, **05**, 2073.
- River depths, restricting, **77**, 2796.
- Rock drilling, **76**, ii, 124.
- St. Anthony Falls, **70**, 283; **71**, 294; **72**, 304; **73**, 408; **74**, 277; **75**, 356.
- St. Gothard, **77**, 708.
- Shafts, **72**, 1154, 1161; **76**, ii, 126; **77**, 697, 707, 708.
- Silting in, water-supply system, District of Columbia, **01**, 3667.
- Sutro tunnel, **72**, 1126.
- Towing through, canals, **74**, 513; ii, 90.
- Ventilation, **77**, 693.
- Wall over, building, **95**, 2437.
- Washington Aqueduct, **84**, 2304; **85**, 2453; 2469, 2480, 2496; **86**, 2045; **87**, 2537, 2547.
- Water flow, formula, **94**, 3199.
- Water power, designing, Ouachita system, H. D. 588, 62d, 2d.
- Water supply, **96**, 3936.
- Work, lighting, **99**, 3805.

Tunnels, Celebrated.

- 77**, 707.
- Canals, **71**, 628, 638; **76**, ii, 81.

Tunnel, Sutro.

- Report on, **72**, 1126.

Turbidities. (See Water Supply; and see p. 2040 of this Index.)

- Checking, water supply, District of Columbia, **08**, 879.

Turbines. (See Power; Pumping.)

- Culverts, valves, locks, **96**, 3273.
- Efficiency of, **74**, 554.
- Locks, operating, **97**, 2977; **11**, 2109.
- Pumping, locks, **95**, 2905.
- Pumping plant, **98**, 2981.
- Tests, Niagara Falls, **11**, 3028; **12**, 3550.

Turnbuckles.

- Stripping of threads, lock gates, **11**, 2109.

Turntables.

- Flat cars and, **04**, 3738.

Typical Cribs.

- Cross sections of, **96**, 2578.

U.

Undermining. (See Caving; Dams; Jetties; Revetment.)

- Jetties, stone placing to prevent, **95**, 3312.
- Preventing, cribs, **97**, 3065.
- Preventing, dams, **00**, 3258.
- Preventing, jetties, **95**, 3312, 3315.
- Preventing, slopes, revetment of, jetties, **95**, 3315.
- Preventing, spurs for, jetties, **94**, 2543.
- Protecting against, stone jetties, **93**, 3490.
- Revetment to prevent, jetties, **95**, 2216.
- Sheet-pile dams, **98**, 1487.
- Stone, to prevent jetties, **95**, 3312.

Underpinning.

- Buildings, Government Printing Office, **01**, 3817.
- Buildings, **04**, 3826, 3860.

United States. (See States; Waterways.)

- Canals aided by, H. D. 781, 60th, 1st.
- Commerce, development of, participation of U. S. in, H. D. 781, 60th, 1st.

United States—Continued.

- Improvements, private, aid of, H. D. 781, 60th, 1st.
- Railroads aided by, H. D. 781, 60th, 1st.
- Rights of, and States, Connecticut River, H. D. 818, 61st, 2d.
- Roads, wagon, aid of, H. D. 781, 60th, 1st.
- South, resources of, **04**, 1420.
- State and U. S. waterways, definition, H. D. 953, 61st, 2d.
- Water power on navigable streams, participation in development of, H. D. 781, 60th, 1st.

United States Dredges. (See Dredges.)

- Commendation, strong; maintenance work, **08**, 1161.
- Operating, expenses, **08**, 1076. (See p. 2337 of this Index.)

United States Improvements. (See Improvements.)**Unloading.**

- Methods, materials for construction, **02**, 2493.

V.

Valleys.

- Lands of, protection against floods, California, H. D. 262, 59th, 1st.
- Reservoirs in, **98**, 2821.

Valleys, Open.

- Reservoir sites, **98**, 2821, 2828.

Valves. (See Gates; Locks.) (See pl. 63.)

- Breakdown due to vibration, locks, **11**, 2110.
- Coverings, locks, **09**, 1705.
- Dams, bear-trap, **01**, 2314.
- Dredges, hydraulic, **04**, **8**, 115.
- Levees, **02**, 1642.
- Lock culverts, **96**, 3271.
- Lock gates, **76**, ii, 416.
- Locks, **91**, 2370, 2742; **04**, 3758.
- Operating, difficulty, causes of, locks, **00**, 3389.
- Operating, locks, filling of, **98**, 2019.
- Operating, machinery, locks, **98**, 1921.
- Safety latch, lock gates, **93**, 1734.
- Torsion, preventing injurious, locks, **01**, 2659.
- Turbine culverts, locks, **96**, 3273.
- Types, best, locks, **11**, 2035.

Vegetation. (See Bars.)

- Starting, bars, **98**, 1786.
- Water for, amount required, **68**, 963; **79**, 1238.
- Waves, effect of, **72**, 215.

Velocities. (See Boats; Currents; Sediment; Waves; Winds.)

- Depth and relations, rivers, **76**, 451.
- Measuring, St. Lawrence, **02**, 2799.
- Measuring, Mississippi River, **11**, 1946.

Ventilation. (See Forts, p. 1797 of this Index.)

- Batteries, **99**, 787; **00**, 860, 893, 1023.
- Buildings, **04**, 3856.
- Comstock mines, **72**, 1131.
- Condensation, governing, forts. (See Forts, p. 1797 of this Index.) (NOTE.—An important subject in connection with construction of waterproof concrete works.)
- Tunnels, **77**, 693.

Vernier.

- Tapes, measuring of, **93**, 1926.

Vessels. (See Boats; Lakes; Ships.)

- Anchorage for, area required, **84**, 579, 585; **85**, 531.
- Ballast, depositing of, places, **96**, 1342.
- Casualties, Great Lakes, **10**, 2098.
- Damages from ice, **77**, 111.
- Damages, harbor entrances, Great Lakes, H. D. 82, 59th, 2d; **09**, 1941.
- Depth of, increasing, canals, H. D. 340, 59th, 2d.

Vessels—Continued.

- Dimensions, **74**, 817, 845.
Dimensions, New York lines, **85**, 781.
Dimensions, St. Marys River, H. D. 64, 62d, 1st.
Draft, channel depths not increasing as fast as, Wilmington, Ala., H. D. 1114, 60th, 2d.
Draft of, entering and leaving New York Harbor, **88**, 619.
Harbors, entrance to, facilitating, Marquette Mich., H. D. 573, 61st, 2d.
Injury of, preventing, narrow channels, **98**, 1046.
Lake tonnage, **68**, 164; **69**, 144; **74**, 590; **75**, 282.
Magnetic variation observation, **04**, 4133.
Masts, height of lakes, **74**, 614.
Mississippi River, H. D. 50, 61st 1st.
Ocean, lake, and canal, comparison of, **97**, 3172.
Protecting, ice, sheer booms for, **78**, 828; **79**, 1363.
Responsibilities for damage to revetments, **08**, 1926.
Size, increase in, due to river and harbor improvements, **08**, 717.
Size of, increasing, Great Lakes, H. D. 900, 59th, 1st.
Stopping, distance needed, H. D. 317, 61st, 2d.
Submarine mines, passage of, regulations for, **98**, 636.
Submarine mines, planting, **86**, 51.

Vessels—Continued.

- Types, most economical, channels and, H. D. 710, 62d, 2d.
Vessels, Deep-Draft.
Canals, practical value of, Sen. D. 301, 61st, 2d.
Vessels, Large.
Channels for, design, Jamaica Bay, H. D. 1506, 60th, 2d.
Vessels, Twelve-foot.
Becoming rare on Great Lakes, H. D. 306, 61st, 2d.
Vested Rights.
Great Lakes levels and, H. D. 263, 59th, 1st.
Vladucts. (See pl. 67.)
Concrete, forming, **03**, 2470.
Concrete, details, Yellowstone Park, **01**, 3778.
Mountains, **03**, 2470.
Vibration.
Bridges, effect on, **75**, ii, 680; **77**, 1099, 1102.
Valve breakdown due to, locks, **11**, 2110.
Vicat Needles.
Cement testing, **96**, 2670.
Voids.
Broken stone, ratio to, **74**, ii, 377; **78**, 1136.
Dry rubble backing, **99**, 3803.
Filling, rubble backing, water tunnel, **00**, 5213, 5214.
Filling, tunnel, back of, **99**, 3803.
Jetties, effect in, **82**, 1434; **85**, 681.
Volga River.
Improvement of, H. D. 1120, 60th, 2d.

W.**Wagon.**

- Tool box, Engineer, **10**, 1080.

Wagon Roads. (See Roads.)

- Alaska, H. D. 192, 58th, 3d.

Wagon, Sprinkling.

- Pumping, Yellowstone Park, **02**, 3044.

Wagon Trains.

- Bridges built by, **77**, 1354.

Walks. (See Concrete.)**Walls.** (See Concrete; Entrances; Lands; Locks; Rivers; Stones.) (See pls. 24, 32, 34, 37, 39, 67.)

- Buildings, steel, **04**, 3829, 3860.
Concrete for, composition, **01**, 911.
Concrete locks, **74**, 786, 820; **75**, 904, ii, 623.
Forts. (See Forts, p. 1797 of this Index.)
Locks, raising walls of, **11**, 2035.
Painting of, breakwater substructure, **99**, 3140.
Reinforcement of, concrete for, **98**, 2002.
Tiles, gun batteries, **99**, 786; **00**, 849.
Tunnels, building over, **95**, 2437.
Voids filled with grout, canals, **11**, 2110.
Whitening. (See Forts, p. 1797 of this Index.)
